It has already become impossible in our older States for a man starting with nothing to become by his labor the owner of a farm. As the public domain disappears this will become impossible all over the United States. And as in the accidents and mutations of life the small owners are shaken from their holdings or find it impossible to compete with the grand culture of capitalistic farming, they will not be able to recover and must swell the mass of tenants and laborers. Thus the concentration of land ownership is proceeding, and must proceed, if private property and land be continued. So far from it being to the interests of the working farmer to defend private property in land, its continued recognition means that his children, if not himself, shall lose all right whatever in their native soil; shall sink from the condition of freemen to that of serf.

The Proposed Washington Stadium.

EXTENSION OF REMARKS

HON. FREDERICK C. HICKS.

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, April 25, 1916.

Mr. HICKS. Mr. Speaker, I desire to call the attention of the House to a very commendable bill recently introduced by my colleague Mr. HULBERT, of New York, with the comment made thereon by the New York Sun, providing for the construction of a stadium in Potomac Park, a project with which I am in hearty accord.

THE PROPOSED WASHINGTON STADIUM.

Officials and members of the Amateur Athletic Union are keenly interested in the success of the bill of Congressman Murray Hulbert, now pending in the House at Washington, which provides for the erection in that city of a Government stadium where athletic contests of nation-wide or world-wide interest can be properly staged. Other lands, some of them having but one-tenth as many athletes as we have, and athletes of far less ability than ours, have built such structures, and have also paid training and traveling expenses for their Olympic teams. The athletes of the United States, however, have paid all the expenses incident to their mighty deeds from their own pockets

and those of their friends. They feel that this one request of theirs should be granted, and that the Government should signify its appreciation of the luster reflected upon America by the achievements of its world-mastering knights of track and field, by rearing in the Capital City a fitting site for great contests.

If the project should meet with success, it is the belief of the leading athletic authorities of the Nation that four years from now, with war's red flood subsided and the opportunity given to turn away from its horrors, Europe would gladly accept the invitation for the holding of the Olympic games in the shade of congressional hails. Many of the British, French, German, and Austrian athletes of yesterday are dead; others are dying daily, shell rent or disease eaten, and it will be a sorry remnant that will return to lean battered bodies on walls and watch their upspringing successors at play.

It is believed, however, that within four years it will be possible for all the lands covenanted together under the Olympic games committee to select athletic teams of sufficient power to make a good showing. And what would be more natural, American athletic authorities ask, than that Europe's athletes should prefer to contest on this side of the Atlantic, where there are no memories of bitterness and where new bonds may be cemented under the most favorable conditions.

A hill (H. R. 14905) for the improvement of East Potomac Park as a public recreation ground.

Be it enacted, etc., That the sum of \$1.545,397 be, and the same is hereby, appropriated, out of any money in the Treasury of the United States not otherwise appropriated, to be made available as requested and to be expended under the direction of the Secretary of War for the improvement of East Potomac Park as a public recreation ground in accordance with the comprehensive plan approved by the War Department and set forth in House Document No. 1038, Sixty-fourth Congress, first session.

National Banks.

EXTENSION OF REMARKS

HON. WILLIAM A. CULLOP.

OF INDIANA.

IN THE HOUSE OF REPRESENTATIVES.

Tuesday, April 25, 1916.

Mr. CULLOP. Mr. Speaker, the report of the national banks made to the Comptroller of the Currency in response to the call of March 7, 1916, is most gratifying and shows the financial condition of the country to be the best ever known. It discloses a state of facts which clearly justifies the optimistic views entertained by the business men and financiers all over the country. The splendid conditions shown by these reports are in part as follows:

part as follows:

The total resources of the national banks of the United States on March 7, 1916, amounted to \$13,833,000,000, exceeding by \$370,000,000 the greatest resources ever shown in the history of the national-banking system, and exceeded by \$2,271,000,000 the resources of these banks as shown in the March 4 statement a year ago.

The increase which has taken place in the resources of the national banks of this country in the past 12 months exceeds in amount the entire resources of the Reichsbank of Germany, as reported in its statement of February 15, 1916. The aggregate resources of the national banks of the United States at this time exceed by approximately \$3,000,000,000 the aggregate resources of the Bank of England, the Bank of France, the Bank of Russia, the Reichsbank of Germany, the Bank of the Netherlands, the Swiss National Bank, and the Bank of Japan.

The increase in the loans and discounts of our national banks March 7, 1916, was \$132,000,000 as compared with December 31, 1915, and \$990,000,000 as compared with March 4 a year ago.

The total deposits on March 7, 1916, amounted to \$10,790,000,000, an increase since December 31, 1215, of \$411,000,000, and an increase of \$2,198,000,000 as compared with March 4 a year ago.

Of the \$411,000,000 increase in deposits since December 31, 1915, \$335,000,000 were from banks and bankers, and \$78,000,000 were reported as time deposits, while demand deposits for this period showed a decrease of \$2,000,000. Of the \$2,198,000,000 increase in total deposits since March 4, 1915, however, the principal increase was in demand deposits, which increased \$1.072,000,000, against an increase in time deposits, which increased \$1.072,000,000, against an increase in time deposits, which increased \$1.072,000,000, against an increase in time deposits, which increased \$1.072,000,000, against an increase in time deposits, which increased \$1.072,000,000, against an increase in time deposits of \$290,000,000.

This is unmistakable evidence of the marvelous era of prosperity the country is enjoying, the sound condition of our financial institutions, and the scope of our business affairs. We are growing by leaps and bounds and are now the greatest financial power in the world. Our people are reaping the golden reward of a sound financial policy, the fruits of safe and sane husiness conditions.

The carping critics who a short time ago were criticizing the constructive measures this administration was enacting into law, predicting as a result the destruction of business and distress among the people, have learned by experience that their prophecies of evil have, fortunately, not been realized.

The resources of our national banks exceed by approximately

three thousand million dollars the aggregate resources of the Bank of England, the Bank of France, the Bank of Russia, the Reichsbank of Germany, the Swiss National Bank, the Bank of Japan, and the Bank of the Netherlands. We are the greatest of all the world powers, and by thrift and enterprise are earning as a criticism on the people of that great State for not having

greater returns here than are being earned elsewhere in the world. It shows a marvelous condition and is the result of our wise and conservative domestic and foreign policies

This condition is not the result of chance but the result of our splendid business policies, brought about by our splendid constructive legislation enacted during the last three years, The door of opportunity has been opened to all alike and special privileges to the favorite few have been withheld and competition has inspired business activity.

A financial system has been adopted which removes fear from the business world, and the business man knows now his business life can not be placed in jeopardy by a few financial sharks who

flourished under our old financial system,

By the enactment of our present financial system the control of our finances was taken out of the hands of a few private individuals, who manipulated it as a private concern, to suit their greed and avarice, and placed its control in the hands of the Government, where it would be administered in the interests of the people and preventing its concentration in one financial center, but distributed it over the country where it would be acessible to the whole people for the conduct of all the business throughout the entire country.

It dethroned the financial kings of Wall Street and took from them the power of dictating the kind and volume of business which the country should do. It emancipated the business man from their domination, and, as could be expected, the business of the country has improved far beyond the most sanguine ex-

pectations of the most optimistic;

Less than three years of trial has satisfied the people of the country, as the results clearly show, the wisdom of the policies

inaugurated.

Legitimate business never flourished before as it is doing now, nor was it ever known to be so remunerative and safe. Such activity as now exists was hitherto unknown. Ample money on reasonable terms can be had to engage in legitimate business and panics "made to order" are things of the past.

Business is expanding, new enterprises are springing up, because the people and the country know money can be had to operate them and they are no longer subject to the hazards which formerly jeopardized their existence-a squeeze in the

money market.

This splendid financial system has terminated the bondage of the business interests of the country. We now have a system which can be expanded or contracted as the business conditions of the country require. More capital is to-day invested in the business of this country than ever before, and it is healthier, more remunerative, and better than ever before, and yet our financial resources are not taxed to their limit; but if business

should require, here is our ability to meet the requirements.

It is conservatively estimated that the surplus reserve now held by the national banks would be sufficient to give a further loaning power of three or four billion dollars should the growth and development of commerce, agriculture, or industry call for

so huge an enlargement of credit.

This condition inspires confidence, encourages activity, and enables our people to forge ahead and win victories in the walks Victories much more precious than those of war. of peace. Here is where we are winning the world. These are the vic-

tories that make the people happy and contented.

Prosperity abounds in the land and the people appreciate it, and they are content to let well enough alone. The carping critic and the calamity howler will not allure the people by eloquent pleas or plausible sophistries to turn from these prosperous conditions or take chances on a change of men or policies. They are satisfied with existing conditions, satisfied of their cause, and desire them to be let alone.

Good Roads.

EXTENSION OF REMARKS

HON. WILLIAM P. BORLAND, OF MISSOURI,

IN THE HOUSE OF REPRESENTATIVES.

Wednesday, April 26, 1916.

Mr. BORLAND. Mr. Speaker; the subject of good roads is of live interest to the people at this time, and I desire to call attention to the following editorial from the Minneapolis Journal. It shows what is being done in Minnesota. It is not intended

done more, but as a compliment to them for the interest shown in permanent roads. It shows that the people are not satisfied with short roads that go nowhere, nor with unimproved roads that are only serviceable part of the year, but they are beginning to demand a good system of connected, improved, high-grade roads that open up every portion of the country to traffic and travel.

The editorial is as follows:

[From the Minneapolis Journal, Apr. 3, 1916.]

"Good roads help small towns, and they are the only phase of modern life that have that effect. Railroads and most other modern inventions kill the small towns and build up the great cities, but altheyear-round roads turn the stream of wealth, travel, and business back toward the rural centers." (Congressman W. P. BORLAND, of Kanses Cities)

inventions kill the small towns and build up the great cities, but allthe-year-round roads turn the stream of wealth, travel, and business
back toward the rural centers." (Congressman W. P. Borland, of Kansas City.)

There is wisdom here for the contemplation of the small town. Good
roads are the means by which the small town may win back much of
its old-time prosperity and importance.

But such roads, to be effective, must start somewhere and lead somewhither. Short stretches of well-surfaced and well-maintained roads
leading into a town will help bring the farmers into town more
frequently. But that is only a part of the harvest the town may
reap if it is situated on a good through road.

One of the best roads in the State strikes south from St. Paul
through Rosemount, Farmington, Northfield, and Faribault. It is the
testimony of business men in all these towns that this road has brought
them greatly increased business. Consequently they do their share
toward maintaining it in fine condition, and prevail on the road
authorities of Dakota and Rice Counties to do likewise.

This is a case where the benefits are so well realized that the roadway
is maintained as a through route by the cooperation of the local communities which profit thereby.

But, unfortunately, many other communities in Minnesota do not
have this keen appreciation of the opportunity to better themselves.
If they did, they would send men to the legislature instructed to legislate without further delay for a complete State system of roads,
planned, built, and maintained by the State itself.

Such a system would open up all sides and corners of the State
with roads continuously good from one end to the other, and so
placed as to invite the heaviest traffic—the main traveled roads, in
short. Feeders connecting with these roads would be the work of the
counties to build, with those of still less importance left to the townships.

The granting, now imminent, of Federal aid to States that engage
in such enterprise, makes the moment propit

Agriculture Appropriation Bill.

EXTENSION OF REMARKS

HON. JOHN H. CAPSTICK, OF NEW JERSEY,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, April 26, 1916.

Mr. CAPSTICK. Mr. Speaker, to my mind there is no service of greater value to the people of the United States than that rendered by the Bureau of Animal Industry. One of the most important of its functions is the inspection of cattle intended for slaughter for food purposes. This inspection assures the condemnation of all animals not having a clean bill of health when offered at the abattoirs, thereby preventing the marketing of unfit meat, and I shall do all I can to encourage this work.

I do not approve, however, of the methods or manner of payment for condemned animals. It seems to me a better system should be devised. As a class the farmers of our country are honest, upright, honorable citizens.

I am a strong believer in the work of the bureau in caring for cattle in transit. The present operations are modern and humane. They minimize the discomforts of transportation for the dumb beasts and proposit them being always. the dumb beasts and prevent them being abused. At the same time disease and sickness are detected. When this occurs the affected animals are immediately quarantined and the disease traced to its source.

My reason for speaking is so there may be a plain understanding concerning the law on these questions and a better comprehension of circumstances under which condemnations are made, and whether the owner of the condemned cattle is entitled to reimbursement.

The subcommittee of the Claims Committee, of which I am a member, now has under consideration two claims for Government inspected and condemned cattle, I desire to read two letters

from the Bureau of Animal Industry regarding one of them. It was introduced by my colleague Mr. Moore of Pennsylvania in behalf of the D. B. Martin Co., of Philadelphia.

The letters are as follows:

MARCH 16, 1916.

Hon. E. W. Pou, House of Representatives.

DEAR MR. POU: Your letter of the 11th instant, inclosing copy of bill (H. R. 12244) for the relief of the D. B. Martin Co., and requesting all papers or copies of same on file in the department relating to the claim and an expression as to its merits be forwarded for the use of the Committee on Claims, has been received.

Inclosed you will find two letters signed by Dr. C. A. Schauser, under whose supervision the condemnations were made; a copy of the claim filed by the company; and a copy of the department's letter to Hon.

J. HAMPTON MOORE explaining why the company's claim could not be paid.

whose supervision the condemnations were made; a copy of the claim filed by the company; and a copy of the department's letter to Hon. J. HAMPTON MOORE explaining why the company's claim could not be paid.

The claim presented by the company arose from the condemnation under the meat-inspection law by representatives of the Bureu of Animal Industry of \$4 cattle as being unfit for food purposes on account of being affected with foot-and-mouth disease. The meat-inspection law under which the condemnation was made does not provide for the reimbursement of owners for such losses. As shown in the copy of letter to Representative Moore, all animals must be inspected and passed before they are accepted for slaughter can not be withdrawn. The animals which were condemned were offered by the company for inspection in the usual manner and with the knowledge that any animal condemned by the Federal inspectors must be destroyed by the establishment itself in the presence of an inspector, and that there is no provision for the reimbursement of losses thus sustained. It will be readily seen that under the operation of the ment-inspection law the animals were destroyed by the establishment and not by a representative of the department. The department has never reimbursed any establishment for losses sustained on account of such condemnations and Congress has never appropriated funds to cover such losses.

The bill (H. R. 12244) indicates that the condemnation of the company's animals could have been made under the act "for the prevention and eradication of foot-and-mouth disease." This is incorrect. The acts of Congress (Public, 286 and 293) appropriating funds for the arrest and eradication of toot-and-mouth disease. The six incorrect. The acts of Agriculture to arrest and eradicate the disease by giving him authority to purchase and destroy any animal or animals affected with or exposed to the disease. Use of Congress cited do not give the Secretary of Agriculture to purchase and destroy animals affected with or exposed to

	Num- ber.	Estimated value.	Parts.	Estimated value.	Total estimated value.
Cattle	52, 665 6, 380 17, 650 658 222, 605	\$2,001,796.65 60,291.00 57,892.00 2,158.24 2,056,870.20	178, 409 1, 750 298 14 464, 217	\$133, 806, 75 1, 312, 50 223, 50 10, 50 348, 162, 75	\$2, 135, 603, 40 61, 603, 50 58, 115, 50 2, 168, 74 2, 405, 032, 95
Total	299, 958	4,179,008.09	644, 688	483, 516.00	4,662,524.09

The animals and parts represented by the above figures were condemned on account of various diseases and in the same manner and under the same law that the animals belonging to the D. B. Martin Co. were condemned.

It is the opinion of the department that the claim should not be allowed as the condemnation was made in the same manner that condemnations are made by the department's inspectors of cattle affected with pneumonia or any other disease which renders them unfit for food purposes or hogs affected with hog cholera. To reimburse owners of some packing establishments for animals condemned on account of foot-and-mouth disease and refuse to reimburse others for animals condemned on account of pneumonia or hog cholera would appear to be discrimination in favor of a class of diseased animals. It is believed that if such claims, as the one presented by the company, be allowed it will open the way for the presentation of claims for the value of animals condemned on account of being affected with any disease. The above table showing an estimated loss of \$4,682,524.09 for the fiscal year 1915 shows to what extent claims are possible if a precedent is once established.

Attention is also called to the fact that the bill reads for \$7,184.15, the full amount of the company's loss. The department has not in any instance paid or allowed the full amount of the value of any animals condemned on account of foot-and-mouth disease. At the beginning of the outbreak agreements were made with the representatives of various States providing that the expenses incidental to the purchase and destruction of all animals affected by or exposed to such disease would be borne equally, therefore the claim of the company as far as the Government is concerned ought not to exceed \$3,592.08.

Very truly, yours,

(Inclosures.)

(Inclosures.)

United States Department of Agriculture, Bureau of Animal Industry, Washington, D. C., April 19, 1916.

United States Department of Agricultures,
Burrau of Animal Industry,
House of Representatives.

Dear Mr. Capstick Referring to your verbal request of this morning for information concerning the claim of the D. B. Martin Co., on account of \$4\$ can aptered and condemned under the morning for information concerning the claim of the D. B. Martin Co., on account of \$4\$ called aughtered and condemned under the morning for information concerning the claim of the D. B. Martin Co. were offered for inspection in the customary manner under the Federal meat-inspection in the County manner under the Federal meat-inspection in the customary manner under the Federal meat-inspection in the customary manner under the Federal meat-inspection in the following facts and, because of being condemned by our inspector, were required, by the express terms of the meat-inspection law, to be "destroyed for food purposes by the said establishment in the presence of an inspector" of the department. The action taken in the case of these cattle was the same as is taken every day in establishments operating under Federal meat inspection, when animals or the carcasses thereof are inspected and found to be affected with tuberculosis, authrax, cholera, pneumonia, or other diseases. Animals condemned and destroyed in this manner are in no sense purchased and destroyed by the Secretary of Agriculture. Such animals and their carcasses are entirely, and at all times, the property of the establishment and are destroyed not by the Federal Government, but by the establishment fiself. On the other hand, animals destroyed in order to arrest and eradicate foot-and-mouth disease, in accordance with the authority contained in the appropriation "for the prevention and eradication of foot-and-mouth disease" are first purchased from the outer stablishment fiself. On the other hand, animals destroyed in order to arrest and eradicate foot-and-mouth disease. The appropriation of the full amount of the value of any animals condemned on account of foot-and-mouth dis

such establishments in accordance with the requirements of the meat-inspection law.

I trust that this information will make clear to you the position taken by the department. The papers left with me are returned herewith.

Very truly, yours,

A. D. MELVIN, Chief of Burcau.

The Griffin Pension Bill.

EXTENSION OF REMARKS

HON. ISAAC SIEGEL. OF NEW YORK.

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, April 25, 1916.

Mr. SIEGEL. Mr. Speaker, the country is daily expressing itself in favor of the Griffin bill, known as H. R. 6915.

The many requests for copies of this bill leads me to insert it in full, as follows:

A bill (H. R. 6915) granting indefinite leaves of absence to superannuated employees of the Postal Service.

Be it enacted, etc., That, beginning with the 1st day of July next following the passage of this act, the Postmaster General shall grant an indefinite leave of absence, together with an allowance of \$600 per annum, to be payable monthly, to any person employed in the Railway Mail Service, the Rural Free Delivery Service, the City Free Delivery

Service, and to post-office clerks and other employees in post offices who are in the classified civil service who have become incapacitated from performing their duties through superannuation.

SEC. 2. That should it be found necessary to employ a substitute to fill the place of an employee who has been granted an indefinite leave of absence, said substitute shall be paid at the rate allowed for vacation work: Provided, That such assignment shall not interfere with the promotion of the substitute to appointment on the regular force when a vacancy occurs or when the force is increased and when said substitute is eligible for such regular appointment by virtue of his standing on the substitute list.

SEC. 3. That the Postmaster General shall establish boards of retirement, each board to consist of not less than three members, to be selected from employees of the Post Office Department and the Postal Service, who shall serve without extra compensation, whose duty it shall be to examine all applications for the granting of such indefinite leaves of absence and to make recommendations based upon their findings to the Postmaster General for his guidance: Provided, That the Postmaster General shall have authority to appoint a physician to advise each board in making its recommendations.

SEC. 4. That applications for the granting of indefinite leave of absence may be either voluntary on the part of the employee or may be recommended by the proper administrative or supervisory official.

SEC. 5. That the Postmaster General shall immediately formulate and issue such rules and regulations as in his judgment may be best calculated to carry out the purpose of this act.

When the hearing was granted on this proposed measure I

When the hearing was granted on this proposed measure I appeared and urged the committee to make a favorable report. I do not propose to restate what I then said, but dally I am in receipt of letters from men of all parties urging its enactment into law, and it gives me great pleasure to read the resolutions adopted by the Republican county committee of the county of New York, which are as follows:

New York, which are as follows:

Whereas there is now pending in the Committee on Post Offices a bill introduced by Hon. Daniel J. Griffin, in the House of Representatives, and known as H. R. 6915, which has for its object the pensioning of post-office employees who have become incapacitated through superannuation; and

Whereas such legislation would be in line with the present-day practice of many large corporations and business men, and has proven a factor in making for greater efficiency; and

Whereas the cost of operation of H. R. 6915, as shown by the well-known actuary, Miles M. Dawson, will be more than offset by the saving to the department of the Government affected by the employment of fewer men at lower salaries to take the place of those retired by this bill: Therefore be it

Resolved. That we, the executive committee of the Republican county

Besolved, That we, the executive committee of the Republican county committee of the county of New York, do hereby indorse this measure, and urge the Members of the House of Representatives from the city of New York and the Senators from the State of New York to aid and support its passage in Congress; and be it further

Resolved, That the secretary send a copy of this resolution to the Members of the House of Representatives from the city of New York and to the Senators from the State of New York.

Adopted April 13, 1916.

In addition thereto, I would call the attention of the House to the fact that the entire press of the country has expressed itself in favor of this measure.

Its passage would signify to the employees of the Government that the enlightened policy adopted by the large corporations is to be hereafter followed by it. In that way the Government would save money and do justice to its hardest workers.

Susan B. Anthony Amendment.

EXTENSION OF REMARKS OF

CHARLES B. TIMBERLAKE. HON. OF COLORADO

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, April 25, 1916.

Mr. TIMBERLAKE. Mr. Speaker, under the leave granted to extend my remarks in the Record I wish to include the following resolutions:

lowing resolutions:

Resolved, That this mass meeting of citizens, assembled in Colorado Springs, Colo., in the opera house, April 16, 1916, in response to the appeal of women from nonsuffrage States, calls upon Congress to pass forthwith on to the State legislatures for ratification the Susan B. Anthony amendment, and protests against the action of the Judiciary Committee in unjustly blocking the Susan B. Anthony amendment, and demands an immediate and favorable report of this amendment to the House.

Resolved also, That copies of this resolution be sent to the President, Speaker Clark, the Senate and House leaders of all parties, and to the two Senators and the Representatives from Colorado; and be it further Resolved, That the chairman of this meeting be empowered in forwarding copies to request that the resolution be read into the Congressional Record.

Resolution passed unanimously by 1,800 citizens of Denver, Colo., April 15, 1916.

Whereas President Wilson declared vesterday in his speech in New York that the Democratic Party controls the Government, and that he personally is interested in lifting the load depressing humanity.

Be it resolved, That we, women voters of Colorado, in mass meeting assembled in Denver, April 15, 1916, in the Broadway Theater, agree with the President and now demand that the Democratic Party fulfill

this responsibility that has been laid upon it by its leader, and give at once the necessary aid and facilities for the passage during this session of Congress of the Susan B. Anthony amendment, proposing to enfranchise the women of the Nation; be it further

Resolved, That we protest against the undemocratic methods now being used against this measure to free humanity and the continued blocking of the submission of it to the various States for ratification; be it finally

Resolved, therefore*, That we call upon the President and all his colleagues to pass the Federal suffrage amendment on to the States without further delay, and that a copy of this resolution be sent to all the administration leaders and to the members of the House Judiciary Committee and to the entire Colorado congressional delegation to be read into the Congressional Record in the Senate and in the House.

Ida Kruse McFarlane, Chairman Denver District Congressional Union; Mrs. James B. Belford, First Vice President; Louise Mellen, Second Vice President; M. Jean Gale, Third Vice President; Garnet Isabel Pelton, Fourth Vice President; Ida B. Blakemore, Secretary; Mrs. Helen T. Mills, Treasurer; Kate Russell, Third Vice President State Executive Committee; Mrs. L. M. Culbbert, Dorn Phelps Buell, National Advisory Committee.

Agriculture Appropriation Bill.

EXTENSION OF REMARKS

CHARLES В. HON. TIMBERLAKE,

OF COLORADO,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, April 27, 1916.

Mr. TIMBERLAKE. Mr. Speaker, to a newcomer and to a person who is accustomed to thinking in "small change," these millions asked for by this bill seem appalling; and yet, when we remember the other millions we have been recently so liberally voting away on various projects and schemes, more or less local in character, and that this appropriation is for the benefit of the greatest interests in our country—agriculture—and that it will be so widely distributed, benefiting directly a greater number of individuals than any measure to be considered by this Congress, I say, remembering these things, one can vote for the dispersion of this vast sum with confident assurance of great and far-reaching result. As a large proportion of our revenue is derived from our agricultural wealth, it is most fitting that the tiller of the soil should have large consideration when his industries are involved.

The subject of preparedness seems to be the one all-engrossing topic of consideration at the present time. That this subject should not be lost sight of in the consideration of this bill is apparent to all, for what is the greatest of all measures of national preparedness to meet the exigencies of world consideration, whether of war or peace, but that of speeding up to the utmost possible efficiency our food production. With 8,000,000 farmers in this country, the production efficiency of whom is contemplated in the measures herein proposed, in order to increase materially the \$10,000,000,000 now produced annually by reducing the handicaps under which to-day they labor is surely worthy of our best and most careful thought. It is therefore evident that no bill submitted to this House for consideration, discussion, and passage exceeds in real importance to the whole country the one now claiming attention, which calls for appropriations for the continuance of the work of the Department of Agriculture for the coming fiscal year.

In common with other Members of this House more conversant with and far more experienced than I in matters pertaining to national legislation, I am not slow to recognize the great value of the important work which has been done by this department of the Government, and with them I feel it to be my duty to facilitate in every possible way the continuation of the numerous activities of this department and to aid it, so far as we may, in carrying out all of the salutary measures it proposes to undertake for the greater good of the farmers, which means the ulti-

mate greater good to our entire citizenship.

Whether the many different amounts stated in the bill are all of them absolutely necessary to the prosecution and successful continuation of the work in which the department is now or may be later engaged could, it is presumed, be determined only by those who are thoroughly conversant with matters of departmental expenditures and necessities. The members of the committee from which the bill has been reported are-or, at least, the majority of them are—evidently satisfied as to the wisdom of appropriating the various sums therein stated. And if they, with full opportunity for examination and inquiry, recommend

the passage of the bill without material change, it would seem that there is little left for others of more limited special knowledge and less favorable opportunity of securing detailed information but to gracefully concur, unless, indeed, a question of party policy should be involved. It is, of course, difficult, if not impossible, for one not specially trained in this work or, at least, for one who has not any intimate knowledge of and practical acquaintance with the various spheres of activity enumerated in the bill to be able to pass judgment on the necessity of the sums demanded. The appropriations sought vary apparently from \$1,770,760, required for the work of the Weather Bureau, to \$632,400 for the expenses attendant upon the efforts now being made to eradicate southern cattle ticks. From the one to the other of these beneficial activities is a far cry indeed, but doubtless each is of prime importance in its special sphere.

If, Mr. Speaker, there is one department of our Government more than another in which the people of this country as a whole take special interest it is that of Agriculture. Its work is of the very highest importance to all States alike; it must be done and done well, if the country prosper, and we, as providers of the means, should be careful not to detract from the highest good it is capable of accomplishing, by furnishing appropriations insufficient to carry on this department's most necessary task. At the same time, however, caution and consideration should pravail, and should be insisted upon in the matter of its expenditures. Too liberal appropriations in this, as in other things, tend to wastefulness and abuse, and, while it is not suggested that money is at present being unnecessarily spent by the Department of Agriculture, we should guard

against rendering such a contingency possible.

It is but natural that I, personally, should be more than ordinarily interested in this bill, having been brought up on a farm myself and being directly interested in and in close touch with farmers and their interests. I am among those who feel it their duty to direct attention, whenever possible, to the preeminent importance to the Nation of this the most ancient of all pursuits of man, and to point out the constantly increasing claims for further consideration and help. Agriculture, it is acknowledged, is the source of all wealth and the foundation of all our prosperity, and, yet, it is but too evident that in many directions it has not received at the hands of Congress the means of aid and attention to which it is justly entitled. Much has been done, it is true, but more yet remains to be accomplished.

There is urgent need for effective legislation which will cause the desirable immigrants who come to our hospitable shores to go to the farms and to adopt agriculture as their work in life instead of remaining in the large centers of population to too often swell the ranks of the unemployed. In the one case, they would become food producers instead of remaining, as is now largely the case, food consumers. Then, too, measures should be undertaken which will tend to keep our youth on the farms and to prevent or, at least, lessen their present large exodus to our towns and cities. This could be accomplished by making farm life and country life, generally, more desirable and attractive. Much good is being done in this direction by those working under the provisions of the Smith-Lever Act, under the direction and with the cooperation of our most efficient agricultural colleges, which efforts should be increased

and the plan extended in all practical ways.

The whole question of rural highways and country roads, their improvement and maintenance, needs to be considered and vigorous action taken to remedy their conditions, thus helping the country and town dwellers alike. A very large extension of the Rural Mail Delivery Service must be undertaken and ac-complished if the farmer is to enjoy anywhere equal mail facilities with others, and to which he is justly entitled. Plans under which the farmer could secure money easily, at a lower rate of interest and for a longer time under an amortization scheme, should be devised and put in operation. This would encourage the farming interests and would contribute largely both to agricultural development proper and to making farm life more attractive by rendering possible the installation of modern conveniences, both in the home and on the farm. The stock-raising industry should be increased and farmers should be encouraged to undertake and combine dairying with their farming, thereby adding materially to their profits and maintaining the productive character of their land. A practical system of farm marketing should be evolved by Congress, as under the present conditions by far too much of the farmers' profit goes into the pockets of the middlemen. There should be provided some means whereby would be avoided the necessity for the farmer to sell his crops as soon as grown, regardless of the then market price, and would enable him to hold them until prices were reasonable and favorable. All of these are problems of

the first importance, awaiting appropriate action of Congress, and all affect materially the welfare and prosperity not of the

farmer alone but of the entire community

I represent a district largely agricultural, populated by an intelligent, industrious, and progressive people. All questions affecting agricultural prosperity are to them matters of paramount importance. They excel in stock raising and in the cultivation of the sugar beets, and have developed what is termed "dry farming" to a marked degree of efficiency by adopting the most scientific methods of "summer fallowing crop" rotation, and so forth.

Our country is growing, its population increasing, and its necessities are consequently greater. This naturally entails a constant increasing expense. The country will not object to this, if as a result our lands are rendered more fruitful and productive. If the best interests of the farmer, whose condition forms the basis of all commercial prosperity, are thereby subserved, and if in consequence the welfare of the country as a whole is materially enhanced, we should have no hesitancy in giving our support to the measure, which I shall cheerfully do.

Agriculture Appropriation Bill.

EXTENSION OF REMARKS

HON. FREDERICK C. HICKS,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, April 27, 1916.

Mr. HICKS. Mr. Speaker, under the permission to extend in the Record my remarks on agriculture by printing a letter from a constituent I submit the following:

My dear Mr. HICKS
I am now in a fix.
My garden is lying untilled
For want of your seeds.
I am greatly in need.
Now send them to me if you will. You wrote me a letter,
And said I had better
Send you word if seeds did not come.
And as I have waited,
And seeds are belated,
Kindly hurry them on to my home. My neighbor, a farmer,
A vegetable charmer,
Has waited till hair's turning gray.
The seeds from your garner
He is waiting, this farmer,
And I think it is truth that I say. We wait for its coming,
And coming a running,
Fast Setauket will find us at home.
V. Hallock just write it,
E. O. Darling beside it,
And now, Mr. HICKS, I have done.

Yours, very truly,

V. HALLOCK, East Sciauket, Long Island, N. Y.

War Disproves Theory of Federal Arms Plants.

EXTENSION OF REMARKS

BENNET. HON. WILLIAM S.

OF NEW YORK.

IN THE HOUSE OF REPRESENTATIVES,

Thursday, April 27, 1916.

Mr. BENNET. Mr. Speaker, under leave to print I insert the following article from the New York Commercial of March

WAR DISPROVES THEORY OF FEDERAL ARMS PLANTS—PRIVATE MUNITION COMPANIES GERMAN POLICY FOR 40 YEARS—EFFECTIVENESS OF TEUTON PREPAREDNESS CLEARLY SHOWN TO BE DUE TO COOL JUDGMENT OF KAISER AND HIS ADVISERS IN FOSTERING INDEPENDENT INDUSTRY IN POWDER, SHELLS, AND GUNS.

rowder, shells, and guns.

What is regarded as one of the most significant results of the world war is the attitude that some of the legislators in the Capitol at Washington have assumed with regard to the building of Government-owned munition plants as a means of national preparedness. The supplying of powder, shells, guns, and all of the multifarious articles necessary to the complete equipment for army and navy was the work of 40 years of German preparedness and during this period the ex-

perience and cool judgment of the Emperor and his council was in favor of privately owned plants rather than the operation of Govern-

perience and cool judgment of the Emperor and his council was in favor of privately owned plants rather than the operation of Government plants does on the theory that it was always possible to increase the number of operatives in a privately owned plant that had to depend upon outside work as well as Government work for its expenses and profit, and that this was a much better plan than to create an enormous Government plant with its thousands of skilled operatives remement as in no land was it ever the policy for Government plants to make goods to compete with individuals in open market.

This same policy has ruled in England and in France, as well as in Austria-Hungary and the lesser European countries.

They created their types of guns, rifees, and various grades of extended their types of guns, rifees, and various grades of extended their types of guns, rifees, and various grades of extended their types of guns, rifees, and various grades of extended their types of guns, rifees, and various grades of extended their types of guns, rifees, and various grades of extended their types of guns, rifees, and various grades of extended their types of guns, rifees, and various grades of extended their types of guns, rifees, and various control of their army and navy officers, but did not engage in the completion of their army and navy officers, but did not engage in the completion of their army and navy officers, but did not engage in the completion of their army and navy officers, but did not extended their types of their grades of their grades of their grades of extended their types of their grades of their

down of Government plants is a matter that the records show on every page regarding the activities of this Government in any of its ship-yards.

From the many records scoted in the Brooklyn Navy Yard, the Mare Island Navy Yard, the League Island Navy Yard, and Norfolk Navy Yard it shows that on the approach of completing a cruiser or battle-ship many hundreds of men are instantly dropped from the pay rolls and left to shift for themselves and find work in private foundries, ship-yards, and machine shops. Such intermittent labor as they could find in the Government-owned shop would never bring them to the same point of efficiency as is attained where they are employed year in and year out, some of them for their entire period of active business careers in the one plant, as is the case with many of our large foundries, shops, shipyards, and munition plants.

Lurking in the background of the idea of Government-owned plants concentrated in a few places throughout the United States is the possibility of their destruction by enemies of the United States. Such a catastrophe during actual war would be almost fatal. This reason is minimized—almost neutralized to the point of negligibility—where private plants in a hundred cities are turning out the articles needed for the Army and Navy.

Another nation-wide conflagration or sudden assault could be conceived and the steady flow of goods on order could be counted upon just as is now the case in all of the European countries where the private plants are responding to the tremendous demands made by their Governments. Here it is well to consider that all of the invidious assaults that have been made upon American capital and labor engaged in the legitimate production of munitions is directed toward weakening our ultimate resources. One of these attacks is in the form of an effort to pass an embargo act to prevent American manufacturers of munitions and war supplies from selling their goods and having them shipped abroad. One of the strongest arguments in favor

of the unyielding maintenance of our rights in regard to export trade in munitions is that it carries with it the assurance that in our day of peril we would be free, as we have been in the past, to call upon our foreign friends to supply our needs.

It was this thought that dominated the wording of our treaties with foreign countries and which has been our guiding star since the creation of the Republic. In no war at no time has America ever deviated from its attitude of holding to the right of trading with whom it pleases and using the high seas without trammel from any other nation. The vote of confidence which President Wilson has received from both the House and Senate shows clearly that the executive branch of our Government is receiving the full, hearty support of the great majority of the Legislature and the people.

Linder these conditions no one can contemplate the surrender of our right to export American-made merchandise. It is to be hoped that no scheme of foreign hatching will result in the Government checking itself by the creation of plants to produce its own equipment, which in the end would result in keeping it constantly behind the onward procession of the world in matters of armament and equipment, while depleting to a considerable extent the virility of America's leading Industries in steel, iron, and copper, and the other allied industries associated in the matter of arms and munitions by reason of Government competition.

Probation System in United States Courts.

EXTENSION OF REMARKS

HON. ISAAC SIEGEL.

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, April 27, 1916.

Mr. SIEGEL. Mr. Speaker, it is now conceded that the probation system adopted by 44 States in the Union has tended to reform a large number of offenders without subjecting them to imprisonment and at the same time saving the States the expense of their maintenance in penal institutions,

Until the power of the judges of the United States district courts to suspend sentences whenever they deemed same advisable for the best interests of the people was questioned, the judges exercised such power under what they believed to be the inherent power vested in courts.

Recently, however, the right to exercise that power has been challenged by the Attorney General, and accordingly a mandamus proceeding was instituted by him in the Supreme Court against

In a letter to me dated March 23, 1916, the Attorney General. among other things, said:

among other things, said:

While appreciating that you are moved to this request by the fact that I have challenged the present power of judges in that regard in the proceeding referred to by you, and now under submission in the Supreme Court of the United States (the Killits case), the question involved in the last-named case, viz, whether judges are usurping power, is a very different one from the question as to whether such a power should be bestowed upon them, or, if to be bestowed, the extent of the power or the mode of its exercise. And I seriously doubt the wisdom of giving official utterance on rhose latter matters, so peculiarly addressed to the discretion of the legislative branch of the Government.

I may say, generally, that while the infinite variety of crime and the varying conditions of individual offenders may make it desirable to lodge in a court some power of differentiating consequences of a violation of criminal laws beyond the usual latitude afforded by the maximum and minimum penalty—as, for example, in the case of first offenders, either very young or very old, who are charged with offenses less than bouicide or less than the gravest felonies, or in the case of all offenders charged with offenses of a nature so petty as that any action taken in that regard would not be calculated to arouse distrust of the court in the public mind—such a power, if given, should always be carefully restricted and safeguarded so as to insure the latter result.

It appears therefrom that the Attorney General takes the view

It appears therefrom that the Attorney General takes the view that the adoption of a probationary system in the United States courts is one for the consideration of Congress.

Mr. Charles L. Chute, who has gathered information re-carding probation laws, has furnished the following list of States as having same, and I insert same in the RECORD:

States and Territories having juvenile and adult probation laws, and year enacted. cted to Jan 1 1916

[Corrected to Jan. 1, 1910.]		
Alabama:	Juvenile.	Adult.
Mobile County	1907

Total Inventle AA States Alacks and	District of Columbia	

Total juvenile, 44 States, Alaska, and District of Columbia. Total adult, 26 States and District of Columbia.

The report of the Attorney General shows that the United States district courts convicted 13.477 persons during the year ending June 30, 1915. Of the offenders committed during the same period of time 77.7 per cent had never been in prison because 100 person b fore: 52 per cent were less than 30 years of age; 9 per cent, or 247, had not reached the age of 20 years; 81.8 per cent were native born; 48 per cent were married; and 68.5 per cent were white.

The bill H. R. 9660 introduced by me does not provide for any paid probation officers. It simply provides for the payment of necessary expenses and makes the United States marshal the probationary officer.

That a probation system of some kind in the United States

courts is necessary is no longer open for argument.

I have submitted this bill to a number of United States district court judges, and I read the following letters which I have received from them:

UNITED STATES DISTRICT COURT,
WESTERN DISTRICT OF NEW YORK,
Buffalo, N. Y., March 6, 1916.

Hon. ISAAC SIEGEL, House of Representatives, Washington, D. C.

My Dear Congressman: I have read with care House bill 9660, for the establishment of a probation system in the United States courts, and I thoroughly approve the same. I think it embodies all the requirements necessary for carrying out the purposes of the bill. No advantageous changes occur to me.

Very truly, yours,

John R. Hazel.

UNITED STATES DISTRICT COURT, EASTERN DISTRICT OF MISSOURI, St. Louis, March 18, 1916.

Hon. ISAAC SIEGEL, Member of Congress, Washington, D. C.

DEAR SIB: I am in receipt of your favor of the 16th instant inclosing copy of bill introduced by you creating a probationary system for the United States courts. I have examined the bill and most heartily approve of its provisions.

Yours, truly,

DAVID P. DYER,

DAVID P. DYER, District Judge.

UNITED STATES DISTRICT COURT,
JUDGE AUGUSTUS N. HAND'S CHAMBERS,
New York, March 15, 1916.

Hon. ISAAC SIEGEL,
House of Representatives, Washington, D. C.

House of Representatives, Washington, D. C.

Dear Mr. Siegel: I am very glad to see that a Congressman from New York has introduced a bill for a probation system. You will be entitled to great credit if you succeed in having it passed. If the Supreme Court in the proceeding against Judge Killits should hold that the power to suspend sentence does not exist. I should feel that a probation system was not only important but almost vital. I think it a mistake to specify the marshal as probation officer. He might not be able to do the work in a busy district, and frequent changes in office would be some drawback. I think all the judges would know trained people connected with organized charities who would act without compensation, and that it would be more satisfactory to leave the selection of the probation officer to the particular judge. Your plan to pay nothing but expenses is sound.

Very truly, yours,

Augustus N. Hand.

United States Courts, Pittsburgh, March 18, 1916.

Hon. ISAAC SIEGEL,

House of Representatives, Washington, D. C.

My Dear Mr. Siegel: I have your letter inclosing copy of the bill which you have introduced, creating a probationary system for the

United States courts. I have run over this bill, and without undertaking to pass upon it in detail I think such a measure would be wise and in entire harmony with the modern trend of legislation in the various States. I would, therefore, favor the bill.

Very sincerely, yours,

W. H. S. Thomson.

UNITED STATES COURTS, Boston, March 21, 1916.

Hon. ISAAC Siegel, House of Representatives, Washington, D. C.

My Dear Mr. Siegel: Yours of the 16th was duly received with the inclosed copy of bill establishing a probationary system for the United States courts. It has my hearty approval. If there is anything which I can properly do to assist in securing favorable consideration for it by the Massachusetts delegation, please let me know.

Yours, very truly,

J. M. MORTON, Jr.

UNITED STATES DISTRICT COURT,
WESTERN DISTRICT OF MISSOURI,
Kansas City, April 1, 1916.

Western District of Missouri,
Kansas City, April 1, 1916.

Hon. Isaac Siegel,
Committee on Immigration and Naturalization,
House of Representatives, Washington, D. C.

My Dear Mr. Siegel: Your letter of March 4 came while I was in attendance upon court at St. Joseph, Mo., and I have been continuously occupied on court work ever since. This must be my apology for failure to make earlier reply to your communication.

I have examined House bill No. 9660 with some care. It may be that upon trial latent defects, which do not now attract attention, may become apparent; but I am unable at present to suggest any change which seems necessary or advisable. The ample discretion lodged in the judges would seem sufficient to meet any case that might arise, and I am of opinion that such discretion will not be abused. Certainly in cases of major offenses the courts would not exceed the clemency extended by the pardoning power, and if they fall too far short of it that power may still be invoked.

I am greatly in favor of the principle involved in this bill. It will relieve the courts of the pain and embarrassment experienced in dealing with cases which present undoubted violations of law, but under circumstances and conditions in mitigation of the offense which demand substantial consideration. In such cases the court is now largely, if not entirely, helpless.

I thank you for your courtesy in submitting your bill to my consideration.

Sincerely, yours.

Arba S. Van Valkenburgh.

sideration Sincerely, yours,

ARBA S. VAN VALKENBURGH, District Judge.

United States Court,
Eastern District of New York,
Brooklyn, N. Y., April 5, 1916.

House of Representatives, Washington, D. C.

My Dear Siegel,
My Mr. Owen, to accomplish somewhat the same result, but with a paid probation officer.
I do not feel that I can definitely make suggestions directly as to the language of such a bill, as I have not given the matter sufficient thought. My first impression, however, is that a salaried probation officer is hardly necessary, that the marshal or some other of the court officials could easily do whatever might be needed in that respect, and that your bill, or one along those lines, would probably prove useful. In the cities there would seem to be much more occasion for the use of a probation officer, and yet I have the feeling that even in New York the amount of benefit received therefrom would hardly justify the appointment of a salaried official. I think, however, some bill along these lines would be worth trying in working along with the administration of the criminal courts of the State.

Yours, respectfully,

Thomas I. Chatffield,
United States Judge.

THOMAS I. CHATFIELD, United States Judge.

UNITED STATES DISTRICT COURT, JUDGE'S CHAMBERS, Norwich, N. Y., March 7, 1916.

The Hon. ISAAC SIEGEL.
House of Representatives, Washington, D. C.

The Hon, ISAAC SIEGEL, House of Representatives, Washington, D. O.

My Dear Mr. Siegel: I have your communication of March 4, inclosing copy of House bill 9660, and thank you for the same. The Supreme Court of the United States now has before it the question whether United States courts have power to suspend or defer sentence in criminal cases. If that court holds that no such power exists, action on the part of Congress of some character is imperative. In the case of first offenders, more especially young men and boys, I am opposed to jail sentences, except in rare instances. My judgment and experience are that in uine cases out of ten more harm than good is done by this course in such cases. More than 50 per cent of young criminals sent to prison lose their sense of manhood to ouite a degree, and after discharge are inclined to, and usually do. fall into criminal practices and reappear in court, State or Federal. During my 13 years and 6 months on the bench I have suspended sentence in the case of probably 100 boys and young men between the ages of 15 and 25 years. In only 6 cases where I have suspended sentence has the offender reappeared in court. Of these 3 were men between 35 and 50 years of age. On axain offending they were promptly arrested and sentenced. My experience, therefore, is that the suspension of sentence in the case of boys and young men is wise and beneficial. If we could have a suitable prison where the offenders might be divided into classes and segregated and trained in classes. I think the evils of imprisonment would be lessened; but, unfortunately, we have no such provision in the law. I am very busy, and have not had time and will not have time to study your bill in all its details and formulate an opinion as to its workings in detail. I am, however, in favor of the general principles involved and stated therein and would advocate its passage, possibly with modifications and amendment, although I would not undertake at this time to make suggestions which are immature.

I think the prov

sion. In suspended sentences or in-deferring sentences I have always made it a practice to inquire thoroughly and carefully into the history, character, and circumstances of the defendants and into the history, character, and circumstances of the family connections, if any.

Probably in nine cases out of ten young boys between the ages of 15 and 25 years who go astray and commit offenses against the law do so because of peculiar environment and temptations and ignorance. I feel that it is better to save, if possible, by placing the defendants under supervision and suspended sentence than to degrade them by imprisonment. If it were true that their acts are the result of deliberation and choice and criminal instincts on their part, my ideas would be different; but my experience is that such cases are rare, indeed. I feel that you are doing a good work, and will be entitled to commendation if you can secure the enactment of your bill or one similar to it.

I, of course, favor suitable limitations on the power of the judge in suspending or deferring sentences in criminal cases. It is perplexing, however, to know where to draw the line.

Most respectfully, yours,

Geo. W. Ray.

UNITED STATES COURTS,
MIDDLE DISTRICT OF PENNSYLVANIA,
Sunbury, March 18, 1916.

Hon. Isaac Siegel,

House of Representatives, Washington, D. C.

Dear Sir: I have before me your letter, with inclosure of House bill
No. 9660 for the establishment of a probation system in the United
States courts, and in reply take pleasure of advising you that this bill
meets a long-felt want in my judgment. I have been following the
practice to an extent which you are here attempting to legalize by direct
legislation, and often thought that a law of this character should be
placed on the statute books.

Very respectfully, yours,

Charles B. Ditmer.

Judge Charles M. Hough, of the southern district of New York, in a letter to me, says:

I have read your bill relating to probation and am very much interested in it. With the principle I am entirely in sympathy. * * * On the other hand, I do not think that paid probation officers have proven a very striking success in our State. I am of opinion that there is very little use in probation unless some one can be found who is really interested in a personal way in the accused. * * * I thank you, very sincerely, for the interest that your bill shows you have taken in this very worthy advance in the law.

Although Judge Learned Hand does not believe that the United States marshal could perform the work in a very hardworked office, he holds the view, however, that no paid probation officers should be employed, and I therefore read his letter giving his views in full:

JUDGE LEARNED HAND'S CHAMBERS, March 6, 1916.

Hon. ISAAC SIEGEL, M. C.

Hon. ISAAC SIEGEL, M. C.

Dear Sir: I have your letter of March 8 inclosing a proposed bill for a probation system in the district courts, and asking my opinion in regard to it. As you probably know, the Supreme Court has still under consideration the question whether at common law the district judges have power to suspend sentence, and it would seem to me wiser to wait until they have decided that question before creating a probation system. If they should decide that we have not power to suspend sentence some such bill as yours would certainly be absolutely essential to the proper administration of justice.

On the other hand, I question whether the United States marshals have the machinery by which they could properly take over this function. In our district, in any case, the United States marshal has a very hard-worked office and he has no time or means to give any effective attention to the probation of prisoners, and I do not believe that he would welcome this addition. I think it would probably be better to allow judges to select probation officers who would do the work voluntarily, which I do not think would be difficult. There are a number of intelligent and experienced women who would be glad to give their services without charge, or, at least, if they got back their expenses only, and my own judgment would be that they could afford more time for that than the marshal would be able to give. My own theory, therefore, would be that if a probation system is to be started it would be well to keep it within the hands of the judges, relying upon the good will of public-spirited citizens to discharge these duties.

It is a source of much satisfaction to me to find that you are interested in so worthy and necessary a part of the administration of justice.

Respectfully,

justice. Respectfully,

Judge Julius M. Mayer, of the southern district of New York, formerly attorney general of the State of New York, says:

On the other hand, I think it just as well, in the long run, not to have paid probation officers. * * * It would be a very valuable matter to have probation recognized by statute, and to have proper records kept, etc. On the other hand, while I recognize the necessity of paid officers in the State system, I do not see that necessity of paid officers in the Federal system, and I am not much of a believer in the creation of new offices.

Although Judge Hollister, of the southern district of Ohio, differs on the question as to who shall be the probationary officer, at the close of his letter he says:

I am very much in favor of some system which will save the judges from the necessity of sending young and first offenders to jail.

Mr. Speaker, I hope that we may be able to give consideration this session of Congress to this question, and that among the beneficial laws that the Sixty-fourth Congress may enact may be one for a probation system for the United States district courts, and in that way help the judges in performing their duties according to the dictates of their consciences and at the same time do justice, both to the people and to the offender who may appear at the bar.

The people are asking for such a law, and it is our duty to comply with their demands.

Juvenile Court, District of Columbia.

EXTENSION OF REMARKS

HON. JAMES T. LLOYD,

OF MISSOURI.

IN THE HOUSE OF REPRESENTATIVES,

Monday, April 24, 1916.

Mr. LLOYD. Mr. Speaker, the juvenile court bill now pending, in my judgment, means more to the unfortunate classes in the District of Columbia than any measure that has been before Congress in a number of years. I regret that some people seem to have misunderstood its purpose and are unduly alarmed about the effect of the passage of the bill. I am safe in making the statement, I am sure, that this bill is not drawn with the idea of helping any political organization, charitable institution, or church enterprise. After it becomes a law the good services of all these various benevolent institutions may be employed to give help and homes to those who need help and who are without homes.

I arose for the purpose of calling attention especially to the charge that has been made that the legislation sought to be enacted here is in the interest of a particular church. I have not the time to discuss this matter, and therefore append to this statement as a part of my remarks an article found in the Presbyterian Standard of date April 19, 1916, that was written by Rev. A. J. McKelway, a Presbyterian minister. The article referred to explains a situation which has been misunderstood and is as follows:

A REPLY TO "PATRIOT."

[By Rev. A. J. McKelway, D. D.]

A REPLY TO "FATRIOT."

[By Rev. A. J. McKelway, D. D.]

I have read the article in the Standard of April 5 entitled "Free Press and Personal Liberty Endangered," signed "Particl." I think no patriot need be alarmed jest the bills which aim to class scurrilous and defamatory publications with indecent publications should pass. They would only be seriously considered when the American public has become even more disgusted than it now is with the senseless and malleious abuse of Catholics and Jews, which is the stock in trade of certain publications. I am more concerned, however, with the representations made in this article concerning the new juvenile-court bill for the District of Columbia. "Partict" has evidently been misled by an article file the concerning the new juvenile-court bill for the District of Columbia. "Partict" has evidently been misled by an article file the concerning the new juvenile-court bill for the District of Columbia. "Partict" has evidently been misled by an article file the concerning the new juvenile-court bill for the District of Columbia. "Partict" has evidently been misled by an article file out the control of the control of the Catholic University here. It was this Julia Lathrop, Chief of the Children's Bureau, a Congregationalist; Mr. Walter C. Clephane and Mr. William Raldwin, both Presbyterians; and Dr. Kirby, a professor in the Catholic University here. It was this latter name that probably aroused the indignation of the Menace, which goes so far as to say in regard to the appointment of a Catholic on his commission by Attorney General McReynolds: "A few months after rendering this service Mr. McReynolds was appointed a member of the Suprase of Mr. and the Catholic University has a proper of a Catholic on his commission by a considered by organizations interested in the welfare of children, and has received wide indorsement by people who know what they are talking about. Representative Ern Johnson, of Kentucky, happens to be chairman of the House District Committee, to which th

It should be recalled that the juvenile court deals with dependent and neglected children as well as with delinquent children, and I presume that if a Methodist family wished to adopt a child of Presbyterian parents and any Presbyterian family were found willing to do so, the spirit of this section would be carried out.

The alleged quotation from section 10 of the bill is a misquotation throughout, a petition being substituted for the ordinary warrant. The section asserts that "the petition shall set forth the name and residence of the child and of the parents, if known to the petitioner, and the name and residence of the person having the guardianship, custody, control, and supervision of such child, if same be known or can be ascertained by the petitioner, or the petition shall set forth that they are unknown, if that be the fact." One of the conditions under which such a petition may be filed is where a person finds a child "under such improper or insufficient guardianship or control as to endanger the morals, health, or general welfare of such child." And upon the filing of such a petition "the court may forthwith, or after first causing an investigation to be made by a probation officer or other person, cause a summons to be issued requiring the child to appear before the court and the parents or the guardian to appear with the child, at a place and time stated in the summons, to show cause why the child should not be dealt with according to the provisions of this act."

The whole purpose of the bill is to remove the court from the atmosphere of criminal proceedings. But so far as endangering the liberty of anybody is concerned, I suppose any truculent or irresponsible person, not known to be such, could swear out a warrant against the editor of the Standard charging him with almost any crime in the calendar, though we should hope that the proceedings would not go very much further than that. And I have no doubt that any one irresponsibly deceiving the juvenile court by a false petition would be subject t

"for."

I notice that "Patriot" urges this: "Let every patriot make his influence felt and urge his Congressman to defeat these infamous measures," one of them being this juvenile-court bill. Knowing the attitude of the Standard as to mixing up the affairs of church and State in the remotest way, I would have hesitated to ask through its columns that patriots with some knowledge of the facts should urge their Congressmen to pass the juvenile-court bill, or the Federal child-labor bill, as another example. I presume that the very idea of any Catholic support for the bill is a sufficient excuse for mixing the affairs of church and State in the appeal which "Patriot" makes through the columns of the Standard.

WASHINGTON D. C.

WASHINGTON, D. C.

Arbitration Treaties.

EXTENSION OF REMARKS

HON, ISAAC R. SHERWOOD, ог онго.

IN THE HOUSE OF REPRESENTATIVES, .

Friday, April 28, 1916.

Mr. SHERWOOD. Mr. Speaker, under the leave granted to me to extend my remarks in the Record I include a list of the treaties negotiated by three administrations—the Roosevelt, the Taft, and the Wilson administrations-with comments:

House concurrent resolution 35.

Whereas treaties between the United States and 18 other Governments that solemnly pledge each of the contracting parties to the principle and practice of investigation and delay before the resort to arms in the settlement of international disputes are at the present time in full force and effect; and
Whereas other treaties are in force between the United States and sundry other Governments which specifically provide for the arbitral settlement of disputes not capable of adjustment by diplomacy or friendly composition; and
Whereas nine of the Governments of Europe and the Government of the United States have entered into treaty agreements, duly ratified, exchanged, and proclaimed, to submit all controversies that threaten to interfere with their peaceful relations to an international commission for investigation and report within one year, thus securing a delay before resort to arms that may, and probably would, prevent war; and
Whereas the principle involved in these treaties has been assented to by other Governments with which formal agreements have not been ratified and exchanged; Therefore be it

*Resolved by the House of Representatives (the Senate concurring),

Resolved by the House of Representatives (the Senate concurring), That the same and humane method of settling disputes between Governments set out in the treaties hereinbefore mentioned should be employed in the adjustment of any and all controversies between the Government of the United States and any other Government.

COMMENTS ON THE RESOLUTION.

The above resolution can in no way embarrass or interfere with any diplomatic negotiations now in debate between the United States and any foreign nation. It only recommends the humane principles of arbitration indorsed and adopted by three administrations-Roosevelt. Taft, and Wilson.

The so-called Bryan treatles negotiated under President Wilson are agreements on the part of the Governments with which they were negotiated to submit any controversy between the United States and the Government with which it happens at the moment to have a dispute to a commission for investigation, with instructions to report within one year. These treaties were negotiated for the purpose of securing delay, the theory being that if quarreling Governments could only be persuaded to await a resort to arms for that length of time and at the same time have the situation thoroughly investigated the result might avert the dire calamity of war.

Eighteen of these so-called Bryan treaties that provide for a commission of investigation and the delay of a year were completed, have been ratified, and are now in force. The ratification of 10 others was advised by the United States Senate, but they were not promulgated and are not in force. Similar agreements were negotiated with Panama and the Dominican Re-

public, but have never been ratified.

A table is submitted which shows the countries with which the United States has negotiated general arbitration treaties. The negotiation of these treaties occurred during the years of 1908 and 1909, and all treaties were to run for a specified time. In some instances the time limit has expired and the treaties have been renewed for another five-year period. There are 22 of these general treaties of arbitration.

A list of the treaties ratified during President Wilson's administration and in force is also submitted. A list of 10 such treaties, ratification of which has been advised by the United States Senate, but which have not been put in force, is also

submitted.

All of the treaties of arbitration negotiated by Secretary Root, of the State Department, contained an identical clause, defining what should and what should not be arbitrated, and provision was made that all arbitral questions should be referred to the "Permanent Court of Arbitration established at The Hague by the convention of July 29, 1899."

These excepted from arbitration questions of "vital interest, independence, or the honor of the contracting States." treaties were all negotiated before the beginning of the administration of Mr. Taft, who has frequently and forcibly expressed his willingness to submit all controversies between this Govern-

ment and any other to arbitration.

These facts all show that the United States is thoroughly committed to the policy of arbitration, and there seems to be no question at issue between this and any other country at this time which may not be properly submitted to an arbitral tribunal.

GENERAL ARBITRATION TREATIES.

Countries with which the United States has negotiated general arbitration treaties.

tion treaties.

France, February 10, 1908; Switzerland, February 29, 1908; Mexico, March 24, 1908; Italy, March 28, 1908; Great Britain, April 4, 1908; Norway, April 4, 1908; Portugal, April 6, 1908; Spain, April 20, 1908; Netherlands, May 2, 1908; Sweden, May 2, 1908; Apann, May 5, 1908; Penuark, May 18, 1908; China, October 8, 1908; Peru, December 5, 1908; Salvador, December 21, 1908; Ecuador, January 7, 1909; Haiti, January 7, 1909; Uruguay, January 9, 1909; Costa Rica, January 13, 1909; Austria-Hungary, January 15, 1909; Brazil, January 23, 1909; Paragnay, March 13, 1909. Twenty-two treaties. All negotiated in 1908 and 1909. Thirteen now in force.

In addition to the above treaties, the following treaties were also negotiated and have been ratified by the United States Senate but have not as yet been ratified by the foreign Governments:

Argentina, December 23, 1908; Bolivia, January 7, 1909; Chile, January 13, 1909.

PEACE TREATIES UNDER PRESIDENT WILSON. Treaties promulgated and in force.

Treaties promulgated and in force,

Guatemala, signed September 20, 1913; Bolivia, signed January 22,
1914; Portugal, signed February 4, 1914; Costa Rica, signed February
13, 1914; Deumark, signed April 17, 1914; Italy, signed May 5, 1914;
Norway, signed June 24, 1914; Peru, signed July 14, 1914; Uruguay,
signed July 20, 1914; Chine, signed July 24, 1914; Paragay, signed
August 29, 1914; China, signed September 15, 1914; France, signed
September 15, 1914; Great Britain, signed September 15, 1914; Spain,
signed September 15, 1914; Russia, signed October 1, 1914; Ecuador,
signed October 13, 1914; Sweden, signed October 13, 1914. Elighteen
treaties.

Ratification advised by United States Senate, but treatics not promulgated and not in force.

Salvador, signed August 7, 1913; Houdurss, signed November 3, 1913; Nicaragua, signed December 17, 1913, Netherlands, signed December 18, 1913; Persia, signed February 4, 1914; Switzerland, signed February 13, 1914; Venezuola, signed March 21, 1914; Argentine Re-

public, signed July 24, 1914; Brazil, signed July 24, 1914; Greece, signed October 13, 1914. Ten treaties.

Ratification not yet advised by United States Senate.

Panama, signed September 20, 1913; Dominican Republic, signed February 17, 1914. Two treaties.

IDENTICAL ARTICLES OF THE TREATIES OF GENERAL ARBITRATION NEGOTIATED BY MR. BOOT UNDER PRESIDENT BOOSEVELT, Article 1.

Differences which may arise of a legal nature or relating to the interpretation of treaties existing between the two contracting parties, and which it may not have been possible to settle by diplemacy, shall be referred to the Permanent Court of Arbitration established at The Hague by the convention of the 29th July, 1899: Provided, nevertheless, that they do not affect the vital interests, the independence, or the honor of the two contracting States and do not concern the interests of third parties. ests of third parties.

The only general arbitration treaty negotiated by the Taft administration which was not a renewal of the above treaties was a treaty of March 13, 1909, which contained the identical article above given.

Preparedness for National Defense.

EXTENSION OF REMARKS

HON. L. C. DYER, OF MISSOURI,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, April 29, 1916.

Mr. DYER. Mr. Speaker, the Senate and the House have already given much time to the consideration of what is necessary to be done in order to put our country in condition to be able to defend our possessions and honor. Shortly we will give more thought to this matter, when the naval bill is taken up. We have expended considerable money in the last few years in building a Navy. The amounts are as follows:

Date of act,	Congress.	Amount.	Fiscal year,
Mar. 3, 1905 June 29, 1906 Mar. 2, 1907 May 13, 1908 Mar. 31, 1909 June 24, 1910 Mar. 4, 1911 Aug. 22, 1912 Mar 4, 1913. June 30, 1914 Mar. 3, 1915	Fifth-eighth, third. Fifty-ninth, first Fifty-ninth, second. Sixtieth, first. Sixtieth, second. Sixty-first, second. Sixty-first, third. Sixty-second, second Sixty-second, third. Sixty-third, second. Sixty-third, third.	\$102, 836, 679, 94 102, 371, 670, 27 99, 971, 449, 79 122, 606, 133, 27 136, 935, 199, 05 131, 510, 246, 01 126, 478, 338, 24 128, 908, 196, 96 141, 050, 643, 53 145, 503, 963, 48 149, 763, 563, 45	1908 1907 1908 1908 1918 1911 1913 1914 1918 1918

As a result of this expenditure, which includes the general expenses of the Naval Establishment, we learn that the United States has on the Navy list-built, building, and authorized-the following number of armed ships:

Battleships, first line17
Battleships, second line 25
Armored cruisers10
Cruisers, first class5
Cruisers, second class 4
Cruisers, tnird class 16
Monitors 7
Destroyers 58
Transports 5
Hospital ships 1
Converted yachts 14
Special type8
Coast torpedo vessels (destroyers not serviceable for duty with fleet)
Torpedo boats19
Submarines 75
Tenders to torpedo vessels8
Gunboats 29
Supply ships 5
Fuel ships 22
Tugs
Unserviceable for war purposes21

A number of these ships are, however, out of commission, because there are not enough men to handle them. The Navy is many thousand men short of what is required.

is admitted by the Secretary of War and the Secretary of the Navy that the authorized enlistments for the Army and the Navy are far from being realized. Young men of good character and physical fitness are not looking for the recruiting offices. That is the condition now, and yet there are bills pending in the Congress that, when written into law, will call for many thousands more men. From where and how will we get them? Some think we should have compulsory service—the drafting of men needed for the Army and Navy. I think the people

realize, however, that this Congress will not pass a law to that effect while we are at peace. So, Mr. Speaker, the only way to recruit our Army and Navy to authorized strength, now and under pending legislation, is to make the Army and Navy more attractive to the men. No one is foolish enough to expect men to enlist for the money they receive as soldiers and sailors. While in the service our soldiers and sailors must be treated like men and human beings. They must not be laughed at and belittled; they must not be denied admission to places of amusement or public gatherings because they are clad in the uniforms of the soldiers and sailors of the United States. They must not be looked down upon, but instead shown special consideration because of their being in the service. Not only the people must act differently toward these men but the commissioned officers must realize that enlisted men are Americans and human beings, the same as they, and also that good treatment tends to efficiency and discipline. Opportunity for promotion and retirement must be improved upon in many respects.

Then, Mr. Speaker, when the men have served their enlistments and received an honorable discharge, that discharge must mean something. It must be considered by the American peo-ple as a badge of honor and distinction. This honorable discharge must mean something for these men when they seek employment either from the Government, the States, the municipalities, or the employing business men of the country. That is not so now. Service counts for very little at this time. Public officials ignore the preference laws, little as they are, that There must be a change by appointing powers we now have. in patriotism if we are to have a better and more patriotic

spirit in this regard.

Why, Mr. Speaker, the Congress has not shown enough appreciation of the service of the men in the Spanish War to pass the widows and orphans' little pension bill-that which is to take care, in a small way, of the dependent widows and orphans of those soldiers and sailors who are in sore need. This House, I am glad to say, passed it in this Congress and in the two pre-ceding ones, but never yet has the Senate done so. It is still pending there, and is now on the calendar for action. Let the Senate act favorably and at once on this Spanish war widows and orphans' pension bill and the result for the good of our country will be manifest in many ways.

Here, Mr. Speaker, let me read a letter and table of figures upon the subject of pensions in Canada, to show the liberality that prevails in that country for the widows, orphans, and men who serve their country. It is as follows:

DEPARTMENT OF MILITIA AND DEFENSE, Ottawa, April 10, 1916.

Ottawa, April 19, 1916.

From: The President Pensions and Claims Board, Canadian Militia.
To: L. C. Dyer, House of Representatives, Washington, D. C.
Sir: In compliance with the request contained in your letter of March 29 last, addressed to the clerk, House of Parliament, Ottawa, I have the honor to inclose herewith copies of the militia pension act, which contains the provision which the Canadian Government has made for the widows of soldiers.

This department has no information respecting pensions for the widows of sailors in the Canadian service. I would advise you to write, however, to the deputy minister, department of naval services, Ottawa, for such information.

I have the honor to be, sir,
Your obedient servant,

J. F. Dunbar.

J. F. DUNBAR, Colonel, President Pensions and Claims Board. SCALE OF PENSIONS.

Articles 641 to 648, inclusive, pay and allowance regulations, are canceled and the following substituted, to take effect September 1, 1914: 641. The following rates of pension will be granted militiamen wounded or disabled on active service, during drill or training, or on other military duty, provided the disability was not due to his own fault or negligence:

Rank held at time of injury or illness.	First degree.	Second degree.	Third degree.	Fourth degree.
Rank and file	\$264 336	\$192 252	\$132 168	\$75 100
major Squad, battery, or company quartermas- ter sergeant	372	282	186	108
Color sergeant Staff sergeant Regimental sergeant major, not warrant officer.	432	201	016	100
Master gunner, not warrant officer Regimental quartermaster sergeant		324	216	132
Warrant officer	480	360	240	144
Lieutenant	480	360	240	144
CaptainMajor	720 960	540 720	360 480	216 288
MajorLieutenant colonel	1,200	900	600	360
Colonel	1, 440	1,080	720	456
Brigadier general	2,100	1,620	1,050	636

⁽a) The first degree shall be applicable to those only who are rendered totally incapable of earning a livelihood as the result of wounds or injuries received or illness contracted in action or in the presence of the enemy.

(b) The second degree shall be applicable to those who are rendered totally incapable of earning a livelihood as a result of injuries received or illness contracted on active service, during drill or training or on other duty, or are rendered materially incapable as a result of wounds or injuries received or illness contracted in action or in the presence of the enemy.

(c) The third degree shall be applicable to those who are rendered materially incapable of earning a livelihood as a result of injuries received or illness contracted on active service, during drill or training or on other duty, or rendered in a small degree incapable as a result of wounds or injuries received or illness contracted in action or in the presence of the enemy.

(d) The fourth degree shall be applicable to those who are rendered in a small degree incapable of earning a livelihood as a result of injuries received or illness contracted on active service, during drill or training or on other duty.

(e) Where the injury is great enough to require the constant services of an attendant, such as the loss of both legs or both arms or the loss of sight of both eyes, or where the use of both legs or both arms has been permanently lost, the rates shown in columns "First degree" and "Second degree" may be increased one-third.

(f) In addition to the above rates, a married officer, warrant officer, noncommissioned officer, or man totally incapacitated may draw for his wife half the rate provided in article 642 for the widow and the full rate for the children of an officer, etc., of his rank, subject to the limitations respecting the age of children. After the death of the officer, warrant officer, noncommissioned officer, or man the widow may then draw the full rates provided in article 642 for man the widow and children.

(g) The widowed mother of a totally disabled soldier may be granted

then draw the full rates provided in article 642 for widows and children.

(g) The widowed mother of a totally disabled soldier may be granted a pension at half the rates fixed in article 642 for a widow, provided the soldier is ner sole support and unmarried. In the event of the soldier's decease, she may draw the full rate referred to.

642. Pensions may be paid to the widows and children of those who have been killed in action or who have died from injuries received or illness contracted on active service, during drill or training or on other military duty, at the following rates, provided the soldier's death was not due to his own fault or negligence and was clearly due to the carrying out of his military duties:

ENAN HELD BY HUSBADD, SON, OR FATHER AT TIME OF DEATH.

RANK HELD BY HUSBAND, SON, OR FATHER AT TIME OF DEATH.

Rank and file: \$22 a month for widow and \$5 a month for each child.

Sergeant: \$28 a month for widow and \$5 a month for each child.

Squad, battery, or company sergeant major; squad, battery, or quartermaster sergeant: \$30 a month for widow and \$5 a month for each

Color sergeant, staff sergeant: \$30 a month for widow and \$5 a month for each child.

Regimental sergeant major, not warrant officer; master gunner, not warrant officer; regimental quartermaster sergeant: \$30 a month for widow and \$5 a month for each child.

Warrant officer: \$32 a month for widow and \$5 a month for each child.

lld. Lieutenant: \$37 a month for widow and \$6 a month for each child. Captain: \$45 a month for widow and \$7 a month for each child. Major: \$50 a month for widow and \$8 a month for each child. Lieutenant colonel: \$60 a month for widow and \$10 a month for each

Colonel: \$75 a month for widow and \$10 a month for each child. Brigadier general: \$100 a month for widow and \$10 a month for each

Brigadier general: \$100 a month for widow and \$10 a month for each child.

(a) A widowed mother whose son was her sole support, and unmarried, shall be eligible for a pension as a widow without children and subject to the same conditions as hereinafter set forth.

(b) In the case of orphans, the rates shown above for children may be doubled and the pension paid to legally appointed guardians.

643. Pensions to widows and children shall take effect from the day following that on which the death of the husband, etc., occurred, and a gratuity equivalent to two months' pension shall be paid the first month, in addition to the pension.

644. The pension of a widow, a widowed mother, or child may be withheld or discontinued should such widow, etc., be, or subsequently prove, unworthy of it, or should she be or become wealthy.

The decision of the minister as to whether a pension should be so withheld or discontinued shall be final.

645. The pension to a widow or widowed mother shall cease upon her remarriage, but she will be eligible for a gratuity of two years' pension payable to her immediately after her marriage. (Any pension of a widow's children will cease when the mother remarries, but the mother's gratuity will include the children's pension for two years.)

646. Neither gratuity nor pension shall be paid on account of a child (or orphan) over 15 years of age if a boy, or over 17 years of age if a girl, unless, owing to mental or physical infirmity, the child (or orphan) is incapable of earning a livelihood, in which case the pension may be continued till the child (or orphan) is 21 years of age, but no pension will be paid to a child or orphan after marriage.

647. Individual cases for which the regulations do not provide, or sufficiently provide, may be specially considered by the governor in council.

648. Pensions may be paid monthly, in advance.

These facts, Mr. Speaker, ought to convince the Senate of the United States of the justice of passing without further delay the widows and orphans Spanish War and Philippine insurrec-

tion pension bill.

Mr. Speaker, if the American people and the youth of the land see and understand that the widows and orphans of soldiers and sailors are taken care of and that soldiers and sailors will be respected and given preference in the employment after they have served their country, it will inspire genuine patriotism and cause enlistments to fill up all shortages now existing in the Army and Navy, the present and the future. I believe sincerely that preference in employment should be given to men who serve their country, and especially should this be so for those who volunteer in time of war.

Section 1. Preference in apppointment—section 1754, Revised Statutes, (sec. 1, joint resolution Mar. 3, 1865), provides that:

Persons honorably discharged from the military or naval service by reason of disability resulting from wounds or sickness incurred in the line of duty shall be preferred for appointments to civil offices: Provided, They are found to possess the business capacity necessary for the proper discharge of the duties of such offices.

This law is ignored and violated by the appointing powers of the Government. Time and again they have done this. know of many instances where the civilian is taken in preference to the veteran. The Civil Service Commission certifies to the appointing power the three highest upon the eligible lists, and the veteran, if on this list, is most always turned down for the civilian. Especially is this true if the civilian has political influence.

Congress should enact a law to compel the Government officials to comply with the preference law and not permit it to be ignored as it has been and is to-day. In addition to that, the law of preference should be enlarged and everyone who has served honorably in the Army and Navy should receive prefer-

ence in appointments under the Government.

Mr. Speaker, I have asked the legislative reference division of the Library of Congress to advise me with reference to preference laws for honorably discharged soldiers and sailors under the United States Government, State governments, and foreign Governments, and the following is what they report to me, to

UNITED STATES LAWS GIVING PREFERENCE IN EMPLOYMENT TO HONORABLY DISCHARGED SOLDIERS AND SAILORS.

R. S. 1754 (resolution of Mar. 3, 1865) directs preference of "persons honorably discharged from the military or naval service by reason of disability resulting from wounds or sickness incurred in the line of duty" for "appointments to civil offices." This section was declared not to be affected by the civil-service act of January 16, 1883 (22 Stat...

not to be affected by the civil-service act of January 16, 1883 (22 Stat. 406, sec. 7).

H. S. 1755 (resolution of Mar '3, 1865) recommends the preference of persons honorably discharged from the military or naval service for private employment.

The act of August 15, 1876 (19 Stat., 169, sec. 3), directs the heads of executive departments to give a preference, in case of reductions in their force, to persons "honorably discharged from the military or naval service of the United States and the widows and orphans of deceased soldiers and sailors."

The act of March 1, 1889 (25 Stat., 762, sec. 5), directs preference to "persons honorably discharged from the military or naval service of the United States" in the appointment of census enumerators.

The act of March 6, 1902 (32 Stat., 52, sec. 5), directs preference to "persons who have served as soldiers in any war in which the United States may have been engaged, who have been honorably discharged from the service of the United States, and the widows of such soldiers," for employment in the Census Office.

The act of March 3, 1905 (33 Stat., 1088), directs preference "to persons honorably discharged from the military or naval service who served in the Civil War" in transfers from the Railway Mail Service to department duty.

department duty.

The act of August 23, 1902 (37 Stat., 413, sec. 4), prohibits the discharge or reduction in any of the executive departments of an "honorably discharged soldier or sailor whose record in said department is rated good."

STATE LAWS GIVING PREFERENCE IN EMPLOYMENT TO HONORABLY DIS-CHARGED SOLDIERS AND SAILORS.

California: Union soldiers, sailors, and marines of Civil War given preference for State employment, and may not be discharged without just cause, after a hearing. (Stat. 1891, ch. 212.)

Colorado: Soldiers and sailors of Civil War given preference for State, county, and municipal employment. (Laws 1911, p. 602.)

Connecticut: Union soldiers and sailors given preference in State employment or on public works. (Gen. Stat., 1902; sec. 2876.)

Union soldiers, sailors and marines who have served in Civil War may not be removed as janitors, engineers, or firemen on State or county public buildings, except for incompetency or misconduct; nor reduced except for cause, after a hearing. (Gen. Stat., 1902; sec. 2877.)

Iowa: Soldiers, sailors, and marine.

2877.)

Iowa: Soidiers, sailors, and marines of the United States in the Civil War given preference for State, county, and municipal employment, and may not be discharged except for incompetence or misconduct. (Code, sec. 1056a 15, 16.)

Soldiers, sailors, and marines of Regular or Volunteer Army or Navy of the United States given preference for employment in cities under commission form of government. (Code, sec. 1056a, 32 (b).)

Soldiers, sailors, and marines or Regular or Volunteer Army or Navy of the United States given preference for employment as policemen and firemen in cities. (Code sec. 679c.)

Kansas: Persons having served in Army or Navy of the United States during the Civil War given preference for State, county, and municipal employment and retention. (Gen. Stat., 1909; secs. 7879-7882.)

Massachusetts: Persons who served in Army or Navy or State.

Massachusetts; Persons who served in Army or Navy of the United States during the Civil War, or received medal of honor for heroic conduct in Army or Navy given preference in appointments and promotions, and may not be removed or reduced without a hearing, in the State and run. 1902, ch. 413; 1903, ch. 150; 1910, ch. 500.)

Persons of the same class may be retired on half pay in State, county, and municipal employment. (Acts and resolutions, 1907, ch. 458; 1909, ch. 398; 1910, ch. 459, 1911, ch. 113; 1912, ch. 375; 1913, ch. 313, 642; 1915, ch. 95.)

Michigan: Union soldiers, sailors, and marines of Civil War or Spanish War given preference for State and municipal employment, and may not be removed, suspended, or transferred without a hearing. (Howell's 1912 Stat., secs. 733, 734.)

Minn-sota: Soldiers, sailors, and marines of the United States in the Civil War given preference for State, county, and municipal employment, and may not be removed except after a hearing. (Gen. Stat., 1913, secs. 3976-77.)

Secs. 3976-77.)

Soldiers, sailors, and marine given preference for employment by State Soldiers' Home Board. (Gen. Stat., 1913, sec. 3957.)

New Jersey: Soldiers, sailors, and marines of Civil War passing civil-service examinations are to be at head of eligible list. (Comp. Stat., 1910, p. 3803, sec. 76.)

Soldiers, sailors, and marines of the United States having served in any war given preference in appointments of noncompetitive class, (Comp. Stat., 1910, p. 3800, sec. 71.)

Union soldiers, sailors, and marines of Civil War given preference for State, county, and municipal employment, and may not be removed except for incompetence or misconduct. (Comp. Stat., 1910, p. 4871,

sec. 59.)
Union soldiers, sailors, and marines of any war given preference for State, county, and municipal employment, and may not be removed without a good cause. (Comp. Stat., 1910, p. 4873, secs. 63, 64.)
Union soldiers, sailors, and marines of Civil War given service pension after 20 years in State, county, or municipal employment. (Laws, 1912, ch. 84.)

Union soliders, sailors, and marines of Civil war given service pension after 20 years in State, county, or municipal employment. (Laws, 1912, ch. 84.)

Soldiers or sailors of the United States and their widows are not affected by certain acts terminating various county offices. (Comp. Stat., 1910, p. 512, sec. 138; p. 528, sec. 188; same, in case of Civil War only, p. 534, sec. 199.

New York: Soldiers, sailors, and marines of the United States in the Civil War, being citizens of New York, given preference in State, county, and municipal employment. (Coms. Laws, 1909, ch. 15, sec. 21.)

Soldiers, sailors, and marines of the United States in the Civil War or Spanish War are not to be discharged except for incompetence or misconduct, after a hearing, and may recover pay for the period of removal. (Cons. Laws, 1909, ch. 15, secs. 22. 23.)

Soldiers or sailors of Civil War over 70 may be retired as officers of a certain court after 15 instead of 25 years' service. (Laws, 1915, ch. 557.)

North Dakota: Union soldiers and sailors given preference for State and municipal employment. (Comp. Laws, 1913, sec. 3186.)

Ohio: Soldiers, sailors, and marines of the United States given preference for employment by State and municipal corporations and on public works. (Ann. Gen. Code, 1910, secs. 12893, 12894.)

Oregon: Union soldiers and sailors of Civil War and Spanish War given preference for employment by State and on public works. (Pub. Laws, No. 263.)

Pennsylvania: Union soldiers, sailors, and marines of Civil War given preference for employment by State and on public works. (Pub. Laws, No. 122 (1887), sec. 1.)

Union soldiers, sailors, and marines of Civil War not to be removed or suspended from State, county, or city employment, nor office abolished nor salary reduced without sufficient cause. (1897, Pub. Laws, No. 196, secs. 1, 2.)

or marines of the United States in any war. (1906, Pub. Laws, No. 83, sec. 1.)

Soldiers and sailors of the United States in the Civil War given preference in civil service of cities of second class. (1907, Pub. Laws, No. 206, sec. 1.)

Rhode Island: Union soldiers, sailors, and marines of Civil War given preference for employment in State Soldiers' Home. (Gen. Laws, 1909, ch. 104, sec. 10.)

Soldiers' Home, Board to include six persons who have served in Union Army or Navy during Civil War and two during Spanish War. (Pub. Laws, 1904, ch. 1045.)

Washington: Union soldiers and sailors and soldiers and sailors of Spanish War and Philippine Insurrection given preference for State and county employment. (Laws, 1915, ch. 129.)

Wyoming: Union soldiers and sailors given preference for State, county, and city employment. (Comp. Stat., 1910, secs. 291, 292.)

DIGEST OF LAWS PROVIDING GOVERNMENT POSITIONS FOR HONORABLY

DIGEST OF LAWS PROVIDING GOVERNMENT POSITIONS FOR HONORABLY DISCHARGED SOLDIERS AND SAILORS IN AUSTRIA, FRANCE, GERMANY,

[A. Bernard and T. H. Thiesing.]

AND ITALY.

The law of April 19, 1872, sections 1-5, provides that noncommissioned officers who have been honorably discharged from the Army or Navy after having served 12 years, during 8 of which they have been noncommissioned officers, are entitled to employment in the Government service, or in the ratiroad, steamship, and other services subsidized by the Government; also, that noncommissioned officers, incapacitated for military service on account of wounds received in campaigns or while on duty for the protection of the public, but not thereby rendered unit for civil employment, may claim a Government position regardless of the number of years served.

Positions exclusively reserved for these noncommissioned officers are; (1) Doorkeepers and watchmen in the Government departments, courthouses, offices, and penitentiaries and in those institutions whose running expenses are entirely or partly defrayed by the Government; (2) Office messengers and conductors and operating employees in the railroad, steamship, and other services subsidized or guaranteed by the Government, to which franchises may be or have been granted, and which provide in their by-laws, etc., that in filling such positions preference should be given to former noncommissioned officers; but it is provided that those who show special fitness shall have preference over those less suited for the positions, (Reichsgesetzblatt, 1872, No. 60.)

Title IV, chapter 4, of the act of March 21, 1905, as amended by sections 34 to 37 of the act of August 7, 1913, provides for the employment in the classified service of honorably discharged noncommissioned officers and privates as follows:

1. Nearly all positions of janitors, unskilled laborers, etc., and from one-half to three-fourths of the clerkships in certain grades of the classified service, are reserved for recalisted men who have served not less than 10 years, 4 of which must have been as noncommissioned

discrete and to years, 4 of which must have been as backdanased officers.

2. One-half to three-fourths of the positions of unskilled laborers, etc., and of the clerkships in certain grades of the civil service are reserved for noncommissioned efficers who have served at least four years.

3. One-half, three-fourths, five-sixths, or in some cases all of the unskilled positions in certain grades of the civil service are reserved for privates who have served not less than four years in the army.

Section 69 of the act of March 21, 1905, authorizes the Government to divide the positions of the three classes enumerated above into groups, and to determine the mode of obtaining a certificate of professional qualification in each group.

Under this authorization, the decree of August 26, 1905, established four groups. The first group includes positions requiring a certain amount of technical knowledge, such as assistant inspectors, mechanics, foremen, etc. The second group includes such positions as clerkships not requiring technical knowledge. The third group includes such posi-

tions as copyists and typists. The fourth group includes unskilled po-sitions such as watchmen, janitors, etc. The first three groups require the passing of an examination; for the fourth no examination is re-

The examinations in the case of the first group include chiefly subjects of a somewhat technical nature. In the case of the second group, the nature of the examinations is determined by agreement of the minister of war and the minister in whose department the position exists. In the case of the third group, only a common-school education is necessary. Candidates for the fourth group must have a certificate from the chief of the corps or director of the service to which the candidate belonged, stating that he can read and write and has a knowledge of arithmetic, and is competent to fill the position sought. Passing grade in every case is 60 per cent average on all examinations. No one over 40 may be certified.

GERMANY.

The second part of the military pensions law of May 31, 1906, contains provisions for the employment of reenlisted soldiers and non-commissioned officers who have seen active service in the army, navy, or in the colonies for a certain number of years, or who have been incapacitated during such services.

Sections 15 and 16 provide that soldiers who have served their regular term and reenlisted for 12 years, and reenlisted soldiers, who have been incapacitated during such service, shall be certified as eligible for certain positions in the civil service, if they seem to be fitted to hold such positions.

Section 17 provides that noncommissioned officers and grivates who

such positions in the civil service, if they seem to be fitted to hold such positions.

Section 17 provides that noncommissioned officers and privates, who have not served more than their regular term but have been incapacitated during such service, may, besides drawing a pension, be certified as eligible for certain positions in the civil service, if they seem to be fitted for them.

Section 18 enumerates the classes of employment to which such certificates apply and the positions which shall preferably be filled with holders of the same, under regulations to be prescribed by the Bundesrat and communicated to the Reichstag (which can not, however, alter them). They include subordinate, clerical, or unskilled positions in the Imperial, state and local government services, in the Invalidity insurance offices, and in institutions supported wholly or in part by the Imperial Government, the states, or the local authorities, excluding the forest service. (Reichsgesetzblatt 1906, No. 30, p. 593 ft.)

The regulations prescribed by the Bundesrat which went into effect October 1, 1907, were published in Zentralblatt f. d. Deutsche Reich 1907, page 309 ff.

ITALY.

The act of May 6, 1909, on the status of noncommissioned officers, contains the following provisions concerning civil-service positions excinsively reserved for honorably discharged noncommissioned officers:

1. First sergeants who have served 12 years are entitled to civilian positions in the state railway service or in other Government departments. Noncommissioned officers who have reenlisted with bounty, honorance are actualed.

ments. Noncommissioned officers who have reenlisted with bounty, however, are excluded.

2. The positions reserved for noncommissioned officers are as follows:

a. In all the military offices under the war departments all the unskilled positions, such as those of watchmen, etc., and in the department proper, two-thirds of those of doorkeepers.

b. In all departments of the Government, one-third of the unskilled positions and a storeroom and warehouse keepers, existing or likely to be created, and paying an annual salary of from 900 to 1,200 lires.

a. In the railway service, one-third of the unskilled positions, watchmen, etc., paying an annual salary of from 900 to 1,200 lires.

A proportional part of the positions enumerated under the letters b and c is reserved for petty officers of the navy with 12 years of service, who are always given preference for such positions under the navy department.

The above provisions apply also to subordinate officers of the quartermaster's department.

master's department.
(Sources: Collezione celerifera della leggi, decreti, struzioni e circolari dell'anno 1909, p. 672 et seq. Gazzetta ufficialle del Regno d'Italia 21 octobre 1909, p. 5725-5726.) CIVIL EMPLOYMENT FOR EX-SOLDIERS AND SAILORS IN GREAT BRITAIN.

ditatia 21 octobre 1908, p. 5725-5726.)

CIVIL EMPLOYMENT FOR EX-SOLDIERS AND SAILORS IN GREAT BRITAIN. Admission to the civil service of Great Britain is regulated not by statute but by orders in council—particularly that of the 10th of January, 1910—and by regulations framed in pursuance of these orders by the civil-service commissioners, with the approval of the lords of the treasury. In these regulations limits of age, generally lying between 21 and 35, are prescribed for each class of appointments. As a general rule, the only advantage given to ex-soldiers and sailors wishing to enter the civil service is that they may deduct from their actual age any time which they may have served in the army or navy.

In a few cases army or navy educational certificates may, at the discretion of the civil-service commissioners, be accepted in lieu of civil-service examination, namely:

"Persons nominated for the situation of messenger, established postman, park keeper, prison warder, and some other situations of a similarly subordinate character who possess an army second-class certificate of education or a petty officer's certificate of education obtained in the navy may, at the discretion of the civil-service commissioners, be exempted from examination in the foregoing subjects."

In the case of certain lower grades of clerical positions in the war office candidates who possess first-class army certificates of education may, at the discretion of the civil-service commissioners, be exempted from examination. A similar ex-mption applies to one of the circla grades in the Admiralty.

The latest report of the civil-service commissioners (for 1914) gives the following statistics of civil employment for ex-soldiers and sailors, but does not indicate how many are admitted on certificate instead of by examination:

"Out of a total of 14.445 male candidates of all classes for whom certificates of qualification, or their equivalent, were granted during the past year, 1.541 ex-soldiers, 230 sailors, and 67 marines received appoi

20 sailors and 6 marines) as skilled workmen. These figures relate only to the established service. The unestablished ranks of the post office include, it is believed, a large number of soldiers.

"The various prison services, including Breadmoor and Rampton Criminal Lunatic Asylums and similar institutions, also absorb a large proportion of men from the army and navy, 67 (including 4 sailors and 2 marines) having been appointed to warderships and similar posts during the year 1914.

"During the same year the Admiralty appointed 1 soldier and 4 sailors to various situations in naval establishments; and the office of works recruited the staff of park keepers by 3 candidates from the army.

works recruited the staff of park keepers by 3 candidates from the army.

"Of the remaining military and naval candidates, 1 was certificated as constable in the consular service, 1 as second-class warehouseman in the customs and excise department, 1 as third-class workman in the mint, 13 as clerks or clerk messengers in the labor exchange and unemployment insurance branch of the board of trade, 12 as established civilian employees, etc., in the army ordnance department, the royal ordnance factories, or the supply reserve depot, Woolwich; 5 were appointed as established civil assistants on the ordnance survey; and the rest secured posts chiefly of the messenger class. (Of the 2,110 artificers placed on the establishment of the dock yards, etc., during the year, many no doubt have served in one or other of the combatant services, but the necessary details are not known in this department.)"

The above statement applies only to positions in the classified civil service which are filled by competitive examination. A study of other opportunities was made by the committee on civil employment of exsoliders and sallors in 1906, whose report is published in the Parliamentary Papers [Cd. 2991]. In Appendix I (pp. 32-36) of this report is given a list of the "Present classes of civil employment of exsolders and sallors."

Following is a summary of the recommendations of this committee

Following is a summary of the recommendations of this committee (pp. 29, 30):

"That an association, which should be financially assisted by but not under the control of the Admiralty and war office, should be created for the provision of employment for ex-soldiers and sailors.

"II. That this association, which should consist of a central office in London and affiliated branches in counties and towns, should undertake all the work of employment now carried out by the war office and by existing agencies.

"III. That it should be supervised by a council selected, in the first instance, from—

"(a) Members of the existing societies in London.

"(b) Representatives of the corporations of the cities of London and Westminster, the London County Council, and the metropolitan borough councils.

"(c) Employers of labor, including representatives of the war office and Admiralty.

westminister, the London County Country, and the metropolitan sorough councils.

"(c) Employers of labor, including representatives of the war office
and Admiralty.

"(d) Ex-soldiers and sailors who have achieved success in civil life
after leaving the colors.

"IV. That the management of the county and town branches should,
under the general supervision of the central office, be conducted by local
committees.

"V. That such local committees should be presided over, where possible, by the lord lieutenant, in the case of the county, and by the
mayor, in that of the town.

"VI. That the members of the local committee should consist of—

"(a) The officer commanding the grouped regimental district.

"(b) The colonel of the territorial battallous or corps.

"(c) The naval recruiting officer of the district.

"(d) Representatives selected from influential people of the district,
employers of labor, etc.

"(e) Ex soldiers and sailors in the district.

"VII. That the Government subscriptions to existing associations
should cease and an annual grant of £16,000 (£12,000 from the army and
£4,000 from navy funds) should be made to the association.

"VIII. That trunds should also be obtained by voluntary subscriptions.

24,000 from navy funds) should be made to the association.

"VIII. That funds should also be obtained by voluntary subscriptions.

"IX. That the Government should direct the various public departments to fill vacancles in the appointments detailed in appendices 2 to 5 and any others which may be suitable by ex soldiers and sailors of good character, and that only in the event of such candidates not being ferthcoming are the posts to be filled by civilians.

"X. That all future vacancies for customs preventive men should be selled by ex soldiers or sallors.

"XI. That at least half the vacancies for outdoor customs officers should be set aside for ex soldiers and sailors.

"XII. That the majority of the vacancies for assistant clerks should be similarly dealt with.

"XIII. That all established messengerships should be so filled.

"XIV. That service in the army or navy of a satisfactory character which has not earned pension, should reckon toward superannuation allowance in the case of men appointed to established positions in the civil service.

"XV. That in the case of ex soldiers and sailors serving in Government departments a proportionate value should be assigned to service in the army or navy with a view to its being considered with the period of civil employment when discharge on reduction of establishment is determined by length of service.

"XVI. That county and borough councils should be urged to reserve a number of appointments for ex soldiers and sailors.

"XVIII. That the age limit in the case of ex soldiers on a sailors who are candidates for appointment to the police should be raised to 32.

"XVIII. That, in view of the imperial contribution made toward the cost of the police, an obligation should be placed upon the force to employ men of the two services in preference to others, so long as suitable candidates are forthcoming, and that, as in the case of the civil servant, previous service in the army or navy should reckon toward police pension.

"XXI. That classes for instruction in motor driving,

"XXIII. That the endeavor should be made, by means of periodical lectures at each military center, to bring clearly before the men the possibilities of their future civil career.

"XXIV. That arrangements should be made to give to ex-soldiers facilities for emigration, and for obtaining, whilst serving, a short course of training in work which is likely to be of use to them as emigrants.

facilities for emigration, and for obtaining, whilst serving, a short course of training in work which is likely to be of use to them as emigrants.

"XXV. That an employment gazette should be published by the central office of the suggested association, giving particulars as to situations vacant, the method of obtaining them, the prospects offered by various classes of employment, etc., and that subscriptions to cover its cost, fees, and traveling expenses of lecturers would form a suitable charge against the canteen funds of ships and units.

"XXVI. That the form of character given to the soldier on discharge or transfer should be improved, both in respect to its division between his military and civil conduct and in regard to its general assessment.

"XXVIII, That, with the view to encouragement of thrift, arrangements be made, on the lines suggested in paragraph 72, to increase the inducements of the soldier to save money whilst serving.

"XXVIII. That the advantages of membership of friendly societies should be brought to his notice.

"XXIX. That payments of pensions and reserve pay should be made at more frequent intervals."

Mr. Speaker, a study of the above shows us that our own

Mr. Speaker, a study of the above shows us that our own National and State Governments have given but little favorable consideration to the enactment of laws providing for preference in employment for honorably discharged soldiers and sailors. It also shows that foreign governments have done much better. It also demonstrates the fact that the foreign governments which have done most in this regard for their ex soldiers and sailors have been the ones to be the better able to recruit up their armies and navies. This Government must awake to its duty and act. If it does not take care of the widows and orphans and show preference to soldiers and sailors there will be but one outcome of it, and that will be compulsory service. I do not know if this country is ready for that or not, but, in my judgment, this Congress is not favorable to it. I would rather see voluntary enlistments needed for the Army and for the Navy than compulsory, and if laws are enacted along the lines that I have indicated, there will be no need of compulsory

Army Bill.

EXTENSION OF REMARKS

OF

HON. KENNETH D. McKELLAR.

OF TENNESSEE.

IN THE HOUSE OF REPRESENTATIVES,

Saturday, April 29, 1916.

Mr. McKELLAR. Mr. Speaker, when the general debate on the Hay Army bill was had I was unavoidably absent. I prepared a speech on that bill at that time and ask unanimous consent to insert it in the RECORD now.

Mr. Speaker, our committee has reported out a bill making far-reaching changes in the military department of our Gov-ernment. They are changes for the most part that make for our

better security and for better national defense.

As the law now stands we have a standing Army composed of 4,834 officers and 97,248 enlisted men, or a total of 102,082 officers and enlisted men. This is exclusive of the Philippine Scouts, which is composed of 182 officers and 5,733 enlisted men. That was the authorized strength of the Army on June 30, 1915, and the actual strength of the Army on that date was 55 officers less owing to vacancies in the Medical Corps, the Engineer Corps, and the Signal Corps mainly, and a deficit on that date of between 1,200 and 1,500 enlisted men. It is believed that the actual strength of the Army now is about the authorized strength. There were 6,403 enlisted men in the Quartermaster's Department that are included in the above figures, but they are not necessarily included in the authorized strength of the Army.

The Hay bill proposes to increase the Standing Army by 40,000 enlisted men, and increases the officers 2,616, and provides that the Quartermaster Corps and the Medical Corps will not be included, which will bring the number up to about 18,000 more, or a total of 158,000. The bill also provides for the formation of skeleton units in the Army, which may be brought up in times of war or when war is imminent to full strength, and in this way the Army we have could almost at once be expanded to about 195,335 enlisted men. Those branches of the service that are increased are: The Infantry, increased by 10 regiments; Field Artillery, 6 regiments; Coast Artillery, 52 companies; Engineers, 15 companies; aero squadrons, 4. The Cavalry was not increased. In the present establishment we have, in round numbers, about 15,000 enlisted men in the for this are as follows;

Cavalry, 20,000 in the Coast Artillery, 36,000 in the Infantry, 10,000 in the Staff Corps in the department, and 7,000 in miscellaneous places. In other words, we have at the present time a mobile Army of about 60,000, exclusive of Quartermaster and Medical Corps, composed of 15,000 cavalrymen and 36,000 infantrymen, with a stationary force of about 20,000 in what is known as the Coast Artillery. The remainder are what might be termed "helpers.

Under the Hay bill these figures will be changed very considerably. The Coast Artillery will be increased so that it will amount to about 25,000 enlisted men; the Infantry will be increased to about 46,000 enlisted men; the Engineer Corps about 4,500 enlisted men; the Signal Corps to about 2,000 enlisted men; the Quartermaster Corps to about 8,000 enlisted men: in all,

about 85,500 men.

MOBILE ARMY UNDER HAY BILL.

The mobile Army under the Hay bill, including the Coast Artillery as a part of the mobile Army, will be as follows: Cavalry—officers, 805; enlisted men, 14,625. Field Artillery—officers, 684; enlisted men, 15,648. Coast Artillery—officers, 956; enlisted men, 25,203. Engineers—officers, 258; enlisted men, 4,468. Signal Corps—officers, 46; enlisted men, 2,174. A total 4,468. Signal Corps-officers, 46; enlisted men, of 107,991. So that, including the Coast Artillery, we would have a fighting Army of 107,991 enlisted men and fully officered, and exclusive of the Coast Artillery, we would have 82,788 enlisted men in the real mobile Army of the country. This could be expanded when war becomes imminent probably 50 per cent. The increases authorized by the Hay bill are to be extended over a period of four years, as provided in section 14 of the bill.

FEATURES OF THE BILL.

The features of the bill are, first, the Cavalry is not increased. This is right, because the Cavalry arm of the service was larger and out of proportion to the other arms of the service. Cavalry is much more expensive than the Infantry, and in modern warfare it is much less effective. Cavalry can only be used in modern warfare for scouting purposes. The next important modern warfare for scouting purposes. The next important feature is the large increase in the Field Artillery. At the present time the Field Artillery consists of 262 officers and 5,664 enlisted men. This establishment is increased to 684 officers and 15,648 enlisted men, an increase of nearly 200 per cent. The Coast Artillery is given a reasonable increase, because of its being generally believed that our coast ought to be well protected. The Engineer Corps is given an increase of about 20 per cent in enlisted men. The Infantry is given a very moderate increase of only about 10,000 enlisted men. The Quartermaster Corps is given a large increase, and probably one out of proportion to the needs of the Army. It seems to me we have got too many "helpers." Under the new bill, in round numbers, we will have about 108,000 fighters and about 50,000 helpers. There ought to be some way to lessen the "helpers."

CADET COMPANIES

The defect in the bill is to be found in the method adopted in the selection of reserve officers.

Section 16 of the bill gives power to the President to organize not exceeding 30 cadet companies of Cavalry, Field Artillery, Infantry, Engineer Corps, Coast Artillery, and Signal troops, to be attached to and serve with regiments and other units of their respective branches of the Regular Army within the

continental limits of the United States.

It is further provided that each company shall consist of not to exceed 100 cadets between the ages of 20 and 27 years, and they are to be recruited from among the officers of the National Guard and graduates of educational institutions to which officers of the Regular Army are detailed. The cadet serves one year with the cadet company and five years in the officers' reserve corps. He is to receive the base pay of a master signal electrician, which is about \$75 per month. For the purpose of conducting the interior administration of these cadet companies the President is authorized to increase the number of noncommissioned officers, to which a fully organized cadet company of not less than 50 men is attached, by 1 first sergeant, 1 supply sergeant, and 2 cooks. These cadets are to be subjected to thorough training in the duties of privates, noncommissioned officers, and commissioned officers, "Upon completion of one year's service with the company as herein prescribed, each cadet shall, if found proficient, be commissioned in such grade in the officers' reserve corps as may be warranted by the degree of proficiency he may have attained, under such rules and regulations as the President may prescribe."

Now, I submit that this is a half-baked plan of securing reserve officers, and should not be enacted into law. My reasons

(1) That no proper training is provided in the bill. A man may be an officer in the National Guard for 10 minutes, and may never have had a gun or a sword in his hands; he may be put in the awkward squad in the cadet company; he may never serve as an officer, commissioned or noncommissioned, in the company at all during his one-year period of service, and under a lenient system of rules and regulations may be graduated into the Army officers' reserve corps within a period of one year. After being graduated into the Army officers' reserve corps he need not have any more instructions at any time within the five years; no more duties to perform, and yet he receives \$1,452 a year to act in the capacity of a reserve in the Army officers' reserve corps.

These cadet companies can also be recruited from "graduates of educational institutions to which Army officers of the Regular Army are detailed." Now, it is well known that there are innumerable students at colleges where Army officers are detailed who receive no military instructions, and a great many of them where they receive military instructions do just enough to enable the institution to get the Federal appropriation in that behalf; and yet a graduate of this institution, without military training, or however small his military training may be, may go into the cadet company and become a reserve officer at the end of a year at a cost to the Government of about \$1,542 a year.

Experts claim that it takes a year of intensive training to make a good private soldier; and yet the bill, at a tremendous expense to the country, undertakes to make an officer at the end

of one year without any such intensive training.

(2) The second objection to the bill is the nondescript posi-tion of these cadet companies. They have no place in the Regular organization, and no duties to perform in the Regular organization. They are not trained by officers of the Army, but are to be under the direction and control of certain noncommissioned officers in the Army. It is surely an anomalous method of training Army officers. If the President, by his rules and regulations, as it is assumed he would, provide that these cadet companies should be officered by members of the company, the result would be that the captain and lieutenants of the company would be under the direct control of the first sergeant in the Regular Army attached to the company. If this is the way to get Army officers, then I confess my absolute ignorance of anything that pertains to the military organization.

(3) Under the terms of the bill the training of these cadets is to be divided into three parts-first, training as a private; second, training as a noncommissioned officer; and, third, training as a commissioned officer. The only requirement to graduate into the reserve corps is to be "found proficient." Proficient in what? Proficient as a private? Proficient as a noncommissioned officer? Proficient as an officer? If proficient as an officer, only three of them out of a company can be made officers, because there can only be one captain and two lieutenants; and it is supposed, therefore, that the other 97 can be "found profi-

cient" as privates or noncommissioned officers.

(4) Cadets upon joining the cadet company are not required to have any standard education. Those that come from the National Guard may have no education at all. Those that come from certain colleges may have all degrees of education. Surely there ought to be some uniformity of the education of

There is no provision for giving these cadets anything but military training. They can not go to school, because there are no means by which they can obtain an education. A young man may be given a complimentary election in a military company just in order to make him eligible for the cadet company. He may not have even the rudiments of an education. He may not even know how to spell or write; and yet, after a year, if he is "found proficient" in a military training he is entitled to be enrolled as a reserve-army officer.

(6) The plan proposed is a novel one. It makes no use of existing agencies. It just establishes a system of itself. It is a system that makes Army officers while you wait, so to speak, which the Government pays \$1,542 apiece. The section ought to be begun by defining the plan as a plan to make paper army officers while the Government is being shaved. It is just like a man going into a barber shop and having his coat pressed while he is being shaved. So Uncle Sam is required to fork over \$1,542 to some favored individual, and while he is forking ever the money the name and address of his paper soldier is

being given to him.

(7) The War Department in passing upon the question of these cadet companies turned them down. In doing so, among other things, it said:

It is not believed that the condition of affairs in the cadet com-any, so far as discipline is concerned, would be found entirely satis-actory for the following reasons: (a) The pay of the cadet would

be much greater than that of the sergeant and other noncommissioned officers who were placed over these men; (b) the social condition at a post or camp would undoubtedly be found too binding upon these young men who will eventually become reserve officers, and who, according to the provisions of section 10 of the same bill, as members of the officers reserve corps who have passed their service in the cadet companies, might be commissioned second lieutenants later on.

(8) The next question is the cost, and it is a most important one. These would-be tinsel soldiers are to cost the Government annually \$1,542 apiece, as estimated by the War Department, and all together they will cost \$4,628,152 annually. When the system is in full blast there would be 18,000 of these play sol-diers, each costing the Government \$1,542 apiece a year, or all

together costing \$4.628.152 annually.

(9) This scheme was a part of the original continental army plan. We repudiated the continental army plan for privates and noncommissioned officers because it was inefficient. It was thought that three months' training would not make a private soldier; and yet we have retained in the bill thus far the same ephermeral plan of making officers. It is conceded that the training of officers is more important than the training of men, and the same reasons therefore that eliminated the continental army scheme as to privates should eliminate the same scheme as to officers.

(10) In my judgment, a reserve officers' corps should be made up of men especially trained, methodically trained, trained in connection with some coordinated system looking to possible service in the Regular or Volunteer Army. They should not only be trained from a military standpoint, but they should be

given the best kind of an education.

(11) In the organization of these cadet companies the military training will not be diffused throughout the whole country or diffused at all, but the organization will be of a haphazard. hotchpotch variety.

FEDERALIZATION OF THE MILITIA.

The greatest accomplishment of this measure, however, is to be found in the plan of making the State militia an effective body of first-line defense. Originally the Secretary of War had another plan. It was known as the continental army scheme. That scheme provided that there should be a continental army composed of 400,000 men enlisted to serve three years, either one month or two months in a year. That after the end of the third year they shall go into the reserve for three years. It was expected that 133,000 of these could be recruited a year, and at the end of three years the 400,000 would be raised, This plan brought up quite a controversy, and the committee was of the opinion that (1) the men could not be recruited in that way, and (2) that the training would not be sufficient to make them soldiers. Of course the plan would have been even more expensive than the federalization of the militia, and in the judgment of the committee nothing like so efficient.

Again, the plan, if it could have been made efficient, would have been a tremendous step toward militarism in this country, in that it would have led to a tremendous standing Army. The result was the committee unanimously voted in favor of the federalization of the State militia.

CONSTITUTIONAL QUESTIONS.

The main argument that has always been used against the Federal Government utilizing the National Guard as the first line of defense was the Government's lack of constitutional power over this National Guard. After a most careful examination of the Constitution and the decisions thereunder the committee came to the conclusion that there was not the slightest doubt about the National Government having complete control over the militia, and that it could be used as a national force. Our Constitution is full of provisions as to the State militia. It was unquestionably the intention of those who drafted the instrument to make the militia a real military defense of the country. The rights of the States to use the militia is provided for, but at the same time the National Government is in terms given the authority to organize, to discipline, and arm the militia, and is virtually given every authority over it except two; one is about the naming of officers and the other is the training of the militia, which powers are reserved to the States. Now, in so far as naming the officers is concerned, the bill provides as follows: (1) That the present officers of the National Guard are continued as officers without further selection. Section 36 then sets forth from what class the officers of the National Guard shall be selected; and after that it provides in section 37 that a commission shall only issue after the candidate for such office is examined by a board of commissioners appointed by the Secretary of War, which board shall consist of three officers of the Regular Army or of the National Guard, or of both, and that at all times the moral character and fitness for military service of such officer of the National Guard shall be determined by an efficiency board. In this way the selection of the officers of the National Guard is really made by the National Government, and the governor simply signs the commission.

Now, as to the training of the troops. Of course, this is had by the various officers thus commissioned by the governors. In this way, while the National Guard of each State remains a State institution, it is really under the control of the Federal Government. Heretofore all of the powers had over the Na-tional Guard have not been exercised. Many of them have been unexercised and undeveloped, with the result that the National Guard has not been considered a national force. Under the new bill the Federal Government is given the right to exercise all of these powers over the National Guard, and I do not believe that any man will say that it will not be an effective first-line defense, and the most effective that we could have.

The next constitutional question that arose is that provision of the Constitution which provides that the National Guard can not be used except to repel invasions, to suppress insurrections, and to execute the laws of the Union. Under this prohitions, and to execute the laws of the Union. Under this problem bition it is claimed that the National Guard can not be sent out of the country. This is obviated by giving the right to the President to draft the entire National Guard, or any part of it, into the Federal service when war is imminent or actual. is shown in section 76 of the bill. In this way the National Guard, by a simple order of the President, becomes a part of the Volunteer forces of the Nation, and all vestige of any other control is done away with.

THE NATIONAL GUARD AS IT IS TO-DAY.

The National Guard as it exists to-day is composed of about 129,000 members. It receives considerable Federal aid. It gets all its arms and ammunition from the Government and large appropriations for clothing, armories, and the like. The amount appropriated last year for the National Guard is the sum of \$3,858,383, while the various States appropriated the sum of \$7,729,675.13. Neither officers nor the men are in the pay of the Federal Government, but they are paid by a few of the States, and where they are paid the sums paid are very small. With this small encouragement from the Federal Government our National Guard has grown to large proportions, and as constituted now would be an effective defense in times of trouble.

WHAT IS PROPOSED UNDER NEW SCHEME.

Under the new scheme it is proposed to increase the National Guard to a force of not less than 400,000. The principal means of accomplishing this end is that the Government proposed to pay the officers and the men for service in the National Guard. The officers are to be paid by giving each captain and officer above that rank the sum of \$500 per year, each first lieutenant \$240, and each second lieutenant \$200. The men are to be paid one-fourth of the pay of a private, which will be \$3.75 per month. The enlisted men of the National Guard are to be subjected to the same examination that enlisted men of the Regular Army are subjected to. They are to be enlisted in exactly the same way, to wit, to serve three years with the colors and four years with the reserve. It is believed that if 129,000 men could be recruited for the National Guard under present conditions, with the pay thus given to it, that there will be but little trouble in recruiting the National Guard up to the 400,000. At the end of seven years the National Guard will have 400,000 men with the colors and 400,000 men in the reserve, and this will continue. This will give our country a citizen soldiery, taken from all the States in peace, largely under State control, thoroughly drilled and disciplined under United States authority, made excellent soldiers, coming from the masses of the people, officered for the most part by local officers, and in this way the country will be given its best defense. Of course provision is made that each arm of the service shall be made proportionate in the National Guard as well as in the Regular Army.

NATIONAL GUARD BEST FEATURE OF THE BILL.

That the National Guard is the best feature of the bill is shown by the following leading facts of the bill:

(a) It is made a federalized force by giving the Federal Government full control over the organization, the discipline,

and the arming of the militia.

(b) It is provided that all officers in the militia shall hereafter be selected by examination under the direction and control of the Federal Government. Virtually speaking, the governors merely sign the commissions and the officers are selected

by the Government.

(c) In the event of war, or imminence thereof, the President is given the right to draft the entire militia or any part thereof

into the Volunteer Army of the United States.

(d) The qualificaions and requirements for the enlisted men are made precisely the same as they are in the Regular Army.

(e) A reserve is built up in the militia in exactly the same way it is proposed to be built up in the Army.(f) The pay of the officers and enlisted men of the militia

is dependent upon the work done by each.

(g) The organization and control of the militia is to be under one central direction and control, and for training, drilling, and maneuver purposes it will not be divided into small parts as heretofore.

(h) It will be larger than ever before, better armed, better equipped, and better paid than ever before, and we will get

better results therefrom.

(i) This method will be a popular method. It will not tear down what we already have and seek to build up that which we have never had, but it is just simply making use of the time-honored military institutions of our country.

(j) It is antimilitaristic. It is a people's soldiery. The men will come from the body of the best people, and will not be just

picked up from just anywhere.

(k) It is far better than a standing army, in that a standing army takes men away from their several vocations and makes them nothing but soldiers, whereas the National Guard scheme not only makes the men soldiers but at the same time it makes them better business men, and more patriotic business men.

(1) In thus building up the National Guard the Government builds up local institutions, in which not only the members of the National Guard of that particular locality but all the people

of that locality will take a pride.

(m) It is vastly cheaper than any other method of prepared-

ness that is proposed.

(n) While it gives a central control to the National Guard, it does not take away the States' time-honored rights to have their own militia.

Armed Merchant Ships.

EXTENSION OF REMARKS

HON. CLARENCE B. MILLER, OF MINNESOTA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, April 27, 1916.

Mr. MILLER of Minnesota. Mr. Speaker, it seems that the controversy over the vote of this House on the motion to table the McLemore resolution will never end. It seems, further, that many news agencies persist in failing to state the true facts and the true motives that induced men to vote as they did.

This whole matter was but a tempest among the Democratic forces of Congress. It appears certain Democratic leaders in the House and Senate were one day called into conference with the President, relative to certain diplomatic negotiations then being conducted between this Government and Germany. Upon the return of these leaders to their respective bodies consternation broke out among the Democrats. Something stated by the President in that conference evidently was of a most sensational character. What that something was soon became generally known in both Chambers. Those Democratic gentlemen came from the presence of the President feeling that our Chief Executive was headed direct for a war with Germany, not only unnecessarily, but over a very questionable proposition.

Senator Stone, chairman of the Foreign Relations Committee

of the Senate, very promptly wrote to the President, using the

the following language:

DEAR MR. PRESIDENT: Since Senator KERN, Mr. FLOOD, and I talked with you on Monday evening, I am more troubled than I have been for many a day. I have not felt authorized to repeat our conversation.

Furthermore, that you would consider it your duty. If a German war-ship should fire upon an armed merchant vessel of the enemy upon which American citizens were passengers, to hold Germany to strict account.

I think I should say to you that the Members of both Houses feel deeply concerned and disturbed by what they read and hear. * * * The situation in Congress is such as to excite a sense of deep concern in the minds of careful and thoughtful men. I have felt that it is due to you to say this much.

I think you understand my personal attitude with respect to this subject. As much and as deeply as I would hate to radically disagree with you, I find it difficult for my sense of duty and responsibility to consent to plunge this Nation into the vortex of this world war because of the unreasonable obstinacy of any of the powers, upon the one hand, or, on the other hand, of foolbardiness, amounting to a sort of moral treason against the Republic, of our people recklessiy risking their lives on armed beiligerent ships. I can not escape the conviction that such would be so monstrous as to be indefensible.

That which the President said in that conference caused this

That which the President said in that conference caused this Democratic Senator to be more troubled than he had been "for many a day." It was of such a character that "Members of both Houses feel deeply concerned and disturbed by what they read and hear." On account of the President's words, "the situation in Congress is such as to excite a sense of deep con-cern in the minds of careful and thoughtful men." The nature of the President's words we begin to sense as we read in the Senator's letter:

I find it difficult for my sense of duty and responsibility to consent to plunge this Nation into the vortex of this world war because of the unreasonable obstinacy of any of the powers, upon the one hand, or on the other hand, of foolhardiness, amounting to a soft of moral treason against the Republic, of our people recklessly risking their lives on armed beligerent ships. I can not escape the conviction that such would be so monstrous as to be indefensible.

Then certain disturbed Democratic Members introduced resolutions in relation to Americans traveling on armed belligerent Thus far all was confined to the ranks of Democracy. ships. Soon, however, it became generally known about Congress just what the President had said at the famous conference. Senator GORE, Democrat, on the floor of the Senate, charged that the following is substantially what the President said, among other things:

* * * That if Germany insisted upon her position the United States would insist upon her position; that it would result probably in a breach of diplomatic relations; that the breach of diplomatic relation would probably be followed by a state of war; and that a state of war might not be of itself and of necessity an evil, but that the United States by entering the war now might be able to bring it to a conclusion by midsummer, and thus render a great service to civilization.

No wonder the Democratic brethren were deeply disturbed. No wonder they were thrown into a panic. Their administration was about to depart from the path of peace and plunge the Nation into war. And over what?

Personally I favor a strong national policy, one that not only asserts American rights but protects them. I believe the conduct of all our foreign relations during the past three years of those with Japan, with Mexico, with the central powers, with the allies, has been vascillating, wobbly, uncertain, never sure of itself, contradictory, ineffective, and humiliating. Never before has our Nation's honor been so completely denied by the nations of the world, never before has it been so uniformly for-saken in the hour of trial. I join my countrymen in fervently laboring to preserve peace, but if things vital to our Nation are at stake, and they can be saved only by war, then I am for war. But if I act to start my Nation into war, I want to be sure that my contention is right, and not only right but vital to my Nation's welfare or its honor. It must be of those things that are the essence of our country's life, integrity, or honor.

Let us see, therefore, why the Democratic Members were in revolt against the President's course. The subject related to the right of American citizens to travel on armed belligerent merchant ships. The subject had not suddenly arisen. It had been up for many months. Long ago our Government became ill at ease over these armed merchant ships. We hesitated to clear, and for a time refused to clear, certain of these boats. It was questionable whether they were ships of war or whether they were simply merchant ships. If the former, they could be attacked by a submarine without warning; if the latter, warning must be given and an opportunity afforded passengers and crew to escape. England claimed they were merchant ships. Germany claimed they were warships. Our Secretary of State, Mr. Lansing, on behalf of our Government, presented to the nations of the allied powers a communication, under date of January 18, 1916, wherein he used the following strikingly significant language:

griage:

Prior to the year 1915 belligerent operations against enemy commerce on the high seas had been conducted with cruisers carrying heavy armaments. In these conditions international law appeared to permit a merchant vessel to carry armament for defensive purposes without lessening its character as a private merchant vessel. This right seems to have been predicated on the superior defensive strength of ships of war and the limitation of armament to have been dependent on the fact that it could not be used effectively in offense against enemy naval vessels while it could defend the merchantmen against the generally inferior armament of piratical ships and privateers.

The use of the submarine, however, has changed these relations. Comparison of the defensive strength of a cruiser and a submarine shows that the latter, relying for protection on its power to submerge, is almost defenseless in point of construction. Even a merchant ship carrying a small-caliber gun would be able to use it effectively for offense against the submarine.

Moreover, pirates and sea rovers have been swept from the main trade channels of the sea and privateering has been abolished. Consequently the placing of guns on merchantmen at the present date of submarine warfare can be explained only on the ground of a purpose to render merchantmen superior in force to submarines and to prevent warning and visit and search by them. Any armament, therefore, on a merchant vessel would seem to have the character of an offensive armament.

If a submarine is required to ston and search a merchant vessel on

mament.

If a submarine is required to stop and search a merchant vessel on the high seas and in case it is found that she is of an enemy character and that conditions necessitate her destruction and the removal to a place of safety of persons on board, it would not seem just nor reason-

able that the submarine should be compelled, while complying with these requirements, to expose itself to almost certain destruction by the guns on board the merchant vessel.

In proposing this formula as a basis of conditional declarations by the belligerent Government I do so in the full conviction that each Government will consider primarily the humane purposes of saving the lives of innocent people rather than the insistence upon a doubtful legal right, which may be denied on account of new conditions. * * * I should add that my Government is impressed with the reasonableness of the argument that a merchant vessel carrying an armament of any sort, in view of the character of the submarine warfare and the defensive weakness of undersea craft, should be held to be an auxiliary cruiser, and so treated by a neutral as well as by a belligerent government, and is seriously considering instructing its officials accordingly.

This is dangerously near a recognition by our President and Secretary of State, for, of course the President indorsed so important a document before it was sent—dangerously near a recognition of the rightfulness of the German contention. It practically admits that piracy and privateering having disappeared from the world, no longer is there reason for merchant ships to arm. The entrance of the submarine has so changed naval warfare that it may be the rule permitting merchant ships to arm should be changed; that if a merchant ship arms at all, she must be held to be a warship.

I should add that my Government is impressed with the reasonableness of the argument that a merchant vessel carrying an armament of any sort, in view of the character of the submarine warfare and the defensive weakness of undersea craft, should be held to be an auxiliary cruiser, and so treated by a neutral as well as by a belligerent government, and is seriously considering instructing its officials accordingly.

Again our Government describes the right of a merchant ship to arm as a "doubtful legal right, which may be denied on account of new conditions.'

After taking this position with the nations of the world, is it possible, excited Members asked, that the President will go to war unless Germany at once agrees to renounce her position?

In the foregoing communication to the powers it is my personal opinion that our Government went altogether too far in the language used and appeared willing to abridge clear rights which, I think, American citizens have. I long ago reached the conclusion that even in these days of submarine warfare the old rules of international law prevail, and merchant ships of belligerent powers have a right to arm purely for defensive pur-Americans, being neutrals, have a right to travel upon such ships, and must be given opportunity to secure themselves before the ship is attacked. For my own guidance, when this matter was before the Committee on Foreign Affairs, of which I am a member, I briefed the law upon the subject as follows

First. Uncommissioned merchantmen, armed only for defense, are not subject to attack without warning and may defend when attacked.

Second. Consequent upon the above, citizens of a neutral na-tion of right may sail on belligerent ships armed only for defon or right may sail on beingerent single trade of the fensive purposes, and should the ship be destroyed by an enemy ship, resulting in death of or injury to such neutral citizen, no warning having been given by the attacking ship, or opportunity offered to such citizen to secure his safety, then the nation whose warship made the attack is guilty of an illegal act.

The right of an uncommissioned merchant ship to arm for

defense only is not new, it is very old. In ancient days such armament was sanctioned as protection against pirates who infested so many seas of the globe.

Then later nations at war made use of privateers, they being merchant ships armed and commissioned to prey upon the commerce of the enemy. As a protection against these privateers merchant ships were permitted to arm, the use of the armament being limited to defense.

In the seventeenth century England compelled her merchantmen to arm in this manner. In the days of Charles the Second—1672—all vessels sailing from English ports were required to be suitably manned and armed. During the next century other laws of similar character were passed.

The right of an uncommissioned, armed ship to resist is thus expressed by one of England's foremost authorities on interna-tional law—Sir William Scott, Lord Stowell—in the Catherine Elizabeth:

If a neutral master attempts a rescue, he violates a duty which is imposed upon him by the law of nations to submit to come in for inquiry as to the property of the ship or the cargo, and if he violates that obligation by a recurrence to force the consequence will undoubtedly reach the property of his owner, and it would, I think, extend to the confiscation of the whole cargo intrusted to his care and thus fraudulently attempted to be withdrawn from the rights of war. With an enemy master the case is very different. No duty is violated by such an act on his part—" Lupen auribus teneo"—and if he can withdraw himself he has a right to do so.

Prof. Oppenheim, of Cambridge, an especially important authority on international law, in his reply to Dr. Schwamm's contention, which reply is in Die Stellung der feindlichen Kauffahr-

terschiffe im Seekrieg, volume 8, pages 154 to 169, and on page

If an enemy merchant ship is called on to stop, the crew can, if they wish] submit to capture and thereby have their freedom restricted, or they may resist and, as a resuit, be overpowered. In case they choose the latter course, their potential membership turns into actual membership in the arm d forces of their State, and if overpowered they become prisoners of war. In case they choose the former course, their merely potential membership in the armed forces of their State remains intact, and they must either give parole or become prisoners of war.

In 1913 the Institute of International Law, in paragraph 4 of article 12 of the Maritime Manual, adopted the following rule:

Both [private and public vessels not men-of-war], however, are allowed to use of force for self-defense against attack by a hostile ship.

ITALY.

Italian "Codice per la marina mercantile," dated October, 1877, article 209, contains the following provision:

Merchant vessels being attacked by other ships, including warships, may defend themselves and may counterattack; they may go to the defense of other national or allied vessels which are being attacked and cooperate with the same in an attack.

RUSSIA.

Article 15 of the Russian prize law of 1895 contains the following:

The right—that is, of visit and search and capture of merchant ships and their cargo—is not accorded to merchant ships except in the following cases: (1) When attacked by allied or suspicious ships, and (2) when they come to the assistance of Russian or neutral ships attacked

by the enemy.

The right to stop, examine, and selze hostile or suspected vessels and cargoes belongs to the ships of the imperial navy. Vessels of the mercantile navy have a right to do so only (1) when they are attacked by hostile or suspected vessels.

This is the accepted rule in Great Britain, France, Italy, Rus-

sia, Belgium, Holland, and the United States.

The Institute of International Law, at its meeting at Oxford in 1913, by article 12 of the "Manual des lois de la guerre maritime," laid down the following rule:

The course is prohibited. Outside the conditions set forth in articles 5 and following, public ships and private ships, as well as their personnel, are not rermitted to indulge la hostile acts against the enemy. It is at all times permitted both to employ force to defend themselves against an attack from an enemy ship.

THE UNITED STATES.

Article 10 of the United States Naval War Code, adopted in 1900, in paragraph 3, says:

The personnel of merchant vessels of an enemy who, in self-defense and in protection of the vessel placed in their charge, resist an attack are entitled, if captured to the status of prisoners of war.

United States Revised Statutes, section 5289, assumes the right of merchant vessels to arm for certain purposes:

The owners or consignees of every armed vessel salling out of the ports of the United States, belonging wholly or in part to citizens thereof, shall, before clearing out the same, give bond to the United States, with sufficient sureties, in double the amount of the value of the vessel and cargo on board, including her armament, conditioned that the vessel shall not be employed by such owners to cruise or commit hostilities against the subjects, citizens, or property of any foreign prince or State, or of any colony, district, or people, with whom the United States are at peace.

Hon. Hamilton Fish, Secretary of State in 1877, in an official communication to Ambassador Morrill, said:

communication to Ambassador Morrill, said:

In an answer to your request for an expression of opinion in regard to Mr. Ogden's question whether a vessel which he is said to be fitting out for a trading voyage to the South Sea Islands can carry two gans and other arms for protection and defense against the natives, I am not aware of any international prohibition or of any treaty provision which would prevent a vessel trading amid the groups of Islands of the South Sea from carrying a couple of guns and arms for the proper and necessary protection of the vessel against violence on the part of law-less or partially civilized communities or of the piratical crews which are represented to occasionally frequent those waters, providing always that the vessel carrying such guns and arms itself be on a lawly voyage and be engaged in none other than peaceful commerce and that such guns and arms be intended and be used solely for the purpose of defense and self-protection. and self-protection.

In the Nereide case, decided in 1815, the facts having occurred in 1813, our Supreme Court, speaking through Chief Justice Marshall, expressed the law as recognized by the United States:

There a Spanish subject chartered an English ship, mounting 10 guns and manned by 16 men, to carry goods, part his and part British to South America. She started with a convoy, became separated, was captured by an American boat, and brought in as a prize. She resisted capture when attacked, but the action was short, and the charter owner. the Spanish subject, remained down in a cabin and took no part in the fight.

The court ordered the Spaniard's goods were not subject to seizure. Says the court (9 Cranch, 388):

The argument respecting resistance stands on the same ground with that which respecting resistance stands on the same ground with that which respects arming. Both are lawful. Neither of them is chargeable to the goods or their owner, where he has taken no part in it. They are incidents in the character of the vessel, and may always occur where the cruiser is belligerent.

The Nervide was armed, governed, and conducted by belligerents. It is true that on her passage she had a right to defend herself, did defend herself, and might have captured an assailing vessel; but to

search for the enemy would have been a violation of the charter party and of her duty.

In point of fact, it is believed that a belligerent merchant vessel rarely sails unarmed. * * * A belligerent has a perfect right to arm in her own defense.

Prof. Freeman Snow, the author of a very great work on in-ternational law, published at Washington in 1888, said, in his work, page 83:

It may be reasonably expected in coming naval wars that steamers of the great mail lines will be armed so as to defend themselves from attack, rather than seek convoy, and the defense will be legitimately carried to the point of seizure of the attacking vessel, or a recapture if once taken. Without a proper commission a private vessel, however, should act only directly or indirectly on the defensive, and not go out of the way to capture enemy vessels. It can not, of course, take any belligerent action toward vessels of a neutral power.

Contra are practically all the German writers of recent date. Dr. George Schwamm, counselor of the German Imperial Department.

Jonkheer W. J. M. Von Eysinger, professor in Leiden Uni-

When the revolt of Democratic Members threatened, the President indicated his earnest desire that Congress take no action, but leave the matter entirely in his hands. In this he was right—precisely right. The conduct of diplomatic business is a duty of the President, and with this duty Congress should in no sense interfere. Congress has no business to "butt in" on this field of action. Accordingly we on the Foreign Affairs Committee put these resolutions aside and the excitement died down. It completely disappeared and was almost forgotten, when the President suddenly wrote to the acting chairman of the Rules Committee and said:

I therefore feel justified in asking that your committee will permit me to urge an early vote upon the resolutions with regard to travel on armed merchantmen which have recently been so much talked about, in order that there may be afforded an immediate opportunity for full public discussion and action upon them.

It would be hard to imagine a more inadvisable procedure than It would be hard to lining it more many some procedure than this requested by the President. The matter should have been left entirely within his own hands, where it belonged. But it was now up to Congress, and something had to be done. The Foreign Affairs Committee of the House at once took up the President's request and these resolutions. The ethics of committee action forbids any statement covering the deliberations of the committee. However, it speedily became apparent that the committee would not do that which the President asked. Nor did it. It finally reported out the McLemore resolution, with the recommendation to table it because it was not a matter Congress should pass upon; rather it was one for the President alone to handle.

Plainly, absolutely, this side-stepped the President's request. The committee did not do that which the President asked, and if the House tabled the resolution, as recommended, it would not do that which the President asked. A motion to table is not subject to discussion or amendment.

Under such circumstances it was natural for Members to differ in their views as to what should be done. A rule being adopted that gave four hours' debate, the discussion that followed disclosed that practically all the Members, both Democrats and Republicans, were of the opinion that American citizens should be warned against taking passage on these particular boats, because it was not necessary to do so, because to do so endangered their own lives, because to do so might embroil our country in war.

Personally I believed in directly doing what the President had asked, as long as he insisted upon it, and that was to bring the question squarely out and vote squarely upon it. To accomplish this it was absolutely necessary to vote against tabling the matter. I personally believed we should strike out all of the McLemore resolution and in its place insert a strong declaration affirming the right of an American to travel on such boats if he desired to do so. I had drawn and intended to offer a resolution to that effect if the matter could be brought before the House for action. During the limited debate on the proposition in the House I spoke as follows:

House I spoke as follows:

There a Spanish subject chartered an English ship, mounting 10 House to present here for consideration and vote is the one that they thought by its terms, if brought here in such a way as to prohibit amendment, would be the one to command the least support and prevent a record of the honest convictions of the membership of the House. [Applause on the Republican side.] If it be the purpose of the Chief Executive of the United States to know whether or not in the judgment of Congress he is right in the position that he and his secretary of State have taken—that Americans of right may travel upon belligerent ships armed for defense alone—I am free to state that I am with him unequivocally in that contention. From such study as I have been able to give the question—and I have given it some—I believe he is absolutely right. I believe that an American citizen, according to the precedents of our own courts, by the rulings of our

Secretaries of State, by the express statutes of our Congress, by the rulings of the civilized nations of the world in general, has the right and could exercise it if he wished to avail himself of that privilege; but, Mr. Speaker, it seems there is something else involved here to-day. I notice in the language selected, no doubt with his customary care and skill, in the letter to the Committee on Rules the President uses these significant words:

"I therefore feel justified in asking that your committee will permit me to urge an early vote upon the resolutions"—

Not the McLemore resolution; not any particular one—

"upon the resolutions with regard to travel on armed merchantmen which have recently been so much talked about, in order that there may be afforded an immediate opportunity for full public discussion and action upon them."

Whatever that may mean to some, it means to me this: That the President of the United States desires to know what we think—we, the flouse of Representatives—upon the much-discussed question of whether or not he should warn American citizens from taking passage upon this class of boats irrespective of their technical, legal rights. The McLemore resolution is one, if it must be voted upon "yes" or "no," that will command the intelligent support of but few men. It contains a recital that if Americans shall take passage upon such a ship, we abandon them to their fate, and they take that passage at their own risk. No one but a cowardly man, nobody but a cowardly Congress, would ever indorse any such a proposition. [Applause.] Buy why should we be asked to lay if on the table? For no purpose but one, namely, that men who here think one way may vote another. [Applause.] The recommendation of the Committee on Foreign Affairs is that we side-step—table—this resolution, because we have no business to pass upon it; but the President has said that we have business to pass upon it ask none such. The President has the right to know, and the country wants him to know, what the country and we thi

Insufficient time prevented a completion of my remarks. The above represents, however, my general attitude toward the

Another and independent proposition was whether Americans should be warned of the danger of traveling on belligerent armed ships. Under the circumstances of this case there can be no objection to such warning, and in my proposed resolution I added a paragraph to that effect. Every Member of Congress practically expressed himself in favor of such a warning. It is the overwhelming sentiment of the American people that citizens are not wise who recklessly place themselves on a boat one of the warring nations says it will destroy, whether that destruction is right or wrong. A proper regard for the lives of its citizens would suggest that a Government advise its citizens of these dangers.

There is grave question as to the armament of these vessels. While a merchant boat can arm for purely defensive purposes, it can not use that armament for offensive acts. Germany contends that these boats are really armed to carry on offensive warfare. England denies this. Many facts and circumstances exist showing that these boats perhaps really are auxiliary cruisers. It is claimed secret instructions have been issued to the commanders of such boats, under which offensive warfare is carried on. Our Government is at this minute doubtful whether or not these boats are not to be considered auxiliary whether or not these boats are not to be considered auxiliary cruisers, and but yesterday ordered the investigation of one that came into New York Harbor. The good King of Sweden, understanding the situation, with all its uncertainties and undisclosed details, immediately warned his citizens against traveling upon that class of boats.

Therefore, at least until the exact character of these boats is ascertained, while the warring nations insist they have a right to destroy such boats without warning, I think it is the height of foolhardiness for an American to go upon such a boat except in some unusual case, when no other ship is available.

There is no force to the statement that our citizens should exercise every right they possess. That is ridiculous. Every day, every hour of every day, we forego the exercise of some right. I have a right to walk down the street or on the sidewalk, but if I behold two men there shooting away at each other I would be a fool to walk right into the danger zone simply because I had a right to walk on the street, even though these two men were committing illegal, criminal acts.

Besides, on the very day following the vote in the House on the McLemore resolution, our Government announced that an effective means would be taken to keep Americans from needlessly exposing themselves on these ships. The means taken surely was effective. It is about absolute. Our Government now refuses passports to citizens who contemplate traveling on lities and States for the markets.

such a ship. In these days traveling requires a passport, so the means taken is vastly more effective than a warning. is also the abridgment of an American citizen's right, that to a passport and to travel where he pleases.

Furthermore, our Government has been busy during the past three years in abridging the abstract rights of our citizens. warned our people to keep out of Mexico, and it has steadily refused passports to our citizens going into the war zone in Europe. Some of these abridgments I do not believe in, but some are simply common-sense applications of conduct to un-

usual conditions.

There is no little significance in the fact that the votes of the representatives from the States in our section of the country were all alike. There was no previous conference, no agreement, simply the registering of the personal opinion of each Therefore there is great significance in the fact that Member. all the Members, Republican, Democratic, and Progressive, with only one exception, from the States of Iowa, Nebraska, South Dakota, North Dakota, Wisconsin, and Minnesota voted against sidetracking the resolution by tabling it, and in favor of bringing the matter squarely before the House for a vote on its merits.

Migratory Birds.

EXTENSION OF REMARKS

WILLIAM A. AYRES, HON.

OF KANSAS,

IN THE HOUSE OF REPRESENTATIVES,

Monday, April 24, 1916.

Mr. AYRES. Mr. Speaker, I am in favor of the motion of my colleague [Mr. Doolittle] to strike out the paragraph of this bill which provides for an appropriation of \$50,000 to enforce what is known as the Federal migratory-bird law.

I will say at the outstart that I am a sportsman and like to shoulder my gun and chase the festive duck. There is nothing, to my mind, more energizing; nothing that gives as much genuine satisfaction and pleasure as to be with a bunch of good sports in camp at night, smoking the pipe of peace, relating the day's experience as to how you failed to bag a certain duck, always prepared with an excuse for a miss, and many other interesting things that we could relate, but which probably would not have any bearing whatever on this motion.

Suffice it to say you will all agree with me that it is a much more pleasant pastime than being here endeavoring to settle

post-office fights and disputes.

I can safely say that no better sportsmen exist anywhere than in the southwest Kansas country, sportsmen in the true sense of the word. They are ready at any and all times to protect our game in and out of season; but they resent discrimination, and feel that a law which permits the migrating bird to be shot promiscuously at other points should not prohibit the shooting of these same birds the short time they may be in our State or going through the State. In other words, we can not see otherwise than that a law which prohibits a good shooting season for some localities and poor seasons for others is unfair and unjust. In the Middle West States, like Kansas, Oklahoma, and Missouri, we have a short season in the fall of the year, but no shooting to speak of in midwinter.

We are told by some of the gentlemen on this floor that our complaint should not be lodged against the law, but rather should be made to the department having charge of this law. In answer to this I for one want to say we have all, and when I say all I mean those of us in the Middle West who are interested in this matter, on more than one occasion had this up with the department, but met with no success whatever. have endeavored to have the season extended to March 15 or even to March 1. This would afford us at least a short season in late winter or early spring. We feel and know that it is not the few birds killed in those States like Kansas, over which these migratory birds make their flight, that destroys these birds, for they do not stop long in these States; but rather it is the indiscriminate slaughter of the young ducks in the fall of the year on their breeding grounds before starting for the South, and also the indiscriminate slaughter after reaching the southern waters.

This could be controlled by good State laws making a reasonable open season in such States by extending it to a later date in some localities and making a reasonable bag limit per day; and, by all means, stop the slaughter of these birds in all localA good sportsman at all times is ready to assist in the protec-tion of game and abhors a game hog and a market hunter.

It is said when the law known as the Bayne bill became a law in the State of New York that there lay in cold storage in New York City 98,156 wild ducks, 48,780 plover, 14,227 quait, 21,202 grouse, 7,825 snipe, and so forth. This simply represents the slaughter for New York market alone for that occasion, to say nothing of such large cities as Chicago, Philadelphia, San Francisco, Baltimore, Washington, and other large cities. I have seen here in Washington this winter on more than one occasion, ducks and grouse offered for sale, when laws and treating sion ducks and geese offered for sale, when laws and treaties are passed prohibiting the sale or purchase of these game birds and the robbing of the nests in the breeding grounds, it will do all to stop the extermination of the wild bird.

I apprehend that it would be necessary to have a treaty if possible to do so with Canada, giving such matters pertaining to the preservation of the wild migratory bird, especially with relation to the breeding grounds and the sale of such game, as it would emeant to but little for this country. it would amount to but little for this country, National or State, to pass such laws unless Canada would also pass similar laws. If they can be slaughtered in Canada for the market, there would be but little protection to prohibit it in this country.

I know of no reason why the Government of the United States can not pass a law prohibiting the sale of wild game in any place

in the United States; if so, there is nothing to prevent the various States from doing so, which will make it effective in the same

The present law is conceded by almost all to be unconstitutional. It has been so held by the supreme court of my State; also by the Federal district court for the district of Kansas and by the Federal court of Arkansas, and will probably be so held by the Supreme Court of the United States before another season appears. Thus it makes the shooting of wild game a doubtful proposition, to say the least. Many hunters are paying no attention to the law, because, as has been stated, they believe it to be unconstitutional, while there are others, equally as good sportsmen, who do not like to be placed in the position of violating any law, be it unconstitutional or not, so long as it remains on the statute books, and by reason thereof are deprived of this privilege and pleasure.

Be this as it may, I am opposed to the present law, as it is unfair and discriminating, and, to my mind, but little protection to bird life, as I have heretofore stated, and repeat there should be laws passed, with good stiff penalties, prohibiting the robbing of the nests and selling the eggs on the market; also likewise prohibiting the sale or purchase of game in all localities; and this will do more to increase the wild game birds than all other

things combined.

Again, I say the true sportsman will do all in his power to conserve the wild game, and will welcome the day when the game hog and the market hunter and the nest robber can be put out of business and legitimate sportsmen have a chance.

Retirement for Officers of Philippine Sconts.

EXTENSION OF REMARKS

HON. WILLIAM W. WILSON,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, April 29, 1916.

Mr. WILSON of Illinois. Mr. Speaker, under leave to extend my remarks, I submit the following:

The officers of the Philippine Scouts desire retirement as officers, the same as other officers of the Army, a right they are not accorded now, owing to nonexistence of a law giving them that right.

They request it as a matter of justice, basing their claim on service and proved efficiency.

It is expected that an adequate measure will be prepared and presented by the War Department.

This pamphlet is to show what the various division and department commanders in the Philippines think of the Philippine Scouts. Note that from 1002 to the present day each commanding general of the Philippines in his official annual report to the War Department recognizes the high efficiency of the scouts and in many cases calls attention to the justice of giving the officers retirement.

The scouts were organized in 1901, 100 officers being commissioned. Of the 100, 21 now remain on the active list; 70 per cent of casualties from all causes in 13 years.

Justice will be too late for many.

Extracts from reports of division and department commanders:

MAJ, GEN. FRANK D. BALDWIN.

MAJ. GEN. FRANK D. BALDWIN.

1902. I have had this organization under my command in the islands, and without hesitation or reservation I will state that I consider them the finest body of native troops in existence, and as an auxiliary force

to our Regulars, or American, troops are unexcelled, and there is no doubt that the small force now under our flag could be increased to 100,000 reliable fighting men. They are less expensive in their organization and maintenance than our Regular troops. This is due in no small degree to the good wook of the officers in the past and present. With an organized command composed of one-third Americans and these people I would not hesitate to engage any troops of the world.

MAJ. GEN. DAVIS.

1903. The native Filipinos under American officers will be as true and faithful as any troops could oe, provided they are well treated and paid promptly.

MAJ, GEN. WOOD.

MAJ. GEN, WOOD,

1004. The six scout companies in this department (Mindanao) have seen considerable field service during the year. They have shown themselves to be well disciplined and cheerful soldiers.

1006. The scouts have maintained their previous reputation as a valuable and thoroughly efficient body of native troops.

1007. The scouts have maintained their previous high standing of efficiency and their conduct and service have been everywhere reported as satisfactory. They did especially good work in Samar and Leyte against the Pulajanes.

1908. The scouts continue to render most excellent service. As scout officers serve continuously in the Philippine Islands, provision should be made for their retirement on the same general lines as other officers.

BRIG. GEN. BUCHANAN.

1906. If this part of the military organization is to remain a permanent feature of the Army it would seem only proper that some provision be made for the future of its officers with reference to retirement and promotion.

BRIG. GEN. MILLS.

1907. I have been most favorably impressed by my observation of the companies of Philippine Scouts serving in this department. The discipline of these companies is very good, and hard work in the field has shown these soldiers to be loyal, patient, and efficient.

1908. The Philippine Scouts continue to demonstrate the fact that they are efficient and excellent soldiers for duty in these islands. An increase in their number will diminish just that much the amount of Regular Infantry necessary in the Archipelago and the added expense of maintaining such. A provision for the retirement of scout officers after faithful service should now be made.

MAJ, GEN, DUVALL,

MAJ. GEN. DUVALL.

1909. Attention is invited to the question of retirement rights of both officers and enlisted men of this force. As to the officers, a provision of law exists by which those who may have had prior service in the Regular Army may, by taking a discharge as an officer and reenlisting in the Regular Army, be retired as are other soldiers. But all Scout officers are not of necessity drawn from the enlisted body of the Regular Army; they may and do come from civil life or from the native class. Therefore we have the anomaly of some Scout officers being eligible to retirement (though the method is roundabout, inconvenient, and annoying to all concerned and to the Scout officer thus retired naturally humiliating), while others have no such right. To state this condition is to condemn it, and it is recommended that some simple, direct provision of law be sought by which all Scout officers shall be placed on the same basis in respect to this right, and that some simple, direct on the same basis in respect to this right, and that basis a lair one.

I wish it fully understood that it is with a distinctly high standard in mind that I pronounce the Philippine Scouts a very valuable adjunct to the Army; well armed, equipped, and accontered; their maintenance economically administered; of exceptionally soldierly bearing; in the main well drilled, trained, and disciplined; eager and quick to learn and with exemplary ardor for field service. As for their racial courage, which has of late been so openly aspersed, it is known that their officers repose much confidence in the dash and grit of the men, those officers who have been in the tightest places with them being the most pronounced in such confidence, and in this opinion I fully concur, from abundant experience with a company of such troops in my own command during the insurrection.

1910. The experience of the past year has strengthened my convictions respecting the views I then expressed. The services rendered by this organization continue to be most sati

MAJ. GEN. BELL.

1911. It is hoped that legislation may be secured whereby Scout officers may be retired as commissioned officers instead of having to reenlist after resigning their Scout commissions and then to be retired with noncommissioned grade. Having served faithfully and well for a great number of years tmost of them being old and tried noncommissioned officers), it would seem no more than a merited heritage for their children that they should be retired as commissioned officers. A specific proposition looking to the attainment of this end will be submitted hereafter.

1912. The Philippine Scout troops in the Department of Mindanao have been almost continuously on field duty, scouting and patrolling during the entire year. The large amount of detached service required of Philippine Scouts has interfered somewhat with their instruction and training, especially recruits, but advantage has been taken of every opportunity to assemble companies and battalions, where practicable, for thorough training, and the organization is an efficient one.

EXTRACT OF AN INDORSEMENT BY BRIG. GEN. FUNSTON.

MANILA, February 16, 1912.

Manila, February 16, 1912.

The undersigned is strongly in favor of the retirement of Scout officers as officers, both for disability and for age. Some provision could be made in a bill for that purpose which would guard the interests of the Government in giving something less than the usual retired pay, to pay those Scout officers who retire after very few years service as such; but still not a few junior officers of the Regular Army of less service as officers than many of the Scouts have already had have been retired for disability, drawing the full retired pay. The present status of the Scout officers as regards retirement is not only grossly unjust but can not but affect their efficiency as a body. It is boped that steps will be taken to remedy immediately this condition of affairs.

Frederick Funston,

Brigadier General.

STATEMENT OF SECRETARY OF WAR GARRISON.

AS PUBLISHED IN THE ARMY AND NAVY JOURNAL OF MARCH 21, 1914.

As published in the above heen made for the retirement of these officers, and the only means of providing for those who have become disabled in the line of duty for the performance of active service or who have reached an age when they were no longer effective has been to accept their resignations as officers, permit their enlistment in the Regular Army, and apply to their cases the laws relative to the retirement of enlisted men. It will thus be seen that the present conditions of the seout officers is an anomaly. It is also p'ainly an injustice. Having served faithfully and well under the most trying conditions for a great number of years (many of them being old and tried noncommissioned officers of the Regular Army), it would seem no more than a merited reward that they should be retired as commissioned officers.

The low cost of the Philippine Seouts, their availability, health, and habits, make them too valuable an auxiliary organization to be allowed to lapse in any respect, and consequently substantial encouragement should be given these officers, as much of the efficiency of the organization depends on their personnel.

I am strongly in favor of the retirement of Philippine Seout officers as officers, both for disability and for age.

EXTRACT OF LETTER FROM BRIG. GEN. PERSHING, DATED JUNE 19, 1913.

EXTRACT OF LETTER FROM BRIG. GEN. PERSHING, DATED JUNE 19, 1913. REFERENCE TO TROOPS ENGAGED IN ACTION ON BUD BAGSAK, ISLAND OF JOLO, JUNE 11 TO 15, 1913.

While individual gallantry and exceptional conduct will be made the subject of special report to the department commander, with appropriate recommendation in each case, the commanding general of the district desires to extend to each and every man of the Bud Bagsak command his heartfelt thanks for the heroic and loyal response to the cail of duty in this engagement which, for stubborn resistence and fercity of counter attack, has probably not been equaled so far since the American occupation of the Philippine Islands.

The commanding general had the privilege of directing this action in person, but he can not forbear expressing his appreciation of and pride in the cool courage, the fortitude, and the splendid gallantry displayed by the troops engaged; pride of blood in the superb fighting qualities of the American soldier, and pride in the native soldier who, under the leadership of experienced white officers, has again demonstrated, in the battle, his loyalty and efficiency.

RETIREMENT, AS OFFICERS, FOR OFFICERS OF PHILIPPINE SCOUTS.

CAMP KEITHLEY, Mindanao, P. I., May 15, 1914.

CAMP KEITHLEY,
Mindanao, P. I., May 15, 1914.

From: Capt. A. W. Barry, Philippine Scouts.
To: The Adjutant General of the Army (through military channels).

1. As published on page 4, Bulletin No. I, War Department, 1914, the Judge Advocate General of the Army, considering the application of an officer of the Philippine Scouts for retirement under Revised Statutes 1243, held "That the law which fixes the pay and allowances of the Philippine Scouts the same as those authorized for officers of like grade in the Regular Army did not include the privilege of retirement, and that the retirement of the officer could only be accomplished by an act of Congress."

2. Capt. H. R. Drake, Philippine Scouts, has been absent from duty with his company since October 25, 1909 on account of permanent disability incurred in the line of duty. Under existing law the best possible provision the War Department could make for this officer would be retirement as an enlisted man, on pay insufficient to provide for him in his crippled condition; and a strict interpretation would not allow even that, but would require his discharge for disability. As this officer belongs to the same battalion as myself, I have personal knowledge of the hardship endured both by the officer and battalion. There are no extra officers in the Philippine Scouts, the duties are arduous and exacting, and the full quota of officers are needed; consequently, it is most desirable that such retirement be provided as will eliminate from active service all officers unable to perform the full duties of their grades.

3. Philippine Scouts officers with prior service as enlisted men in the Regular Army, may, under existing law, resign, enlist as privates and then retire; but officers without such prior service can not retire at all.

4. The Scout organization, having been in existence for a period

and then retire; but officers without such prior service can not retire
at all.

4. The Scout organization, having been in existence for a period
approximating 13 years, it can hardly be claimed that they are a
temporary force, similar to volunteers called into being to meet a
more or less limited need.

5. It is well known that Scout officers are called upon to exercise
the same functions as company officers in the Regular Army; their
responsibilities are equally as great; they are held as strictly accountable for the proper performance of the duties of their respective
grades; the military educational requirements are similar; courtmartials have frequently been composed of both regular and scout
officers; they have been called upon to perform duties outside of the
Philippine Islands, and to all intents and purposes there is no difference between the officers of the two branches, save in the matter of
retirement. It would appear then, that the duties, requirements, etc.,
of the scout officer, being the same as those for officers of ficer so fithe grade
in the Regular Army, it would be a matter of simple justice that his
reward for the efficers witally affected by the researce of a retire

same.
6 As one of the officers vitally affected by the passage of a retirement law for scout officers, and believing that my services entitle me

to the privilege of retirement as a commissioned officer, I request that this communication be brought to the attention of the Secretary of War with the purpose in view of having the proper authorities take steps looking toward the enactment by Congress of a law providing for the retirement mentioned.

Captain, Philippine Scouts.

[Second indorsement.]

HEADQUARTERS PHILIPPINE DEPARTMENT,
June 9, 1914.

TO THE ADJUTANT GENERAL OF THE ARMY:

1. Since the organization of the scouts—General Orders, No. 9, Head-quarters of the Army, Adjutant General's Office, Washington, February 6, 1901—no officers of the United States Army have endured greater hardships or performed without let-up more hazardous field service. This is emphasized by the list of casualties among the scouts herewith appended.

2. Existing laws in respect to their retirement are inadequate, emi-

This is emphasized by the list of casualties among the scouts nerewith appended.

2. Existing laws in respect to their retirement are inadequate, eminently unjust, and ungenerous. Those who were fortunate enough to have been enlisted men when commissioned in the scouts can now, under existing law, resign with a view to their appointment and retirement as noncommissioned officers, and even then they have to beg somebody to appoint them. Many of these deserving officers, however, were not enlisted men, and were appointed officers in the scouts from officers of volunteer service. There is absolutely no way for this latter class of deserving officers to be retired.

3. The case of Capt. H. R. Drake, referred to within, emphasizes the inadequacy and injustice of existing law affecting the retirement of these officers. There are other scout officers who have been seriously wounded in action and who are unable to properly perform service in the field and who are being held for such service as they can perform with the hope that Congress may some day properly provide for their retirement. Two such officers now within my recollection are Licuts.

4. Captain and Rackley.

with the hope that Congress may some and recipients are Licuts. Gunn and Rackley.

4. Captain and lieutenants of scouts are officers of the Army, and therefore existing laws affecting the retirement of captains and lieutenants of Infantry and the Porto Rico Regiment of Infantry should be made applicable to them.

5. It seems that the following phraseology inserted in that part of the act making appropriations for the support of the Army which provides for the pay of Philippine Scouts, might cover the case:

"That hereafter captains and lieutenants of the Philippine Scouts shall have the same pay, rights, and allowances provided by law for Infantry officers of similar rank in Army of the United States."

T. H. Barry,

Major General, Commanding.

EXTENSION OF REMARKS

OF

HON. CHARLES B. WARD,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, April 27, 1916.

Mr. WARD. Mr. Speaker, any measure affecting the interests of the farmer is one which is entitled to command the most serious and earnest consideration of our Federal Government. I am especially interested in this bill (H. R. 12717) making appropriations for the Department of Agriculture for the fiscal year ending June 30, 1917, not alone because a large percentage of the people who I have the honor to represent in this House are engaged in agricultural pursuits, nor because I have been given the honor of serving on the committee which favorably reported the bill, but rather I am especially concerned in the measure because it is in support of the work and life of the farmer, whose occupation, in my humble judgment, is not only the noblest in the world but it forms the very basis of our national prosperity. The bill carries a total appropriation for the Department of Agriculture, exclusive of permanent annual appropriations, of \$24,501,093, this sum being an increase of \$1,529,311 over the appropriation for the current fiscal year and a decrease of \$97,996 below the estimates submitted by the department. The committee has reported the bill favorably only after exhaustive hearings had been held and every provision given full consideration. The officials in the various lines of work in the department came before the committee and gave reports of results of the past year and their plans for the com-The present bill is an increase over the appropriaing year. tion for this fiscal year of 6.6 per cent. It should be noted that the bill now under consideration carries with it an appropriation of \$2,500,000 for combatting the foot-and-mouth disease or any other contagious or infectious disease which might attack live stock. The fund is not to be expended for any other purpose, so that if such outbreak of disease does not occur, then the money is retained in the Treasury. I believe at the present time there is only one quarantine, and that of a herd of swine

in one county in Illinois.

In reckoning the cost of maintenance of the Department of Agriculture and in considering the amount this bill asks for, it must be remembered that there is a substantial amount of revenue coming into the Treasury as a direct result of the activities of the department. Such revenue in 1915 amounted to \$2,549,426.18, and in the report of the committee is divided as follows: Receipts from national forests, \$2,481,469.35. This sum is an increase of \$43,759 over 1914. The receipts under this heading are further classified—(a) timber, \$1,175,133; (b) grazing, \$1.130,495; (c) special uses, \$175,840; sale of condemned and other property, \$41,517.60; sale of hearings, \$208,15; receipts from United States seacoast telegraph line, \$3,852.73; sale of official cotton standards, \$7,556.50; receipts from settlement of disputes, \$14,821.

THE IMPORTANCE OF AGRICULTURE.

The inherent nature of the great science and industry of agriculture, the very fact that working with the forces of nature it produces that which is essential to the maintenance of life is conclusive proof of its supreme importance. There is no taking of chances nor speculating regarding the fostering of agricul-

tural industry for its foundation is placed alongside the foundation of life itself. In these troubled times, while the nations of the world are in the most inflammatory state in history, we may turn our eyes to our Army and Navy—our military strength—but the time will never come when the statement can be proven untrue that the twelve million and more farmers from the Pacific to the Atlantic form the bulwark of our Nation.

According to the last Federal census, that of 1910, our rural population amounted to 49,348,883 as against the urban population of 31,609,645. According to the last official figures there were 19,582,039 persons engaged in agriculture in the United States, this number being exceeded by but one other country, namely, Russia, who had 13,808,505 of her people engaged in the industry. On January 1 of this year the estimated value of farm crops in the United States, based on prices at the farm, reached a total of \$10,501,686,375, of this amount \$6,652,288,634 being the value of crops, and \$3,849,397,741 being the value of farm animals and farm animal products. In 1910 there were 6,361,502 farms in this country, with a total land area of 1,903,289,600 acres. There were 478,451,750 acres in improved land in such farms and 400,346,575 acres in unimproved lands. The total valuation of farm property in 1910 was \$40,991,449,090. Of this total, land was valued at \$28,475,674,160, buildings at \$6,325,451,528, implements and machinery at \$1,265,149,783, and domestic animals, poultry, and bees at \$4,925,173,610. The average value per acre of farm land was \$32,40.

Measured by the amount of wealth it produces, there is no industry under the sun that equals agriculture. The annual output of manufacturing industries is sometimes pointed to as being greater in value than that of agriculture, but in this connection the fact must not be lost sight of that the manufacturing business uses annually millions of dollars' worth of raw material. When this amount is deducted from the value of their output its valuation gives place to the supremacy of the farmers' work. In 1909, according to the last Federal census, the annual output of our manfacturing industries was valued approximately at \$20,000,000,000, but the amount of raw material used was valued at \$12,000,000,000.

It is not alone in money value that the industry of agriculture is to be estimated. The life in the great out of doors, the work that brings men next to the heart of nature, builds body and mind as no industrial or commercial enterprise can hope to do. That hardy stock who in pioneer days went out into the rural districts of our country to work the land and build homes truly interpreted the spirit of Americanism; knew the true meaning of American citizenship; never shirked its responsibilities nor betrayed its trusts, and have given us such a great share of stanch Americans in high place to-day, who point with pride to their farmer ancestors or to the farm where they first learned the lessons of nature—the lessons, as everyone of them will tell you, which more than anything else led them into command and leadership.

In Congress and out of it we have of late heard much of national preparedness. In appropriating money to aid the farmer in his work, to make accessible to him the knowledge that has come from scientific research, to extend to him every consideration commensurate with the importance of his work, we are doing much for national preparedness—a preparedness of value in time of peace or in time of war.

THE COUNTRY'S GROWTH AND AGRICULTURE.

The growth of our country has been the wonder of the world. The first official census of the United States was taken in the year 1790 to determine the "Federal ratio" or the number of Representatives that could sit in Congress. The ratio was then fixed at 1 in every 30,000; now it is 1 in over 193,000. The first census showed we had a population of less than 4,000,000; it showed also that practically the whole body of people lived along the Atlantic seacoast on a strip of land about 250 miles wide. On the average our population has doubled every five years, and to-day our people number more than 100,000,000. It is estimated by the geographer of the census that our population, including Alaska and Hawaii, on July 1 last was 110,750,000, an increase in the past 125 years of 106,750,000.

One hundred and twenty-five years is but a brief period for a Nation to spring from insignificance to a world power. With the invention of the cotton gin in 1793 the industrial wheels of the South were set in motion, and we see to-day the value of cotton products is more than \$600,000,000. The increase in manufacturing, which is so largely dependent upon agriculture, has been great, and we find that the capitalization of industrial concerns is more than eighteen billions. The first steam railroad in this country, built in 1830, ran between Baltimore and Ellicotts Mills, a distance of 14 miles. To-day in the State of New York alone the railroad mileage is more than 8,000. The

grand mileage for the country for the year ending 1912 was 246,816; these figures show an increase of 22,453 over those of six years before. Less than 100 years ago, back in 1825, Henry Clay, the "Father of the National Road," and President Monroe were congratulating themselves on seeing the national road—the route of the emigrants-built from Maryland through to the Mississippi. To-day thousands upon thousands are traveling upon the 2,000,000 miles of public roads in the United States. Of improved highways we have more than 230,000 miles. It is easy to perceive what progress this enormous building of railways and highways is indicative of. The Boston News Letter, a weekly paper published in 1704, was the first regular newspaper in the United States, and to-day, as everyone knows, there are more newspapers and periodicals published in the United States than anywhere in the world. Besides our vast system of schools, where more than 18,000,000 children receive instruction at the expense of the Government, our higher institutions of learning, both public and private, have an enrollment of more than 360,000 and are conceded among the best in the world. Even before the present war had piled up the appalling debt of the belligerent nations we were far ahead of any nation in wealth, our wealth at that time being estimated at \$150,000,000,000, or \$65,000,000,000 greater than Great Britain and Ireland and \$60,000,000,000 greater than Germany, our nearest rivals.

Honorably, no bly, in the path of integrity, and in the light of freedom we have striven to our present-day prominence and power. In paying tribute to this great progress and in looking for the foundation of it all it is not my purpose to depreciate the vital importance of manufacturing and other industry, but at the base of all this progress I can not full to see agriculture as the very groundwork upon which we have builded. While lending a helping hand to other industry which is dependent upon it, it has maintained its lead in the value of production to the country; it is to-day and will continue to be, if we be wise enough to show it due regard, the most important industry of

our land.

THE WHOLE COUNTRY IS NECESSARILY CONCERNED IN AGRICULTURE.

With our leaping gains in population, the time has come when we must give heed to the conservation of our natural resources. More production per acre must be had from the soil. Our yield per acre is far below that of Germany, where methods of in-tensive farming are employed. Until recently comparatively little attention was given to scientific farming in this country, but sooner or later we must come to intensive farming. Greater application of scientific principles will enable the farmer to net more income with less labor. In agriculture, as in the other industries, we must look forward. The time when we can get all we want from the land without putting anything back has passed. There is no more land in the United States than there was 125 years ago, but there are 96,000,000 more people here than there were then. There will be no more land here 50 years from now than there is now, but there is no question but there will be millions more of people here at the end of that time. They all must be fed. Humanity may change in some particulars, but it never can advance out of the bread-and-butter class. The United States Department of Agriculture has an eye to the future, and much of its work, for which we make appropriation in this bill, goes to pave the way for methods of agricultural conservation that will mean much to the proper maintenance of the industry. The farmer asks for no special support; he wants only fair and equal recognition at the hands of the Government. He has an abundance of support that his own farm and his own knowledge of working it gives him; but if he were not enterprising and progressive, so that he turned most of his crop out to the world for a money return, the other people in the country would be begging him to prosper with his production so they, too, might live. It is the country at large, as well as the farmer himself, that is concerned with governmental treatment of agricultural pursuits.

COMPARATIVE FIGURES SHOWING PEODUCTION AND VALUE OF AGRICULTURAL PRODUCTS IN THE UNITED STATES AND IN OTHER COUNTRIES.

The United States leads the world in the amount of production and in the valuation of its agricultural products. We also lead in amount of agricultural exports. The mere statement of the amount of production or the amount of value is not sufficient to show our standing, but when these figures are placed alongside the figures for other countries of the world we have proof of the place which this country holds in the industry of agriculture. According to figures by the Bureau of Crop Estimates of the Department of Agriculture the United States in the past year of 1915 led the world in the production of the following: Corn, 3,054,535,000 bushels; wheat, 1,011,505,000 bushels; oats, 1,540,362,000 bushels; cotton (1914), 16,134,930 bales of 478 pounds each; and tobacco (1914), with 1,034,679,000

and the second

pounds. Russia (51 governments of European and 10 of Asiatic Russia) led in the production of barley in 1915, with 475,109,000 bushels, and also led in rye with a production of 861,097,000 bushels. Germany (1914 latest figures) led in the production of potatoes, with a total of 1,674,377,000 bushels, while the United States was second in potatoes, with 409,921,000 bushels. The average annual production in the United States for 1905–1909 (crop years) in corn was 74.8 per cent of the world production; in wheat for 1906–1910 it was 19.8 per cent of the world production; in oats for 1906–1910 it was 24.4 per cent of the world production; in barley for the same period it was 12.6 per cent; in rye for the same period it was 2 per cent; in potatoes for 1905–1909 it was 5.9 per cent; in cotton for 1905–1909 it was 59 per cent; in tobacco for 1905–1909 it was (including Porto Rico) 31.6 per cent; in flaxseed, 1905–1909, it was 25.4; in rice, 1905–1909, 5; in hops, 1906–1910, 25.9; in sugar, 1906–7 to 1910–11, 9.8; and in coffee, 1905–1909, it was 1.5 per cent.

The relative rank of the United States among the various countries of the world in agricultural production, exportation, and importation for a recent five-year period is shown by the

following figures:

The figures for the periods specified above would under normal conditions be, comparatively speaking, substantially the same to-day.

These figures ought to bring home to us in full measure the importance of agriculture in this country. It is a healthy condition for the country to keep agriculture the paramount industry. The statistics for last year show that our industrial concerns had a total capitalization of \$18,000,000,000. The speed with which they are progressing is shown by the fact that these figures show an increase of 45.4 per cent over the figures of five years previous. What we do here tending to enable agriculture to keep abreast of the great progress of our country is something done in the interest of the welfare of the whole Nation.

RURAL CREDITS.

A simple comprehensive plan of rural credits is needed in this country, and I trust this session of Congress will not end with-out favorable legislation being enacted in that particular. I be-lieve the need and advisability of some form under Federal control of long-time loans with a lower rate of interest for farmers is generally conceded. The platforms of the Republican, Democratic, and Progressive Parties in 1912 all favored rural credits; the United States Commission, the American Commission, the committee of Congress, the President, the national grange, the Farmers' Union, the agricultural press throughout the country have all gone on record favoring national legislation to provide our farmers with proper credit facilities. European countries which have been so generous in their aid to agricultural interests in the way of land credits have acted of necessity; they knew that agriculture was with them, too, the basis of their wealth. The great national indebtedness resulting from costly wars fell very largely upon agriculture which could not withstand the tax and the excessive interest, and in the interest of the whole people, agricultural industry, by having offered to it a system of rural credits which would supply it with abundance of credit at a rate of interest even as low as the rate paid by the Governments themselves, was offered a fair and open road to bring, as nothing else could, prosperity back to the country. We may learn by the experience of other countries the advisability of extending proper credit to agriculture as needs be extended to it because of the nature of the industry, necessitating as it does, long lapse of time before there is a return upon the investment. Not every day or week or every month does the farmer turn his stock into money, but rather every year, and in some things not that often. This fact, on its face, clearly shows the need of longer time loans. A fact, the importance of which is often lost sight of, is the large share of the public taxation borne by the farmer; in commercial and industrial enterprises much property escapes the assessor, but there is not an acre of farm land that escapes taxation.

But it is not my purpose to speak further of rural credits at this time. I merely refer to it here, as I have been speaking in a general way of the welfare of agriculture. Opportunity for comment will be afforded when the rural-credit bill comes before the House. The Senate has already reported a rural-on the first of this year, together with their valuation, were:

credit bill—S. 2986—and the Banking and Currency Committee of the House is about ready to favorably report a similar measure—H. R. 6838. There is no controversy over the proposition that Congress should enact a law establishing a national system of land credits; it now rests with Congress to meet this question with as little delay as possible and with the consideration that it deserves.

AGRICULTURE IN NEW YORK STATE.

So great is the commercial business and industrial enterprises of the State of New York that its importance in the industry of agriculture is often overlooked. As the only Representative from New York State on the Committee on Agriculture of the House of Representatives, I may be permitted to say a word in particular concerning agriculture in the Empire State. According to the last estimates of the Department of Agriculture New York ranked eleventh of all the States in the total value of farm property. This total value in New York reached \$1,451,481,495. Illinois was first, with a valuation of \$3,905,321,075, and only the following other States exceeded New York: Iowa, Texas, Nebraska, Missouri, Kansas, Ohio, Indiana, California, and Minnesota. The last Federal census, in 1910, showed that New York had 215,597 farms containing a total of 22,030,367 acres, of these there were 14,844,039 improved acres and 7,186,328 unimproved acres. The average number of acres to a farm was 102.2, and the per cent of improved land was 67.4. According to the report of the Bureau of Census for 1914

According to the report of the Bureau of Census for 1914 there were 11 principal crops in this country, valued at \$4.813,-281,000, which covered about 90 per cent of the total value of all crops in the United States. New York of all the States ranked first in production and value in four of these crops. These 11 crops, in order of value, were corn, hay and forage, cotton, wheat, oats, vegetables, forest products on the farm, potatoes, tobacco, barley, and apples. According to the same consus New York ranked eighth in the value of her total crops.

cotton, wheat, oats, vegetables, forest products on the farm, potatoes, tobacco, barley, and apples. According to the same census, New York ranked eighth in the value of her total crops. The first nine States in order of the valuation of their crops were: Illinois, Iowa, Texas, Ohio, Georgia, Missouri, Kansas, New York, and Indiana. New York was first in hay and forage, in vegetables, in potatoes, and also in apples. New York, however great she may be commercially or industrially, is an agricultural State, and is doing her share to add wealth and prosperity to the Nation through the industry of agriculture. Despite her relatively great weight of population New York has vast land that is yet to be developed in agricultural pursuits. We need this land developed, and we need to get greater production from our already cultivated land if we are to take full advantage of our agricultural wealth.

Here are some figures in New York's principal group for local

Here are some figures in New York's principal crops for last year: In oats New York ranked seventh, with 54,270,000 bushels, valued at \$24,422,000. In this crop she was exceeded only by Illinois, Wisconsin, Minnesota, Iowa, and North Dakota. In barley New York ranked eleventh, with 2,720,000 bushels, valued at \$2,040,000, exceeded only by Wisconsin, Minnesota, North Dakota, South Dakota, Kansas, Colorado, Idaho, Washington, Oregon, and California. In rye New York ranked fifth, with 2,805,000 bushels, valued at \$2,609,000, exceeded only by Pennsylvania, Michigan, Wisconsin, and Minnesota. In buckwheat New York was second with 5,320,000 bushels, valued at \$4,-256,000, exceeded only by Pennsylvania. In the production of potatoes New York was first, with 22,010,000 bushels, valued at \$18,048,000, her nearest rival being Maine. New Yorl was also first in hay, with a production of 5,850,000 tons, valued at \$91,845,000. Pennsylvania was second, with 4,340,000 tons. In apples New York led all the other States, with a production of 8,528,000 barrels (3 bushels each). Pennsylvania, producing 7,700,000 barrels, ranked second. It might be interesting to note that the average farm price (per bushel) for apples in New York State in 1915 was 77 cents, while in 1914 it was 45 cents. The production in 1914 reached 16,533,000 barrels, the largest of any State in years. New York was exceeded by only 11 States in the production of peaches last year.

On January 1 of this year there were 21,166,000 horses on farms in the United States, and their value was \$2,150,468,000. There were at the same time on farms 4,565,000 mules, valued at \$519,824,000. The value per head of horses was \$101.60, and of mules \$113.87. In the number of horses on farms the State of New York took fifteenth place, with 609,000, valued at \$84,651,000. The importance of New York in dairying is shown by the fact that in the number of milch cows she ranked second of all the States, New York having at the first of this year, according to official estimates, 1,539,000 milch cows, valued at \$88,031,000. New York at the first of the year had \$49,000 sheep, valued at \$5,264,000, and 799,000 swine, valued at \$9,428,000. Farm animals in the United States, besides horses and mules, on the first of this year together with their valuation, were:

Cattle, 61,441,000, valued at \$2,506,254,000-of this number 21,-988,000 were milch cows. Swine, 68,047,000, valued at \$571,-890,000. Sheep, 49,162,000, valued at \$254,348,000.

FARMING INTERESTS NEED A PROTECTIVE TARIFF POLICY,

No matter how crucial may be the situation of our relations at the present moment with any foreign Government, it is folly for us at any time to slight the vital importance of our economic future. I come now to the very important economic subject of the effect of a national policy of free trade or protection upon our agricultural interests. Does the farmer desire to pursue a policy of near free trade and let the grain from Russia, Argentina, Canada, the eggs from China-in fact, does he desire to have the agricultural products of the world come into this country with little or no duty to compete with his own production? Abraham Lincoln's plain talk about the tariff has never been quite satisfactorily refuted. Lincoln said, in effect:

If foreigners ship goods into this country, we get the goods and the tor-cigners get the money; but if we protect our own markets and have our people buy our own production, then we get the goods and the money.

Admitting that some products can be more cheaply produced in foreign countries, do our farmers, or any other class of our people, want to be forced to compete in a class with the cheap labor of China and other foreign countries where the low standard of living accounts for the labor being as cheap as it is?
"The standard of life." a phrase which expresses the thought

of that measure of necessities, comforts, and luxuries, considered by any individual to be needed for himself and his family, differs greatly from land to land. In the Asiatic countries it is so low that it touches in large classes the minimum of subsistence. As has been pointed out by one of our American economists, the population of India, where the standard of life is Iow, has increased under English rule during the past century from 200,000,000 to 300,000,000. Such a population "lets out all the slack" of income and never takes up any. The great public works of irrigation, forestry, and transportation, and the de-velopment of industry under English rule gave an opportunity for a higher standard of living, but it was used instead to per mit the existence of a greater number of men in the same old These facts have their bearing on the question of protecting our own markets against foreign invasion and the maintenance of our own standard of living. The American standard of living, while it differs in different classes, is on the whole the highest found anywhere in the world. We must keep it the highest.

The gentleman from Tennessee [Mr. Austin], who, as we all

know, has made a very careful study of conditions in China and Japan, points out very strikingly some facts which it will be well for us to heed in dealing with this question of free trade or protection. The gentleman, writing in 1915 about Japan, said in part:

1 traveled several thousand miles in the flowery kingdom, visiting the principal cities, and I also traveled through the agricultural section. * * The population of Japan proper is 53,000,000, and if you add the dependencies of Korea and Formosa it gives a total of 71,000,000, * * Seventy per cent of the people live by farming. * *

you add the dependencies of Korea and Formosa it gives a total of 71,000,000.

* * * Seventy per cent of the people live by farming.

Labor is cheaper to-day in Japan than any other country in the world except China, and the difference is exceedingly slight. Japan, having the decided lead in the manufacturing line, is now supplying China, and in doing this has successfully met the competition of all her American and European competitors. In the manufacture of cheap cotton goods she is rapidly taking the trade away from her ally, Great Britain, and while the United States, before Japan developed her cotton industry, sold cotton goods in China in one year to the value of \$29,800,000, now since Japan has gotten into the game, our trade in this line in China was between five and six millions per annum in 1914.

She has not only driven our cheap cotton goods out of China, the greatest cotton-goods market in the world, but enters our insular markets in the Philippine and Hawaiian Islands and sells annually from five to six million dollars' worth of cotton goods. This is not all. Japan is demonstrating on our very shores what she is capable of doing. In 1907 the total amount of cotton goods from Japan sold in the United States under a Republican protective tariff was \$333,989; in 1914, under the operations of the Democratic low tariff, she had no trouble to pay the customs duti's and unload cotton goods to the value of \$1,041,632, a difference or an increase of \$707,643.

The construction of the Panama Canal opens a cheap water transportation route to our eastern cities and States, and Japan is already arranging for lines of fast passenger and freight ships to connect her factory ports with one of the best sections of the greatest and best markets in all the world, the region between the Atlantic and the Mississippi River

At this very time, and during the last year, when the American mills were unable to dispose of their output and many of them either closed down or ran on reduced time, employees idle, etc., under th

markets in all the world, the region between the Atlantic and the Mississippi River

At this very time, and during the last year, when the American mills were unable to dispose of their output and many of them either closed down or ran on reduced time, employees idle, etc., under the present tariff law the Japanese mills were running night and day, putting in from 20 to 22 hours in every 24, and the sales of Japanese goods in America, the Philippine and Hawuilan Islands, and China show an increase. Last year (1914), under the Wilson-Underwood tariff, our foreign competitors sold in the United States cotton goods made in foreign mills and by foreign workmen to the value of \$70,704,823, being an increase over their sales in the United States the year before (1913) of \$4,638,970.

I visited one mill at Tokyo, where I found a room full of women working for S cents a day. In another plant I saw at least a thousand women and girls working for 15 cents a day—11 hours—boarded and roomed in quarters furnished by the company. Four and a haif cents a day was deducted for their meals and lodging, leaving a balance of 10½ cents net for their day's work. Fifteen of these women or girls occupy

a single room 16 by 18 in size, sleeping on the floor, without a single piece of furniture in the room.

With modern machinery, cheap power, cheap labor, and cheap water transportation to all the known ports and markets in the world, Japan has essential and controlling advantages over all of her foreign competitors. All Japan wants is a low tariff law and she will successfully meet and undersell all her competitors in any manufacturing line she has entered upon or may hereafter decide to enter upon.

With extensive deposits of every known mineral, the cheapest labor in the world, the most modern, up-to-date machinery, and a large and increasing marine service backed up by the Japanese Government, Japan will be in fact a peril, a yellow industrial peril, in the Orient, in South and Central America, Canada, and the United States, under a low tariff or nonprotective tariff law. Last year Japan imported pig iron, steel ralls, plate, and galvanized iron to the value of \$25,882,454. She is going to not only save this—keep the money at home by going into the iron and steel business—but enter the foreign markets extensively in this line, if her present plans materialize.

With America's high standard of living and wages and short hours she can not commercially stand up against the Japanese and Chinese industrial systems on equal terms.

A personal visit to the Orient, first-hand observation, study, and information would cure for all time the most rabid free trader or low-tariff man in or out of the American Congress.

Practically every other country of the world maintains a

Practically every other country of the world maintains a substantially high protective tariff—England being an exception because of her widely scattered possessions upon which she is dependent. Our own country has come to its present great wealth and prosperity through a protective tariff under Republican administration. Under protection our 100,000,000 of people have purchased from our own markets, and this is as it should be. No farmer should fail to see the fairness to him of the maintenance of such a condition.

THE EUROPEAN WAR AND ITS ECONOMIC EFFECT UPON THIS COUNTRY. The Department of Commerce has warned us "to guard against any sense of safety in our present prosperity, in so far as that prosperity is based upon business connected with the belligerent activities in Europe." We are all agreed that the abnormal conditions arising out of the war in Europe are giving us a prosperity at the present time which we would not be enjoying if it were not for the great temporary demand of the belligerent countries for our products. The records of the Department of Commerce during the Democratic administration fully warrant the Commerce Department's warning. When the Democratic administration came into power we had a great balance of trade in our favor. Then when the Underwood tariff law went into effect imports increased and exports decreased until we had an actual monthly trade balance against us. balance continued against us until the war began, the war virtually offsetting the damaging effect of the new tariff law. Our trade balance with those countries not at war is against us. The prosperity of the farmer at the present time has been pointed to by Democratic leaders. Let me remind you of some facts that have already been pointed out: True it is that we have had the greatest wheat crop in our history, and we have sold more to Europe than ever before. Our sale of wheat to Europe during the first year of the war compared with the first year of the present tariff law in time of peace increased from \$103,595,000 worth to \$316,262,000 worth, or a gain of 205 per cent. During the year of peace we sold in breadstuffs to Europe \$181,484,000 worth, and in the year of war we sold \$567,607,000, a gain of 213 per cent. In the year of peace we sold to Europe horses to the value of \$3,177,000.

In the year of war we sold them horses to the value of \$82,-276,000, a gain of 2,490 per cent. During the year of peace we sold to Europe mules to the value of \$622,000, and in the year of war we sold them mules to the value of \$18,041,000, a gain of 2.795 per cent. During the year of peace we sold to Europe hay to the value of \$790,000, and in the year of war we sold them hay to the value of \$2,263,000, a gain of 233 per cent. During the year of peace we sold to Europe meats and dairy products to the value of \$138,736,000, and during the year of war we sold them such products to the value of \$243,098,000, a gain of 75 per cent. During the year of peace we sold to Europe sugar to the value of \$4,341,000, and during the year of war we sold to Europe sugar to the value of \$36,816.000, a gain of 748 per cent.

In determining the question of his welfare under free trade or protection the long-headed farmer of this country is not going to be blind to the fact how this new Underwood tariff law was working against him until the abnormal conditions resulting from the European war stopped its injurious effect. And, looking to the future, he is not going to rest on the false supposition that the war market is to remain indefinitely; but if he be as farsighted as I know him to be, he will see his peril if our markets are open to foreigners when this European war ends.

Senator Lewis, Democrat, of Illinois, evidently sees an impending danger, when he says:

To allow the manufactured articles of Europe to come without limit to this country as a Democratic theory, the goods to be sold at such price as Europe could take in order to obtain money to build up her wasted places, would be to overcome our own manufactures and slay the pos-

sibility of establishing American plants to take the place of those which heretofore in Europe served the uses of America and the world.

The Boston Globe, a well-known Democratic newspaper, comments as follows:

Obviously we must prepare to meet the coming struggle in the best way to safeguard American industry. The European nations will seek ruthlessly to crush their American rivals, since we shall be their principal opponents, in their efforts to recover from the losses by war. Their method will be the most effective one possible. This method is "dumping." Goods produced cheaply will be poured into the United States after the war to undersell American-made goods produced in normal conditions. Our budding dye industry, for instance, will be swamped under a flood of German chemicals sold at prices be'ow the cost of production here. If we do nothing to stop this flood of European goods our country will suffer one of its worst financial panies. Thousands of men will be thrown out of work; the labor market will be drugged by hungry men, and we will have the song kitchen, the bread line, scared capital, and industrial chaos. Our industrial defense is our tariff. We must keep out pauper goods from war-sodden Europe.

President Wilson can hardly reconcile his party's advocacy of free trade at this time with his former writings. The Napoleonic wars had an effect upon this country similar to the effect that the present war has now and will have upon us. Mr. Wilson writing of the need of a protective tariff upon the restoration of peace at that time said (History of the American People, Vol. III, p. 239):

Vol. III, p. 239):

Peace changed the very face of trade. * * * English merchants poured their goods once again into the American ports, so long shut against them by embargoes and war. * * * Manufactures bad sprung up while the ports were closed. * * * By the year 1815 close upon \$50,000,000 had been invested in the manufacture of textile fabrics alone. * * * The new movement did not stop with the establishment of cotton fabrics. The manufacture of wool and flax and hemp and even silk was added. * * Iron manufactures, long ago set up but tentative and feeble hitherto, increased from handreds of thousands to millions in value under the stimulation of foreign trade cut off. Hides and skins were extensively prepared; ilquors were distilled and fermented from the abounding grain and fruits of the countrysides; glass, earthenware, furniture, almost everything that was in general use in the country, was sooner or latter added to the growing list. Industry long ago begun upon a small scale, took heart to grow, and those which Americans had hitherto not dreamed of attempting were heartily embarked upon. Distinct manufacturing regions began sensibly to develop in the Middle States and in the East, with intrests and characteristics which statesmen could not afford to overlook. It was manifestly a menace to every young industry that a flood of English imports should continue to pour into the country at the open ports. The remedy was a protective tariff, such as Mr. Hamilton had wished to see at first, and the young Republican leaders of Congress did not hesitate to advocate and establish it.

THE EFFECT OF THE UNDERWOOD TARIFF LAW BEFORE THE WAR.

The Underwood tariff law, prior to the European war, proved disastrous to labor and farming interests; the duties which it imposes on imports into the United States are inadequate, under normal conditions, either for protection to American industries or to provide the Government with the necessary revenue to meet its running expenses. The increase in exports as a result of the war have given temporary relief from the effects of the Democratic tariff and when normal conditions are restored after the war is over this country will be open to a flood of foreign goods produced by the cheap labor of Europe. For the first 10 months of the operation of the Underwood tariff from October 1, 1913, to July 31, 1914, the amount of imports admitted into the United States free of duty was \$988,187,549 in value compared with imports free of duty to the value of \$821,608,167 during the corresponding previous 10 months' period under Republican law from October 1, 1912, to July 31, 1913. The amount in value of dutiable goods decreased under the first 10 months of the operation of the Underwood law to \$617,617,233 from \$682,218,836 under the previous corresponding 10 months under the Payne law, and the percentage of total importations admitted free of duty increased from an average of 54.4 per cent per month to 61.5 per cent per month. The decrease in excess of exports over imports shows very clearly the injurious effect of the Democratic tariff. Under the Underwood tariff there was a steady decrease in the excess of exports over imports from October, 1913, when the excess amounted to \$138,912,162, which was the first month when the Underwood law went into effect, until March, 1914, when the excess was reduced to the comparatively insignificant sum of \$4,943,930. Commencing with April, 1914, until the beginning of the European war the balance of trade was against us each month, reaching in August, 1914, the sum of \$19,400,396. In the first 10 months of the operation of the Underwood tariff law-the period of its operation before the outbreak of the war-the revenue received from duties on imports decreased approximately \$31,500,000 as compared with the preceding 10 months' period under Republican tariff.

WE SHOULD BE INDUSTRIALLY INDEPENDENT OF THE WORLD.

One great outstanding fact that the present war teaches us is the importance of being industrially independent of the world. Only a policy of protection to our own industries will enable us to enjoy the security of that industrial independence.

EUROPE IS LOOKING TO ITS ECONOMIC FUTURE.

Far-sighted leaders in the belligerent countries of Europe are looking with grave concern to their economic future. As I have before pointed out, these countries look to agriculture as the basis of their wealth. Great movements are on foot in Europe at the present time to control trade after the war. recent development was the unanimous adoption of a resolution by the Chamber of Commerce of Vienna proposing an economic union of Austria and Germany to render them "more independent of their political and commercial opponents in regard to the supply of necessary foodstuffs, raw material, and industrial products, and enable them to defend with greater energy their commercial interests in the world market." After the war every possible effort will be made by the European nations now engaged to make up for their tremendous losses. More than anything else, they will look to the industry of agriculture to restore their lost wealth, the wealth that is being drained by the most costly war in history. These countries, driven by force of circumstances to sell their products at what prices they can get, would welcome an open market in the United States; they would welcome a chance to compete with the American farmer. Are our great markets to be thrown open to this foreign production to the peril of our own agricultural production? Such will be the condition if the present Underwood tariff law is in effect after the war. Are we to continue to levy special taxes when such revenue should come—and always has come in Republican administrations—from proper taxes on imports? The Underwood law was tried in the year before the war. It decreased our revenues enormously and did not decrease the cost of living. It failed completely.

THE EFFECT OF THE UNDERWOOD TARIFF IN NEW YORK.

The farmers of New York are greatly concerned in dairy farming, and in this industry the State takes a very high rank. The Democratic tariff made a great reduction in tariff on butter, cheese, milk, and eggs, with resultant effect to the farmers of New York. On butter the Republican tariff maintained a duty of 6 cents per pound. The Democratic tariff put it down to 2½ cents a pound. For 10 months before the Underwood bill went into effect our imports in butter and its substitutes amounted to 1,000,000 pounds, valued at \$272,000. For 10 months while the Underwood law was in effect-before the war-the imports were 7,685,000 pounds, valued at \$1,700,-000. Milk, fresh and condensed, was let in entirely free by the Democratic law. The Department of Commerce recently reported that the Netherlands and Switzerland "sold much larger quantities of milk in the United States in 1915 than ever Of course they did, when the product came in duty The farmers of my own district directly felt the effects of this competition when manufacturers of condensed milk were compelled to lower the price they were paying for milk. The Democratic tariff made a great reduction on cheese, which during the first 10 months of the law increased our importation more than 12,000,000 pounds. Republican law had placed a duty of 5 cents per gallon on cream; the Democratic law lets milk and cream come in duty free. The importation of cream during the 10 months above referred to was 482,000 gallons. The Republican tariff law placed a duty of 5 cents a dozen on imported eggs. For the fiscal year 1913, under this law, eggs were imported to the amount of 1,360,000 dozen, of which 80 per cent came from England and 7 per cent came from China. Under the Democratic law, which placed eggs on the free list, and which was in force nine months of the fiscal year of 1914, nearly 6,000,000 dozen eggs came in, of which only 4 per cent came from England and 32 per cent came from China. For the 10 months ended October, 1913, we imported 21,600 dozen eggs; for the same period, 1914, Democratic law, 4,667,000 dozen; for the same period, 1915, 1,772,000 dozen. In addition to this, prepared eggs are becoming an important factor in our imports. Inasmuch as frozen and evaporated eggs come in in bulk, duty was assessed on them under the Republican law at the rate of 5 cents per dozen, estimating 11 to the pound. The Democratic law cut the duty to 2 cents a pound. During the fiscal year 1913 we imported 228,000 pounds of these eggs.

For the fiscal year 1914 we imported 3,400,000 pounds. Eggs prepared in this manner are used to a large extent by bakers in making cakes, and so forth. The consumer gets no advantage from this and the domestic producers of eggs lose a market for "seconds," cracked eggs, and so forth. The effect of this lowering the duty on eggs is indicated by the fact that several factories formerly operating in this country using domestic eggs and using American labor have removed to China and are building huge evaporating and refrigerating plants for the preparation of egg mixtures, employing Chinese labor. Topeka, Kans., plant and one from Boston are examples.

effect of this increased and growing importation on our market

must be apparent to our own egg producers.

New York is an extensive grower of vegetables and fruits. All along the line on the various vegetables produced in New York the duty was lowered about 40 per cent. In apples and other fruits it was reduced about 60 per cent. New York pro-duces more potatoes than any other State in the Union. Prior to the Underwood tariff law a duty of 25 cents a bushel was imposed on foreign potatoes. Before the duty was taken off foreign potatoes we imported only 314,000 bushels, but for the 10 months after the Democratic law went into effect 3,630,000 bushels of foreign potatoes came into this country. The Unbushels of foreign potatoes came into this country. The Un-derwood law has dealt severely with the products raised by the New York State farmer. The great increase in imports during the 10 months when the law was in effect before the war clearly shows how our markets were open to the foreigner in competition with that which our own farmers produced.

THE WORK OF THE UNITED STATES DEPARTMENT OF AGRICULTURE.

The work of the United States Department of Agriculture extends over too large a field to admit of my giving it any detailed account here. I believe that the department for whose activities this appropriation bill makes provision has rendered much service to the agricultural interests of the country

The need of the department is sure to be felt more and more as it becomes necessary for us to more nearly follow intensive farming. The committee's report divides the work of the department into three major classes: First, research work, which includes the scientific study of the fundamental problems of agriculture; second, educational or extension work, which aims to make available to the rural population the results of the department's experiments and discoveries; third, regulatory work, which includes the administration of the statutes coming under the department. The administration of the national forests is also included under this heading. It is estimated that about three-fifths of the total funds of the department go for work of a regulatory nature, leaving the other two-fifths available for research and demonstration work.

Some of the different agencies of the department may be listed as follows: Office of Farm Management, Weather Bureau, Bureau of Animal Industry, Bureau of Plant Industry, the Forest Service, Bureau of Chemistry, Bureau of Solls, Bureau of Entomology, Bureau of Biological Survey, Division of Publications, Bureau of Crop Estimates, States Relations Service, Office of Public Roads and Rural Engineering, Markets and Rural Organization, Demonstration on Reclamation Projects, Eradication of Diseases in Live Stock, and so forth.

WE NEED TO ENCOURAGE AGRICULTURE.

The statistics of our population show a heavy drift to the city as compared with the number going to the farm. In 1900 our urban population was 31,609,645, while our rural population numbered 44,384,930. In 1910 our urban population had jumped to 42,623,383, while our rural people numbered 49,348,jumped to 42,623,383, while our rural people numbered 49,348,883. In those 10 years our urban population had increased 34.8 per cent, while our rural population had increased only 11.2. These figures are worthy of note; they show a striking increase, comparatively speaking, of consumption over production in this country. We have not reached that stage when we need view with any alarm the theory of the economist Malthus, who sounded a warning that population was increasing beyond the means of subsistence. But with our population growing by leaps and bounds and the great percentage of that increase going into the cities to consume rather than produce food, we going into the cities to consume rather than produce food, we can readily see the growing need of attention to agricultural pursuits. It is wise policy for this Government to do what it can consistently to encourage the great and noble industry of agriculture.

Militaristic Propaganda.

EXTENSION OF REMARKS

HON. WARREN WORTH BAILEY, OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES.

Saturday, April 29, 1916.

Mr. BAILEY. Mr. Speaker, in my judgment the action of the Blair County Central Labor Union at its recent meeting in declaring emphatically against the militaristic propaganda which has been so aggressive of late is typical. It fairly reflects the prevailing sentiment among the workingmen in my district and throughout the great industrial State of Pennsylvania.

The Blair County (Pa.) Central Labor Union is one of the most influential bodies of its sort in the State. It is made up of representatives of organizations, with a membership of about 4,000, embracing trainmen, engineers, switchmen, telegraphers, and many others. In the quality of its membership the Central Labor Union is perhaps one of the foremost in Pennsylvania.

At its recent meeting a lengthy report explaining the attitude of this powerful organization on the question of so-called "preparedness" was submitted by Secretary C. L. Brumbaugh and adopted, as follows:

If we are to express the attitude of the labor movement toward the increase of military power, we must face the issue squarely and consider all questions concerned in relation to the workers. We must draw the line between "preparedness," as it might be defined by labor, and the militarism, which is the true desire of the big commercial

If we are fo express the attitude of the labor movement toward the increase of military power, we must face the issue squarely and contented that the increase of militarism, which is the true desire of the big commercial interests.

The program advocated by "big business" and the newspapers which is control to the big commercial interests.

The program advocated by "big business" and the newspapers which is control to the proper of the big commercial interests.

The program advocated by "big business" and the newspapers which is not result in destruction, but in the protection of human life and the products of human labor. Our preparedness would signify the development of every man, woman, and child to the highest possibility of the property of the development of every man, woman, and child to the highest possibility and issue of all would possess in the highest degree the lovality and issue of its citizens. The father who could look forward worth patriotism. A Government which would give equal apportunity and issue of its citizens. The father who could look forward worth propertunity, would love their country and, if necessary, protect its Such people would have too high and fine a sense of justice to wantonly attack any other people.

Such people would have too high and fine a sense of justice to wantonly attack any other people.

Such people would have too high and fine a sense of justice to wantonly attack any other people.

Such people would have too high and fine a sense of justice to wantonly attack any other people.

Such people would have too high and fine a sense of justice to wantonly attack any other people.

Such people would have too high and fine a sense of justice to wantonly attack any other people.

Such people would have too high and fine a sense of justice to wantonly attack any other people with the people would have too high and the people would have too high and the people would have too high

We recommend that organized labor be alive and awake to see that in any system of citizen soldiery the greatest possible freedom and democracy shall prevail; that the men shall be given instruction in civic affairs, physical training, and the fullest opportunity for promotion from the ranks. Representation for labor upon whatever committees or commissions may be chosen to decide upon or control plans for military defense should be demanded.

9. Any military system should be democratically officered and controlled by heads directly responsible to the citizens of the Nation.

10. We oppose any increase in the standing Army. The danger to the American worker from foreign countries is not so much the danger of attack by their Governments. The real danger to the workers comes from the hordes of helpless, underfed, foreign immigrants which are brought in this country every year by the manufacturing interests which seek cheap labor. Any plan for the increase of the Army and Navy would but make this danger more acute. If the native American workers are drawn into this Army and Navy and the industrial plants which would be necessary to its support, a demand for more labor power would offer an excuse for bringing in low-paid workers, who would seriously undermine the standard of living and make every real problem of labor still more acute. The problems of labor are the shortening of the work hour, the increase of wages, the betterment of conditions, stronger organization, and constant development of greater power in the political field. An increased Army and Navy would not solve a single difficulty that labor has to face.

Preparedness which is based upon physical fitness. Patriotism may be needed, but it must be a patriotism which is based upon love of homes, not boarding houses, love of country, and only a country which guarantees liberty and opportunity for free development, including access to the land, will be loved sufficiently to guard its defense.

We feel that the labor movement of Blair County should help to ho

Agriculture Appropriation Bill.

EXTENSION OF REMARKS

H. STEPHENS. HON. JOHN OF TEXAS.

IN THE HOUSE OF REPRESENTATIVES,

Saturday, April 29, 1916.

Mr. STEPHENS of Texas. Mr. Speaker, the amendment of the gentleman from South Dakota should prevail. I can not conceive of a better use that the \$40,000 asked for by his amend-ment could be put to. Much of the country west of the one hundredth meridian, extending from Mexico to Canada, will produce only crops of Kafir corn, milo maize, Festuca Sudan grass, and kindred feedstuff in paying quantities. The value of these grains and hay crops are unknown in the East; hence the value of these crops should be made known to the people of the East, so as to show that they will fatten stock as well as the crops used for that purpose in the East. If the Government would investigate this matter fully and advertise through its agricultural bulletins the fattening values of these dry-land crops in the Middle and Eastern States it would make a market for millions of tons of these products of the West, much of which can not now find a market, for the reason that their fattening qualities are not definitely known in the East, and it is the desire of the people of the western dry-land States that this amendment should prevail, and I hope that it will do so by practically a unanimous vote.

"When Congress Met at Trenton."

EXTENSION OF REMARKS

HON. WILLIAM J. BROWNING,

OF NEW JERSEY,

IN THE HOUSE OF REPRESENTATIVES,

Monday, May 1, 1916.

Mr. BROWNING. Mr. Speaker, New Jersey is one of the smallest States of the Union, and it is not given to boasting; but it is one of the oldest States, and its record is such as to justify the highest praise. Over in Pennsylvania there is a society known as the New Jersey Society of Pennsylvania, which has been gathering together distinguished Jerseymen and others who have been pleased to trace their ancestry back to the State. In recent years the society has adopted the practice, when convenient, of setting up memorials on historic ground. It recently visited the city of Trenton to place a tablet marking the site of what has been called the "seventh national capital," The principal speaker on that occasion was our colleague from Pennylvania, the Hon. J. Hampton Moore, whose address, delivered December 11, 1915, has just been received from the stenographer. I avail myself of the permission to extend my remarks by

inserting the address of my Pennsylvania colleague:

APPRESS OF CONGRESSMAN J. HAMPTON MOORE AT UNVEILING OF MEMO-BIAL TABLET PRESENTED BY THE NEW JERSEY SOCIETY OF PENNSYL-VANIA TO THE CITY OF TRENTON DECEMBER 11, 1915.

Mr. Chairman, it is a cold day, but every true-born Jerseyman warms up on his native soil. [Applause.] To be welcomed on this busy corner of the historic city of Trenton with the mayor's eloquence in front and the street-car Hessians in the rear would delight the cockles of the heart of anyone who to himself hath

The president of the New Jersey Society of Pennsylvania has introduced me as the "orator" of the occasion. It is hard to live up to such an introduction, and I do not expect to. I have come here hurriedly from Washington and shall speak but

Whether the society knew it or not, it happens that we have come to Trenton on the anniversary of Washington's encampment at Valley Forge. One hundred and thirty-eight years ago to-day the ragged and bedraggled, but patriotic soldiers of the Continental Army took up their camp yonder across the Delaware at Valley Forge. The British general, Howe, was in control at Philadelphia. It was a colder and a sadder day than this for the founders of this Republic.

President Hires has referred to the stirring times about the city of Trenton in those days. He spoke of the historic importance of the ground upon which these exercises are being held. It is fair to say that we have met upon no mean spot. The unveiling of the tablet upon this building revives the memories that hallow Valley Forge, that cluster around the Battle Monument, and that make precious the patriotic landmarks that have been reviewed by President Hires and by Mayor Donnelly.

WASHINGTON GREETED AT TRENTON.

It was here that Washington was received. It was here that the great friend of America, the French general, Lafayette, made his farewell address to Congress. This ground was the scene of many interesting events prior to and during the period of the Revolution, and the New Jersey Society of Pennsylvania has done well in coming here to dedicate to the city of Trenton a tablet to celebrate the site.

When our forefathers were assembling about this corner, much as you are doing to-day, we were in the throes of a war which was to settle our fate as a Nation. Those who would assume that no warlike foreigner would ever dare to put his foot upon American soil have but to recall that during the period of the Revolution the foe was here, and that he had to be met

and driven back by the sturdy sons of America.

The Congress, which had been meeting in the city of Philadelphia, the home of the Liberty Bell which proclaimed the Declaration of Independence, had decided to meet in Trenton. The depressed state of the Treasury, which was partly responsible for an outbreak of a portion of the troops, had induced our continental forefathers to remove the seat of Government to Princeton. This was in 1783. There the Continental Congress deliberated, and amongst other things took up the very important question of location, the permanent location, of the Congress of the United States. Where should the Congress go?

TRENTON AND GEORGETOWN CHOSEN.

Then, as now, men in politics and in statecraft resorted to logrolling and to other methods we sometimes denounce to-day. Such methods are not new. They never have been new in the history of the world. The Continental Congress at Princeton deliberated and received proposals; the various States then represented in the confederation of States made their suggestions as to the place of meeting. What should be the permanent home of the Congress of the United States? Sites in Pennsylvania were suggested; Philadelphia put in its bid; Maryland put in its bid; Virginia put in its bid, and bids came from New England. The Congress of the United States was worth having; the people of those days saw, just as the people of the present day see, the advantage of entertaining the Representatives of the Nation.

New Jersey sites were foremost in the offerings. Princeton wanted to be made the home of the Nation. Burlington County offered a site. Numerous other offers were made to the Congress. But, finally, after careful deliberation, a resolution was passed that there should be erected "upon the banks of the Delaware, near by the city of Trenton," a permanent establishment for the accommodation and maintenance of the Congress of the United States. It passed, but then, as to-day, in our various legislatures and sometimes in our National Congress, a new motion was made. After reconsideration the new motion was that temporary places of residence only should be established for the Congress of the United States, one upon "the banks of the Delaware, near by to the city of Trenton, other on "the banks of the Potomac, near by to the city of Georgetown," the present site of Washington.

WHEN CONGRESS MET IN TRENTON.

Then, before the Congress adjourned from Princeton, it was decided that they should alternate between these two places when ready; meanwhile they began their next session in the city of Annapolis, in Maryland. Congress met in Annapolis for a time after the adjournment from Princeton yonder, and from Annapolis the Congress decided that it would come to the city of Trenton, here "upon the banks of the Delaware," where it was originally intended that the permanent Capitol of the Nation should be. This much for the satisfaction of the mayor and the citizens of Trenton, who may be studying up the im-

portance of the city as a national landmark.

Congress decided to come to Trenton. A lease was entered into. Consult the archives and Dr. Godfrey, of your adjutant general's office, if you desire the details, but £150 was the amount that Congress paid for the lease of the site we are now occupying, the present home of the Mechanics' National Bank, of which your distinguished citizen, Gov. Stokes, is president. Here, where we now stand, stood the old city tavern, known in even earlier days by other names, but here it stood and within its walls the Congress of the United States assembled in solemn council in 1784. Thus Trenton, early in the history of the country, and apart from its other traditions and memories, was permanently placed upon the map of the country.

NEW JERSEY'S PROUD RECORD.

This, my friends, in brief is the story and the occasion of our visit. A band of loyal Jerseymen-men who were born in this State or whose parents were born here-we have come back to renew our faith and friendship and to express the pride we feel in the sacrifices and achievements of our ancestors, [Applause.]

Why are we proud of the State in which many of us were Because she was steadfast in colonial times and in all the period of the Union of the States, because in the march of progress she has never receded, and because in that advance which has characterized the Union of the States New Jersey has been conspicuous and foremost in their upbuilding.

The Revolutionary history of New Jersey is glorious, Her history in the Civil War and in all the epochal periods of the country is distinguished. In all great events she stands re-splendent in men and deeds. In material progress New Jersey is the peer of any other State. Let us make a few comparisons.

The first census of the United States was taken in 1790, and

then New Jersey had a population of 184,139. That was the record of New Jersey 126 years ago. The census which your State authorities have just completed, for the year 1915, shows that her population has advanced to approximately 3,000,000 souls-actually 2,844,342. New Jersey is but a spot upon the map of the United States, and yet in the value of manufactured products New Jersey stands sixth in line amongst all the 48 States of the United States. She is exceeded in the value of the product of her manufactures only by the great Empire State of New York first, by the great Keystone State of Pennsylvania second, by the great interior middle western State of Illinois third, by the old Bay State of Massachusetts fourth, and by the great agricultural and manufacturing State of Ohio fifth.

Little New Jersey, here upon the Atlantic seaboard, stands sixth of all the States of the Union in the record of the product of her manufactures. [Applause.] Something to be proud of

DENSITY OF POPULATION.

And in the density of her population, the accumulation upon a limited soil of God's best people, New Jersey, this little State of ours, sixth in the product of manufactures, stands third only to Rhode Island first and Massachusetts second. That is, New Jersey has within her borders a denser population than any other State in this Union save Rhode Island and Massachusetts, She has a population of 378 (State census) or 337 (Federal census of 1910) for every square mile of ground. When sometimes you hear the arguments of our friends in the South or in the West about the development of their respective sections bear in mind that here in New Jersey you have 378 (or in 1910. 338) people for every square mile of ground, while out yonder in Nevada, for instance, which has two United States Senators to your two United States Senators, they have for more

than every square mile of ground only one inhabitant-at least that is the estimate based upon the Thirteenth Census.

New Jersey can not compare with greater States in the number or value of farms, because her area is so limited, but on the average of the value of crops per acre New Jersey stands fourth of all the great agricultural States of the Union. Her record in manufactures is fine, as is her record in population; but her record in agriculture, in the value of her soil products per acre, is behind that only of Massachusetts, Rhode Island, and Connecticut. In her farm development, tested by the skill of her toilers and the richness of her soil, New Jersey stands fourth amongst all the 48 States of this Union. [Applause.]

PER CAPITA DEBT IS SMALL.

And when it comes to financial stability-that substantial quality of which we are all proud in discussing the relative merits of the States-New Jersey stands one amongst the 13 of the 48 States of the Union whose debt per capita is less than \$1 and one among the 4 whose per capita debt is less than 25 cents—a true test of the value of citizenship [applause]; a real evidence of the strength and solidity of the people who constitute a Commonwealth.

My friends, we glory in the grandeur of New Jersey, and we glory in those forefathers of ours who deliberated in Philadelphia, in Princeton, and upon the site of this beautiful bank building. They strove and they suffered, and they had their contentions and differences, just as we have them to-day. They had them perhaps in a more aggravated form, because their great problems were new. We have had the advantage of their experience, and we have greater strength in numbers. They had the great burden of establishing the foundations, and for that we should be thankful. They were no more infallible than we are now, but they succeeded in fundamentals, and it is wise and proper that we should hold their memory in grateful reverence.

WAR PROBLEMS OF OUR POREFATHERS.

They had their war problems, just as we are having them They met them with courage and with fortitude. established one enduring precedent which bears upon our present-day agitation for preparedness. They understood the civic virtue of community life. They knew the plain people, many of whom had fled from imperialism abroad, would not stand for militarism in the new country. They realized that the strength of the Union of States once established would depend upon a solid citizenship, upon a civic patriotism. They valued the Army, even though they could not pay it, but they did not want the Army to rule. They had seen the soldiers of their own day go for months and years without recompense and with scant clothing; but when the test came those forefathers of ours and their successors stood for the civic rightsthe domestic, peaceful rights of the people. They knew what it meant to build up and maintain a large standing army-their European experiences taught them that-and they so legislated as to keep the war spirit in proper bounds. For financial as well as for civic reasons they were compelled to do so.

THE DISBANDMENT OF ARMIES.

While they honored Washington, the soldier, almost to the point of idolatry, they honored him more as the citizen and statesman, who stood for their progress, their security, and their happiness as a people. These were the principles he and they finally wrote into the Constitution of the United States. Washington understood the problem of distributing the Army. He and his congressional associates had much of the same concern after the surrender at Yorktown that Grant and his generals had at the close of the Civil War. In neither instance were the soldiers, who had fought so gallantly, to be permitted to continue indefinitely under martial law. was a fear, during the Revolutionary period, that they might overrun the country to the prejudice of all peace and of all law and order, but our forefathers wisely provided against any such condition. Happily they were able by legislation, supported by a wholesome public sentiment, to turn the mind of the soldiery to civic employment, to obedience to civil law.

It is no mean undertaking to build up an army, and by the same token an army of veterans, once organized and dependent upon military regulation and support, can not be easily broken up. It is said that some one, imbued with the martial spirit, suggested to Gen. Grant, when the distribution of his great veteran Army was under discussion at the close of the Civil War, that it would be well to move on to Canada and take possession of that country. Of course no such conquest was entered upon, but under the advice of men like Grant the mind of the soldier was turned toward the plowshare; he was urged to return to peaceful avocations, and to-day no higher tribute can be paid to the American veterans who knew what actual warfare was than to say he is the truest and best friend of our civil institutions. Having tasted of the horrors of war, he understands and appreciates the value of peace.

PREPAREDNESS FOR SECURITY AND PEACE.

It may not be amiss, while our people are discussing the question of preparedness, to refer to these incidents in our own We must deal with the question of preparedness, but we should treat it from the standpoint of the national welfare, over and above the interests or prejudices of individuals. If we are to prepare for war, we should prepare not only to defend our national honor if assailed but to insure that peace and tranquillity which our forefathers wrote into the Constitution of

the United States. [Applause.]

We have seen enough of the horrors of European warfare to prepare ourselves to avoid them. What this country wants and what our forefathers strove for was the maintenance of peace and security. Our preparedness, therefore, whether it consist of an increase in the Navy, which is the first line of defense, or whether it be to build up our coast defenses and increase our standing Army, should nevertheless be wholly with the view of perpetuating the assurances and the safeguards which have been given to the American fireside by our Constitution and our laws. In short, our preparedness should be sufficient only to uphold the American standards of right and justice. It should be a model for civilization. [Applause.] And to this end it should be our duty and our pride to encourage and to continue, now and forever, that spirit of faith and patriotism which animated the men who assembled here in Congress in 1784 and who made it possible, under the Constitution of the United States, that the rights of the people to the enjoyment of justice, domestic tranquility, and the common defense should be preserved. [Applause.]

The Late Representative Brown, of West Virginia.

MEMORIAL ADDRESS

HON. WILLIAM A. ASHBROOK, OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Sunday, April 16, 1916,

On House resolution 204, as follows:

"Resolved, That the business of the House be now suspended that opportunity may be given for tributes to the memory of Hon. WILLIAM 4. Brown, Jr., late a Member of this House from the State of West Virginia.

"Resolved, That as a particular mark of respect to the memory of the deceased, and in recognition of his distinguished public career, the House, at the conclusion of these exercises, shall stand adjourned. "Resolved, That the Clerk communicate these resolutions to the

"Resolved, That the Clerk send a copy of these resolutions to the family of the deceased."

Mr. ASHBROOK. Mr. Speaker, I feel it my duty to pay a brief tribute to the memory of my good friend, William G. Brown, Jr., of West Virginia. The greatest reward of service here is the opportunity afforded to help those who need help, to brighten the pathway of others, and the lasting friendships gained by our daily associations in this Chamber, in the committees, and our social relations. I knew our friend well. I had high admiration for him. He was one of the most companionable men I ever knew. There was nothing petty or mean in Junion Brown. Frank, unostentatious, generous, cheerful, courteous, ever seeking an opportunity to do something for his friends, never imposing upon them, big hearted, optimistic, considerate, kind, and true as steel. These were some of the many good qualities of our friend who was so ruthlessly called to his reward.

It is surprising when we stop to reflect how many Members have been summoned hence during the past 10 years. We can truly say, "Few know so many friends alive as dead." When younger than I am to-day I recall hearing my best friend, my mother, now with the pure in heart, sadly say, "The most of my mother, now with the pure in heart, sadly say, "The most of my friends sleep on you hill." As we reach and pass middle life, this sad fact becomes true to all. Our most priceless possessions are the memories of those who were near and dear in life, We love, then, to recount their good deeds and acts of kindness. In my list of friends worth while and no longer here, I will ever prize and cherish my acquaintance with Junior Brown.

When his death was announced it scarce seemed possible that it was true. Less than a week previous I saw him at my hotel, seated as host at a dinner table with a dozen or more of his

constituents, gay and happy as he always was when he had the opportunity to entertain his friends. A week later a little mound covered his mortal remains in his home-town cemetery. Truly, in the midst of life we are in death.

The life, character, and public service of WILLIAM G. BROWN, Jr., has already been exemplified by others more capable than I It avails naught to now praise or misstate fact. I could not pay a higher tribute than to say that those who knew him best loved him most. I am glad that I knew him. His life is an inspiration to me. He did not live for self alone. He freely shared his prosperity with those less fortunate, and the honors heaped upon him did not exalt him in his own estimate of himself. He was always and to the end a splendid specimen of what man should be-lovable, courageous, generous, and high minded,

Philippine Independence.

EXTENSION OF REMARKS

HON. S. D. FESS. OF OHIO.

IN THE HOUSE OF REPRESENTATIVES, Monday, May 1, 1916.

Mr. FESS. Mr. Speaker, national honor, next to religion, is the strongest passion of the human breast. This universal dictum has been the theme in song and story, of brush and chisel; it has been the subject in pulpit and forum; it has supplied the inspiration in the world's fields of battle. Robert Burns in his deathless Cotter's Saturday Night surveys the gamut of human emotion—filial affection in the home, philanthropic affection for the race, patriotic affection for country, and religious affection for God—places love of country next to that of love of God. National honor calls for the loftiest statesmanship of our leaders, the deepest devotion of our citizens, and the highest pride of all people. It is the one duty no one should refuse and the one right all should demand. There is no possible consideration to justify hesitation in either direction. Neither the childish whine of disgruntled groups of politicans, the ignorant complaints of unfortunate human beings, easily aroused by the demagogue, the cheap cry of economy, the cowardly fear of the incursions of ambitious nations, the mockish hypocrisy that we have no right to ingraft Anglo-Saxon ideas upon a Malay people, the maudlin assertion that the most wonderful achievement in nation building known to the world is an unjustifiable expenditure of money, nor the pronouncements of political platforms when issues are sought, should be regarded for a single moment when national honor is at stake.

Obligations which have fallen to this country, not from our own choosing but from the results of a var for humanity, can not be lightly ignored. The proposal to abandon the Philippines, a measure now before this Congress, is the keenest test of national honor this country will be called upon to make. 8,000,000 people came to us not from choice. McKinley expended his last ounce of influence to avoid war with Spain. He could not stay the current of public condemnation of the oppressor of Cuba, and war came. With it came these 1,700 or more islands, with 8,000,000 human beings, speaking no common language, but scores of various dialects serving as complete bars of communication one against the other as the most widely different peoples, speaking the most widely different languages; tribes with no sympathy one for the other, but in at least one case undying enmity between them. Here we inherited the prob-

lem of the proper disposition of our wards.

The alternatives presented to McKinley were few. Should they be returned to Spain? To do that would have been a con-demnation of our own conduct in chastising this country for her oppression. This was unthinkable. Should they be transferred to some other country, with a colonization history? This was also unthinkable, first because the transfer of a people in the open market of itself was somewhat revolting to our sense of national honor, and, secondly, a Republic such as ours does not entirely sympathize with the colonial government prevalent in the world. Should they be turned adrift to shift for themselves? This alternative was not long considered, simply for the conclusive reason of the dishonor to America involved in our destruction of their only government by force f our arms without substituting something in its stead. Herein is only one of the great blunders of this present administration on the pitiable Mexican trouble. Behold our President forcing Huerta, the only

responsible head, out of Mexico without having fully decided what substitute he would make. We had no right to destroy the only government Mexico had unless we intended to hold ourselves responsible for the government that was to follow. Whatever Wilson had in mind then or proposes now, McKinley, in 1898, would not agree to destroy the only government in the Philippines and then move off to allow bloodshed and disaster in internecine war, tribe with tribe, until interested foreign nations would step in and take possession. Such a step would have been dishonorable to the last degree and alike un-American, and McKinley would have been as deeply condemned then for such an indefensible act as Wilson is now for the awful condition in Mexico, with our hide-and-seek policy, making war upon a bandit when we are parleying with some other equally irresponsible revolutionist.

The only way open to this country was to accept the obligation of duty to a people which had come to us through the issues of war. This way was entered after full deliberation and for nearly a score of years we have been there, and I challenge the world to produce an equal triumph in the business of nation building as is found yonder in the southern seas. There is the brightest chapter in the history of national regard for the welfare of a helpless and foreign race ever penned since the morning stars sang together. A people which had been under Spain for 300 years; the mass of the population ignorant not only from necessity but from policy; a people unused to any of the modern methods of life, as primitive as those who lived a thousand years ago: a people without homogeneity except in race and habits; a people tribes of whom practiced head-hunting, others slavery, others peonage, polygamy, and so forth; a people upon an area capable of supporting twenty times the present population under modern methods; a people whose population was at times decimated by the ravages of smallpox, cholera, bubonic plague, beri-beri, and other serious epidemics; a people unaware of modern possibilities, living the most primitive life, yet capable of becoming a modern people; this people, so helpless and handicapped by ignorance and superstition falling under the issues of war to our care, have in less than a generation undergone a transformation that is the wonder of the world.

President McKinley, like the great Horace Mann, knew that the first steps must be education. He remembered the dictum of the great educator back in the thirties of the last century:

If we wish to better Massachusetts we must begin upon the child, not upon the adult. There is much more in the formation of character than in reformation of character. We also declared that to clean up a boy the work must begin on the mind, not on the body. The open door to the schoolhouse must therefore be the first step in State betterment.

So, likewise, McKinley declared the first step to better the people of the insular possessions must be the schoolhouse. So we undertook the work, and here it is.

Mr. Speaker, yonder in those southern islands lies the world's greatest laboratory for nation building known to man. It is not only under our management, it is of our own creation, our initiation, and under our direction.

our initiation, and under our direction.

What do we now see? With the schoolhouse as the training ground for the next generation we see nearly 600,000 youth in preparation—not to converse or write a name in dialect and then call him literate, but to equip the mind with modern thought and training to know his rights, his abilities, his possibilities, to stimulate his ambitions, and to prepare him to care for the fruits of self-government.

The schoolhouses, many built to stand forever, are filled with children under trained teachers, at first mostly American, to insure good results. To supply trained Filipino teachers normal schools were established, which are rapidly supplying the needs of the schools. Every department of industrial and vocational training to insure better farm results and more efficient industrial results is prominently carried on. In the short term of American occupation the literacy ratio has been wonderfully increased, not in the adult so much as the child. In less than a score of years there are more people speaking the English language than there were speaking the Spanish in 300 years.

Next to the schoolhouse, and akin to it, was the work for the unfortunate. Sanitation was the remedy. The frightful epidemic of cholera so common in the islands, as it had been in Cuba and in Panama, was an early enemy to be combated by American science. The United States Public Health Service is the result of that effort. I challenge the world to produce a more brilliant page in hygienic achievement. Cholera has become a thing to be remembered only; smallpox, whose prevalence in other days is marked on the faces of many on the streets of Manila, is now not to be feared. It is almost entirely wiped out. The same thing is true with bubonic plague. This is modern science triumphant. It was accomplished only by the most rigid regulations of the quaran-

tine laws, which were summarily enforced, and which never could have been enforced save by American authority, as evidenced by constant complaints among the more ignorant. The cleaning-up campaigns, the construction of modern sewers, the supply of pure water under modern methods, furnish in those far-away islands one of the healthiest spots on earth. The contrast now with then is one of the object lessons never to be forgotten.

Kindred to this campaign for sanitation the hospital system was inaugurated. To-day as finely appointed hospital equipment can be found in Manila as can be found anywhere else.

As was to be expected, this achievement was made under the silent protest of ignorance and superstition, unknown to Europe or America—a valuable suggestion of what will in due time follow should American influence be withdrawn. In all these departments of modern civilization the real work is to train natives to carry on this work. This is the real constructive work of American occupation.

True, from the standpoint of a material advancement, wonderful progress has been made. The 120 miles of railroad which we found have been extended to nearly 600 miles of modern railroad tracks. The trails through the islands which we found have given way to thousands of miles of well-built roads connecting the various parts of the islands and making possible the unification of the people, thousands of whom are beginning to trade with one another. The old buildings for public purposes have given way to modern municipal buildings of modern equipment. Primitive methods of agriculture are in places giving way to the intelligent methods learned in the industrial and agricultural schools. The production of the islands is rapidly increasing, the consumption is keeping pace, wages are in places ten times what they had been, trade in the islands as well as with the outside word is rapidly growing. In a word, this primitive people, under the discipline and direction of American skill, is rapidly becoming a modern people.

A contrast of conditions collective and singly in 1900 with what can now be seen in the same quarters of the islands indicate not only the work that has been done but the possibilities of properly directed energies in the future. It accentuates the importance of its continuance. This accomplishment is not the result of accident or incident. It is a result of a carefully planned and religiously executed program. It has not been carried on for the sake of our own country, save the honor and dignity involved in carrying on a great work for the world, but it has been inspired from the very beginning in the determination to help the Filipino people.

It is slanderous in the extreme to ask whether this Nation is justified in its accomplishments. It is ingratitude too base to be tolerable to question the appreciation of the people for whom this work has been conducted. It is an insult to the intelligence of our time to intimate that such results as there achieved could have been secured without American intervention. The conclusive proof that no such work for civilization would or could have been done is the attitude of the politico and his influence upon the ignorant Filipino toward American education, American discipline, and training now in vogue in the islands, The general treatment, silent and sullen, of these people of the Americans in the islands, especially in the last three years, is conclusive evidence of what will happen in the islands just as soon as American influence is removed.

This feeling can be directly traced to a propaganda for independence by those who desire to profit as leaders in the
islands. So long as American influence is dominant the ambitions of these people are not only restrained but their plans
are impossible. This propaganda is inspired by these leaders,
who in turn build upon the prejudice and superstitution of the
ignorant, unable to appreciate what has been done in the past
15 years. This propaganda is furthered by the agitation of
some Democratic leaders in this country who, after having been
defeated by the people, still persist in writing their platform in
the proposed reorganization of the government for the islands.
This propaganda is also aided by the unwise utterances of those
now in authority in the islands and the censorship of all discussion by those on the ground who otherwise would openly condemn dissension.

Mr. Speaker, whatever else this administration must answer for to this Nation, there is one crime that will not be forgotten, the unsettling of the most stupendous and wonderful work of civilization for a needy people ever begun by a great and responsible nation. Not until this administration came to power was there a single backward step in that wonderful work.

It was only last Saturday night that I talked for three hours with a former district superintendent of schools who for six years had charge of the schools of an important and populous island. He tells me he has no hope for the islands. He de-

clared it would be disgusting if it were not so pitiable to see the possibilities to follow the withdrawal of the influence of

This attitude of the Nation for which the Democratic Party, and it alone, must be held responsible means but one thingthe work of the past 18 years, the equal of which is not known to history, must be sacrificed-not to our loss, but to the incatculable loss of the peoples for whom we have labored. Democratic Party has been the one great obstacle to that world work for this indefensible and helpless people. After having driven the country to war with Spain, against McKinley's wish, this party refused to accept the results. This party has made at least two campaigns on the issue, with decisive repudiation In the midst of this persistent obstacle this work both times. has been continued uninterruptedly, until the Democratic Party injected this unsettling policy-first to declare for a future date of independence, and now in this bill it is proposed to cut them The enormity of this proposal is difficult to fully comprehend.

Mr. Speaker, there is no truer law of biology than that forms of life which evolve under certain conditions will revert to the original type just as soon as the conditions are removed. It is true in individual life. Remove the child from the ash heap into other environment, and up to a certain age the longing for the ash heap persists, and it will continue to hold its attraction for the child until not only new interests are created but new ideals are formed. So it is with peoples. The unrest of the Filipino under American restraint is but a suggestion of his preference for his primitive methods to the modern life. He is not alone in this. It is quite universal. Ideals can not be completely altered overnight. Civilization is not a matter of the calendar. It is counted in generations. Eighteen years of modernization can not work a metamorphosis of a race. It can transform a generation of children if the child can be constantly kept under its environment. This is impossible in the Philip-While English is spoken by more people in the islands than any other language, this is mostly confined to children. Those who speak it in the school will hear a different language in the home.

Mr. Speaker, not until the boy and girl that enter school to-day become a man or woman of 25 or 30 years of age will the training in the schools begin to dominate the islands. This can only be hoped for by continuing this training under American influence. It will begin to decay as soon as we leave the islands.

There is no possibility of a nationality without a common language. This common language is within the next generation if this country keeps its hand on the helm. Just as sure as we do not these islands will revert to the primitive habits-the first love. This is the enormity of this vicious and wicked proposal to commit national dishonor that the islands may strangle all hopes of a national existence. Has anyone here to-day responsible for his vote counted the cost of independence of these The sure result of a common language spoken and understood in every part of the many islands and a consequent nationality, without it impossible—this result sacrificed for all time with its sure consequences. An educational system which is rapidly becoming universal for the training of head, heart, and hand, and placing in the possession of every child the in-struments of self-help—this will as surely go as it is now complained of because not understood. Sanitation that has driven from the Islands most of the dread diseases of smallpox, cholera, bubonic plague, beriberi, and made the islands as healthy as most places in our own country. This can be preserved only by rigid regulation, under which the native has fretted and because of which the mischief-maker, the politico, has been able feed the passion and hatred of the uninformed and easily misled. This must become ineffective, and it is nothing if it is not effective. The great work of driving out the diseases of stock upon which the farmer depends for his beasts of burden. The disease of rinderpest and surra to which cattle and horses are subject must be combated. This has been accomplished by rigid methods which will be lost in all probability with the with drawal of our dominance. The system of road building will discontinue, as evidenced by the discontinuance recently upon the basis that roads are too costly. The retarding of this plan to modernize the islands can have but one meaning. They will not stand still; they will relapse. The public improvements such as were made in harbors and ports will not continue; growth here will not only cease but decay will follow. Railroad building will not only stop but it will gradually fall into disuse. No public enterprise can prosper unless the general activity all along the line, including all the people, is intelligently directed. Retard modern methods and railroading as a profitable venture ceases. This is not only true here but it is infancy, withdraw our authority and permit internecine strife true in all the towns in all public utilities. Banks will feel it, in a modern Mexicanization of the islands until some interested

business of every character will suffer. The nearly 700 post offices in the islands and the nearly 300 postal savings banks with more than 1,000 Filipino depositors in 1907; the telegraph and telephone offices connecting Manila with at least 100 small centers of population, all of which have been built up by American initiation and which have created a new life in industry, will respond to the withdrawal of the directing energy under which this new life was stimulated and maintained.

The inauguration of self-government throughout its many phases, including the courts, has been the one most essential item in the great experiment in this Malayan people. The United States under McKinley, Roosevelt, and Taft has step by step educated this people to self-government. The problem was to make slow but sure progress, and not to go too rapidly. The government was first military. Then, in due time, it became civil under a commission appointed by the President. To train the people for self-government, municipal government under the direction of the commission was permitted. The next step was a government with a legislature, the lower house of which was elective, made up by the natives, with an upper branch appointive, and responsible to the United States. During the growth of this popular recognition in the lawmaking body, the municipal governments multipled throughout the islands and became training schools for self-government under the eye of Uncle Sam. It was the policy of the three Presidents named to advance steadily toward the goal when the people of the islands could choose to have their own self-government entirely disconnected with the United States if the latter would so decide it wise, or as a self-governing country under the direction of the United States if the Filipino so decided. When that stage would be reached must be left to the United States; not with its ward. This policy was further promoted by the present Democratic administration. The upper branch is now under the control of the Philippines, a majority of the commission being Filipino. The courts and administration as well as the schools are rapidly becoming Filipino.

The one fatal danger is not in the advance but in the unwise propaganda that loses sight of self-government in the false halo of independence; two widely different conditions,

The Jones bill of last Congress, in the main, was in keeping with the past policy, but it injected an unwise preamble, which could have none but a vicious effect. It was an attempt to write the Democratic platform in the organic law for a people, a purpose too important to reduce to the levels of party politics. That vicious innovation has its effect in the islands and is now minimizing the great work of this Nation. It is designed to forfeit the vast accomplishment of this country which has not only cost us forty-three millions of money, but precious lives, to effect. The evidence of our purpose must be in what we do, not what we say. Character rests upon a record, not a prospectus; upon a performance, not a promise. The Jones bill without the preamble is performance; with the preamble it is a promise which can have no good, but furnishes a lever in the hands of mischief-makers, agitators, for constant harm. Assured that this sort of promise could only work injury should we remain to do our duty, the Senate proposes to unload the Philippines altogether, and like a coward scuttle the ship and leave her to sink

Mr. Speaker, from whatever standpoint this proposal is examined it is vicious, and the party responsible for it will feel the lash of speedy repudiation. After our soldiers liberated a people at the price of treasures, of blood, and sacrifice; after the Government has inaugurated an experiment in self-government among a people to whom it was unknown-after this experiment had reached the stage where it had invoked the wonder of the civilized world, when these people began to show proofs that principles sown were beginning to show ripening fruitsnow comes a minority party to inject partisan politics into an accomplishment which ought to be regarded too sacred to play with, and proposes to undo the work of two decades, haul down the American flag, abandon our American citizens who are in the islands upon our own invitation, nullify the good work by permitting an abandonment of all the advantage of modern methods of civilization inaugurated, a removal of the restraints of civilization, a reversion of a people to old habits the result centuries of observance, repudiate our sacred obligations to these people as well as to our own, dishonor our own word and pledge in the securities we permitted to be issued and sold to inaugurate a constructive and building program, thwart the great promise of domestic trade by retarding the great work of the development of a soil that is capable of producing all the tropical products both in variety and quantity demanded by our people, discard a foreign commerce only now in its foreign country intervenes by taking possession of the country, and all for what reason?

This is no reflection upon these island peoples. It is a statement of a fact in history. As every people is labeled by characteristic marks which gives it its identity, the Filipino has his traits. The 300 years of control under the Spaniard gave no chance for initiative. Even to-day 90 per cent or more of all the business of any city is done by foreigners. Most of what would be called native enterprise is conducted by the Chinese, but a small number in proportion to the whole population. Can any open-minded man doubt what will happen when the government of these people is turned over to Filipino politicians? The recent elections showed a voting population of 250,000, about 3 per cent of the total population. Of this electorate less than 30 per cent were eligible upon educational qualifica-

In the face of the inevitable future of these peoples in their present unstable and indefensible situation, what can be set out as the source of this indefensible proposal? answers. Because we have promised the Filipino to do so. Were this true, the sane answer would be that a bad promise is better broken than kept. But no party ever promised what this Clarke amendment proposes to do. The only thing any responsible party ever held out was the prospect of self-government when a government was established and future efficient rule was assured. Independence is not what these people want, It is a prosperous government, and self-government if it can be safely secured. Canada has self-government but not inde-So has Australia, New Zealand, and South Africa. Mexico has independence, but who among you would say she has self-government?

Another group declares the Filipino wants independence, and we are therefore unjust in not granting it. So do certain groups want slavery, others peonage, others polygamy, others the cus tom of head hunting. But wanting these things is not a justification for granting them. Furthermore, it is not at all true that the Filipino wants independence as an exercise of intelligent judgment. The vast mass of the adult population to-day knows nothing of the merits or elements of self-government and much less of independence. Ignorance and superstition so abound among the people that a propaganda can be made to flourish among them.

Another group declares we have no right to ingraft upon these peoples our ideas of government. The Filipino would have no right to attempt the government of the non-Christian tribes which this proposal contemplates.

Another group claims they cost vast expense to this Government. While outside of the Army this is not true, and, including the Army item, it is not much more kept in the Philippines than elsewhere, the future development of these islands will return many fold all the expense entailed by our dominance

Another group contends they are a strategic weakness from a military point of view. This country has never yet displayed the spirit of cowardice. Not in all its history has it ever run away from a duty, and even were it guilty of such a lapse it would not be because it was afraid. This is the last excuse. This Republic will never be frightened from performing its duty, especially when the price of such refusal is national honor.

Mr. Speaker, there is but one course for this Government to pursue; the only wise course both for the Filipino and for the United States: that is the course outlined by McKinley and furthered by both Roosevelt and Taft. During the 15 years under these administrations the work was begun and steadily carried on that has worked a virtual transformation of a people. has been done unselfishly by the great Republic to the gratitude of many of the beneficiaries, but, I regret to say, not all, and what is worse in the face of sullen criticism of certain agitators whose ambitions were necessarily thwarted by the presence of

Not until the present régime was inaugurated did the good work done for the islands stop and the mischief-maker get in The legitimate fruits of this recent agitation embraced in the preamble of the bill are evident everywhere today in the islands in the general attitude toward American residents, toward the work of the Americans, and in the vociferous native leader and Filipino press. The climax of that agitation has now found its way to the American Congress. It is the Clarke amendment already passed by that body, a position declared unwise by President Wilson and resented by Secreta. Garrison to the extent of leaving the Cabinet, protested against by American citizens at home as well as in the islands, condemned by the conscience of the country, yet here it is in this House, and we are asked to indorse this act of perfidy and dishonor.

The princely ex-Secretary of War when before the committee spoke in no uncertain terms:

The princely ex-Secretary of War when before the committee spoke in no uncertain terms:

We have no right to go further at this time because of the duty which we have undertaken in this great enterprise. We have altered the lives of these people by injecting a new and more advanced civilization among them. We have whetted their aspirations for different methods of life, of doing business, and of handling governmental matters. We have accustomed them to sanitation, energy and effort in commerce, agriculture, and trade; we have stimulated them to live upon a different plane and to educate their children for better things. For us to go further at this time and withdraw our support before we have practical assurance that these things will in the main continue would be a betrayal of the generation of islanders that we have stimulated and to whom we have held out great hopes, without any corresponding advantage to ourselves or to anyone. Not to give them what is provided in this bill would likewise be a betrayal of the pledges and promises made on our behalf, because by their conduct of that which we have given to them to do they have shown themselves worthy and capable of doing as much more as this bill will give them to do. Good faith to those to whom we have pledged ourselves requires us to stay so long as we must; and good will to the islanders, in accordance with our pledges and assurances, requires us to stay no longer than is necessary to test and reach conclusions as to their capacity for managing their own affairs. This act seems logically the next and oroper type to take in the experiment. What its result will be no one but a prophet can tell. That it can not be disastrous in any proper sense of that word is assured by reason of the control we retain and the safeguards we have provided. What the next step should be, when it should be taken, what conditions would properly surround the grant of absolute independence, and other like speculations, it seems to me, are idle and their consideration at this time wo

This utterance was by the head of the department responsible . for the islands and to the committee of the Senate responsible for the legislation for these people. It is in keeping with the policy of McKinley, Roosevelt, and Taft. Mr. Speaker, I have waived aside the manifold grounds for the defeat of this scuttle policy and simply press the national duty to these peoples. Other Members have dwelt upon these further considerations and thus have relieved me from this phase of the argument. The real consideration as it now appeals to me is national honor.

Mr. Speaker, in the name of the boys who went down in the muddy waters of Habana Bay, February 15, 1898, in the name of the valiant lads that went through the dangerous channel at Cavite with Admiral Dewey, just 18 years ago to-day, in the name of the soldiers that penetrated the forest with Gen. Funston to the lair of the head of the Filipino insurrectionist, Aguinaldo, in the name of that heroic group of Americans, 5,000 strong, who bravely undertook to battle for the fruits of modern civilization in the Orient, in the name of the hopes of the millions of helpless Filipinos who must have leadership, not exploitation, in the name of our own honor as a Nation to respect our financial as well as moral obligations toward those who upon our behest are now in the islands with their all, and in the name of the dignity we hope that our Nation may always enjoy in the eyes of the world as a member of the family of nations, I appeal to you, my colleagues, upon both sides of this aisle, strike down this proposal of scuttle, so unwise in economy, so dangerous in its possibilities, so dishonorable in policy, so cowardly in purpose, and so indefensible in reason, reject this reversal of a nation's history and restore once for all our high standard of leading these people yet to higher levels. To pass this measure will be the climax of dishonor from which this proud Nation will not recover in the memory of any one now living.

Philippine Independence.

EXTENSION OF REMARKS

HON. OSCAR W. SWIFT,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Monday, May 1, 1916.

Mr. SWIFT. Mr. Speaker, there is nothing in the history of the American Commonwealth to merit the assertion that it seeks territorial aggrandizement, whereas the liberal policies pursued toward China, Cuba, and Porto Rico demonstrate the lofty character of the motives by which our Nation has been inspired in its attitude toward weak and defenseless peoples with whom it has entertained intimate or governmental relations.

The cession of the Philippines to the United States was one of the logical and inevitable results of the conflict with Spain in 1898, and the acquisition of these isles in an eastern sea has imposed upon our Nation obligations which can not be honorably abandoned at this time by mere statutory enactments.

Since the Democratic Party assumed control of national affairs in 1913 it has sought to justify the reversal of comprehensive, well-established, national policies by the promulgation of the beatitudes on humanity.

An implied promise, though conjectural, has been exalted.

In the name of humanity an existing stable government in Mexico was openly discouraged, and upon its overthrow the rule of a weak, unreliable, and bombastic chief fostered. Our troops were withdrawn from Vera Cruz on the plea of a promise implied. A salute to the flag was demanded, but withdrawn in the name of humanity. An implied promise furnished the excuse to lift the embargo on the shipment of war munitions into Mexico, and on our frontier, undefended in the name of humanity, the sacred blood of soldier and civilian has been shed.

In the name of humanity the honor of loyal citizens has been publicly slandered in high places, and in that same name it is now proposed to violate the express national promise to protect, defend, and uplift the Filipinos until fully qualified for

self-government.

Mr. Speaker, public opinion fortifies my judgment that it is still inopportune to establish the period of Philippine independence, and it is my firm conviction that, like the rainbow at dawn, the platitude "this was done in the name of humanity" will be dissolved in the chaos of uprisings and insurrections among that unhappy people, and those who now advocate the early surrender of American sovereignty will seek to shield themselves behind the barricade of irresponsibility.

The Philippines.

EXTENSION OF REMARKS

HON. ISAAC SIEGEL, OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Monday, May 1, 1916.

Mr. SIEGEL. Mr. Speaker, I shall vote against the Clarke amendment, as I do not believe that the Filipinos are as yet fit to govern themselves and because I believe that we are having at the present time in Mexico sufficient trouble without seeking a duplication thereof in the Philippines.

The New York Times published on February 14, 1916, an article which I quote in full, as it is worthy our most serious

FORESEES DISASTEE IN PHILIPPINES BILL—HENDRIK COLIJN, NOTED EXPERT ON MALAYSIAN AFFAIRS, WARNS AGAINST INDEPENDENCE—CITES DUTCH EXPERIENCE—MOVEMENT IN HOLLAND FOR A BIGGER NAVY TO COPE WITH POSSIBLE AGGRESSION BY JAPAN.

THE HAGUE, January 18.

The Hague, January 18.

"If your Congress passes the Jones bill with the Clarke amendment, giving independence to the Philippines in 1921, there will certainly be most serious consequences—not only in the Philippines but all over the Orient in the possessions of European powers."

This is the opinion of perhaps the greatest living expert in the government of Malay races, Hendrik Colijn, who practically created the present civil service of the Dutch East Indies, after, as a soldier, he had had a large part in the pacification of the last of the unruly tribes, who was called home after 20 years in the Orient to become a member of Parilament, and served as minister of war and marine in the last conservative government (1911-1913), and who is at present, from his seat in the First (upper) Chamber of Parilament, one of the leaders of the Conservative Party and one of the most long-sighted of Dutch statesmen. In his home here, where he is the head of an East Indian oil company, he talked to-day about the work of the Dutch in their East Indian archipelago, which has eight times the population and fifty times the area of the Netherlands; and the conversation turned to American colonies and the pans of American antiimperlalists.

"I ought to say rather," Mr. Colijn went on after a moment, "that there would be most serious consequences, for I do not believe that you will grant complete independence to the Philippines now or soon. You can not. At the very least there must be some arrangement, such as the British have in Egypt, where with a nominal native Government you would have American supervision and American officials in the higher posts. If the Jones bill is passed, you would have to come back to some such system after the Philippines had enjoyed a very short period of complete independence. You would have to do it for the sake of the islands themselves. But in the interval there would be disorders; If the Americans had cast aside their tast hold on the Islands, some other power could step in under pretense of resto

SAYS FILIPINOS LACK CHARACTER.

"Why do you think Philippine self-government would be a failure?" Mr. Colijn was asked.

"Because the natives lack character," he responded promptly.

"They have education, many of them; more in the Philippines than in our colonies. But they have not enough to make them anywhere nearly capable of self-government as yet. Of the 5,000,000 in our colonies there are perhaps 2 per cent—perhaps only 1 per cent—who have some education. In the Philippines the percentage is higher—perhaps as much as 10 or 12—but it is not yet high enough.

"And mere education, reading, writing, mathematics, history—learning—is not sufficient. It takes longer than that to train character. In Java, the oldest, wealthiest, most civilized of our colonies, we have found that as engineers, doctors, lawyers, even, Malays can be as good as white men. But not as administrators. Every man has his price, and sometimes it is a very low price.

"The chief fault of American administration in the Philippines, so far as I have been able to observe, is that it is too democratic. You are prone to put natives into high administrative posts for which they are not ready. Character can be created, but it takes time. We have found that. In the Netherlands there is no difference of opinion over what we want to make ultimately of our East Indian dominions; it is our aim to educate the people up to where they can govern themselves under the Dutch crown. But we must move slowly. Self-government can not be created by order; it must begin at the bottom, in little things, and grow by degrees. You can not begin at the top.

"Where you have a superficially educated upper class, small in numbers, without the cultural background which leads a European or an American to administer honestly and efficiently, and the great mass of the common people little better than savages, far beneath them, the upper classes would not represent the people. They would exploit them."

"But is there not some self-government in the Dutch colonies?"

"We have had great success in the first step—self-government in the villages," Mr. Collin replied. "There the natives are learning the rudiments. It is our policy, too, to work as far as possible through the native chiefs—rajahs, datus, or whatever the local title may be—but we keep them under a strict control. We must, for the Malays are used to the strong hand.

"I'm leave teelf we have really been working properly only about 50

FIFTY YEARS IN JAVA.

we keep them under a strict control. We must, for the Malays are used to the strong hand.

"In Java itself we have really been working properly only about 50 years, and the last of the tribal wars in the outer islands was not finished until 1907. In that year our eastern colonial budget was 160,000.000 gulden (about \$70.000.000) and this year it is 360,000.000. But that is not a very long time in which to get practice in self-government, and to suppose that the educated Malays would now be truly representative of the people is wholly wrong."

"But they do not realize that, I suppose?"

"Of course not, and that is why the passage of the Jones bill would make trouble. You can not educate a people and keep them from thinking; and it is only natural that when Javanese or Filipinos or natives of British India get a certain amount of western learning they imbibe also certain western ideas of their right and ability to govern themselves. Their limitations, naturally, they are not likely to see, and naturally it irritates them to find white men always in a position of superiority. So you have the movement of 'Asia for the Asiatics,' which had been dormant and unexpressed for many years, but did not really come to the surface and take form till after the Chinese-Japanese War.

"That war showed Asiatics that it was possible for an oriental nation to become a strong military power, and from that time on the nationalists in every eastern dominion saw the dream of something that they too might accomplish. The two Filipino revolts against the Spaniards and the Americans fanned this feeling still higher, and, of course, the Russo-Japanese War, when for the first time a great western power was beaten by an oriental nation, roused it to a much more dangerous point. If America set the example of giving independence to ber Asiatic possessions the nationalists in other European colonies would at once begin to chafe under their own restrictions, and there might be a good deal of trouble in more places than one."

"You said a little

MAY TAKE A CENTURY.

"How long do you think it will take?"

The man who knows more about Malay administrative problems than anybody else lifted his eyebrows.

"Much longer than most people think," he said presently, "Perhaps a hundred years, perhaps more, perhaps less. It goes slowly,"

"And the Philippines. How soon do you think they will be ready for complete self-government?"

"There, again, no one can say how many years; fifty, a hundred, two hundred—who knows? But it will not be in 1921."

The governmental problem is not the only one confronting the Dutch in their East Indian possessions. Behind an unobtrusive bill which was quietly introduced in the second (lower) chamber of the Dutch Parliament when that body began its session last week there lie possibilities of an entire displacement of the present naval situation in the Far East, and even of a realignment of national groupings in that region.

Far East, and even of a realignment of national groupings in that region.

The bill provides for a special tax on all persons possessing a property of more than 50,000 guiden (\$22,000) or an equivalent income, the money raised to be devoted to naval expansion. Among members of the Conservative Party, which was preparing to make this project a feature of its program when it was turned out of office by the election of 1913, there is no secret that the money to be raised, if the tax is imposed, is to be used to begin a fleet which those Dutch statesmen who favor a vigorous Asiatic policy intend eventually to build up to six superdreadnaughts, with the proper auxiliaries, and this fleet is to be stationed permaneutly in the Dutch East Indies.

The Dutch fleet at present is negligible. But the altered situation which has come about in the last 20 years in the Orient and the general neglect of the Far East by the great European powers since the beginning of the war has convinced many Dutchmen that a navy is badly needed in Java.

JAPAN'S MOTIVES SUSPECTED.

JAPAN'S MOTIVES SUSPECTED.

For some years Dutchmen who realize the value of the extensive and enormously wealthy East Indian possessions of the Netherlands have been disturbed by the tendency of the leaders of the "Asia for the Asiatics" movement to look toward Japan. It is only natural that

in India, Java, China, and the Philippines ardent nationalists look toward Japan as their exemplar. Most of these nationalists would prefer the rule of Japanese; but, rather than either, they would prefer to rule themselves. Whenever the superiority of the white man galls them they look toward Japan for moral support, for possible material assistance at some future time.

The benevolent intentions of Japan with regard to the freedom of the Asiatics are rather distrusted by Dutch enthusiasts for a big navy. The certainty that Germany and probably even England would not permit Japanese interference with the Dutch East Indies is no longer of avail now that the great European powers are deadlocked, and may remain deadlocked for years, while Japan, outside of it all, is steadily gaining ground by standing still. If the Netherlands need help in the Far East in the next few years, they will not get it from Europe.

There remain two places whence it might come—Australia and the United States. Australia is spending her energies so lavishly in the war that her value as an ally is not so great as it would have been when the agitation for a Dutch Asiatic fleet began; but it is certain that every onnce of strength she possesses would be used to prevent a Japanese conquest of Java and the other islands of the archipelago. Japanese conquest of the Dutch islands would facilitate Japanese conquest of northern Australia whenever the Japanese felt like it.

The proposed Dutch fleet would not be large enough to challenge Japan's naval supremacy in the Far East; but it would be strong enough, if based on Soerabaya and one or two other harbors, now lightly fortified, which could be turned into powerful strongholds, to Join with the Australian fleet and the American Asiatic squadron and put up an adequate resistance until the main body of the American affect could arrive.

That an understanding could be reached with the United States, as well as with Australia, for joint naval action of a purely defensive

put up an adequate resistance until the main body of the American fleet could arrive.

That an understanding could be reached with the United States, as well as with Australia, for joint naval action of a purely defensive nature in case of trouble is believed by many Hollanders. They merely point out what the position of the Philippines would be if Japan, in addition to her present possession of Formosa as an advanced position for attack, also occupied the enormous and wealthy Dutch Archipelago, with its numerous potential naval bases in their rear.

The naval program of the conservatives probably will meet with strong opposition in the present session, despite the sort of party truce which prevails. A strong section of the Liberals and Radicals, supported by the Socialists, can see the reasonableness of universal military service to defend the territory of Holland itself, but is unwilling to incur heavy expense for defending Java. Moreover, the keeping the Dutch Army mobilized on the frontier has eaten up one loan of 275,000,000 gulden and has necessitated the proposal in this session of another of 225,000,000, and many lines of Dutch industry, with most lines of Dutch commerce, have been crippled by the blockade. The finances of the Government require extremely careful handling.

The press of the country is against the Clarke amendment, as is shown by the following editorial from the New York World of April 28, 1916:

LOOKING FOR TROUBLE IN THE PHILIPPINES.

The Philippine bill, which has encountered such fierce opposition in the House at Washington, embraces legislation of importance to the welfare of the islands. Besides meeting adequately some social and economic problems, it extends the principle of home rule and greatly strengthens existing guarantees of liberty.

As presented to the Senate, the measure in its preamble promised ultimate independence. An eleborate amendment proposed by Senator Clarke, of Arkansas, provides that in not less than two nor more than four years from the enactment of the law, if the President is satisfied that the people are capable of self-government, the United States shall withdraw from the islands and leave them to their own resources.

This is the mischlevous proposition which is resisted in the House and threatens the defeat of the entire bill. To press it in times like these, when no man can foresee the results of world-wide war and when the fate of small nations as well as great is in the balance, would seem to be the very limit of rashness. No such action is needed in order to keep faith with our dependency.

Both parties are pledged to Philippine independence, which must come in due season, when a Congress then sitting shall be satisfied that all the conditions are favorable. A specific promise now is likely to raise false hopes, and its almost certain cancellation, as provided for, could hardly fail to involve us in serious complications. To get rid of the vicious Clarke amendment it ought not to be necessary to defeat the entire bill.

Let me also read the following editorial from the Philadelphia Inquirer:

WILSON QUOTED AGAINST HIMSELF.

WILSON QUOTED AGAINST HIMSELF.

One phase of the Garrison resignation that will attract the attention of thoughtful persons is its relation to the policy of "scuttle" in the Philippine legislation. The Secretary of War felt that the President ought resolutely to put his foot down on the mean attempt to place the United States in the position of squirming out of its moral obligations. That Mr. Wilson once deemed it incumbent on this country to teach the natives of the Philippines the meaning of self-government by "a long apprenticeship of obedience" is proven by his own words. They occurred in a lecture delivered to the students of Columbia University on Constitutional Government in the United States. They were spoken, as has been said, while Mr. Wilson was "in training" for the Presidency. He said:

"We can give the Filipinos constitutional government, a government which they may count upon to be just, a government based upon some clear and equitable understanding, intended for their good and not for our aggrandizement; but we must for the present ourselves supply that government.

* * But we can not give them self-government, Self-government is not a thing that can be 'given' to any people, because it is a form of character and not a form of constitution. No people can be 'given' the self-control of maturity. Only a long apprenticeship of obedience can secure them the precious possession, a thing no more to be bought than given."

If the President feit this way, and his words certainly indicate that he did, it is his duty to protest against the humiliating legislation which is being jammed through Congress.

It is easy to understand and to sympathize with Mr. Garrison.

Let me quote the following editorial from the New York Times of April 28, 1916:

KILL THE SCUTTLING BILL.

The 30 Democratic Members of the House of Representatives who stood out in Wednesday's caucus against the passage of the Philippines bill under gag rule have rendered a patriotic service to their country. Despite the President's support, the Philippines bill should not be passed. To repeat our promise to grant independence to the inhabitants of the archipelago as soon as they are capable of self-government is quite unnecessary. To promise to give them independence within four years, if the promise were kept, would be a gross betrayal of the trust we assumed when we took the control of the islands away from Spain. Both Brig. Gen. McIntyre, Chief of the Bureau of Insular Affairs, and Mr. W. Morgan Shuster have lately reported that good progress is making in the Philippines, the people are learning, they will be capable of self-government some day, but that day is in the distant future. If they were released from American rule now, all the good work that has been done would be undone. The pretense that peace and prosperity would be continued under a hastily acquired independence by a vast multitude of people of different religions and ideals, many of them still illiterate, is too shallow to deceive anybody.

The only excuse for getting out of the Philippines is that we want to get out. Revolution would follow our withdrawal; a new and worse Mexico would be created in the Far East. It is unnecessary to conjecture what the ultimate result would be. The national honor demands that we fulfill our obligations and devote our energies to the development of the islands in the arts and industries and educate their people. Freedom they already possess. They are not the subjects of a despotic or greedy Government exploiting them for its own purposes. Mr. Shuster's report shows that they are doing well and learning how to administer their own affairs.

The action of the 30 Democratic Members indicates that the obnoxious bill can not pass in its present objectionable form, if, indeed, it can pass after reasonable amendment. Re

The business men of the country are against this Clarke amendment, as is fully established by the following resolutions, which I read at length:

which I read at length:

Preamble and resolution adopted by the Cotton Goods Export Association of New York, April 24, 1916, in relation to proposed legislation by Congress upon the Philippine Islands.

Whereas the United States in taking possession and control of the Philippine Islands voluntarily assumed an obligation to the undeveloped and defenseless people of those islands to render them ample protection and to assist them in political, economic, and moral development according to the standards of American civilization; and Whereas by the same act the United States assumed an obligation to the other nations of the world to prevent these comparatively undeveloped islands, of great strategic value, from becoming a cause of contention and strife between nations; and Whereas the United States in what has thus far been done to perform these duties has made a beginning only in the development of the islands and their inhabitants: Now, therefore, be it

Resolved by the Cotton Goods Export Association of New York, That the United States Government be urged to continue the discharge of its obligations to the people of the Philippine Islands and to the nations of the world by proceeding with its task, and publicly announce its intention to retain sovereignty and control over the Philippine Islands until such time as that development shall have the assurance of stability and until all the responsibilities of the United States shall have been fully and adequately met.

It is only proper to call attention here to the—

It is only proper to call attention here to the-

FACTS OF THE PHILIPPINES.

HISTORY.

The Philippines were discovered by Magellan in 1521. In 1565 the Spaniards made the first permanent settlement at Cebu. In 1570 they occupied Manila, and with the exception of about two years—1762-63—when Manila was in the hands of the English, the Spaniards were in control of the islands until 1898, the year of American occupation.

GEOGRAPHY.

The total number of charted islands exceeds 3,000. Many of these, however, are mere rocks or coral reefs. The largest of these is Luzon, with an area of approximately 40,969 square miles, and Mindanao, area about 36,292 square miles, which is inhabited principally by the Moros, The next in order in area are Samar, 5,031 square miles; Negros, 4,881 square miles; Panay, 4,611 square miles; Paragua, 4,027 square miles; Mindoro, 3,851 square miles; Leyte, 2,722 square miles; Cebu, 1,762 square miles; Bohol, 1,441 square miles; and Masbate, 1,236 square miles.

miles.

The islands are about 600 miles off the coast of China, and lie between 5° and 22° north latitude, and 117° and 127° east longitude. The northernmost group are but a short distance south of the Japanese island of Formosa, while the southernmost extremities reach close to Borneo and the Celebes.

The principal cities and commercial ports in the order of their importance are Manila, Iloilo, Cebu, and Zamboanga. Manila is situated on the island of Luzon, Iloilo on Panay, Cebu on the island of that name, and Zamboanga on Mindanao. Manila is the capital, the first port of the islands, and the chief commercial center. It is distant 2 days by sea from Hongkong, 4 days from Nagasakl, 5 from Shanghaf, and 28 from San Francisco or Seattle. A 17-knot ship could make the passage from the Pacific coast to Manila direct in 15 days. The route at present followed touches the principal ports of China and Japan, affording through passengers ample opportunity for a visit in those interesting countries during the regular stops.

The total area of the Philippine Islands is 115,000 square miles, or 73,571,222 acres. Of this area 60,000 square miles, or 38,400,000 acres, are forest land, comprising about 25,600,000 acres of virgin forest and

12,800,000 acres of second-growth forest. The virgin forest includes approximately 2,000,000 acres of inaccessible mountain reaches. The estimated area of land under cultivation is 7,413,000 acres; agricultural land not under cultivation, 4,942,000 acres. The cultivated lands

Rice 2,820,0 Abaca (hemp) 999,8 Coconuts 551,5

Cacao Z, 5	
Coffee 1, 6	01

REAL PROPERTY.

The assessed value (in United States currency) of taxable real estate of the islands is as follows:

Manila (16,687 parcels)	\$49, 335, 302
310 parcels exempt from taxation	\$31, 882, 693
Total real estate outside Manila (2,158,198 parcels)	\$185, 587, 132
489,047 parcels exempt from taxation	\$35, 190, 454
Legal tax rate, Manilaper cent	11
Legal tax rate provincialdo	1

Allotted as follows: One-eighth per cent, roads and bridges; one-fourth per cent municipal primary schools; one-fourth per cent, municipal, general; one-fourth per cent, provincial, general.

There is no personal property tax.

POPULATION.

The total population of the Philippines is estimated to be 8,000,000 or 9,000,000, of which about 647,740 belong to the non-Christian or uncivilized tribes. Manila has a population of 272,454, made up as

Americans Filipinos Spaniards Other Europeans Chinese All others	5, 474 236, 940 4, 406 1, 506 16, 657 1, 960
Filipino transients in Manila	266, 943 5, 511
Grand total	272, 454

CLIMATE.

The Philippine Islands have a mildly tropical climate. The nights are cool and sunstrokes are unknown. The temperature records for the past 27 years show an average minimum of 72.5° F. and an average maximum of 88.3° F. The recorded death rate per 1,000 whites in Manila for 1914 was 6.93, as compared with 16.52 for New York in 1911, 15 for San Francisco, 14.06 for Chicago, 17.95 for Glasgow, and 22.3 for Belfast.

COMMERCE.

The exports of the islands for the calendar year 1914 amounted to \$48,689,634, of which \$24,427,710 went to the United States. The imports for the same period amounted to \$48,588,653, of which \$24,020,395 came from the United States, exclusive of other insular possessions. The principal articles of export were:

HempSugar	
Copra Tobacco (manufactured and unmanufactured)	7, 980, 270
Coconut oil	2, 619, 183
The principal imports were:	
Cotton and manufactures of	
Iron and steel	6, 983, 444 3, 276, 148
Wheat flour	1, 611, 158
Coal	1, 749, 745 1, 013, 451
Illuminating oil	
Meat products	1, 866, 274

During 1914, 772 foreign vessels, with a net tonnage of 1,912,756, entered Philippine ports; while during the same period 747 foreign vessels, with a net tonnage of 1,931,249, cleared from these ports.

INFROVEMENTS.

The railroad mileage in operation and under construction in the Philippine Islands is as follows:

The Manila Railroad Co. has 890.01 kilometers (552.7 miles) in operation and 151.01 kilometers (98.8 miles) under construction, and the Philippine Railway Co. has 212 kilometers (131.7 miles) in operation, making a total of 1.253.02 kilometers (178.1 miles) in operation and under construction.

In addition to the above, the Manila Railroad Co. proposes to build 254.88 kilometers (158.3 miles).

ROADS AND BRIDGES.

Following is a statement of first, second, and third class roads, together with the number of bridges and culverts, constructed in the Philippine Islands:

	Miles.
Pirst-class roads	1.590
Second-class roads	
Chird-class roads	1.783

Mr. Speaker, I believe that I shall best perform my duty both to our people and to the Filipinos as well, by voting against the Clarke amendment, and in that way help to maintain peace and prosperity both here and in the Philippines.

The Gasoline Situation.

EXTENSION OF REMARKS

HON. FREDERICK C. HICKS,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, May 2, 1916.

Mr. HICKS. Mr. Speaker, the price of gasoline is an economic question of great importance to every section of the country, and especially to Long Island, where it is used extensively both on land and water. In fact, I doubt if in any district gasoline is used in a wider range of diversified activities than in the first district of New York, for, in addition to our automobiles, motor cycles, and boats, we utilize it for power on the farm, for driving machinery in our shops, for pumping water in our homes, for delivering our supplies, and for the propulsion of aeroplanes, whose manufacture has become an important industry with us.

The increase in the number of internal-combustion engines in the past decade has been phenomenal, and gasoline has revolutionized the system of transportation and the methods of in-

A few years ago automobiles and power-driven launches were the playthings of the few; to-day they are the necessities of the many. Gasoline has passed from the zone of pleasure to the sphere of industry, and the price at which it is sold to the consumer has become an economic question of Nation-wide importance.

In the harbors and bays of my district there are thousands of motor boats, the launch of the yachtsman, and the working boat of the bayman, both alike dependent upon gasoline for power

and both seeking relief.

The rapid advance in the price of this commodity has caused hardships to many and the complaints have been so general that Congress has very properly instituted an investigation of the subject. I feel it is incumbent upon the Federal Government to ascertain, if possible, the causes which have produced this condition and then take whatever action is necessary to remedy the evil. At the present time the Department of Justice, the Department of Commerce, and the Federal Trade Commission are endeavoring to solve the problem. In a preliminary report transmitted to the Senate on April 10 the Federal Trade Commission publish some very interesting tables, which I desire to publish, and in addition formulated their plan of procedure, from which I quote:

to publish, and in addition formulated their plan of procedure, from which I quote:

In its investigation of causes, the commission is considering both domestic and foreign conditions and is weighing every factor to detect any artificial or manipulative element. A letter of inquiry has been sent to every manufacturer of automobiles, farm tra-tors, and other gasoline engines in the country to ascertain, as far as possible, the increased output of their products and the effect of the advance in gasoline prices upon the demand for their products and upon the consumption of gasoline. The following points are being examined: Forces of demand and supply as affecting the price of crude oil, exports and imports, deterioration in quality of crude, increased cost of refining, improved methods, and speculative holding of crude and gasoline.

The close connection between the investigation of the causes of high prices and of the alleged discrimination should be noted. If prices are found to have been raised to higher levels in some sections than in others, making due allowance for quality of product, freight, and marketing conditions, it may be inferred that an element of artificial manipulation has entered into the advance.

The oil industry, moreover, is an unusually complex one. The prospecting for oil, the purchase or lease of oil lands, the drilling of wells, and the provision of tanks for crude storage in the field, form more or less distinct branches of the crude-oil industry. The crude oil must be gathered through a network of pipes to some central point for shipping, and then it must be transported by trunk pipe line from Oklahoma even as far as the Atlantic seaboard. At the refinery large supplies must be stored to provide a stock of crude oil which will insure continuous operation. In refining, the different crudes yield different products, and refineries vary from the "skiaming plant," which takes off gasoline and sells the balance largely as fuel, to the "compiler run" plant, that gets not only naphtha and gaso

PRODUCTION, CONSUMPTION, AND PRICE.

The following table summarizes in round numbers the total marketed production of crude petroleum in the United States from 1900 to 1915, inclusive, and shows for comparison the crude oil production of the catire world during that period, in barrels of 42 gallons:

Year.	United States.	Entire world.
1900	63, 600, 000 69, 400, 000 88, 800, 000 100, 500, 600 117, 100, 000 114, 700, 000 124, 500, 000 164, 100, 000 178, 500, 000 183, 200, 000 220, 400, 000 222, 900, 000 2248, 400, 000 25, 800, 000 265, 800, 000	149, 100, 000 167, 400, 000 182, 000, 000 194, 800, 000 218, 800, 000 215, 400, 000 224, 900, 000 285, 100, 000 327, 600, 000 327, 600, 000 345, 700, 000 384, 700, 000 400, 600, 000

1 Estimated.

1 No figures available.

From the above it is indicated that about two-thirds of the world's supply is produced in the United States.

Quantity of gasoline produced by refineries reporting to the commission, 1915.

Total	681, 721, 716	393, 671, 434	1,075,393,150

Returns not having been received as yet from several large refineries, the statistics in the preceding table are only approximate. They indicate accurately, however, the movement of gasoline production during 1915 and correspond rather closely to the estimated gasoline content of the total crude production, which is estimated at about 1,950,000,000 gallons.

From the following table it is indicated that we are exporting 15 per cent of our production:

Exports of gasoline, naphtha, and benzine (combined).

The foregoing statistics are taken from the monthly reports of the Bureau of Foreign and Domestic Commerce. At the end it is shown that the total exports of all volatile petroleum products during 1915 were equal to 15 per cent of the total estimated gasoline content of all the crude petroleum produced in the United States during 1915.

Comparison of average monthly tank wagon prices of gasoline (58°-69°) in the East (Pennsylvania) with those in the West (North Central States), by months, 1915.

[Cents per gallon.]

	East (Stand- ard).	West.

The "tank-wagon prices" referred to are the wholesale prices charged dealers for gasoline delivered in bulk by tank wagon. They are computed for gasoline having the same gravity according to the Baumé test (58°-60°). As freight and marketing costs are included, the figures are not comparable on an absolute basis, but are chiefly valuable as indicating the move-

In 1915 there was issued in the United States 2,100,000 automobile licenses, and the estimate for 1916 is placed at 2,750,000. Allowing 500 gallons for each car, this will call for 1,375,000,000 gallons of gasoline, against 1,025,000,000 gallons used in 1915.

Remembering that the sudden rise in price was in the fall of last year, when the exports were not abnormally large, the increased cost of gasoline can not be laid to that source, and as the production of crude petroleum throughout the year remained constant at about 25,000,000 barrels per month, the advance was not due to a shortage of raw material at any time. As a matter of fact, the amount of gasoline produced increased steadily throughout the year, and as statistics show that the cost of manufacture did not increase during that period, the only logical conclusion that can be reached is that the rise of price was an arbitrary one.

As the number of automobiles and other power-driven machines will continue to increase, every effort should be made to conserve the energy which propels them,

It has been suggested that a heavy duty be levied on the exports of gasoline. Such a law, in my opinion, would be unconstitutional, and even if it were not, the quantity we send abroad-15 per cent of our supply-is not large enough to materially reduce the price, for of the amount exported only a small percentage would be affected by such a law and made available for home use.

I believe we must seek other channels for relief. If the courts find that a combination to control prices exists, that combination should be destroyed and the guilty parties given the full penalty of the law. It may be possible to augment the output of crude oil or improve the methods of producing gasoline. New devices for converting it into power may be invented or even substitutes discovered which will give us a larger supply at a lower cost

The Federal Trade Commission summarizes the situation as

The consumption of gasoline is rapidly increasing.

The production of crude has been generally regarded as near its

naximum.

Some immediate relief may be afforded by means of the following:

(a) The use in internal-combustion engines of heavier distillates approaching kerosene.

(b) An acceptable kerosene carburetor would at once go a long way toward relieving the present shortage of gasoline.

(c) General use of cracking processes, whereby gasoline is made from kerosene and other less valuable petroleum oils. Such cracking processes are being rapidly developed and promise near relief. It is practicable to produce gasoline from kerosene, gas oil, fuel oil, residuums, and heavy crudes by present-day cracking processes, and no oil should be used for fuel that has not been so treated.

(d) Increasing the production of crude to furnish the necessary supplies of gaseline; but this is not to be recommended if it increases the output of distillates, for which there is no market.

In addition they refer to the possibility of opening up new oil fields and then in some detail give the following as an answer to the query:

What new method or methods have been evolved to increase the percentage of gasoline produced from the crude oil, or to cheapen the cost of production in any way?

(a) The extraction of gasoline from natural gas by compression is a new method. The production of gasoline from this source in five years is as follows:

177, 000 286, 000 573, 000 1, 016, 000 1, 500, 000

3, 552, 000 Total. This gasoline may be blended with heavier distillates from petro-

This gasoline may be blended with heavier distillates from petroleum.

(b) The usual refinery practice is to produce a number of gasolines of different gravities, such as 74°, 70°, 68°, and so on down to 60° gravity. If refiners, instead of making gasoline of different gravities, would blend the higher grades with lower distillates, making a single grade of 60° gravity, this would increase the gasoline yield 3 to 4 per cent, or more than 1,000,000 barrels per annum.

(c) By improved design of carburetors and internal-combustion engines, it is possible to use heavier oils than have heretofore been considered practicable. Six or seven years ago gasoline of at least 70° gravity was desired, while to-day a gravity of 60° is quite satisfactory. This in part explains why 10 years ago only from 10 to 12 per cent of gasoline was extracted from Pennsylvania crudes, whereas to-day the same crude yields twice that amount; likewise Indiana and Oklahoma crudes are yielding double the proportion of gasoline to-day that they yielded 10 years ago.

(d) The Burton cracking process for producing gasoline (motor spirits) from certain low-grade petroleum distillates is a process patented and owned by the Standard 0il Co. The production from it is in excess of 3,000,000 barrels per annum. This gasoline output is equivalent to the ordinary gasoline recovery from 18,000,000 barrels of crude oil containing 17 per cent of gasoline, or more than 10 per cent of the total production of crude for the past year, exclusive of California. Kerosene, heavy residuum oils, and asphaltic crudes are not at present used in this process.

(e) The Rittman cracking process for producing gasoline (motor spirits) from petroleum distillates was brought out by the Bureau of Mines in 1915. Application for patent is pending in the Patent Office. At the present time seven refineries in six States are installing plants to use this process, which not only increases the yield of gasoline but utilizes for this purpose crude oil, kerosene, or any other low-grade d

In reference to the Rittman process let me state briefly some interesting facts. Dr. Walter F. Rittman, a resident of New York, an employee of the Bureau of Mines, invented certain processes for the production of gasoline, benzine, and toluene. These improvements seem certain to prove of immense value, and Dr. Rittman, realizing their importance, expressed a desire to dedicate to the people of the United States the use and enjoyment of the patents he had perfected. At once the question arose as to the best plan to pursue in handling the patents in order to insure the greatest benefit to the public. In a report from the Department of the Interior it is stated that

order to insure the greatest benefit to the public. In a report from the Department of the Interior it is stated that—

It seems wisest to have the Rittman patents so held that some trustee for the people shall have authority to issue licenses for the use of the processes under terms which will give a maximum of protection to the public. For example, it is the plan with regard to these patents to authorize their use only upon condition that the details of the commercial working out of the processes shall be available to the Bureau of Mines for publication whenever desirable; that the bureau shall be informed of improvements in the processes or in plant or apparatus for their operation; and that all such improvements which are patentable shall be assigned to the trustee for the people in the same manner as the original processes.

The Secretary of the Interior, as the head of the department in which the processes were developed and in which the administration of the patents should be carried on, is the most logical trustee for the people.

Dr. Rittman desires that the benefit of his inventions, so far as they may be applied to oils produced in the United States, shall innre to the people of the United States.

The processes promise to be of great value to the people of the United States, but will retain all foreign rights and the right to use his processes on oils imported into the United States.

The processes promise to be of great value to the people of the United States. For example, the gasoline process seems certain greatly to increase the gasoline yield of the oil supply of the United States. The crude oils produced in this country have a normal gasoline content of from 5 to 25 per cent with ordinary refining processes. The average gasoline yield of United States oils is somewhere in the neighborhood of 15 per cent. The Rittman cracking process will increase this yield to 45 per cent by running the residuum through the still once, and by taking the remaining products heavier than gasoline and running them

per cent above the yield by ordinary refining processes can hardly be overstated.

The desire of the petroleum industry to use this gasoline process has been so great and so many applications have been received for permission to use the process without waiting for the issuance of a patent that the department has issued a number of licenses for such use pending the granting of the patent and the assignment of the patent rights to the Secretary.

Yesterday the Senate of the United States by a unanimous vote passed the following joint resolution:

Resolved, etc., That the Secretary of the Interior be, and he is hereby, authorized to accept as trustee for the use and benefit of the people of the United States assignment from Walter F. Rittman of his entire right and title, or of any lesser interest, in, to, and under any letters

patent of the United States which may be granted to said Rittman under applications Nos. 29019 and 29020 for patents for certain improvements in the manufacture of gasoline, benzene, toluene, etc., in so far as said applications or the letters patent issued thereunder cover and embrace the manufacture of such products from materials produced and manufactured within the United States, and the said Secretary of the Interior, or his successors, is hereby authorized to grant such licenses and take such steps as may be necessary to make such processes available to the people of the United States; Provided, That the Secretary of the Interior shall also be authorized to accept the assignment of any right, title, or interest in or to any patent issued upon any device, improvement, process, equipment, apparatus, or other matter or thing developed by any licensee in the use of the said Rittman processes. Sec. 2. That the Secretary of the Interior is authorized to perform any and all acts and to make such rules and regulations as may be necessary to carry this resolution into effect.

Mr. Specker, L. congratulate the Secreta, upon their properts.

Mr. Speaker, I congratulate the Senate upon their prompt action and trust the House will be equally expeditious in handling this subject for the situation demands our earnest and immediate consideration. I trust the Rittman process will give the benefit predicted. Announcement has just been made that the Maxim Munitions Co. has acquired the rights to manufacture a chemical substitute for gasoline. It is to be hoped that the claims of the discoverer of the compound will be fulfilled,

We must try every expedient, exhaust every means in an effort to reduce the cost of gasoline or find substitutes for it. Few subjects transcend this in importance, affecting as it does both our industrial prosperity and our individual welfare, and I

hope Congress will take prompt action for relief.

The Clarke Amendment to the Philippine Bill.

EXTENSION OF REMARKS

HON. JAMES W. HUSTED,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Monday, May 1, 1916.

Mr. HUSTED. Mr. Speaker, I regard the proposition contained in the Clarke amendment for complete and absolute independence of the Filipinos within not less than two or more than four years, reserving absolutely nothing to the United States except the right to reserve lands and to acquire lands, rights, and privileges which the President may deem needed by our Government for naval bases and coaling stations, as unwise and undesirable from every standpoint. But when we couple with the above proposition that it is to be carried out without providing in any way for the national integrity of the Filipino people after they have been declared free, it is, it seems to me, base and unworthy of the American people. I desire to occupy my time in discussing the four chief points which are urged by the promoters of the Clarke amendment in favor of its adoption. These are:

(a) That the Filipinos desire independence.

(b) That there is no American sentiment in favor of permanent retention.

(c) That the Filipinos have sufficient capacity and experience for self-government.

(d) That the cost of maintaining our sovereignty is dispro-

portionate to the benefits derived.

At the time of the Spanish-American War the Filipinos had a real desire for independence, based upon a good and sufficient reason, which we can understand and appreciate, even though they were not fit for independence at the time. It was the natural result of Spanish misrule. They desired independence that they might secure liberty. They wanted to throw off the yoke of Spanish oppression.

When we purchased the islands and took possession of our property the Filipinos knew nothing about us. They were suspicious and assumed the worst as to our motives and objects. It took several years for us to gain any measure of their confidence or cooperation. Our political and social reforms, our works of internal improvement, which are a splendid achievement of colonial administration, were instituted and inaugurated in the face of the opposition of the people for whose lasting

benefit we faithfully labored.

But the time came when they realized that we were, possibly, partly disinterested; that we might be working, somewhat at least, unselfishly for their good, and they gradually gave us their confidence. They began dimly to realize the blessings of American liberty and more fully to appreciate the substantial benefits of American government. With this dawning consciousness that a new era of justice, freedom, and opportunity was at hand, ushered in for them by the disinterested devotion of a great and

mighty people, the desire for independence measurably subsided. If our Government had at that time given the Filipino people distinctly to understand that the granting of independence was not a question for present consideration but for the indefinite future, when we were sure it would prove a blessing and not a curse, I do not believe there would now be any considerable desire for independence among the Filipinos. however, at this time, when circumstances were working toward the adjustment of a harmonious permanent relationship, a strong sentiment for the independence of the islands developed in this country. It was asserted that the acquisition of the Philippines was a long step toward imperialism; that their retention was re pugnant to our ideals and traditions; and that we should get rid of them at the earliest practicable date. This sentiment has practically died out in America, for the reason, no doubt, that it was based upon a false assumption. Our Government had no idea of territorial aggrandizement in acquiring the Islands. We took them rejuctantly, and because it seemed the only proper course to pursue at the time, and the retention of the islands has not created among us in the slightest degree any imperialistic spirit.

The effect of it, however, was to encourage the Filipinos in the hope of early independence, and this hope has been fostered in many ways by the present administration of the islands. It is easy to understand, under the circumstances, why independence is a popular campaign slogan with the native politicians, even though it is not based on reason and common sense, but, on the contrary, is opposed to the best interests of the country. I imagine it might be possible to create some sentiment for independence even now among the people of the Hawaiian Islands or Porto Rico if it was made to appear the clear intention of this Government to grant it in the near future.

It is evidently the general desire of the Filipino people to secure their independence, but it is certain they do not want the kind of independence proposed by the Clarke amendment. They want to go it alone, but insist that we are obligated to stand by and lend a hand whenever they may need help. The Democratic Party in the islands, in recently adopted resolutions, condemn in strong terms any policy which would "cast the Filipinos adrift without adequate financial resources and with no protection or guaranty of national integrity."

It can not be denied that the desire of the Filipinos for inde-

It can not be denied that the desire of the Filipinos for independence is entitled to consideration, but it can in no sense be regarded as controlling in the determination of the question until we have satisfied ourselves that independence would conduce to the best interests of the Filipinos and would also be consistent with our own best interests.

The committee report asserts it is doubtful if there is any appreciable American sentiment in favor of permanent retention. Little space is given to the elaboration of this point, and it is at best a mere conclusion of the committee based upon individual opinion unsupported by evidence. I, for my part, do not believe it, and I know there is extensive and general public opposition to the granting of independence under the terms of the Clarke amendment. Practically all of the Republican and independent newspapers of the country and many Democratic journals actively oppose it. I have not received a letter or petition in its favor. I have received many urging me to vote and work against its adoption, and I assume that my experience is the same as that of the other Members of the House.

It is urged by the committee that the Filipinos have sufficient capacity and experience for self-government and are therefore entitled to independence.

It does not necessarily follow that independence is a desirable condition for all people who have developed capacity for self-government and who have had a considerable experience in its exercise. They might still be so weak and helpless, through lack of adequate financial resources and the means of protection, as to require the support of a strong power to maintain their national integrity. That is exactly the position in which the Filipinos would find themselves if turned adrift under the provisions of this bill. It is evident that they fully realize it and expect us to furnish the needed protection. They would rec'on without their host, however, if the proponents of this bill had their way about it, for one of the main reasons mentioned in the committee report for passing this bill is the chance it would afford to escape the obligation of defending the

I have never visited the Philippine Islands and know nothing about their people except what I have read and gained from a few persons who have lived there. But I have gathered enough information to convince me that it is preposterous to claim they have developed sufficiently to be fit to be trusted with a full measure of self-government. They have made commendable progress during the 17 years they have enjoyed the benefits and

privileges of our guardianship. They show a most praise-worthy desire to acquire education, and there are among them many substantial citizens of culture and refinement who would be a credit to any nation. They are not among the class, however, who are clamoring for independence, but wisely recognize the limitations of their people as a whole and are contented to remain under the benevolent restrictions of our Government, whereby their personal and property rights are protected, an efficient, economical, and orderly administration of civil affairs assured, the public health safeguarded through modern methods of sanitation and disease prevention, and internal improvements of great and lasting value carried on in a manner and to an extent which would be impossible without American cooperation.

I am in favor of giving the Filipinos from time to time as large a measure of self-government as they are capable of exercising wisely, but it does seem to me that we have recently gone at least as far, and possibly further, in that direction than circumstances justify; but it is surely right to err, if we can not be certain of the effect, on the side of liberality.

It is also contended that the cost of maintaining American sovereignty is disproportionate to the benefits derived.

We acquired Alaska from Russia for a comparatively small sum of money. The reason Russia gave for parting with this vast extent of territory was because it did not pay her. It had, as a matter of fact, under Russian administration, proved a losing venture, but it has turned out a very profitable investment to us. It has paid for itself many times over, and we have not scratched the surface of its enormous resources. It is claimed, and may be true, that the Philippines have not thus far been a profitable venture for us, but, if this is so, I believe it is largely profitable venture for us, but, it this is a distribution of a close approximation. It seems to present investment amounts to about \$600,000,000. It seems to present investment amounts to about \$600,000,000. We did not be difficult to arrive at a close approximation. We did not acquire the islands until December, 1908, and paid \$20,000,000 for them. From the very beginning some opposition to their retention developed on the ground that it was a step toward imperialism and opposed to republican principles and ideals, The people of the islands were led to believe that some time or other in the indefinite future complete independence would be accorded them. As a result, American capital has been reluctant to embark in the development of the country's resources, fearing, no doubt, that our Government would, sooner or later, abandon the Islands to their fate and that American interests would suffer as a result. It is inconceivable to me that any American business man at the present time would think of investing any money in the Philippines, however tempting the opportunity for profit might appear, with a proposition such as the Clarke amendment to this bill pending in the House and having received sufficient consideration to have passed the Senate of the United

It appears there are Members of the Senate and of this House who regard the Philippines as a liability and not as an asset, I do not believe any other great nation would so consider them. If they were a liability at the time of acquisition, I am sure that Great Britain or Germany or Japan would speedily convert them into a most valuable asset. On the figures it would seem doubtful whether they are a liability to us at the present time. During the years 1891 to 1895, inclusive, the average annual value of American exports to the Philippines was \$120,917. In the year 1914 we sold them products to the value of \$28,571,821, and in the year 1915 to the value of about \$49,000,000.

The Philippine Islands are the only extensive tropical possession of the United States. They contain approximately 150,000 square miles. They now grow, or can be made to grow, practically every tropical product, and with their possession and what we can obtain from them we could become absolutely commercially independent.

It seems inconceivable that the American Government could so disregard its national duty and self-interest as to turn these valuable possessions adrift without reserving or acquiring in them any interests except such lands, rights, and privileges as the President may deem required by the United States for naval bases and coaling stations and leave them, without protection or guaranty of national integrity, a prey to internal disorders and revolutions, which their weak and helpless condition would invite, to be speedily gathered in by some foreign power, which would appropriate their trade and exploit their resources with much less consideration than we have shown for the social and political welfare of the people. It would, however, so highly prize the possession of this key to the Orient that it could be relied upon to defend it with whatever military and naval forces were necessary for the purpose. Such a power would probably hold the islands for many years, if not centuries, to its own great profit and to our great shame. Especially does such a course

seem incredible when it must be apparent to any student of the Eastern question that the acquirement of dominant influence in the islands by any first-class power would be a greater menace to our peace and prosperity than the existing status or even the retention by us of control over the Philippine Government in matters affecting only our national interests.

The Philippine Bill.

EXTENSION OF REMARKS

HON. WILLIAM R. WOOD,

OF INDIANA.

IN THE HOUSE OF REPRESENTATIVES.

Monday, May 1, 1916.

Mr. WOOD of Indiana. Mr. Speaker, one of the difficult questions with which the framers of the Constitution had to deal was to provide a way to manage and control and make disposition of the territory then belonging to the United States and other territory which might thereafter be acquired. At the time the Constitution was adopted cession had been made of the Northwest Territory. There was also much talk at that time about Canada becoming voluntarily a part of the territory of the United States. During the period of the Confederacy there had been much dispute between the different States with ref-crence to the disposition of the Northwest Territory and with reference to the attitude that the States should occupy toward Canada. It was the contention of some that the revenue to be derived from the sale of the lands in the Northwest Territory should be divided among the several States, and there was considerable contention as to how and in what proportion such revenue should be divided. As a consequence of all this, it was not an easy task for the framers of the Constitution to make adequate provision for the control and disposition of territory. The first draft of the Constitution contained no provision for Subsequently, however, the third section of Article IV of the Constitution was adopted, by a divided vote, which has for its purpose the solution of the territorial problem. and this section is the only part of the Constitution that makes any provision whatever for the acquisition or disposition of territorial possessions

Section 3, Article IV, of the Constitution reads as follows:

New States may be admitted by the Congress into this Union, but no new State shall be formed or erected within the jurisdiction of any other State; nor any State be formed by the junction of two or more States, or parts of States, without the consent of the legislatures of the States concerned as well as of the Congress.

The Congress shall have power to dispose of and make all needful rules and regulations respecting the territory or other property belonging to the United States, and nothing in this Constitution shall be so construed as to prejudice any claims of the United States or of any particular State.

The first clause of this section provides the manner in which new States may be admitted into the Union and how such States may be formed. The second clause of this section is the one that either gives the right or puts an inhibition upon the right of the United States to dispose of any territory over which it has taken and exercised complete sovereignty; and if any right is given to authorize the United States to surrender and dispossess itself of territory over which it has taken and exercised complete sovereignty, it is by virtue of the first half of this clause, which reads as follows:

The Congress shall have power to dispose of and make all needful rules and regulations respecting the territory or other property belonging to the United States.

At first blush it would seem that this portion of this clause authorizes the United States to dispossess itself of any of its territorial possessions, but a close analysis of the text, considered in the light of the authorities in construing the language used therein, will raise a very serious doubt, if it does not conclusively convince an unprejudiced mind, that the United States has no right by virtue of the language used either to sell or give away any of its territorial possessions. The confusion, if any there is, arises from the use of the words "dispose of." These words, however, were used by the framers of the Con-stitution and intended by them to have quite a different mean-This is made clear, I think, by the decided cases involving these words and their legal meaning. Judge Story, in his work on the Constitution, in discussing this very clause, with reference

to the attitude of the States concerning the Northwest Territory, says:

To induce them to make liberal cessions, Congress declared that the ceded territory should be disposed of for the common benefit of the Union, and formed into Republican States, with the same rights of sovereignty, freedom, and independence as the other States—

And so forth.

In using the words "disposed of" in the language quoted it does not mean that the United States was to dispossess itself of the territory in question, but that it should make disposition of that territory under the sovereignty of the United States, and describes the manner in which such disposition shall be made, thus showing clearly that it was never the intention of the thus showing clearly that it was never the intention of the United States, either during the period of the Confederacy or after the formation of the Union, to part with the sovereignty over territory belonging to the United States. It will also be observed that as thus used there is quite a different meaning that must be given to the word "dispose" than is given to the word "disposesss." "Dispose" as used in this clause, and as decided in many cases, means "to determine the faith of; to exercise control over; to fix the condition, application, employment, and so forth; to direct or assign for use; to exercise finally our power of control over." And if this is not the meaning that was intended by the framers of the Constitution, they ing that was intended by the framers of the Constitution, they would have used the disjunctive "or" instead of the conjunctive "and" in this sentence; and instead of saying, "The Congress shall have power to dispose of and make all needful rules and regulations respecting the territory," they would have said, "The Congress shall have power to dispose of or make all needful rules and regulations respecting the territory.'

The language used, in view of the debate upon the question of our territorial possessions, clearly establishes that it was the intention of the framers of the Constitution to provide the manner in which our territorial possessions shall be managed and controlled, and to make disposition of them for such man-

agement and control.

It is, therefore, my contention that under this section of the Constitution the United States is absolutely without authority to surrender its sovereignty over any of its territorial possessions that have been ceded to it by treaty or that it has obtained by conquest and the title to which is indisputably vested in the United States.

When territory is thus acquired it comes at once "under the domination and jurisdiction of the United States," and "in cases of confirmation or cession by treaty the acquisition becomes firm and stable, and the ceded territory becomes a part of the nation to which it is annexed, either on terms stipulated in the treaty or on such as its new master shall impose." And after the acquisition of such territory under the clause of the Constitution we have been considering, the new master may make such disposition of the territory as it may see fit for its control and management under the sovereignty of the United States.

Thus, after we acquired the Philippine Islands, legislation was had having for its purpose the establishment of laws for the control and management of the islands. Disposition of the control and management was given under authority of the United States to certain officers and certain tribunals, and from time to time new disposition has been made for the control and management of these islands by enacting laws giving the inhabitants thereof a greater voice in the management and control of the same; but all of these dispositions have been made without the surrender of one iota of the sovereignty of the United States. And if, as Judge Story says, this new territory becomes a part of the Nation to which it is annexed, the Philippine Islands are just as completely a part of the United States territory as the Northwest territory was at the time of the adoption of the Constitution and just as complete a part of the territory of the United States as the Louisiana purchase and as all the territory ceded to us as a result of the War with Mexico and just as complete as the cession of Alaska.

Under the Paris treaty, by which the Philippine Islands were ceded to the United States, we took upon ourselves all of the obligation of ownership and sovereignty. The mere fact that the Philippine Islands are seven or eight thousand miles away and are not contiguous territory does not alter the case in the least. There is no one who will dispute but what the Hawaiian Islands are just as completely ours and just as fully under our Islands are just as completely ours and just as fully under our control as the Territories of Arizona and New Mexico were before they became States. While it is true that a territorial government has not as yet been established in the Philippine Islands, yet there is nothing to prevent that disposition of them being made at any time. And there would be nothing to prevent such territories being admitted as States of the Union, provided they could establish their qualifications entitling them to statehood.

If we have the right to surrender our sovereignty over the Philippine Islands to the Filipino people, or if we have the right to sell them for a price to any other power, we would have had the same right to have sold any one of the Territories of the United States to any foreign power. We would have the same right now to sell Hawaii to any foreign power or to give to the people of those islands their independence. We have the same right to sell Alaska to any foreign power or to give to the people of Alaska their independence and permit them to set up a national government of their own.

If by an act of Congress we can surrender our sovereignty over the Philippine Islands to the Filipino people, what is there to prevent us by an act of Congress alienating a State by and with the consent of the people of that State? It is my contention that there are many things that our Government can do that it can not undo. Under the Constitution it can admit Territories as States into the Union, but it can not by an act of Congress arbitrarily put a State out of the Union. It can provide the manner for the naturalization of citizens but it can not arbitrarily take that citizenship away when once it has been given. The powers of the United States are limited. The Con-stitution itself provides "the powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States, respectively, or to the people." Upon this proposition, Judge Story says:

The Government of the United States is one of limited powers; and no authority exists beyond the prescribed limits marked out in the instrument itself. Whatever powers are not granted necessarily belong to the respective States or to the people of the respective States, if they have not been confided by them to the State government.

The last half of the second clause of section 3, of Article IV, which reads, "And nothing in this Constitution shall be so construed as to prejudice any claims of the United States, or of any particular State," places an inhibition against the United States surrendering sovereignty over these islands for the reason that every particular State has a vested interest in these islands. It is a joint owner with the United States in them, and the only disposition that the United States can make of them is by acts of Congress looking to their regulation and control.

has been contended by some that notwithstanding this inhibition there is nothing to prevent the United States from surrendering the islands, getting out of them, and abandoning them to whatever fate may lie before them. The same justification could be offered for our abandoning any of our other Territorial possessions, or in abandoning any State in the Union. Any such course would be a clear violation of the duty we owe to all our people alike, wherever they may be situated, and in whatever condition they may be found in any of our territorial possessions. Upon this same reasoning in justification of abandonment, we might have spared ourselves all of the blood and treasure involved in the Civil War, for all that our southern friends then asked was to be permitted to go

There being no express power delegated to the United States by the Constitution authorizing it to dispose of the Philippine Islands and there appearing an absolute inhibition against its doing a thing that would result in impairing and prejudicing not only the claims of the United States but also impairing and prejudicing the claim of every State in the Union, I am of the opinion, therefore, that the United States Government has no legal right to surrender or dispossess itself of the Philippine Islands.

Agriculture Appropriation Bill.

EXTENSION OF REMARKS

HON. S. D. FESS. OF OHIO,

IN THE HOUSE OF REPRESENTATIVES, Tucsday, May 2, 1916.

Mr. FESS. Mr. Speaker, of the vast annual expenditure of the Government, carried by the many supply bills the Congress is called upon to consider, the Agricultural appropriation bill enlists the country's approval more generally than any other. Many of the great supply bills are an expenditure to keep the machinery in running order. The legislative, executive, and judicial bill, the diplomatic bill, the sundry-civil bill, all fall judicial bill, the diplomatic bill, the sundry-civil bill, all fall ably not half enough for the purpose, it would be a wise policy in this class. Many are a burden which is the price of our if the Government would take the one needed step to provide

being a great and sovereign Nation, such as the Army, the Navy, and the fortifications bills. But the Agricultural bill, in a special manner, adds to the element of administration, that of creative and constructive research. It deals with the positive as well as the negative side of government. It is a good example of the adverse of Tom Paine's idea that government is a necessary evil. His idea was that the chief function of government was to forbid. Even in the agricultural realm it is estimated that three-fifths of the expenditure is devoted to the regulatory function in the administration of the various statutes designed to compel respect for proper conduct as outlined in the following enactments: Meat-inspection act, cattle-quarantine act, diseased-animal transportation acts, 28-hour act, virusserum-toxin act, food-and-drugs act, insecticide-and-fungicide act, plant-quarantine act, seed-importation act, Lacey Game Act, migratory-bird act, and the cotton-futures act. Of the nearly \$25,000,000 expenditure carried in this bill, at least \$15,000,000 must be applied to prevent violations of these acts, designed to protect the rights of the consumers. It is quite a comment upon the general attitude of the trade world

The remaining \$10,000,000 is devoted to research endeavor and educational extension work. In this field is where the great and valuable work is carried on. The first is distinctively research, and the latter is demonstration work. Both these fields are distinctively governmental and are the most legitimate use the Nation can make of its resources; especially is this true of the former field-research.

There is no doubt that some criticism is due to parts of this legislation. There are some departments, such as the Forest Service, that appear to be heavy at the top, where the overhead or purely administrative expense is out of proportion.

It is also true that some phases of the preventive activities, such as the attempt to reduce the ravages of diseases among animals and crop elements, are expensive and cause doubts as to whether this is the very best use to make of the public funds. However, the country demands these enemies must be met and combated, else all constructive effort will be defeated in the end.

The chief activity of the Federal Government in this particular realm is to discover causes and suggest remedies and, if necessary, prescribe, under penalty of law, that the eradication of the various pests may be accomplished by concerted action of the agriculturists. Such awful loss to the farmer as was suffered last year by an epidemic of foot-and-mouth disease, not so much from that disease, but rather from an epidemic of cholera, which resulted directly from herding fat stock by force of the quarantine regulation of State and Nation. The total loss of an entire drove of fat hogs not infected by the foot-andmouth disease, but an induced epidemic of cholera, the results of an imperfect, if not totally unwarranted, exercise of the police or quarantine power, should never again be made possible under law

This bill proposes an investigation of that particular fatality from which my own State suffered so frightfully last year. While the exercise of the power of quarantine must be a sovereign right, to which the individual must submit, yet the country must find the way where State and Nation can cooperate to secure speedy action of relief, that perfectly healthy stock may be readily marketed with safety to the public from diseased meats, as well as to the individual owner from an induced epidemic by inability to make disposition before the ravage reaches the community.

Mr. Speaker, the most commendable features of this bill are

those which carry to the farmer the fundamental principles of agriculture, those which are rapidly making the farm a scientific laboratory in production. I do not refer to those features designed to enable the farmer to preserve what he already has, but rather to inform him to increase his commodity and to find what he does not have. Our acreage is limited in extent but not in production. There are boundless spaces regarded as waste, either because of lack of water or other elements wanting. One problem is to supply water where it is possible and another is to find the secret of dry farming. But the greatest aim of governmental action is to discover the secret of soil fertility. The problem is to find how to make the acre produce its maximum. This is not yet known and is the grant man. The consumption must necessarily increase. This is not yet known and is the goal of the research The consumption must necessarily increase. There is no limit to this demand. The production must likewise increase. Since the limit of acreage will be reached, the maximum per acre must be found. Here is the call of the scientist, and the Government is doubly justified in giving every encouragement to this field. This bill deals bounteously with this feature.

In this connection, while there is an appropriation of \$50,000 for developing the coloring materials, and a sum which is prob-

by proper tariff legislation a protective duty so as to assure American capital, if it would invest, it would not be driven to the wall just as soon as the war is over. The country would in a very short time be producing, by utilizing the coking gases now wasted, all the dyestuff for coloring matter the people needed, and we would thus build up in our midst one of the greatest industries of which now Germany is the monopolist. Here is one of the very best examples of how a party will allow its theory to interfere with its opportunity as well as its national duty. The Democratic Party, fully alive to the dye situation and as fully aware of our immediate possibilities if we would but embrace the hour, refuses to take the step, simply because in the past it has contended on the stump and in its platform that a protective tariff is not constitutional. What can be said about the dye industry could be stated in regard to fertilizer for the farm. This country should proceed to develop the nitrate in-dustry, not by an obsolete method proposed by some water monopolist but by the simple utilization of lost power, shamefully wasted, a possibility demonstrated by the figures of my colleague [Mr. Longworth]. In another field the country should utilize its great resources for potash. This bill, I am glad to say, has undertaken this object—a most commendable effort.

The function of the Government is not completed when it

finds the secret of production it must extend to making its capital able to pay American wages in the production of a competitive article. Here is one of the fundamental differences between the Republican and Democratic Parties. Had the Republicans control of the Government it would not satisfy itself in the suspension of the Underwood bill on sugar as this administration has done, but it would suspend it on agricultural products which, when the European war closes, will feel a competition from the world as never before. It would also displace it by insuring a dye industry that in time will rival anything

known in Germany.

The farmer must also have a better system of roads. One of the main demands is the proper material out of which to build them. This bill proposes to assist in this feature as well as to make demonstration of the finished road.

This has connection with a better grading of grain and marketing of the same as well as an easy currency. All these items

will be cared for in the near future.

The American farmer of the future is destined to be the most independent as well as the most contented of our population, His problems are pressing, but they will find a solution in due time. He will not only find the secret of production, but the better roads, the rural delivery, the weekly and in many cases the daily news, the telephone and in many cases the automobile, the central high school, and the church will produce a social life not to be equaled anywhere in the world. As yet this stage is not reached, but it is most certainly in the future.

This sort of legislation as herein proposed will meet with genuine approval by all the country, and for it I congratulate the committee, and especially the chairman who has labored un-

ceasingly to bring about these results.

Should the National Government Aid Rural Credits?

EXTENSION OF REMARKS

HON. FRANK PARK, OF GEORGIA.

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, May 2, 1916.

Mr. PARK. Mr. Speaker, the following appeal to facts and history relating to what other countries have done for the agricultural classes and what Congress should do for the farmers of the United States, by Mr. Clarence Poe, editor of the Progressive Farmer, in a general way commends itself to people who are earnestly thinking and striving to do something that will really benefit the farmers of our country. It matters not what method or system or plan may be devised by Congress, provided in its working operations it shall accomplish what is needed; that is, to lend money to farmers at a rate of interest which will enable them to live and repay the loan and to enable those desiring to farm to own farms and to obtain means to purchase farms at such a rate of interest as will make it possible for them to live and pay the interest and the principal in a given time.

The situation of the American farmer is the most serious of any that confronts the American people. He is the mudsill and the foundation of all things material which go to the support of life, comfort, and luxury of the people, and by all means no longer should he be neglected by Congress to the extent that he has been in the past.

When we give to the farming class that which they earnestly and seriously request and demand of us now we lay the corner stone for the erection of the greatest system of prosperity which this Nation can hope for in the future. If we neglect it, it not only means a gradual depression of the energies, aspirations, and hopes of the farmers of this country, but it means a gradual diminution of the greatest source of wealth that from year to year pours into the channels of trade of this country. I commend to all of the Members of Congress the words and ideas embraced in this appeal of a most able and patriotic

SHOULD THE NATIONAL GOVERNMENT AID RURAL CREDITS? AN APPEAL TO FACTS AND HISTORY FOR THE CONSIDERATION OF PRESIDENT WILSON AND OUR SENATORS AND REPRESENTATIVES.

[By Clarence Poe, editor of the Progressive Farmer.]

To President Wilson and our Senators and Representatives in Congress: Adam Smith, when he came to write his "Wealth of Nations" in 1776 remarked upon it as a truism that the policy of all great nations since the downfall of the Roman Empire, "has been more favorable to arts, manufacture, and commerce, the industry of towns, than to agriculture, the industry of the country."

No one who has read history carefully can doubt that the great philosopher was right; and the tendency of our own Government since 1776 has been exactly like that of the European Governments before that day.

that date.

We have hoped of late years, however, that nations were beginning to see the ruinous folly of this course. The concentration of wealth in the hands of a few, the drift of population from the country and the overcrowding of cities, the development in America of that "excessive urbanization" which the historian Ferrero says is "the disease which killed the Roman Empire" and which Rider Haggard calls "the handwriting on the wail of our civilization"—all these signs we hoped had not been lost en Governments or even on the proud who have feasted with our modern Belshazzars.

RURAL CREDIPS-GENUINE OR SPURIOUS?

RURAL CREDIFS—GENUINE OR SPURIOUS?

The chief recent evidence of an awakening has been the growing demand for having the American Government establish a modern system of rural credits—a demand which was solemnly included in the platforms of the Democratic, Republican, and Progressive Parties in the campaign of 1912.

The farmers of this country accepted these platform declarations as meaning something. They began to take on new hope. They knew what Europe had done for her farmers through rural credits, and they said, in the language of Senator Gore, "What Europe has done for her farmers America must do for hers."

Now, when the farmers of America heard those platform declarations, they didn't suppose that what was proposed was simply a plan by which they could lift themselves by their bootstraps. They didn't suppose that what the Government meant to say was, "We are going to pass a little bill whereby farmers can organize associations and sell bonds for themselves and raise money for themselves and finance themselves." If that were all, there was no use raising any racket about it or holding out any faise hopes. Any State legislature could have done that in half a day at any time for 50 years past—or any Congress.

Now, let us make our position clear. We don't want to see Congress give the farmers anything; we don't want any gift or subsidy—not even the free seed with which the mails are overloaded at this season, We believe with David Lioyd-George, the greatest champion of the masses in Great Britain: "To let them expect all to be done for them by gifts, alms, and charity is not statesmanship. This is the sort of thing that would create a parasite democracy such as ended Rome."

DISCRIMINATING IN FAVOR OF COMMERCE AND AGAINST AGRICULTURE.

DISCRIMINATING IN FAVOR OF COMMERCE AND AGAINST AGRICULTURE

We repeat, therefore, that the farmers don't ask gifts, don't ask charity. But geutlemen of the House and Senate, they do ask justice, and such friendly aid as Congress can give on ample security without risk in getting a just system of rural credits going. And we ask you to inquire whether the farmers of America have had justice or whether the proposed rural-credits bill of your subcommittee will give them justice.

the proposed rural-credits bill of your subcommittee will give them justice.

What has happened for a hundred years? What sort of treatment has the farmer had for a hundred years at the hands of the Government of which he has been called "the backbone" in every campaign? ("Backbone" seems to be a good word here since it is the backbone that bears the burdens for the rest of the body.) Listen to the sort of treatment the farmer has received from the Government:

To distribute the money of the country, the life-blood of prosperity, the Government supposed to be founded on the basis of "equal rights for all and special privileges for none" has created a national banking system with the following results:

(1) The farmer was told first of all that the land itself, his real estate and the main source of the Nation's wealth, could not be accepted as collateral by Government banks; and when this rule was nominally repealed in the new Federal reserve act, the repeal was hedged about by red tape or adverse conditions, that lending on real estate by national banks is still practically unknown. The national banking system does not recognize and has not recognized the farmer's chief collateral.

2. Not only was the farmer told that the Government money-distributing agencies recognized commercial collateral and didn't recognize agricultural collateral (land), but he was also told that loans were offered on terms suitable to commercial interests but not on terms suitable to agricultural interests. It is easy enough for the merchant or manufacturer to borrow satisfactorily on 90 days' time. He "turns over money" quickly, collects monthly or quarterly from purchasers, and a 90-day loan suits him. But it doesn't suit the farmer. It takes the farmer full 12 months even to grow a crop; while for making permanent improvements on his farm, buying needed machinery or live stock, putting up barns, silos, draining his land, etc., he must borrow, not for months but for years. And to all these needs and demands of agriculture the offici

WHAT EUROPE HAS DONE FOR HER FARMERS AMERICA MUST DO FOR HERS.

What europe has done for her farmers america must do for hers.

The crane in the fable invited the fox to cat with him, but served the food at the bottom of long-necked pitchers—and the fox got nothing. That is the sort of financial help the Government has offered the farmer—help he couldn't get at, hedged about by impossible conditions, both as to collateral and as to terms of loans.

Through all the years, therefore, the Government of the United States in its most vital relations to the people—that of a distributor of money or credit—has given special privileges to commerce and has discriminated against agriculture. It has given the farmer a stone when he asked for bread.

Now, what is proposed by the farmers of America as a remedy for this condition? It is proposed that a genuine rural-credits system be established and set in operation insuring three things:

1. Giving land its just and proper value as collateral for loans.

2. Insuring the low rates of interest which such collateral should demand. (Under past conditions it has been true, as a president of the Nebraska Bankers' Association said recently, that the farmer, with the best collateral offered by anybody, has to pay the highest interest of anybody.)

2. Gradual long-term methods of repayment, the amortization feature. And in getting such a system started it is asked that the Government lack the system, not with gifts to the farmers but with such assistance as will insure the system's actually working from the start and will at the same time safeguard the Government's investment and insure repayment with interest. The plan proposed in the Hollis-Bulkley bill was the purchase of \$50,000,000 worth of farm-mortgage bank bonds each year. The farmers do not care what the plan is, so it actually works and gives the relief promised. They may well say to Congress, as Mr. Wilson sald to Congress in asking for Government aid to our merchant marine:

"I am not so much interested in the particulars of the program as I am in taking immediate advantage of the gre

WHAT OTHER NATIONS HAVE DONE FOR RURAL CREDITS.

what other hations have done for real credits.

Study the Federal reserve act and the national banking act, Mr, Congressman, the rediscounting features, the low interest rates allowed commercial banks, etc., and then see if you can look an honest farmer in the face and tell him that the new rural-credits bill will insure as square a deal for agriculture as the Federal reserve act gives commerce. And study the European rural-credits systems and see if the statement quoted from Chairman Hill, of the rural-credits committee, American commission, is not correct. In fact, let us consider briefly what some European nations have done:

"Germany: The 'Landschaften' received subsidies from the Government in starting. Now, the Government provides supervision and control. Under the landschaften the farmers in Silesia get money on land at 3½ per cent, adding 1½ to 2½ per cent a year to apply on extinguishing the debt.

"France: The Credit Foncier was subsidized by the Government and given a monopoly for 25 years. 'This Credit Foncier is simply a Government-subsidized and Government-controlled bank for lending money on real estate, and to other land-credit institutions have ever made any marked progress in France.' Interest is 4.2 per cent. Agaln, 'the Credit Agricole Mutual is subsidized by the French Government, money obtained from the Bank of France being supplied the district banks without interest, these lending to local associations upon sultable security.'

"England: In 1913 England appropriated \$500,000,000 to below."

money obtained from the Bank of France being supplied the district banks without interest, these lending to local associations upon suitable security.

"England: In 1913 England appropriated \$500,000,000 to help Irish tenants buy land, they to become owners by paying 3½ per cent a year (2½ per cent interest, ½ per cent on principal) for 68 years, and the writer has seen tenants who bought by this plan. 'The history of land legislation in Great Britain and Ireland is a record of direct Government ald.'

"Russia: Russia has gone even further than Great Britain in extending State aid to purchasers of small farms. Through land-purchasing acts 20,000,000 small holdings, to the value of over \$1,000,000,000, were created, the Government funds so advanced being payable on long time and at very low interest rates. Furthermore in 1883 the Russian Peasants' Land Bank was organized. Loans to the extent of 90 and even 100 per cent of the value of the land are made, repayable in from 13 to 55½ years, with interest at the rate of 4 per cent. "Austria-Hungary: The Government aided rural-credit institutions in starting, but does not buy their bonds or debentures.

"Switzerland: 'Switzerland has 28 land-credit institutions owned or operated by the State, whose debentures are, of course, guaranteed by the State.' (Morgan: 'Land Credits.')

"Denmark: Denmark, a little country no bigger than an average American congressional district, 'advanced \$5,360,000, without interest, to found the Mortgage Bank of the Kingdom of Denmark. This bank is designed as a central institution for the landschaften. It buys their debentures. Denmark makes annual appropriations out of the treasury, amounting in 1909 to \$1,720,000, to be lent to small holders.'

"Sweden: 'The Swedish General Mortgage Bank was endowed at its founding with \$2,144,000, and in 1890 the bank was given a subsidy of \$8,040,000 in Government bonds. This is a central institution to aid the 10 local landowners' mortgage association in the sale of their debentures.'

"Egypt 'The Agr

debentures.'

"Egypt' The Agricultural Bank of Egypt is controlled by the State, The National Bank of Egypt, closely connected with the State, owns one-third of its capital stock. A 3 per cent dividend is guaranteed on the stock by the Government, and when necessary to sell its bonds at a reasonable rate of interest the Government guarantees their payment.

"Japan: "Japan guaranteed a 5 per cent dividend for 10 years on the stock of the Kwango Glinko, or central land-credit bank of Japan. It also gave subsidy of \$4,980,000 to the 46 local or district land banks, called the Noko Glinko."

"Other countries: Furthermore, quoting Morgan's Land Credits, 'South Australia, Western Australia, New South Wales, Victoria, Quecésland, and New Zealand, through State land-credit banks or direct appropriations, make loans to farmers."

Moreover, it is true that in the Philippine Islands the United States Government itself has subscribed the stock of the Philippine Agricultural Bank (\$500,000), and "among the lendable funds of this bank are the postal savings bank of the country." If Uncle Sam doesn't listen, therefore, when the farmers say, "Do for us what Europe has done for her farmers," can he afford not to listen when they say, "Treat us, your loyal taxpayers, as well as you treat the Filipino farmers, your rebellious tax eaters."

OUR GOVERNMENT HELPED START COMMERCIAL BANKING, NOW LET IT HELP BURAL BANKING,

But it is not only true that farmers have a right to say to Congress, "What Europe has done for her farmers America should do for hers," but they also have a right to say, "Help the new rural banking system as liberally—in proportion to the enormously increased wealth of America—as our own country helped a commercial banking system just 100 years ago this year." We will let our able Secretary of the Treasury, Hon. William G. McAdoo, tell what happened. In a speech before the Chamber of Commerce of Indianapolis, Ind., October 13, 1915, he said:

"My illustrious predecessor, Alexander Hamilton, proposed the organization of the first United States Bank, with a capital of \$10.000,000. In 1791 the Congress authorized it and subscribed \$2,009,000, or 20 per cent of the capital stock. Federalists and Republicans alike voted for it and President Washington approved it. When the second United States Bank was incorporated, in 1816, Democrata and Federalists alike voted for it and President Madison approved it. The second bank had a capital of \$35,000,000 and the United States subscribed to \$7,000,000, or 20 per cent of its capital stock."

We don't have to go back a hundred years, however, to find proposals to have the Government assist a new project until it is proved that private capital in ample quantity will be available for the purpose. The President of the United States, in his message to the Congress now sitting, December 7, 1915, urged the importance of a greater merchant marine and declared for Government aid to commerce in this particular. His exact words are pertinent in this connection:

"Capital can not accomplish this task of a sudden. It must embark upon it by degrees, as the opportunities of trade develop, Something must be done at once; done to open routes and develop opportunities where they are as yet undeveloped; done to open the arteries of trade where the currents have not yet learned to run, especially between the two American continents, where they are, singularly enough, yet to be created and qui

" PRIME THE RURAL-CREDITS PUMP!"

"PRIME THE RURAL-CREDITS PUMP!"

What the President asks for commerce, Mr. Congressman, is what we ask for agriculture: Let the Congress of the United States start the rural banking system to work by giving its backing—not gifts, but loans on security it will itself approve—until the investment capital of the country gets used to, and acquires confidence in, this new kind of banking "where the currents have not yet learned to run." And if such backing takes the form even of a \$50,000,000 purchase of landbank bonds, as was proposed in the Hollis-Bulkley bill, the Government of the United States in 1916, in proportion to its strength, will not be doing more to help start a rural banking system than it did in 1816—under the direction of the same party as now—to help start the commercial banking system of a hundred years ago!

For all the reasons we have given we do not believe it is a revolutionary proposal, judged by American traditions—on the contrary, we believe it is common justice and honesty—for the Government to lend enough assistance in the start to make sure that the rural-credits machinery will work. For our lawmakers may be very sure that farmers in modern slang "are from Missourl," and will not be satisfied with any sort of rural-credits machinery, however elaborate, however beautiful to the eye on paper or to the ear on the stump, unless it actually works. And anybody who has ever had any experience in starting a pump knows you must frequently put in a little water in the beginning to set the pump working right. What our farmers say to you, therefore, Mr. Congressman, is to prime the pump—prime the pump and set it going.

"What Europe has done for her farmers America must do for hers."

"What Europe has done for her farmers America must do for hers."
What America has done for commercial interests America must do for agricultural interests. What Uncle Sam has done for rebellious Filipino farmer subjects he must now do for loyal American farmer citizens.
Congressman Lever knows the committee bill is inadequate, and his amendments for Government guaranty and aid are the least that should

considered.

United States Grain-Grades Act.

EXTENSION OF REMARKS

HON. ELIJAH C. HUTCHINSON, OF NEW JERSEY,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, May 2, 1916.

Mr. HUTCHINSON. Mr. Speaker, in my judgment this is one of the most important matters before Congress to-day. The inspection of grain is at present a farce and no one is in a position to know what he is going to get when he buys a certain grade of grain. Most of the States have a department of trade, board of commerce, or some other body which establishes the grade of grain, and this grade is generally based on the condition of the crop; if the crop is of poor quality the grade is reduced accordingly. The eastern buyer has nothing to say

providing the seller produces the inspection certificate.

If grain comes east by the all-rail route and is not taken out of the car that was originally inspected, it is all right; but if it is sent east by the lake-and-rail route, and most of the grain received in the East is received over this route, the quality is greatly reduced. Every time the grain goes in an elevator the quality is reduced. The elevators to-day are made to leak and the grain has a habit of growing, so that by the time the east-ern buyer receives it it is hardly recognizable. If the small buyer buys a car of grain and does not stipulate the inspection he desires, he is likely to get almost anything but what he desires. If he tries to buy eastern inspection, he will find it impossible unless he pays an advanced price for it.

I was recently in Philadelphia on the floor of the Commercial

Exchange when an inspector was trying to get through a shipment of 500,000 bushels of wheat for export. The wheat had been through an elevator and the elevator had leaked about one-half soft winter wheat. If he is successful, he will make about 10 cents a bushel on every bushel he gets in, and the

buyer, instead of getting No. 1 Duluth or spring wheat, will get about one-half winter wheat of a poor quality.

This amendment is in the right direction, but I do not favor giving the Secretary of Agriculture so much power in the matter, as I fear that the Secretary may not be an expert regarding the grading of grain. I believe that the power should be placed in the hands of the Secretary of Agriculture and two competent grain experts, they to have the power to appoint State inspectors, fix a grade for grain, and act as a court of last resort in By this means a buyer would be protected and get

what he buys and pays for.

I know that there will be opposition to this on the part of the exporters, who will advance the argument that the inspection of other countries will be inferior to ours; to that objection I can say that the buyers will soon realize that our inspection is better, if it is, and will be willing to pay more for our grain. My contention is that all grains should stand on their own merit and that the buyer will pay for the grain according to inspection, providing that it is uniform, and that he can blend his grain to meet the requirement of this trade. Under the present system we buy a certain grade and take what we get and frequently can not tell what we have until it is tested in manufactured products, and then it is too late. A miller may lose his reputation as well as his business by unintentionally using inferior grades.

We believe that the farmer sells his wheat under inspection and it is resold under another inspection, usually about one or two grades higher. Under the present system we have no board of last resort to appeal to other than the creatures of the exchange or boards of the different States, and the buyer has to advance so much to procure a trial that he will usually submit to his loss unless there is a large amount involved.

Toward Militarism.

EXTENSION OF REMARKS

HON, CLYDE H. TAVENNER, OF ILLINOIS.

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, May 3, 1916.

Mr. TAVENNER. Mr. Speaker, for the benefit of historians of the future who may desire to trace through our own time the trend of the Republic toward a military autocracy, I desire to report for preservation in the archives of Congress that the Navy League of the United States, the parent of the militaristic propaganda in this country, has held its annual convention for the year of our Lord 1916, convening in the National Capital on Monday, April 10, and adjourning Thursday, April 13.

All of the sessions were well attended. It was observed, however, that the usual quota of Secretaries of the Navy and chairmen of Naval Affairs Committees, as well as Senators, Representatives, and other public officials who must depend upon the votes of the people for their retention in office, were conspicuous by their absence. To account for this phenomenon, deponent

saith not. Nevertheless he has his own idea.

It may be said that the convention was one of the most remarkable in the history of this now famous organization, not, however, because of anything it did, but because of what it did not do. One of the most striking features of the convention was

its failure to take action on a number of matters of wide public interest, the Navy League's attitude toward which has been much debated.

Extreme patriotism was the keynote of the convention. multuous applause greeted every expression of patriotism and willingness of the speakers to die for their country. Larger naval appropriations were advocated. The smallness of the Army was deplored. The general feeling among the delegates seemed to be that the Nation was in very grave and immediate danger from invasion by a foreign foe. As the sessions and banquets proceeded from day to day, the patriotism of the delegates grew apace, becoming more and more intense, until it appeared possible that the convention might adjourn, form a procession, march to the nearest recruiting office, and enlist in a body.

Owing possibly to the fact that no one of the delegates thought to offer such a motion, however, the convention finally adjourned and the delegates returned to their several homes without en-listing, either collectively or individually. Nor, so far as can be learned, did any of the sons of the Navy League officials appear

at the recruiting offices.

In view of the fact that the Navy League officials are looked upon by some as models in citizenship, bravery, and patriotism, and that so far as is known they themselves do not deny these virtues, their action in failing to enlist was deplored by many citizens, and especially because on the very days the convention was in session the newspapers reported that American troops were far into Mexico and that their lives were in actual peril

because of the lack of sufficient enlistments.

Mr. Speaker, the United States Army is still in need of re-cruits, and the officers and directors of the Navy League, or their sons, still, therefore, have a golden opportunity to set examples in practical patriotism to the farmers and wage earners of the Nation by enlisting and taking their place in the ranks at the front. If there are any who desire to enlist, I stand ready to cooperate. If any of the officers or directors of the Navy League will communicate with me, giving their addresses, I will be glad to make enlistment as convenient as possible for them by requesting the recruiting officers of their respective communities to call on them. I trust they will not all speak at once.

WHAT THE NAVY LEAGUE CONVENTION DID NOT DO.

Here are other things the convention took particular care not to do:

(1) The convention did not indorse the Government armorplate bill.

(2) The convention did not pass resolutions placing itself on record in favor of taking private profit and private graft out of war and preparation for war through the Government construction and manufacture of battleships, submarines, aeroplanes, munitions, etc., so that money appropriated for preparedness in the future will go into preparedness instead of principally into the pockets of men identified with the Navy League, which is where a large part of the taxpayers' money appropriated for preparedness in the past has gone.

(3) The convention did not deny that J. P. Morgan, for so many years a director of the Navy League, is the officially accredited munition agent of the British Government and one of the largest individual beneficiaries of war and preparation for

war in the entire world.

(4) The convention did not deny that the president of the Navy League is also president of the New York Metal Exchange and chairman of the board of directors of the International Nickel Co. (the Nickel Trust), and that because of the great quantities of nickel used in battleships and munitions this concern would profit probably more than any other single concern from the \$500,000,000 bond issue for battleships which the president of the Navy League has been advocating.

(5) The convention did not deny that representatives of every armor-plate concern in the United States are included in the list of the 19 men published on page 32 of the February, 1904, issue of the Navy League Journal, the league's official organ, as being the "founders" of the Navy League.

(6) Last, but not least, the convention did not indorse House

joint resolution 112, which requires war trafficking firms to divulge the names and addresses of their stock and bond holders, so that the public may know to what extent the men who are crying out to heaven for preparation for war will profit financially in the event that their agitation is successful.

WHAT THE CONVENTION DID.

Here are some of the things the convention did:

Called to order by the chairman of the board of directors of the International Nickel Co.

Opened with prayer.

Hissed the Secretary of the Navy, who is in favor of the Government manufacture of munitions of war.

Heard papers and addresses advocating larger appropriations by Congress for the Army and Navy.

Hissed the Secretary of the Navy some more.

Banqueted at the expense of the chairman of the board of directors of the International Nickel Co.

Passed resolutions indorsing a naval program which will require vastly increased appropriations, and which will also mean increased taxes, increased cost of living, and increased profits to the war traffickers.

Reelected the chairman of the board of directors of the International Nickel Co. president for another term.

Adjourned.

STATEMENTS IN "NAVY LEAGUE UNMASKED" SPEECH REMAIN UNANSWERED IN CONGRESS.

On December 15, 1915, I called the attention of Congress to the amazing extent to which men affiliated with the Navy League are also connected with concerns or industries which stand to profit from "preparedness." These are the remarks published in part in pamphlet form under the title, "The Navy League Unmasked.

Although more than four months have passed since that speech was delivered, no Member of Congress has as yet undertaken the responsibility of arising in his place and attempting to disprove the statements therein contained. It is my belief that no one will be able to successfully disprove them, now or later.

More than one thousand specific statements of alleged fact are given in "The Navy League Unmasked," such, for instance, as these: That J. P. Morgan is a director of the Navy League and also of the United States Steel Corporation; that Robert Bacon is a director of the Navy League and also of the United States Steel Corporation; that Elbert H. Gary is a contributor of the Navy League and a director of United States Steel; that Henry C. Frick is an honorary vice president of the Navy League and a director of United States Steel; that George F. Baker, jr., is contributor to the Navy League and the son of a director of United States Steel, and so on. Surely these statements are specific enough. If not accurate, it would appear that it would be a very easy matter to disprove them, showing either that the persons mentioned are not and never were connected with the Navy League as stated or that they are not connected with the United States Steel Corporation.

Were I to make the same speech again, with all the criticisms of it before me, I would not know where to alter or to change it to the extent of dotting an "i" or crossing a "t." To the best of my knowledge and belief every statement in "The Navy League Unmasked" is true and accurate.

There are many brave souls in Congress as elsewhere, however, and I do not say that the Navy League will not ultimately be able to find one possessing the courage to buckle on his armor and boldly sally forth to make attack, even though it is to be a belated one. But to any who is contemplating it, if there be any such, I would give a word of friendly advice, and do it too, in all good faith: Be sure your armor is well buckled, for truth and facts are indeed stubborn adversaries. may blow, the heathen may rage, but "time can not change a line that truth hath writ."

One further suggestion I would make, and this also in the best of good feeling and sincerity, because I entertain a kindly and proper regard for all my colleagues and would not have a single one of them imposed upon: If the Navy League insists upon placing upon you the impossible task of extricating it from the taint of its war-trafficking founders, it is only right that the Navy League should place in your hands the necessary evidence to enable you to make at least a pretense of doing it. Before you buckle a single buckle, therefore, or consent to do any sallying whatsoever, demand that the Navy League arm you with affidavits, duly sworn and witnessed, on the subject of whether the names of the Midvale Steel Co., Charles M. Schwab, J. P. Morgan, and sundry other war traffickers are or are not listed on page 32 of the February, 1904, issue of The Navy League Journal, the league's own official organ, as "founders" of the Navy League. Then ask for affidavits giving a clean bill of health to the heads of the Navy League not only of last week or yesterday, but of to-day. Inquire about the possibility of obtaining an affidavit to the effect that Robert M. Thompson, the present president of the League, is not the chairman of the board of directors of the International Nickel Co., and that board of directors of the International Nickel Co., and that nickel is not the most expensive as well as profitable metal that goes into armor, battleships, munitions, and the other things that the league's program for "prepardness" calls for. Ask for an affidavit to the effect that J. P. Morgan, for years an officer and director of the Navy League, is not a war trafficker; that his profits from the blood-soaked battlefields of Europe do not run into the millions, and that if the proposed \$500,000,000

bond issue for battleships goes across he will not draw down still more millions!

THE NAVY LEAGUE FOR DEFENSE?

The Navy League has been spending large sums to tell Americans that it is organized for the defense of the country.

The Navy League is deceiving the country, and its own official organ, the "Seven Seas" magazine, proves the deception.

On page 13 of the September, 1915, issue, appears the true

gospel of the Navy League.

We read: "The true militarist believes that pacifism is the

masculine and humanitarianism is the feminine manifestation of national degeneracy. * World empire is the only logical and natural aim of a nation."

Then, on page 28 of the "Seven Seas" for November, 1915, is an enlargement upon the "defense" idea, as follows: "It is the absolute right of a nation to live to its full intensity, to expand, to found colonies, to get richer and richer by any proper means, such as armed conquest, commerce, diplomacy."

Here we have the philosophy of the Navy League. Read it

again and again, until you realize its full significance, and its full danger.

STRANGE LANGUAGE FOR A DEMOCRACY.

It would be interesting to know just what thoughts were running through the mind of the writer of the following, which was taken from the Navy League Journal of the issue of August,

With the signs of social danger about us • • • with capital and labor under strange conditions brought about by the stupendous changes in the relationship between money and men, too much stress can not be laid upon the necessity of inculcating into the minds of all, the cardinal old-fashioned principles which are the foundations of discipline, of respect to command, and of duty to and from subordinates. No school promotes these virtues like a sailor's life; no education is better than that of the Navy. A small Navy, supplemented by a large reserve, will help materially to avoid future domestic strife and insure a victorious service.

THE "POVERTY" OF THE NAVY LEAGUE.

Whenever the Navy League needs big money, it gets it from Wall Street sources. At a little luncheon held in New York on June 10, 1915, \$17,500 was raised in a few minutes, among the contributors being the J. P. Morgan estate, which is heavily interested in United States Steel, \$2,000; R. M. Thompson, chairman of the board of directors of the International Nickel Co., \$1,000; E. H. Gary, chairman of the board of directors of the United States Steel Corporation, \$1,000; Jacob H. Schiff, a director with J. P. Morgan on the National City Bank of New rector with J. P. Morgan on the National City Bank of New rector with J. P. Morgan on the National City Bank of New York, \$1,000; George F. Baker, jr., director of the First National Bank of New York and a son of a director of the United States Steel Corporation, \$1,000; Allan A. Ryan, director of the Bethlehem Steel Corporation, \$250; L. L. Clarke, director of the war-trafficking American Locomotive Co., \$250, etc.

The New York Times of Friday, June 11, 1915, contained the following news item relative to the luncheon given on the day

previous:

previous:

The Navy League started its campaign for an American Navy second to none other in the world yesterday at a luncheon in the Recess Club, 60 Broadway. It was attended by more than 100 well-known citizens. As a result of the discussion which followed the luncheon more than \$17,500 was subscribed to be used for the league's propaganda. Those at the luncheon included Charles Steele, L. K. Wilmerding, Dock Commissioner R. A. C. Smith, J. F. Brady, F. A. Schermerhorn, James Speyer, W. A. Tucker. Elbert H. Gary, Theodore P. Shonts, J. C. White, Frederic R. Ccudert, George T. Wilson, Ogden Mills Reid, J. P. Grace, George F. Beker, fr., Colgate Hoyt, William Guggenheim, Allan A. Ryan, Supreme Court Justice Clarence J. Shearn, Raiph B. Strassburger, J. Stevens Ulman, William J. Schieffelin, S. H. P. Peli, Malcolm D. Whitny, Perry Belmont, Harry Payne Whitney, Herbert L. Satterlee, Stewart Prosser, Mortimer L. Schiff, Col, Charles A. Fowler, W. C. Rieck, and James L. Kelly.

MORE THAN \$17,500 SUBSCRIBED.

MORE THAN \$17,500 SUBSCRIBED.

MORE THAN \$17,500 SUBSCRIBED.

Subscriptions announced after the meeting were as follows: Frank Tilford, \$2,500; J. P. Morgan estate, \$2,000; J. G. Bennett, \$2,000; R. M. Thompson \$1,000; J. H. Schiff, \$1,000; E. H. Gary, \$1,000; John Markie, \$1,000; B. F. Cutting \$1,000; C. A. Fowier, \$1,000; G. F. Baker, ir., \$1,000; B. M. Baruch, \$500; J. H. Harding, \$500; A. B. Forbes, \$250; W. Guggenheim, \$250; A. A. Ryan, \$250; E. Meyer, jr., \$250; L. L. Clarke, \$250; W. J. Matheson, \$250; R. B. Strassburger, \$160; A. D. de Navarro, \$100; W. F. McCombs, \$100; C. J. Shearn, \$100; J. G. Ward, \$100; Ansonia Hotel, \$100; Seward Prosser, \$100; C. N. Bliss, jr., \$100; R. A. C. Smith, \$100; T. P. Shonts, \$100; P. C. Hewitt, \$100; M. Ia Montagne, \$100; J. P. Grace, \$100; J. Kruttschnitt, \$100; M. Ia Montagne, \$100; J. P. Grace, \$100; M. Ballon, \$250; R. B. Challet, \$250; R. B. Challet, \$250; R. B. C. Shifth, \$100; R. R. C. Smith, \$100; J. P. Grace, \$100; J. R. Ballot, \$250; R. B. C. Shifth, \$100; R. B. Ballot, \$250; R. B. C. Shifth, \$250

Col. Robert M. Thompson, chairman of the executive committee of the Navy League, who presided, made a patriotic speech and "concluded with a reference to the proposed \$500,000,000 bond issue, of which he is an enthusiastic advocate."

DONATIONS FROM THE POOR ARE ALSO WELCOME.

The league is not above accepting the smal'est contributions from the poor, however, and in one of its 45 advertising documents, entitled "What the Navy League Is Not," avers that "the Navy League is unfortunately, not a rich society, but depends on voluntary support."

According to the most recent literature of the organization According to the most recent interactive of the Organization that has come to my hand, there are 31 directors of the Navy League, including such poverty-stricken millionaires as J. P. Morgan, Robert Bacon, Perry Belmont, George von L. Meyer, William A. Clark, the Montana copper king, and others. The personal fortunes of these 31 men at the most conservative estimate aggregate \$100,000,000, which is an average of more than \$3,000,000 per director. This does not include the millions of R. M. Thompson, president of the league, or those of Herbert L. Satterlee, brother-in-law of J. P. Morgan, counsel for the league. It is questionable whether the views of any board of directors whose personal fortunes average \$3,000,000 can be representative of the attitude, feelings, and heartbeats of the great mass of the American people, a large portion of whom are hard pressed to obtain the barest necessaries of life. It is especially difficult bearest necessaries of life. difficult, however, to imagine these gentlemen neutral on the question of increased naval appropriations, because to more than one of them the Navy League propaganda spells vastly increased incomes for them at the expense of the many.

THE BATTLE CRY OF MAXIM.

Have you seen that awful moving picture, "The Battle Cry of Peace"?

Did you shake with fear, and tremble for your country's safety?

Did you know that while you were thus trembling others were calmly calculating on the fat contracts and the extent of the profit your fear might bring them?

On the screen you were told that the play was founded on the story of Hudson Maxim, "Defenseless America" You saw Mr. Maxim in the picture. He was holding something aloft. It was an instrument of warfare.

Mr. Maxim was advertising his wares and playing on your fears which make a market for his goods.

Mr. Maxim has something to sell—war munitions. The following is from the stock report of Harvey A. Willis & Co., 32 Broadway, New York City, November 13, 1915:

The stock of the Maxim Munitions Corporation is the latest candidate for favor among the Curb war stocks. It made its appearance this week at 12 and was actively traded in at 12 ip to 14½. This company is a \$10,000,000 concern recently organized for the purpose of manufacturing munitions of war of all kinds except explosive materials.

* * The company has arranged to take over the important inventions of Hudson Maxim for the manufacture of aerial torpedoes, bombthrowing devices, aeroplane guns, etc. Mr. Maxim himself will be president of the company.

The book was a fine advance notice. The picture was a fine follow up. Then came some swift "patriotic" work.

Just two weeks later, November 27, 1915, the following ap-

peared on the first page of the New York World:

St. Louis, November 26.—Many members have resigned and others are threatening to resign from the Committee of One Hundred appointed by Mayor Kiei to urge the preparedness program upon Congress. This action resulted from advertisements in St. Louis newspapers this morning of a \$10,000 000 Maxim Munitions Corporation offering stock for sale at \$10 a share. Hudson Maxim appeared two days ago before the Business Men's League to urge support of the national defense program.

the Business Men's League to urge support of the national defense program.

"That's a pretty swift beginning," said former Solicitor General of the United States Frederick W. Lehmann in announcing his refusal to serve on the committee.

"One can not help suspecting an ulterior motive," said Judge H. S. Caulfield in declining to be a committeeman.

"If the activities of the National Security League, at the instance of which the committee was appointed, the appearance of Mr. Maxim and the promulgation of the advertisement can be connected, it is treasonable," said John H. Gundlach, former president of the city council and member of the committee.

Here we have a sample of the "patriotism" that is directing the "preparedness" campaign, spending huge sums, carrying its poison of fear into every part of the Union.

It is time for every man and woman of the United States to get angry, to fight this misrepresentation and deception. the facts on to your doubting or unconcerned neighbor.

Think, write to your Congressman and your two Senators to-day, and, when the time comes, vote. Demand that private profit and private graft be taken out of war and preparation for war through the manufacture by the Government itself of all battleships, submarines, aircraft, guns, and munitions. Once this policy is adopted, the professional big Navy boosters will quickly lose their ardor. Your livelihood, your peace, your life and the lives of your children and the life of the very Republic itself depend upon the crushing of the head of the serpent of militarism.

THE PEOPLE SENSE THE DANCER IN MILITARISM, BUT AS YET DO NOT KNOW EXACTLY HOW TO ESCAPE IT.

There are countless thousands of men and women in the United States who view the trend of the Republic toward militarism with the gravest apprehension. They know that militarism is the most dangerous menace that any republic can face, for it has been destroying republics ever since there have been such institutions. They know, too, that militarism is equally dangerous whether it is labeled militarism or labeled something else.

Militarism and democracy never have and never will make good bedfellows in a "cradle of liberty" such as ours. Either democracy must kick out militarism or militarism will kick out democracy. It is for the people of the Nation to say which is to go. The fight is to be ultimately to the death of one or the other. And the patriots for profit are powerful, for they have their friends everywhere in public life, Leading the fight for the militarists are not merely the captains of Wall Street, but the captains of the captains of Wall Street.

But it is unnecessary to point out which side privilege is on. The greedy predatory interests of this Nation were never before so solidly arrayed on one side of an issue as on this. money changers of Wall Street have never done anything for the American wage earners or the American farmers except exploit them. Are the latter now ready blindly to follow them into the spider's web of militarism to be exploited on a more gigantic

scale than they are even now being exploited?

The war-trading capitalists would not only make the taxpayers pay for war paraphernalia to-day in cash from their wages, but to-morrow, if it meant still greater profits, there is no reason to believe they would hesitate to bring about conditions that would force our citizens to take up the arms they had sold them and march off to the "armed conquest" the Navy League's official journal says is the "proper means" by which the United States should reach its full destiny.

War, however, is not the only danger that militarism holds for a republic. In war with a foreign nation a republic has at least a fighting chance for its life. The vital danger in militarism to a republic is the evergrowing burden of taxation which is placed on the backs of the producers to finance it. It is not the increased appropriations of one year, or of a five-year program, that can swamp us, but the policy of an increase next year to the increase of this, the increase the year following to those of the preceding year, and so on and on and on. The tree of militarism flourishes like unto the green bay tree, ever sending out new roots and branches.

Americans do not need to look across the seas for evidence of the power of a military machine to enlarge itself. The War Trust has ever been the Sacred White Cow in our own Capitol. The watchword has ever been, when some legislator sought to interfere with its steady growth, "Hands off the Sacred White Cow!" Month after month and year after year this Sacred White Cow has stood with its feet in the public trough at Washington, gorging itself on the dollars of the taxpayers. The more this Sacred White Cow is fed, the larger it grows, and the larger it grows, the more it eats. Unless this beast is given a changed diet or unless it is driven away from the public crib and slaughtered, it will ultimately impoverish the Nation.

It is not a sufficient answer to say that the country is also growing, for the increase in expenditures are far in excess of the increase in population. For instance, the population of the United States in the last seven years has increased 12 per cent. In the same time our national expenditures have increased 50 per cent. And the Army and Navy increases now proposed make our previous increases look cheap.

Statement showing the amounts appropriated for the Naval Establishment for the fiscal years 1891 to 1915 inclusive:

1891	\$24, 610, 501, 64	1904	\$88, 386, 217, 08
1892	32, 706, 004, 50	1905	112, 438, 602, 56
1893		1906	
1894	22, 467, 840 06	1907	104, 528, 348, 79
1895	25, 747, 451, 59	1908	109, 029, 421, 40
1896	30, 628, 421, 64	1909	123, 585, 362, 01

1902	81, 710, 906, 73	1916 (proposed)_	241, 449, 151, 99
1903	82, 021, 634, 40		

ARMY AND NAVY EXPENDITURES OF THE PRINCIPAL WORLD POWERS.

Congressman Mondell, of Wyoming, in a speech in the House December 17, 1915, gave the following figures showing the ex-penditure for the armies and navies of the world:

Total Army expenditures, 1901-1912:	
United States	\$1, 616, 898, 165
Germany	
France	1, 774, 631, 558
Great BritainTotal naval expenditures, 1901-1912:	2, 486, 126, 900
United StatesGermany	1, 331, 821, 032 354, 055, 078
FranceGreat Britain	789, 242, 168 1, 981, 209, 088
31101 111100	1, 001, 200, 000

APPENDIX TO THE CONGRESSIONAL RECORD.

Grand total for Army and Navy, 1901-1912:	
United States	\$2, 984, 719, 197
Germany	2, 110, 508, 119
France	2, 563, 873, 726
Great Britain	4, 467, 335, 988

It is not a single year's increase in appropriations that is dangerous, but the policy of militarism, and it is equally dangerous whether it is called militarism or "preparedness." Once the policy is adopted, it is but a matter of arithmetic to figure out the length of time a republic can stand. When the cost of the

upkeep of the military machine makes it necessary to place such a tax on the things the people eat, wear, and use as to make it impossible for a wage earner to support himself and family of little ones on his wages, all the battleships and all the machine guns in existence will not be able to protect a democracy.

The real menace which confronts our Republic is not the one the Navy League is pointing to-invasion of our shores by hostile peoples from beyond the seas. It is the menace of militarism which the Navy League itself is endeavoring to foist upon this Government.

GROWTH OF UNITED STATES ARMY IN 25 YEARS.

Statement showing actual strength of the Regular Army, Hospital Corps, Quartermaster Corps, and Philippine Scouls on June 30 for the fiscal years 1891 to 1915, both inclusive, and the appropriations made for the support of the Army and for fortifications and other works of defense for the same period.

Statutes at Large, vol. 24, p. 435, provides that the culisted men of the Hospital Corps "shall not be included in the effective strength of the Army nor counted as a part of the culisted force provided by law."

Statutes at Large, vol. 37, p. 593, provides that the culisted men of the Quartermaster Corps "shall not be counted as part of the culisted force provided by law."

IF THERE IS ANY DOUBT ON THE SUBJECT, WHY NOT REPORT H. R. 112 AND LET THE FACTS SPEAK FOR THEMSELVES?

The present propaganda for excessive appropriations for the Army and Navy is the child of the Navy League, and the Navy League is and always has been the child of armor and munitions makers

If Congress doubts it, why does not Congress investigate the matter for itself? Why not let in the light? Why not? Why not turn the congressional searchlight not only on the question of whether the "preparedness" agitation is the child of the muniwhether the "preparedness" agitation is the child of the muni-tions patriots, but on the riddle of what our Army and Navy officials have been doing with the \$240,000,000 of the people's money that Congress has been appropriating annually for "pre-paredness"? Why not turn on the light? On January 19, 1916, I introduced in the House of Representa-tives a resolution which, if adopted by Congress, will effectually

turn on the light. It will settle all uncertainties by allowing the facts to speak for themselves. On the same day this resolution was introduced the Rules Committee of the House held a hearing on the subject of an investigation. But up to this time no investigation has been ordered. Or, stated in another way, an investigation has not been permitted.

Investigation has not been permitted.

The resolution is known officially as House joint resolution 112. It is not known to the American people, however, either by that number or any other, for it is not known to them at all, as resolutions of this character are not published generally by the newspapers advocating big "preparedness" appropriations. There are exceptions, of course, but as a general rule the public is getting but one side of the "preparedness" issue. For the benefit of those who insist upon having both sides of the question I will insent here the resolution in full. tion. I will insert here the resolution in full:

[House Joint Resolution 112.—Introduced by Representative CLYDE H. TAVENNER, of Illinois, and referred to the Committee on Rules.]

TAVENNER, of Illinois, and referred to the Committee on Rules.]

Whereas more than \$200,000,000 raised principally by taxing the things that the people eat, wear, and use, have been expended annually on the Army and Navy, under the general assumption that in return for this colossal expenditure the Nation was being reasonably "prepared"; and Whereas it is now being generally asserted in many quarters that the Nation is pitifully "unprepared," the specific charge having been made on the floor of the House of Representatives, by a Member thereof, that "If war were to break out to-day, it would be found that our coast defenses have not sufficient ammunition for an hour's fight"; and

Whereas it has also been charged in the Congress that millions of dollars of public funds have been wasted by the payment to private manufacturers, by Army and Navy officers, of from twenty to sixty per centum more for large quantities of Army and Navy supplies than the same could have been obtained for through their manufacture in Government arsensis and navy yards; and
Whereas President Wilson in a message to the Congress on December eighth, nineteen hundred and fourteen, said that, "Like good stewards we should so account for every dollar of our appropriations as to make it perfectly evident what it was spent for and in what way it was spent"; and
Whereas the profit incident to the manufacture and sale of arms, armament, and munitions of war has a tendency to corrupt public opinion, disturb international peace, and prevent a peaceful settlement of disputes between nations; and inasmuch as it ought to be made impossible for any person or corporation to make money out of war; and inasmuch as the Government should, for its own safety and protection, manufacture all arms, armament, and munitions of war for the equipment, construction, and use of the Army and Navy, to the end that it may be independent of individuals and corporate interests; and

whereas there has been public criticism of the action of ex-Army and ex-Navy officers who after resigning or retiring have taken employment with concerns having dealings with the Government; and worked out by officers and employees of the Navy Department at public expense for exclusive use in American battleships were furnished to a private firm to be embodied in battleships for another nation; and

to a private firm to be embodied in battleships for another hatton; and
Whereas it has been charged that the Navy League, an organization active in agitating for increased naval expenditures, has among its founders, officers, members, and directors persons who are or have been officers, directors, or stockholders of war-trafficking firms or concerns which stand to profit financially from the increased naval appropriations being agitated by said Navy League; and
Whereas hearings by the lobby investigation committee of the United States Senate in nineteen hundred and fifteen revealed that Senaiers now in office were stockholders of war-trafficking firms and concerns which profit financially from Government appropriations for the Army and Navy; and
Whereas any or all of the divers matters heretofore mentioned may bear on the alleged wasting of public funds and the alleged unpreparedness of our Nation in spite of the enormous appropriations made by Congress annually; and
Whereas it is deemed advisable to gather the facts bearing on the aforesaid conditions and charges, or in any way or manner relating thereto or to any of the subjects above mentioned, as a basis for remedial and other legislative purposes: Therefore be it

Resolved by the Senate and House of Representatives of the United

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That a joint committee of the Senate and House of Representatives, to consist of six Members of the Senate to be appointed by the President of the Senate and six Members of the House of Representatives to be appointed by the Speaker of the House, is hereby empowered, authorized, and directed—

First. To investigate fully and inquire into each and all of the above-recited matters and into any matters and subjects connected with or appurtenant to or bearing upon the same.

Second. To investigate fully and inquire into—

(a) The total amounts paid to private manufacturers for guns, ammunition, torpedoes, powder, armor plate, submarines, battleships, and other equipment and supplies used by the Army and Navy in large quantities for each year since eighteen hundred and eighty-seven, and approximately what the saving would have been to the people if the capacity of Government establishments had permitted the complete Government manufacture of said equipment;

(b) The extent of the economy or extravagance which has resulted from the Government manufacture of Army and Navy equipment of any kind whatsoever which the Government is now engaged in manufacturing;

(c) The most feasible plan of acquiring or constructing manufacturing plants of sufficient capacity to supply the Army and Navy with all arms, armament, and munitions of war, including ships and their equipment;

all arms, armament, and munitions of war, including ships and their equipment;

(d) The probable cost of such manufacturing plants, taking into account both present and future military needs;

(e) The proper locations for such manufacturing plants;

(f) The necessary legislation to prevent either persons or corporations from engaging or continuing in such manufacture and when such legislation should take effect.

Third. To investigate and report the extent to which Army and Navy officials on the retired list, or who have resigned from the Army and Navy, are now connected, or have ever been connected, with concerns having dealings with the Government.

(a) Or to investigate any alleged connections, direct or indirect, between any Army or Navy officer, either on the active list or the retired list, and concerns which now have, or have had, dealings with the Government;

(b) Whether any Army or Navy officers on the pay roll of the Government, either on the active or retired list, are now, or ever have been, in any contract by which they are, or were, to receive royalties on implements of war sold to foreign Governments.

Fourth. To compile a list of ex-Army and ex-Navy officers employed by private concerns and the names, places, and character of the business engaged in by the concerns with which said persons are, or have been, connected.

Fifth. To investigate and report the circumstances under which any private concern has been able to obtain plans and specifications from the Navy Department for use in constructing battleships for a foreign nation.

Sixth. To investigate the quality of work of any character supplied

nation.

Sixth. To investigate the quality of work of any character supplied the Government by private concerns or the circumstances involved in connection with the making of any contracts between the Government and any private concern.

Seventh. To ascertain the extent to which individuals who are, or who have been, founders, directors, officers, life members, or contributing members of the Navy League, or similar organizations, are, or have been, stockholders, officers, directors, or employees of concerns which stand to profit from the increased appropriations for the Army and Navy which are being advocated by the Navy League or kindred organizations.

Eight To inquire into the organization, membership, expenditures.

been, stockholders, officers, directors, or employees of concerns which stand to profit from the increased appropriations for the Army and Navy which are being advocated by the Navy League or kindred organizations.

Eighth. To inquire into the organization, membership, expenditures, receipts, and sources thereof of Labor's National Peace Council, or any organizations which have been active in the proposed increases in the Army and Navy of the United States.

Ninth. To ascertain the extent to which Members of Congress, both of the Senate and House of Representatives of the United States, own, hold, or control, directly or indirectly, or have ever owned, held, or controlled, directly or indirectly, at any time during their membership in this or any preceding Congress, stock or bonds in any concern or concerns which are now or have been engaged in the manufacture of munitions of war.

Tenth. To ascertain the extent to which Members of Congress, both of the Senate and House of Representatives of the United States, own, hold, or control, directly or indirectly, or have ever owned, held, or controlled, directly or indirectly, at any time during their membership in this or any preceding Congress, stock or bonds in any concern or concerns which have profited financially by virtue of contracts for munitions, armament, ships, or other supplies or materials, under moneys appropriated in the Army, Navy, fortifications, sundry civil, or other appropriation bills, or, if deemed advisable, to require Army and Navy officers or any person or persons who have taken an active part for or against increased Army and Navy appropriations to testify as to their holdings of stocks or bonds.

Eleventh. To require munitions concerns or firms which have obtained contracts for materials of any character under Army and Navy appropriations to furnish sworn lists of its stockholders and bondholders on June thirtieth, nineteen hundred and fifteen, or such other date as it may designate, or to require stock brokers to furnish lists of those for

MARTIN DIES POINTS TO THE DANGER OF MILITARISM.

I desire at this point to quote from the speech of Congressman Martin Dies, of Texas, the kind of a speech that the great newspapers of the country as a general rule do not publish, for it is not conducive to the creation of a military autocracy in this

country:

When our form of government was in the process of molding the immortal sages who sat in judgment upon the lessons of history and the experiences of mankind chose for us a republic of peace in preference to an empire of grandeur. These learned men were profound students of the world's history. They were familiar with the principles of all forms of government. They were not ignorant of the splendor which follows in the wake of great armies, great battles, and great generals; but they preferred peace and happiness in the homes of the people to the splendor of armies and military establishments. These founders knew that militarism would destroy free government, and they were happy in the knowledge that our isolated situation made great armies and great generals unnecessary. Providence rendered us secure from the wars of the Old World. Great oceans lay between us and the trampling soldiery of Europe. We occupied the one spot of earth for the successful establishment of a republic and the pursuit of the arts of peace.

On yesterday, the anniversary of the immortal Washington, we heard the wisdom and the greatness of that revered patriot extolled in eloquent terms. Let me take a sentence from the Farewell Address of Washington and propound it as an interrogatory to the membership of this body:

"Why forego the advantages of so peculiar a situation? Why quit our own to stand on foreign ground? Why, by interweaving our destiny with that of any part of Europe, entangle our peace and prosperity in the toils of European ambittion, rivalship, interest, honor, or caprice?"

But we seem to have forgotten the admonition of the fathers. We are no longer satisfied to stay upon our own shores and pursue the avocations of peace and the enjoyment of liberty.

The generals and the enjoyment of liberty.

The generals and the admirals shake their heads ominously and hint at war; the heads of the great supply committees that spend the people's money fidget in their seats and cry out in trembling accents for more money with which to purchase powder and shot, guns and ships, arms and armaments. Ah, Mr. Chairman, the great trouble with us is that we are pursuing a policy which we know is likely to bring war. [Applause.] If we were attending strictly to our own business, there would be no excuse for all these mock heroics about war, and there would be no excuse for spending these fabulous sums of money taxed from the labor of the people. History gives ample proof of the fact that military men are prone to exert influence against peace. War is their game, and naturally enough, they fret and chafe at plping times of peace. There can be no Alexanders and Hannibals without battles, and there can be no battles without war. If we listen to our generals and would-be generals, every appropriation bill will bristle with war preparations, and there will never be an end of it until there is a sodiler upon the back of every citizen and the neglected implements of husbandry lie rusting in the fields, while their former users burnish bayonets and black boots in the camps of an army.

I am not a pessimist, Mr. Chairman, but history does not encourage me to hope that our free institutions will long survive the time when the military shall be made paramount to the civil affairs of our Government. When we send great armies away to oppress our neighbors they will return to oppress our own people.

Rome sent Cæsar and his soldiers to conquer the barbarians, but he returned with his army to destroy the last vestige of Roman liberty and seat himself upon a throne. The people of France, in more recent times, employed Napoleon to lead a grand army against the neighboring peoples of Europe, but when the conquering general came back to France he promptly overthrew the young Republic and crowned himself Emperor with his own hands. Your great generals are not Democrats; they are not Republicans. They are autocrats who despise the civil authority and hate the democratic principle of equality.

Mr. Chairman, the principles of liberty and equality can not live in the military atmosphere. If we would go forth to conquer and achieve military renown as the Romans did, we must expect the fate which befell the Roman Republic; if we would have a Cæsar to point his sword against our neighbors, we may expect that he will at last turn that sword upon us. We can not have the glory of a strong government without paying the penalty in ruined liberties. [Applause.]

ment without paying the penalty in ruined liberties. [Applause.]

But this is no time to talk of war. This is no time to talk of a great standing army. Great God, with fifteen or twenty millions of men in Europe grasping their swords ready to strike at their brothers and neighbors, Goes my friend from Massachusetts not find enough of that sort of thing? We read of the wars of the world, of the mightly Persian hosts; we read of the wars of the world, of the mightly Persian hosts; we read of the mightly hosts of Xerxes; we read of Napoleon's brilliant campaign with conplacency; but when we look just across the ocean to-day and bchold that which is occurring there, it seems to me that the martial spirit of even my friend from Massachusetts would find enough to satisfy itself. [Applause on the Democratic side.]

Mr. Chairman, great armies are never justifiable except in defense of liberty or to strike from the hands of men the shackles of oppression and of tyranny. [Applause on the Democratic side.] I would fear to trust the destiny of this Republic in the hands of admirals and generals. Their game is war. The glory that they shall get, if they get glory, is from war. I am willing to have a small aimy as a sort of police force. I am willing to have as good a navy as we need to protect our commerce and our country. But, Mr. Chairman, I dread the day that the military power shall take precedence over the civil power in this Republic. [Applause on the Democratic side.] Can you point to a nation of militarism that maintained the liberty of the people? Liberty can not live and breathe in an atmosphere of war and military power. O God of this world, give us this one spot upon which to maintain a free government. [Applause.] Separated from our neighbors by almost impassable barriers, it would seem that God had planted this great people here to work out a shining example of liberty. I hope we may never again hear the tramp of soldiery upon these independent shores.

Now, Mr. Chairman, that concludes what I wanted to say. I

Now, Mr. Chairman, that concludes what I wanted to say. It is a subject that I have always felt deeply about. I love this Republic; I

love liberty; I hate armies; I hate despotism. I would not bunch the tears of a nation to make a diadem for a king. I am always thinking of Napoleon and the hundreds of thousands of French peasants and French soldiers that lay dying on the snow-capped hills of Russia during his retreat. I care nothing for Charlemange and all his glory to be divided among his crazy sons. But, Mr. Chairman, I have dreamed that this Republic, standing out single and alone in the world, where men could have government based on the consent of the governed, should yet belle the history of the world and leave a proof that men are capable of this sort of government.

WORLD'S HISTORY SHOWS THAT A PROFESSIONAL SOLDIERY IS NOT THE SOLDIERY OF HUMANITY AND LIBERTY.

It is the custom of the Navy League and similar so-called defense leagues to sneer at the citizen soldiery. With loud acclaim they decry its efficiency. But what does history say? It tells us that the citizen soldiery has been efficient enough to establish liberty wherever it has been established and to dethrone oppression and tyranny wherever and whenever it has been de-

It is true that at times George Washington lamented the rawness of his troops. But what soldiery other than a citizen soldiery would have left its bloodstained footprints in the snow and ice at Valley Forge? Who believes a professional soldiery would have left them there? The raw, untrained troops of George Washington, the citizen soldiery that followed the Father of our Country, were efficient enough to defeat a vastly superior force of highly trained and efficient professional troops. A citizen soldiery is simply the soldiery of humanity, while a professional soldiery has ever been the soldiery of the exploiters of When the cause is sufficiently worthy, when the human race. humanity has been oppressed to a point where it can stand oppression no longer, all the militarism in Christendom will not be able to resist a citizen soldiery. One may as well talk of resisting the tides of the sea as to resist a justly provoked citizen

A professional soldier will fight for any cause, whether it be right or wrong; that is, a well-trained, highly efficient professional soldier will. He will turn his gun upon his own countrymen. They have even been known to turn their guns, at the command of a superior officer, upon defenseless women and children. Throughout the ages the professional soldier has been used principally as a prop for established wrong, and to hold labor in subjection for exploitation by the rich and powerful. But a citizen soldier will volunteer only when he approves of the principle he is to fight for. He is then ready to perish for the cause, and the history of the world bears striking proof of the superiority of such a soldier, man for man, over the merely professional fighter.

MINUTEMEN ARE PREPARING TO FIGHT TO SAVE THE REPUBLIC FROM MILITARISM.

Everyone at all in touch with public sentiment knows there are citizens of all political faiths in every nook and corner of the Nation that sense the danger in the suddenly emphasized issue of militarism, and who are thoroughly awake to a realization of the nearness of that danger. Everywhere there are patriotic Americans who love their flag and all that it stands for, and are willing to give not only their votes, but their lives if necessary, to keep it flying for them and their children and their children's children. And there are other millions of the Republic's citizens who are not awake to the perils of militarism who will be awakened. Public sentiment, the great sleeping giant, is slowly but surely stirring. Thoughtful citizens are beginning to throw off the lethargy which has held them. Everywhere throughout the length and breadth of the land strong men are beginning to lift their voices, calling to their patriotic countrymen to awaken. It is to be a battle, not with bullets, but with ballots. Therefore it may be a long one, covering years to come.

To-day, however, is the day for each man and woman to open the campaign. No matter what your rank or station, no matter whether you live in the thickly populated city or far out on the range, begin to-day systematically to awaken those with whom you come in contact. Practically all that can be done for the present in Washington has been done. Therefore, men and women of America, the fight now is really in your hands,

Answer the militarist's challenge to your patriotism by a patriotism that is greater than his. Instead of needlessly dying for your country, live for it, firmly resolved that this, the mightiest Republic of all history, and still the one great political hope of the world, shall not perish on the rock of militarism, the arch enemy of republics throughout the ages.

BOTH BIG PARTIES RUSHING TOWARD MILITARISM WITH A SEVEN-LEAGUE-BOOTS STRIDE,

So far only the Republican voters of Michigan and dum. Nebraska have had an opportunity to express their views. And, considering the fact that Democratic platforms in times past have denounced militarism and favored the reduction of the Army, there would appear to be justification for the belief that there is even a stronger sentiment against militarism within the rank and file of the Democratic Party than within the Republican Party.

One of the principal planks in the Democratic platform of 1900

was as follows:

MILITARISM OPPOSED.

We oppose militarism. It means conquest abroad and intimidation and oppression at home. It means the strong arm which has ever been fatal to free institutions. It is what millions of our citizens have fled from in Europe. It will impose upon our peace-loving people a large standing army and unnecessary burden of taxation, and will be a constant menace to their liberties. A small standing army and a well-disciplined State militia are amply sufficient in time of peace. This Republic has no place for a vast military service and conscription.

The Democratic platform of four years later, 1904, contained the following:

We favor the reduction of the Army and of Army expenditures to the point historically demonstrated to be safe and sufficient. AS EUROPEAN POWERS DAILY WASTE THEIR STRENGTH, THE UNITED STATES GROWS STRONGER IN PROPORTION.

But, argue the militarists, we are in far greater danger from invasion by European armies than we were either in 1900 or 1904. The central powers, they would have us believe, could and would capture New York before breakfast, take luncheon in Philadelphia, eat dinner in Baltimore, and spend the first night on American soil in Washington, the Capital of the Nation.

This may be good press-agent copy for the armor and munitions manufacturers, with whom it originated, but it has a vital

weakness. It is fiction.

I contend that we are not in far greater danger from invasion by European armies than we were in 1900 or 1904, but that we are in far less danger from such invasion than we were in 1900 or 1904 or at any time in the last quarter of a century.

I will attempt to prove it by the philosophy of the war lords themselves: The policy of all the world powers is to determine the size of their building programs by those of their respective

rivals for world power or probable or possible enemies.

The rich, powerful, audacious European nations that entered the present war nearly two years ago are to-day virtually bleeding to death. By the time the war ends their credit will be wrecked, their debts will be mountain high. Five million men, young men, the very flower of the manhood of Europe, will be in their graves. There will be millions of cripples and millions of widows and orphans to be taken care of. Crepe will hang from every door knob, and anguish and despair will exist in every The vast and costly ordnances and munitions of war with which the nations were supplied at the outbreak of the conflict, together with those manufactured during its run, will be ready for the scrap heap. "The proud Europe that began this war will in nowise resemble the Europe that emerges from it any more than a cripple who has been bled within an inch of his life resembles an athlete in perfect health."

Regardless of when this war is brought to a close and regardless of which side comes out victorious, military Europe will be dead beyond resurrection for at least a quarter of a century.

Query: Conceding for the sake of argument that it is necessary for a nation to increase its armament in the same proportion as a rival power, by what logic can it be considered necessary for a peace-loving nation whose armament is wholly intact to vastly and suddenly increase it at a time when its rivals are reducing the armament of one another to heaps of smoldering ruins?

One answer is that the munition makers need the money. DANGER OF INVASION BY ARMIES FROM ACROSS THE SEAS IS PRINCIPALLY FICTION.

For months the people of the United States have had fear pounded into their brains by magazines, newspapers, and motion pictures. The wild cry for the spending of billions, the piling up of armament and the saddling of the country with a military caste has been based principally on fiction. It is a good rule to keep cool and take fiction at its own worth.

Editorial enthusiasts have hastened to forget the disaster at the Dardanelles, the statement of the President, "We are threatened from no quarter;" the impending bankruptcy of weakened Europe. Americans should consider some facts.

On the floor of the House recently Congressman E. W.

SAUNDERS, of Virginia, said:

Just at the present time, unfortunately, the only difference between the two old parties on the new issue would appear to be little more than the difference between tweedledee and tweedle-

Mr. Chairman, this is not a question of a great navy, but of a greater navy. This country has a great navy, a far greater navy than the man in the street is aware of, when he listens to the ranters who would have him believe that sane and moderate men are unwise and unpatriotic, merely because they are unwilling to waste the substance of the country in a wild riot of naval construction. Compared with the guns of every other nation in the world save England, and the lingoes always exclude England from their calculations, the guns on our ships in weight and carrying power are distinctly superior to all others.

THE VIEWS OF GEN. WEAVER.

Brig, Gen. Erasmus Weaver, head of the Coast Artillery of the United States, confounds the fiction writers.

Gen. Weaver would have charge of the defenses of the country if such an invasion occurred.

In 1915, testifying as to the strength of our coast defenses, Gen. Weaver said:

I have been a close student of the whole subject, naturally, for a number of years, and I know of no fortifications in the world, so far as my reading, observation, and knowledge goes, that compare favorably in efficiency with ours.

On January 19 of the present year Gen. Weaver went before the House Committee on Military Affairs and asked for an increase of 11,000 men for the land fortifications. I quote from the report of the hearings before the committee:

the report of the hearings before the committee:

Mr. McKellar. If we conclude to carry out your recommendations and give you the 11,000 men, then, as I understand you, you would have a perfect system of coast defense that you think would be adequate for any purpose?

Gen. Weaven, Yes.

Mr. McKellar. Your idea is that your guns are sufficient now? Gen Weaven. The guns now mounted and those contemplated will give us an entirely satisfactory defense.

Mr. McKellar. You do not take any stock in the idea that the ships of foreign nations carry guns of long enough range to silence your guns? Gen. Weaven. No.

Mr. McKellar. I want to ask you, General, with our present condition, is our condition of preparedness for defense deplorable? Gen. Weaven. Except in the matter of personnel, it is not.

Mr. McKellar. It is in excellent condition, with the addition of a few officers and men, such as have been recommended by the department and by you?

Gen. Weaven. Yes, sir.

Mr. McKellar. In your judgment, is it not unfair and misleading to the American people to have a public man make a statement that would lead you to believe that the coast cities of our country are wholly at the mercy of some invading enemy?

Gen. Weaver I do not know that there is any officer who is acquainted with the facts that would make such a statement.

Mr. McKellar. Any public man; I do not say an officer.

Gen. Weaver. I hesitate to criticize public men.

WHAT GEN. MILES THINKS ABOUT IT.

From the Congressional Record of February 3, 1916, page 1693, is taken the following extract from the testimony of Gen. Nelson A. Miles, United States Army, retired:

Having had much to do with placing and construction of our fortifi-cations, and inspecting every one along the Atlantic, Pacific, and Gulf coasts, as well as having had an opportunity of seeing all of the great armies of the world and many of their fortifications, including the Dardanelles. I am prepared to say that our coasts are as well defended as the coasts of any country, with the same class of high-power guns and heavy projectiles, and I have no sympathy for the misrepresentations that have been made in the attempt to mislead the public.

Later this officer declared:

These overseas expeditions spring from the minds of men writing about preparedness who know less about preparedness than anything else. Before a Senate committee January 31, 1916, Gen. Miles de-

The placing of an army on American soil is the last thing any European government would attempt; it could never be reembarked. It would dissolve like snow beneath the midday sun. Whenever it has been attempted it has resulted in disaster.

We have seen this come true at the Dardanelles. The greatest battle fleet in the world's history backed up a magnificent army in that landing. They faced no such great guns as our coast forts have. Yet for a year this army and navy struggled and the soldiers never got beyond range of the naval guns. Then the attempt was abandoned. The jingoes refuse to remember such a recent shattering of their fictions and try to make you forget

it, too.

They refuse to remember that England during the present war, troops, unequipped, from one friendly port, Quebec, to another friendly port, Southampton. Yet they tell you glibly of 400,000 enemies landing on our shores almost overnight.

If the people know the facts there will be no fear. If there is no fear the "preparedness" proposition now before Congress for a vast army and a vaster navy will not become law.

THE PERIL OF PRIVATE MUNITION PLANTS.

While I have leave to print, I will insert an address delivered at the World's Peace Conference held at The Hague, Netherlands, in 1913, by Mr. G. H. Perris, of London:

We have this year, for the first time, I think, in the history of the peace movement, an analysis, something like a scientific analysis, of the methods by which war material is supplied to three of the greatest countries in the world. In the case of the German Empire, Dr. Liebknecht has placed before the Reichstag the results of his inquiries. In the case of France, M. Delaisi has embodied the results of his in-

quiry in a little pamphlet, to be obtained upstairs. I have myself made a similar inquiry so far as concerns the great manufacturers of armaments for the British Empire. It is therefore not simply as regards the wickedness of militarism and the preparations for war in Germany that this question rises. Liebknecht's revelations in Germany have attracted peculiar attention; but what the investigations that have been made in England and France prove is that this disease is substantially the same in all the great countries of the world.

These inquiries give somewhat surprising results, or at least surprising to those who are already economic students. I shall very rapidly summarize for you the results of these inquiries. I suppose that it is natural for people who do not know the international peace movement, and who say that pacifists are sentimentalists, to say also that armaments are, as it were, a national fire engines in our cities for the extinction of fires. These people sincerely believe that the great names of Krupp and Schneider and Armstrong and others are properly honored, each in his own country. So in Germany the Kaiser decorated Krupp, visits his house, and shows signs of satisfaction in standing beside a member of that firm, and so we hear, in regard to the war in the Balkans, of "a contest between Germany and France" as to whether the cannons supplied to the combatants came from Krupp's or Schneider's; which is as it people competed for the honor of having served out poisons for the purpose of murder. And so in England Vickers, Maxim, and others are honorable corporations in the eyes of the public; and if there is a new battleship, it can not go into battle without having been christened by some lady of title with a bottle of champagne. It is a matter of honor thus to dedicate a means of human slaughter. It is supposed that the armaments are necessary for the peace of the world, and it is supposed that the makers of them are excellent citizens; and so it is also supposed that the remains of human s

THE WAR TRADERS' TRUST.

of them only, and there are scores of them. Two of these only, Vickers and Armstrong, this year distributed £1,500,000 in profits. I mention these facts to illustrate the wealth of the armaments trade.

THE WAR TRADÉRS' TRUST.

And we find that these firms, instead of being competitive business, are combined, both within each country and internationally. The pleathat one company competes with another and makes honest sales to its Government is pure pretense. This combination is extending more and more into the international field. It is far from being complete. The whole business of armaments has not become cosmopolitanized, but it has reached a considerable degree toward that. It is very probable that it will be some time before great armament makers of the three great entities—the groups of nations represented by the German Emergency of the companies of a certain extent. With each other, They do undoubtedly compete to a certain extent. But they already meet each other at many points.

You may remember the case of the Deutsche Munitions und Waffen-Fabrik, cited by Dr. Liebknecht in the Reichstag. This was the case of a German company hoiding a considerable share in French companies and exerting a provocative influence in the Parisian press, in order that competition and jealously as to orders for armaments may be kept alive. In England we have a combination of the British and but the process of the companies and exerting a provocative influence in the Parisian press, in order that competition and jealously as to orders for armaments may be kept alive. In England we have a combination of the British and but the process of the companies and exerting a provocative influence in the Parisian press, in order that competition and jealously as to orders for armaments may be kept alive. In England we have a combination of the British and the group of the parision of Krupp, Schneider, and Armstrong is their effort to exploit the service of the serve of the service of the service of the service of the service of the serv

Nation—"Cousin Jonathan" as we call him. Across the occan lies the rising Empfier of Japan, which is Englands ally.

What these events mean is that, over those frontiers that base-minded politicians have built—that history has built, of course, finally—there is carried on an industry which has no frontiers whatever to Its and folly of human nature. It can not be dealed, I think, that the sole interest of these firms consists in embrolling one nation with an other. They preach nationalism, but it is a nationalism of a chamdlered that the sole interest of these firms consists in embrolling one nation with an other. They preach not not be dealed, I think, that the sole interest of these firms consists in embrolling one nation with an other. They preach may be a made of the preaches the control of the preaches the control of the preaches the control of the preaches the political traveler being some to them. Some of you must wonder from time to time where the hill tribesmen of India, where the slave traders of the Persan Galf, where the Somalis, where the revolutionists of the South The fact is there is no conscience whatever in the trade of death. [Applause.] These great companies will sell their deadly weapons to anyone. Those regulations which prevent evil—minded persons buring a file these. Such firms sell heir weapons on some lonely frontier, and then we wonder there is a "little" war.

The most pitfulf fact is the comparative helplessness of the governments is as "strength. But I am satisfied the British Government is as strength. But I am satisfied the British Government is an strength. But I am satisfied the British Government is and in strength. But I am satisfied the British Government is an strength. But I am satisfied the British Government is an instruction. But I am satisfied the British Government is an instruction of nature and the control of war choose to go into the field of political azistrion. In the last two few and the strength of the control of war control of the control of war control of the

Conservation of the Appalachian Forests.

EXTENSION OF REMARKS

HON. JAMES J. BRITT,

OF NORTH CAROLINA,

IN THE HOUSE OF REPRESENTATIVES,

Tucsday, May 2, 1916.

Mr. BRITT. Mr. Speaker, the act of Congress of March 1, 1911, known as the Wecks Act, appropriated the sum of \$11,000,000 for the purchase of forest lands about the headwaters of the navigable streams rising in the White Mountains destruction by fire.

of New England and in the Appalachian Mountains of the South. To June 30, 1915, 1,317,551 acres had been purchased under the provisions of this act, at a cost of \$6,885,901.30, an average of \$5.22 per acre. Of the \$11,000,000 thus appropriated, \$3,000,000 has lapsed, \$7,000,000 has been expended in the purchase of lands, \$800,000 has been expended for administration and forest-fire control, and an available balance of some \$200,000 remains for the completion of purchases now in negotiation. The Agricultural appropriation bill now before the House makes no provision whatever for that purpose, and, unless an appropriation is now made, further extensions in this great and pressing field of public enterprise will be brought to sudden standstill.

Under the provisions of this act the National Forest Reserva-tion Commission has selected for purchase in the White Moun-tains and in the southern Appalachian Mountains 21 great areas, and in 16 of these large purchases have been made. Of these 16 areas 5 lie wholly or in part in my district. They are the Mount Mitchell area, the Pisgah area, the Savannah area, the Nantahala area, and the Smoky Mountain area.

Officers of the Department of Agriculture, who have given the matter years of careful study, estimate that in order properly to conserve the forests of the Appalachian highlands land purchases to the extent of 5,000,000 acres should be made in the southern Appalachian Ranges and to the extent of 1,000,000 acres in the White Mountains of New England.

We all know that the Weeks Act gets its constitutional justification in the avowed purpose of Congress to improve the navigation of our ship-bearing rivers. Technically that is the purpose, but of infinitely greater importance is the conservation of our forests and our soils and the prevention of the loss of life

and property by destructive floods.

Mr. Speaker, of all the noble and worthy purposes for which we have voted quotas of money since I have been a Member of this House, not one, in my judgment, save and except those for flood sufferers and for the national defense, is so worthy, so necessitous, so meritorious as this. I do not assume to speak for New England, for I do not know the conditions there, but I do know the conditions in the southern Appalachian Mountains, particularly those in my own district. There we have such tremendous destruction of the forests and denudation of the lands as even to suggest a veritable new geological order, with all its ruinous consequences to soil and stream. This comes from the laying bare of the land by the removal of the forests, thus depriving nature of her reservoirs for holding in check her rain and moisture, and leaving her streams to the influence of uncontrolled gravity, to be borne precipitately down the mountain sides, not only carrying with them the fertile soil but filling the headwaters of our navigable streams with silt, earth, and débris. seriously impairing navigation at points far below their sources.

My section is peculiarly, almost tragically, exposed to the destructive effects of deforested lands. Its mountains are high, its slopes are steep, and its river channels are narrow and irregular. In my district alone there rise no fewer than 12 rivers that either become navigable streams or the confluents of navigable streams. At the culmination of the Blue Ridge 2 of them, after seeming to hesitate as to what direction to go, take their winding courses 500 miles to the southeast and empty into the Atlantic Ocean, while 10 of them, after a thousand meanders, flow away to the northwest into the Tennessee and the Ohio, thence into the Mississippi, finally to spill their waters into the Gulf of Mexico, more than 2,000 miles away. their sources, high among the mountains and hills, the furies of nature sometimes unchain their demons of destruction to wreck havoc upon forest and soil and man and beast. I have myself been personal witness to an instance of these terrible plays of nature's forces. I have seen a tiny stream, because of deforested lands, suddenly swell into a mad, rushing torrent 20 feet deep, sweep away gardens and farms, houses and shops, and bear on its bosom men and women to sudden and tragic death. One-third of a fine little mountain town is carried away in a minute. Loss of a lifetime's savings leaves with me a memory unhappy enough, but the recollection of the bare escape of my family from a horrible death abides to urge an everlasting protest against the reckless removal of our forests.

A few miles east of Asheville, Mount Mitchell, the highest point east of the Mississippi, rises to a height of almost 7,000 feet above the sea level. Within the last few months the legislature of my State has appropriated the sum of \$20,000 to preserve the crest of its loftiest peak, where sleep the remains of Dr. Elisha Mitchell, whose labors in measuring and exploring its majestic heights resulted in his tragic death. On its western slope the city of Asheville has purchased and carefully guards and conserves a tract of 17,000 acres as its sources of water

But nothing but Deity and the Federal Government can stay the restless hand of the lumberman and forest despoiler. Deforestation and denudation go on at an alarming rate. Soon no merchantable timber will be left. But, worst of all, there is wanton and reckless disregard of all forms of tree life. Nor is there any transplanting or renewal. The process of destruction never halts; that of rebuilding never commences. There is no thought of to-morrow. Each day seems to justify its own

I know that the distinguished gentleman from South Carolina, Mr. Lever, chairman of the Committee on Agriculture, feels a great pride in his bill and does not care to have it marred or changed. That pride is well founded, and I share it with him, for it is indeed a very excellent bill, and, in my judgment, it needs only a \$3,000,000 provision for forest purchases to make it the finest agricultural bill ever brought into this House. I trust, however, that he will not permit his pride to stand in the way of a great and imperative public necessity. In this House we ought each to stand ready to do something for sections other than our own. His State and mine adjoin and have a common name and a common history. Probably we are not doing reciprocal good turns often enough. He knows what the governor of North Carolina said to the governor of South Carolina. It will add immeasurably to his greatness and to the merits of his bill if he will join me in securing an appropriation for this purpose.

Mr. Speaker, I trust that this House will not conclude that this demand comes from me only. It comes from the Department of Agriculture, from every forestry association in the United States, from public men of every class all the way from New Hampshire to Georgia, and from every other part of the United States, and, if I may be pardoned, I will say that I understand that it was by but a single vote that the Committee on Agriculture failed to report a provision of \$2,000,000 for this purpose. Throughout all my section there is one earnest, in-sistent appeal for this relief, and the people there will neither be satisfied nor able to understand if it is not granted.

But, Mr. Speaker, pray do not understand me to ask for this allowance merely that so much money may be expended in my section. That would indeed be a low motive, and one by which I trust I may never be controlled. Nor am I seeking credit for securing legislation. My only purpose is to serve a great cause. If you will give us this appropriation, you may place the credit anywhere under heaven that you please. It may go to the majority Senators and Representatives of my State or to the chairman of this committee or to the majority as a whole, or anywhere else. I am willing to be unknown that I may serve a purpose so worthy and a public need so great and pressing.

And why should my request not be granted? This House has voted great sums of money for almost every purpose mentionable. We have voted millions for rivers and harbors, but these rivers and harbors were not, like the forests of my section, speedily going to waste. We gave a million for an inland waterway in the eastern part of my State, and while it is a worthy purpose, yet that waterway, unlike our forests, is not going to waste. We have spent millions to destroy crop pests and fruit blights, to eradicate diseases of horses and cattle, to promote irrigation, and for hundreds of other purposes; and can it be that we can not get a few millions for a purpose so tremendously important and so pressingly necessary?

Mr. Speaker and gentlemen, I appeal to your patriotism, to

our sense of justice. Do not deny to the eastern portion of the United States this appropriation, a sum small indeed, and yet of such vast consequence to the future of our section. I do not believe, gentlemen, I can not believe, that you will turn us away empty.

Independence in the Philippines.

EXTENSION OF REMARKS

HON. JOSEPH WALSH, OF MASSACHUSETTS,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, May 3, 1916.

Mr. WALSH. Mr. Speaker, we are dealing with a question to-day that calls for the utmost care. It should be decided without prejudice. We should have only in our minds the sole question, as to what is best for the people who inhabit the islands which became ours as a result of Dewey's victory at Manila on May 1, 1898.

Our own Government is one of laws and not of men. It is In the words of the immortal Lincoln, "a Government of the people, by the people, and for the people."

The Philippines have been under our control for 16 years, and during that period the people in those islands have made

rapid and admirable progres

But, sir, 16 years, in the history of a people, is but a twinkle of an eye. You can not inculate within that time the necessary principles to establish self-government in a people who for centuries have been almost in bondage, who have been born with the belief that all authority and restraint is detrimental.

I shall vote against section 34 of this measure, which seeks to set a limit of time within which independence must be granted

to this people.

It has been said that we are false to the traditions of the founding of our own Republic. This I submit, sir, is not based on fact. The forefathers refused to submit longer to abuses and tyrannies as set forth in that immortal document, the Declaration of Independence. Is there abuse in the Philippines, are we tyrants, does despotism prevail?

Who is there to say we have been false to the trust we assumed? Their marvelous progress refutes any such charge even if it be uttered. Let our flag remain. Let the influence of our laws and institutions continue. Let the protection of our Nation enfold the people of these islands. Let us continue unselfishly the task of civilizing and educating this race.

Let us not at this time, one of the saddest in the world's history, abandon a people to the rapacity and greed of nations, who would jump at the chance to step in as we stepped out. Unprejudiced observers state that the conditions in the Philippines do not warrant the granting of independence at this time, and in this connection I desire to direct attention to an interview given by Mr. J. P. Morse, president of the Standard Manufacturing Co., of Boston, Mass., who has just returned from a business trip to the Far East which covered a period of onehalf year.

He visited China, Japan, and the Philippine Islands. He went there to study financial and commercial conditions. He desired to get information at first hand, and while traveling a vast amount of territory took considerable notes which later he intends shall form the basis of a publication. Speaking to a reporter he said:

intends shall form the basis of a publication. Speaking to a reporter he said:

My duty as an American citizen impels me to disclose the conditions which I found in the Philippines. I believe the American public is as ignorant of the actual conditions controlling it as any public can be, and unless complete and honest information is afforded we shall be confronted with a problem soon in the Philippines that may imperil our interests if not our political standing. I want to say I bear no prejudic against any persons in the islands. I desire to give forth such facts as I know will bear closest scrutiny and investigation.

The condition of business in the Philippine Islands is deplorable, Whatever business is now being conducted and under American control may be purchased at a terrible sacrifice. I spoke to many merchants who had vast amounts of money invested, and they were willing to self out at one-quarter of the amount of their investment. The banks are overcautious and large loans are impossible to procure. It is strange why such a condition, depiorable in every respect, should exist in a country which has enormous natural and unqualified resources. Large interests from America have sent representatives to the Islands, and upon arrival there have been informed by local interests that any investment that might be made would not be safe, and after a few weeks those interests left, taking no action

Sanitary conditions there are dangerously bad. Newspapers in Manila, published daily, report the different cases of cholera, diphtheria, and rinderpest. This last-named disease is a terrible menace to the people, and yet it could be kept under control and reduced to a vanishing point under any kind of efficient management. The present administration is doing nothing in this direction to protect the citizens.

Mr. Morgan Shuster, our former minister to Persia, seems to think that matters in the Philippines are rowy. They are by no means that. In his article, which appeared in the New York Times last week, April 21, he

the public service, and he commended him with credit for skill and success.

My personal and close investigation indicates that matters are not only not improving, but absolutely deteriorating. The financial situation is rushing toward bankruptcy. A mere glance at the figures contained in the Manila Daily Bulletin, February 26, 1916, indicates that the legislature has appropriated for public works, schools, railroad, bank, and government charges \$43,000,000. The receipts of the government can not in any event exceed \$26,000,000. The difference can not be raised and has not been provided.

I agree, in view of this exhibition, with Mr. Dean C. Worcester, former secretary of the interior for the Philippine Islands and now engaged in business in Manila, who said that the sole purpose of Mr. Shuster's visit to the Islands was to endeavor to impress the people of the United States with the idea that the administration of the Governor General has been crowned with success.

Mr. Shuster must have taken a superficial view. He did not come in direct contact with conditions all over the land. He saw conditions through the eyes of Gov. Harrison. He was conducted by officials who took up affairs on parade, but he did not look behind the lines.

I made a personal investigation by going into many cities and into the country. I 'nquired of the people who knew and had nothing to hide; people and merchants who were too discouraged to hide anything, but wanted remedy and relief; merchants and the public generally who had been lured to the Philippines with the prospects of greater com-

mercial possibilities, and who found conditions below those elsewhere

mercial possibilities, and who found conditions below those elsewhere in the world.

I am not a party man in the strict or offensive sense of the word. Successfu administration is a matter of personal talent. The ability to choose wise leaders, who in turn select and supervise good executives under them, men of diligence, foresight, and industry; but I must admit that the previous administration did things—built 450 miles of railroad and 2,500 miles of macadamized highway. During the 14 years of the previous administration until the present one the Philippine Islands were on a straight course toward civilization. The cities of the Philippines compared well with the inland cities of the Orient of the present day. Hospitars were built; disease gave way before their works; schools were erected which accommodated 500,000 Filipino children, with a thousan! American school-teachers, who were the only white residents of the town where they were located. They built hotels, public buildings, and instituted boards of trade, which dile good, honest work and stood out as a monument of success. They made possible the existence of missionaries in the island, helped them, held up their hands: and it must be admitted that the missionary system is one of the most civilized agencies of any modern people and modern times.

All of which chows and clearly demonstrates the miracles American

times.

All of which shows and clearly demonstrates the miracles American industry and manh-od could accomplish with comparatively little capital. When our Government took over this rough and half-civilized island it was not done rashly, but with the thought that a great country like ours should as one of the achievements of its progress assist in the uplifting of alien races. It was our intention and our purpose to clevate them to such a standard that in time, like ourselves, they should be capable of self-government in the most perfect form.

selves, they should be capable of self-government in the form.

With the present state of insurrection, ignorance, and incapability this consummation can not even be thought of. Conditions must be looked into and practices applied to get these conditions. Mexico, upon our own borders, is an actual example. The people themselves realize that they are not fit for self-government and can not be without a long and helpful course of training and development. They need and beg for the strong and protecting hand of our Government over them, and we must not by a blundering appliance of theories do the reverse.

the reverse.

I am not inclined to criticize our present administration, yet the fate of the Philippines depends upon the result of the next election. We require a strong executive who will reverse the present policies now in existence there. It is impossible to explain the tremendous opportunities, the stupendous and yet undeveloped resources of those islands which some day will be the source of unimagineable wealth to this country.

Shall We Haul Down Our Flag in the Philippines?

EXTENSION OF REMARKS

HON. CLARENCE B. MILLER,

OF MINNESOTA,

IN THE HOUSE OF REPRESENTATIVES.

Thursday, April 27, 1916.

Mr. MILLER of Minnesota. Mr. Speaker, the bill now before the House contains many pages and many subjects designed to reconstruct and perfect the government now maintained by the United States in the Philippine Islands. At its end, however, is another paragraph of a totally different character. This last paragraph is commonly known as the Clarke amendment, and provides for immediate independence—to be exact, independence within two to four years. Therefore, if this last paragraph shall be adopted and be enacted into law, it makes nugatory and valueless all the preceding provisions of the bill. If it becomes a law, to enact the rest of the bill would be the height of folly. No sooner would the machinery of government under the terms of this bill be instituted than the time for withdrawal will have come. The real question, therefore, for this House to determine is whether or not it shall enact the Clarke amendment into law as the policy of this Government.

Whatever may have been our individual opinions as to the desirability of ultimately giving independence to the Philippine Islands, we stand aghast at the brutal suddenness of this propo-When we instituted government in the Philippine Islands under the direction of the noble and martyred McKinley, we determined to show the world an altruistic spectacle in colonial government. We should institute and maintain in the islands a government for the purpose of benefiting the Filipinos, teaching them the art of self-government, developing their resources, and lifting them into a sturdy position of nationality. For 17 years we have labored with unremitting zeal and unfaltering courage to achieve this noble purpose. Our work there constitutes one of the most glorious chapters in all human history. Our achievements there form a record of which every American should be proud. The achievements of the Filipino people under this benign government have transcended the fondest hopes we held We are in the midst of this work. Many, at the beginning. many years remain before its completion. Are we to stop now?

The proponents of the Clarke amendment base it not at all on the capacity of the Filipino people now to stand alone; not at all upon the state of development to which they have reached; aster.

not at all upon the fulfillment by America of its duty there and to humanity throughout the world. Rather they base it upon a blind determination to throw the Philippines overboard and abandon them to their fate, regardless of their condition, of the effect upon them, of the effect upon American honor, of the effect upon the international relations between the United States and the rest of the world. Such a policy of scuttle was never before proposed in the history of our country, and now merits, as it should receive, the universal condemnation of all mankind. If we are lost to our sense of national honor, to our moral obligations, and to the legal obligations we assumed when we signed the treaty with Spain, then what means all this military preparation to perpetuate our country? A nation that will so lightly abandon its duties and its obligations and so ruthlessly sacrifice the welfare of 8,000,000 of people would be unworthy of perpetuation, because it could not be entitled to a decent respect among the peoples of the world and could not long receive respect from its own citizens.

It would be, indeed, interesting to discuss this matter from the standpoint of American interests and American honor, but for the present I prefer to consider it from the standpoint of the Filipinos, their views and their wishes. A very aggressive, intelligently conducted, and unopposed propaganda has been carried on to create in the minds of Americans the belief that the Filipino people all desire independence. This certainly does not represent the exact situation. As I stated on a former occasion, practically all Filipinos engaged in political activity in the islands express an earnest desire for independence. I have sometimes thought many of them were talking independence when they did not think independence likely to come and because to talk it was an easy way to ask for votes. It must also be admitted that the independence propaganda has many adherents among the people in centers like Manila, Cebu, and Iloilo. After two careful trips made throughout the archipelago, I am of the deliberate opinion that perhaps three-fourths of the people have not the remotest conception of what independence is and have no ideas whatever respecting it. This great mass of people remains undisturbed and untouched by the independence propaganda. They are the common people, the taos, who work the fields and constitute the great body of citizenry. the class of people to which America owes its great duty. This is the class of people for whose betterment we dedicated our energies. These are the millions we determined to uplift, to whom we should give opportunity, the most important and sacred of all American privileges.

Then, too, I discovered quite generally throughout the islands that a very considerable portion of the Filipino business men. especially property owners, while publicly voicing independence in harmony with the propaganda of the politicos, nevertheless in private conversation would beg that the American sovereignty be retained. Just what portion of the business men and property-owning class entertained this view I can not say, but I know it has been all along quite large. Now, however, the real crisis has come. No longer is the question one of ultimate independence, ultimate withdrawal of American sovereignty, for this Clarke amendment provides for immediate independence. therefore, have been concerned to note the effect upon the Filipino people. The effect has been pronounced and far-reaching. It is true that lip service has sent cables to the United States from those in political authority, recommending and urging the passage of the Clarke amendment, even when the exact terms of the Clarke amendment were not known. But at the same time there has come from the thinking Filipinos a Macedonian cry for help. For the first time they have looked the independence question squarely in the face, and the picture they behold fills them with profound alarm.

One of the most influential of the native papers, La Democracia, and one that has been enlisted in the independence propaganda, shortly after the passage of the Clarke amendment in the Senate, in an editorial expresses the following:

The present epoch in the history of the islands is the most critical in all their history. It can not be overlooked that, left to their own efforts, the Filipinos are unable to repel foreign aggression of powerful peoples like Japan, nor would they be able to withstand the peaceful aggression of immigration that even China with all her power was unable to resist.

Another paper, the Independent, perhaps of all the papers published in the islands the most radical for independence, shortly after the news reached Manila that the Clarke amendment had passed the Senate, came out with an article which contained the following:

We are a nation divided into thousands of islands, speaking different dialects. In order to preserve our inheritance we must have a strong standing army ready to repel foreign invasion. We must have a good navy to protect any part of this country within a moment's notice and to bring aid to any part of the archipelago in case of national disaster.

In our patriotic zeal we must not forget that Japan is our neighbor. We must not trust in the delusive hope of diplomacy. Our prayer to keep out foreign invasion will not avail us. A standing army of 1,000,000 men and a navy as strong, if not stronger, than that of Japan, with an aviation corps of 10,000 strong means protection. A lesser army or a smaller navy will not keep away the menace from our door. History has demonstrated the futility of the hope to trust in the promise of a stronger nation. * * *

If it is the intention of the people of the United States to give us a complete independence within four years, could we protect ourselves from foreign invasion and have the respect of the rest of the world? With our present economic situation, it requires a return of a thousand times greater than our present revenue in order for the government to organize within the short space of four years a force of sufficient strength to preserve and maintain our national integrity and hones.

No truer picture of the situation in the Philippines was ever painted. Pause a moment to examine a few of its details. total revenues from all sources for the government in the Philippine Islands amount each year to about \$14,000,000. this schoolhouses must be built, roads constructed, schools supported, agriculture fostered, pressing programs to secure sanitation and promote health must be carried out. All governmental expenses must be paid. In fact, it requires most careful economy on the part of the Government to spread its income so as to cover the essential governmental subjects of expenditure. Do the best they can, there remain hundreds of schoolhouses that need to be built, scores of public sanitary markets awaiting construction, artesian wells throughout the Provinces must be dug in the interest of health and sanitation, while public works of all kinds must be postponed until the government has sufficient funds to carry them out. The islands now have no foreign relations to support, no ministers, no consuls, no army, no navy. Whence can come the money with which to construct the navy and maintain the army the Independent says are required if independence is to be given the islands? Should the total revenues of the whole year be applied to naval construction they would not build a single modern battleship.

I recall two years ago when I visited the Province of Tarlac, one of the important Provinces of the islands, a meeting was held of all the prominent people of the Province. Independence speeches were freely indulged in. To develop their viewpoint I asked a few questions. I asked them of the fiscal, who corresponds to any Citation. sponds to our State attorney. I asked them of the iscal, who corresponds to our State attorney. I asked him if they had independence what they would do to keep off a foreign foe. He said they would build a navy and a big one. I called his attention to the fact that the total revenues amounted to but \$14,000,000, insufficient to construct a single battleship. Then they all sighed. Then, suddenly looking up, he said: "America will loan us some battleships." I replied that America had none to loan for such purposes. Then he said then battleships." I replied that America nau hone to total an illion purposes. Then he said they would raise an army of a million purposes. men if a foe should come. I asked him what they would equip them with. He said they would arm them with bolos. I called his attention to the fact that modern armies are equipped with high-powered artillery and rifles, and they would be destroyed

before they ever got to the enemy.

The Filipinos have but started to build business institutions and to build themselves up industrially. At the present hour 95 per cent of the business conducted in the Philippine Islands is conducted by foreigners. This is no guess. All business in the islands pays to the government a tax on the gross amount Consequently, the government keeps an accurate The records account of the business conducted in the islands. disclose that 95 per cent of that business is in the hands of Chinese and other foreigners. There are about 8,000,000 people in the islands. Of these 40,000 are Chinese. But these 40,000 are to-day paying 72 per cent of all the taxes in the islands. In other words, 7,960,000 are paying 28 per cent of the taxes

while 40,000 Chinamen, foreigners, are paying 72 per cent.

The great thing in the islands to-day is the development of their industries. Until the islands are economically in a state of independence, political independence from their standpoint is absurd. This is being realized by the thinking part of the Filipino people who are not engaged in political activities. During the past year I have observed with great interest a general awakening among the farmers of the islands, for farming is the great industry there, toward agricultural development and economic prosperity. I have just received a striking expression of the sentiments and wishes of the farmers in the islands respecting independence.

Shortly after the passage of the Clarke amendment in the Senate I received a cablegram from Senor Ramon Lopez, who formerly was a member of the Filipino Legislative Assembly and who is one of the substantial farmers in the islands. This cablegram said that he voiced the sentiments of farmers representing \$20,000,000 worth of property, and they all protested against the enactment of the Clarke amendment and requested the postponement of any discussion of independence for a period of 20 years. I sent him a communication at once stating that I

desired this expression on the part of the farmers placed in the form of a petition and signed by those who indorsed it. I have just received that petition. I consider it of historic significance. It was written in the Spanish language, and is as follows:

just received that petition. I consider it of historic significance. It was written in the Spanish language, and is as follows:

Los que suscriben, vecinos y proprietarios de las Islas de Panay y Negros, Islas Filipinas, y todos ciudadanos Filipinos, respetuosamente manifestamos que es nuestra opinion que la aprobacion del bill Jones en la forma tal como fué aprobado por el Senado de los Estados Unidos, seria fatal para el progreso en la vida social, el desarrollo en el comercio, industria y agricultura, y para el bienestar político de todos los habitantes de las Islas Filipinas.

Por tanto, nosotros sinceramente suplicamos al Congreso y al Gobierno de los Estados Unidos y a sus ciudadanos, que suspendan toda accion sobre el bill Jones, y que la question de la independencia política de las Islas Filipinas sea suspendida definitivamente por un periodo de veinte años, y cuando llega esa epoca que no se tome ninguna accion sobre la independencia de las Islas Filipinas sin el voto del pueblo Filipino.

Iloilo, Provincia de Iloilo, Islas Filipinas, hoy primero de marzo del año mil novecientos dieciseis. A. D.

[Translation]

We, the undersigned residents and property holders of the islands of Panay and Negros, P. I., and all Filipino citizens, respectfully state that it is our opinion that the passage of the Jones bill in the form that it was passed by the Senate of the United States would be fatal to social progress, to the development of the commerce, industry, and agriculture, and to the political well-being of all the inhabitants of the Philippine Islands;

Therefore we earnestly beg the Congress and the United States Government and its citizens that they suspend all action on the Jones bill, and that the question of the political independence of the Philippine Islands be definitely suspended for a period of 20 years, and that when this period arrives that no action as to the independence of the Philippine Islands be taken without the vote of the Filipino people.

Holio, Province of Holio, Philippine Islands, this day the 1st of March, of the year 1916, A. D.

This petition is signed by 92 men. I understand other particular

This petition is signed by 92 men. I understand other petitions are on the way here. I have taken occasion to look up thons are on the way here. I have taken occasion to look up the character and standing of these 92 men. They are men of the highest respectability. They are leading men, every one a citizen of consequence and a leader in his locality. They repre-sent the great farming industry in the islands of Negros and Panay, wherein is located the bulk of the sugar industry, probably the richest and most prosperous agricultural section in the entire islands. Let it be understood that this is the posi-tive expression of serious-minded men, whose interests are at stake and in whose hearts is the firm conviction that the passage of the Clarke amendment means their ruin as well as irreparable injury to the islands as a whole. Those politicos engaged in the independence propaganda will deride this petition and curse its signers, but to my mind this petition, representing, as it does, the honest convictions of the great body of the people of the islands, should receive the highest consideration at the hands of this Congress and be respected in the fullest sense. Note the strength of the language employed.

The passage of the bill in its present form "would be fatal to social progress and to the development of the commerce, industry, and agriculture and to the political well-being of all the inhabitants of the Philippine Islands." Every element of national activity and every feature of national life will be fatally affected by the passage of this bill. Not only do the petitioners request that there be no further consideration of the independence question for a period of 20 years, but that thereafter if the question is revived no action be taken without a vote of the Filipino people. I trust that this request, this petition representing so large a body of people who will be seriously affected will be listened to by the Congress.

In this connection it certainly is interesting to note that the judgment of every Democrat familiar with conditions in the islands and charged with responsibility thereto is earnestly and conscientiously and whole-heartedly opposed to this amendment,

One of the most brilliant men that has graced the Cabinet of any President in half a century, the late Secretary of War, Mr. Garrison, resigned primarily because the Clarke amendment threatened to become a law. For three years as Secretary of War he had been charged with the great duty of directing the American Government in the Philippine Islands. He had become intimately and peculiarly acquainted with conditions there, the aspirations of the Filipino people had become known to him, and the duty of the United States in respect to the Filipinos had been revealed to him. I ask my Democratic brethren to listen once more to his words and to weigh them carefully. He said, in resigning:

I consider the principle embodied in the Clarke amendment an abandonment of the duty of this Nation and a breach of trust toward the Filipinos. So feeling, I can not accept it or acquiesce in its ac-

These are not light words. No trifling reason could justify his resigning in the stress of that hour. The reason is the most important thing in the world, the duty of the United States. To pass the Clarke amendment, he says, would be a breach of trust toward the Filipinos and an abandonment of America's The President apparently acquiesces in this viewpoint, for in his letter to Secretary Garrison he said:

It is my own judgment that the action embodied in the Clarke amendment is unwise at this time.

When this amendment was adopted in the other branch of this legislative body, it is well known that it was opposed by the chairman of the Committee on the Philippines and others conversant with Philippine conditions and seriously desirous of acting sanely toward them.

There is a branch of the Democratic Party in the Philippines. Its membership comes from all sections of the United States. A convention of this party was recently held in Manila to select delegates to the Democratic national convention at St. Louis, and as a part of their platform, having in mind the Clarke amendment, adopted the following:

ment, adopted the following:

We denounce and repudiate as un-American, un-Democratic, and cruelly unjust to the Filipino people any policy which would cast this people adrift on the dangerous seas of international politics.

The United States by abandoning the islands would dishonor itself and justly forfeit the respect of the nations of the earth and of the people who look to us for protection and for whose safety we have assumed responsibility. We brand as unworthy of the American name a policy involving the abandonment of a sacred trust for reasons alleged to be concerned with our greater security. If giving proper protection to all inhabitants of the Philippines until such time as our obligations shall have been honorably fulfilled does in truth constitute a menice to our national safety—which we do not concede—better, we say, war, and even defeat, than dishonor.

It can not therefore be said that responsible Democratic leadership believes it wise to pass the Clarke amendment. In fact that leadership is almost unanimously opposed to it. On what possible ground, therefore, even under the application of the party lash here in the House, even though that party lash be wielded by blind rage and bitter partisanship, can Democrats who are loyal to the honor of their country and to its duty vote for a proposition that is universally condemned by every responsible Democratic authority.

Other Democratic testimony is not lacking. Brig. Gen. Frank McIntyre, United States Army, has been chief of our Bureau of Insular Affairs now for eight years and was a member of that bureau seven additional years. He certainly is thoroughly familiar with the conditions in the islands. He made a visit to the islands this summer for the purpose of investigation. He is from Alabama and, as far as an Army officer has politics, a Democrat of the old school. His sympathies are certainly with Democracy. Upon returning from the islands last summer, before the Senate Committee on the Philippines, he gave the following testimony:

Senator Lippitt, Am I to infer from your statement that you think there is a group of people in the Philippines that do not think immediate independence would be for the public interest?

Gen. McIntrike. Oh there are many people who so think.

Senator Lippitt. The majority?

Gen. McIntrike. I should say that a majority of the thinking people.

Senator Lippitt. A majority of the thinking people.

Gen. McIntrike. * * They are not for immediate independence, and they do not think it would be for their permanent interest. * * * I think that is right.

Judge James H. Blount, formerly of Georgia, and who spent many years in the Philippines, first as a soldier, later as a judge, is the Democratic apostle respecting Democracy's policies toward the Philippines. He is the author of the famous book, The American Occupation of the Philippines, which is the gospel of Democratic beliefs respecting all things Philippine. Judge Blount is out openly and vigorously in opposition to the Clarke amendment. In the Washington Star of March 18, 1916, he says:

The corner stone of every argument I have ever offered advocating Philippine independence has been neutralization of the islands through the international agreement. I am opposed to changing the status quo until the world finds out whether a neutralization treaty is or is not

"a scrap of paper"; in other words, until this war settles whether or not honesty is the best policy for nations as well as for individuals.

I am wholly unable to understand the intellectual processes of an honest and pariotic American who will vote on foreign or quasi foreign affairs for "party" reasons. We are all in the same boat—all Americans—and, to use a familiar colloquialism, it is like "rocking the boat," If I were in the House now I would vote with my party on domestic affairs, such as tariff, currency, etc., with all the fidelity of a Tammany sachem but on a question that concerned the honor of my country, like this Clarke amendment, with the neutralization cut out, I would feel ashamed to vote any way but against it, because, as Senator Stone said, "The whole world will look upon throwing the Philippines overboard in any such way with amazement, and we would fall under the just condemnation of mankind."

Continuent I believe the interests of \$000,000 Filipines are

Gentlemen, I believe the interests of 8,000,000 Filipinos are vitally at stake. I believe with the farmers of the Philippines that the adoption of the Clarke amendment would be fatal to social progress in the islands, to commercial development, to industrial development, and to the political welfare of all the inhabitants. I believe the honor of the United States is at stake. By the blows of our soldiers and our sailors we drove Spanish sovereignty from the islands, we established our own, and entered upon the great duty of bettering the life of the humblest as well as of the highest of the inhabitants; of giving all an opportunity, of building institutions of self-government which would endure through all time. To withdraw now, to leave these islands without a sovereignty which we know will reasonably protect life and property and secure freedom and liberty to all the inhabitants, would be to violate the pledged and sacred honor of our country and our duty once gloriously assumed. It will cause our country to be guilty of a sneaking, contemptible, ignoble act, one that will be pointed to by the finger of scorn throughout the world and looked back upon by all the children who shall follow as the supreme disgrace in their Nation's history. We are strengthening our Army and building a Navy; we are increasing the military power of the United States to preserve the integrity of our country and the perpetuity of free institutions under the American flag. possible that while engaged in this great work we shall at the same time haul the flag down from over duty and honor and 8,000,000 people whose interests and whose welfare require our protection?

A Step Forward by the Committee on Arriculture.

EXTENSION OF REMARKS

JAMES HON. H. DAVIS.

OF TEXAS,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, May 2, 1916.

Mr. DAVIS of Texas. Mr. Speaker, on this question I have made perhaps a thousand speeches in the last 30 years. I have been very much interested in our friend, from Illinois [Mr. CHIPERFIELD), who just left the floor. He talks about the Rules Committee in the past and the Rules Committee now. difference between the two is that the Rules Committee under Republicans had a habit of blocking legislation in the farmers' interest and saddling a lot of trusts and combines on the farmers and the country, and I condemned them in every form of language I could use in a parliamentary way; but when the Democratic Rules Committee has the courage to bring out legislation to help the farmers, three very important measures, to open the door of hope to that class who drink warm slick water out of an old jug at the end of the row, while we men here drink ice water out of a cooler, my God, I want to congratulate the Committee on Rules! [Applause.]

In one of these measures we have the warehouse system. have seen the apples in rows of trees a mile long on the Pacific slope, as beautiful as ever the human eye looked upon, rot and go to waste, while across on the other side of the mountains the people could not afford to eat applies, because some sort of a monopoly lay between the mouth of the hungry fellow and the fellow who had the apples. I have seen peaches and potatoes rot by the thousands of bushels, when they would not pay for the baskets and sacks to put them in, because there was no warehouse system to handle them, and a line of monopolies built up by the Republican Party stood between them and the fellow 300 miles away, who could not afford to eat them. I have seen all those conditions, and I want to help remedy them. [Applause on the Democratic side.]

We are dealing with a very serious problem—the cotton exchange. The Supreme Court has decided definitely-and it is an accepted proposition of law-that the power to regulate is the power to destroy, and I hope it will have that effect in this amendment. The whole issue is involved in this one fact: That if we leave the exchange with the full power to control the absolute spot market of the United States, with no competition by the actual buyer or spinner down among the ranks of the cotton growers, they have a legalized unscrupulous monopoly in touch with the exchange in Liverpool, and they can put a final price on every bale of cotton in the United States every day six hours before the farmer gets out of bed in the morning.

The power to regulate carries with it the power to kill, and I want to kill these exchanges and then kick them to show them there is punishment after death. If it regulates unto death, that is there misfortune and the farmers' good fortune.

Mr. Speaker, it is encouraging to see this administration broadening and extending the Agriculture Department. All civilization is now agreed that agriculture lies at the foundation and serves as the strongest support of all successful Governments. By the very nature of his vocation the farmer is remote from the centers of civilization and stands more or less alone and helpless as the prey of predatory greed. And while it is easy for all other professions and callings to organize and make their collective power felt in government, it has always been a difficult problem for the farmer, and therefore in most Governments he has been sadly neglected.

Our country, being new and possessed of a large virgin land estate subject to homestead entry, the farmer has not only been sadly neglected but has suffered under great disparagement by the law, rules, and customs of our Government, but we have reached the stage at which the Government is realizing, and the people are appreciating, the fact that the farmer is entitled to vastly more consideration than he has had in the past.

Our Agricultural Department has been moving forward for the last few years in many lines of great benefit, not only to the farmer but to the whole population, and the bill now pending, carrying an appropriation of nearly \$25,000,000, is one of the most comprehensive and thorough of its kind and opens up the hope of spendid achievement for the future. The Bureau of Animal Industry makes ample provision for the propagation of our domestic animal life and for the scientific prevention of those terrible diseases, such as tick fever, hog cholera, and foot-and-mouth disease. Also it makes ample provision for governmental action to prevent the ravages of the boll weevil, Hessian fly, and other pests that destroy millions every year and do so much to harass the farmer and make his labors abortive. Throughout the realm of agriculture it provides for the bestknown methods and ample application of up-to-date service. But the most remarkable features of its benefits are to be found in its warehouse system and the establishment of a marketing bureau, looking ultimately to national and interstate market service, conducted for the benefit of both producer and consumer, in which the producer and consumer will be face to face, closer together, and through an intelligent exchange both being greatly

For 25 years, beginning with the alliance in its early history and coming down through the years, I have worked with most of the leading farmers of our country to this end. It provides for the standardization, classification, and market quotations of both cotton and grains, grading each to a given legal standard, seeking to eliminate the sharks that rob the farmer every year out of multiplied millions by false grades. It also makes an effort to save the farmer from the greedy cormorants that stand around the grain pits and cotton exchanges each year in luxuriant splendor to gamble on the sweat and toil of the great farming element. The provision in this line falls far short. But it does assume control over them and assert the Government's right to take charge of them. In this way experience may soon teach some method to destroy them or destroy their evil and unscrupulous power over the farmers' produce.

Now, if the farmer could be given a fair, honorable land bank and farm credit system, pulling out the leaches and legalized shylocks that get between him and the Government mint and allow him to get currency when he puts down sound collateral just as cheap as it is issued to the commercial banking system, a few years would show the farm life throughout our country in a new light, with new hope, new life, and splendid prospects. But it is not my purpose here to discuss a farm loan or rural-credit system, but I want to compliment the Democratic Party, this administration, and the Committee on Agriculture, of which Mr. Lever, of South Carolina, is the chairman, for having done more in this measure for the hope and happiness of our country, through a program for the relief of agriculture, than has been done before in all the history of our Agriculture Department.

In my judgment, this measure as a whole is by far the most important agricultural measure ever carried through our Congress. If the Senate adopts it and it becomes a law and is followed to its full fruition, it will go a long way toward lifting our farmers, truckers, and fruit men out of the realm of uncertainty, give them a stable market, and a symmetrical and just distribution of crops and commodities, make their warehouse certificates solvent paper at any bank, prevent a glut in the markets anywhere, and abolish that old fake and fraud that has been used by the speculator and juggler for years called "overproduction."

But the point on which I want to compliment the committee and the Democratic side of the House most cheerfully is the parliamentary strategy by which the friends of agricultural prosperity forced this measure through, under a Democratic rule, putting the warehouse and grain-grading measures into the bill as a rider. The rule made the croakers croak and the yelpers yelp, and the belligerents moan with melancholy forebodings about gag rule. But, led by the assiduous and energetic chairman of the Agriculture Committee, we who had seen the farmer bucked and gagged for years were determined to make an honest effort to give him the largest measure of opportunity consistent with public good and at the same time eliminate as much as possible that greedy gang of speculators who feast upon the distress of both producer and consumer.

Again complimenting Mr. Lever and his committee, and feel-

Again complimenting Mr. Lever and his committee, and feeling thankful that I have had a humble part in the formation and passage of these laws, in a measure fulfilling the labor of 25 years of my life, I want to appeal to the farmers of this country and to the patriots who feel for the common weal not to let this measure lag or go by default in the future.

Cotton Statistics and Western Republicans.

SPEECH

OF

HON. J. THOMAS HEFLIN,

OF ALABAMA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, April 13, 1916.

The House in Committee of the Whole House on the state of the Union had under consideration the bill (H. R. 12717) making appropriations for the Department of Agriculture for the fiscal year ending June 30, 1917.

Mr. HEFLIN. Mr. Chairman and gentlemen of the committee, the gentleman who has just spoken [Mr. Hull of Iowa] seemed to deplore the fact that the foot-and-mouth disease has been wiped out in the United States. I think it is an occasion for general rejoicing that we have been able to accomplish that result, and I am very sorry that some gentlemen on that side are not willing to rejoice with us. It gave me a great deal of pleasure to vote for an appropriation for the purpose of eradicating the foot-and-mouth disease which existed in the North and Northwest. The Government has expended about \$4,000,000 to eradicate the foot-and-mouth disease, and we on this side voted cheerfully for the measure that has brought relief to the farmers of the West. It may be that in wiping out the foot-and-mouth disease in the West we have also wiped out a much-needed Republican political issue.

Now, as to hog-cholera eradication, I voted for a measure that

Now, as to hog-cholera eradication, I voted for a measure that appropriated \$600,000 for that purpose. And, Mr. Chairman, we have spent more money in three years to eradicate hog cholera in the North and West than the Republican Party appropriated under the administrations of Roosevelt and Taft, covering a period of eight years. [Applause.] I regret that gentlemen on that side from the West do not appreciate as fully as they should this great work that has been accomplished for the good and for the prosperity of the farmers in that section of the country.

The gentleman from Kansas [Mr. Doolittle], a Democrat, has done more in the short time that he has been here for the farmers of the West for farm-demonstration work than all the Republicans from that State, and the gentleman from Missouri [Mr. Rubey], a member of the Committee on Agriculture, has been a power for good to the grain growers of the country.

Mr. HAUGEN. Mr. Chairman, the gentleman speaks of the

Mr. HAUGEN. Mr. Chairman, the gentleman speaks of the great work done in the eradication of hog cholera. I would like to ask the gentleman, what have we to show for the expenditure of the \$600,000 referred to?

Mr. HEFLIN. I refer the gentleman to his colleague from Nebraska [Mr. Sloan] and to the farmers of the West as to the good that has been accomplished. A great deal of good has been accomplished, and the Committee on Agriculture, of which I am a member and of which the gentleman is a member, under the leadership of the gentleman from South Carolina [Mr. Lever], a Democrat, is employing every means possible to eradicate hog cholera, and the gentleman knows this very well. I stand ready now to vote for any additional measure that will cradicate hog cholera in the northern and western sections of our great country. That is my position. [Applause.]

our great country. That is my position. [Applause.]

Mr. HAUGEN. I desire to state that I am heartily in favor of what the gentleman says. I have no quarrel with the department, and the fact that it has brought no results is no reason why we should not make these appropriations. We have made the appropriation, and we should continue to make liberal appropriations; but, unless we get something it return, it is not fair for any Member of the House to rise in his seat and speak of great work and of certain achievements when we have nothing to show for it. We should not only be fair with the department, but we should be fair with the people throughout the country who furnish the money. We should be just as fair to one as the other, and we can be fair to the people of the country without questioning the ability or the integrity of the department.

Mr. HEFLIN. I did not yield to the gentleman for a speech. As he well knows, good work is being accomplished along this line. Let me mention some sections in which this work has been done. In 16 counties in which this work has been done by the Department of Agriculture good results have been obtained. Hogs raised in 1912 in these 16 counties, which are located in Idaho, Illinois, Indiana, Iowa, Kansas, Kentucky, Michigan, Minnesota, Missouri, Nebraska, Ohio, South Dakota, and Tennessee, numbered 975,000.

In 1914, under improved conditions brought about by the Government's work, they raised 1,256,000 hogs. So good work is being accomplished.

Mr. Chairman, the gentleman from South Carolina [Mr. Lever] has made reference to Thomas Jefferson, the father of the Democratic Party. It has been said that Mr. Jefferson was a farmer, and he was. He brought from Italy seed rice to this country in his vest pocket and gave it to the farmers of Louisiana and Mississippi. He invented the hillside plow and the revolving office chair. He was at one time a member of this House, ambassador to France, Secretary of State, and President of the United States. As has been said by the chairman of the committee [Mr. Lever], Jefferson said that the four great pillars under the material development of this country are agriculture, commerce, navigation, and manufacture.

Republicans on that side, with few exceptions, at this session of Congress have done all they could against navigation. They tried to kill river and harbor improvement in this country. And just the other day the great body of them in this House planted themselves firmly against the River and Harbor Congress of the United States, which patriotic body is composed of some of the very best men in America, who meet in this city once a year and urge upon Congress the great importance of developing the rivers and harbors of our country. They struck a deathblow to the ship-purchase bill and injured American commerce, and they have voted against measures that helped the agricultural interests of the country. [Applause on the Democratic side.]

Mr. Chairman, just last week, when the cotton farmers of the South wanted to know the truth as to cotton consumption, the amount used in the various industries in the United States, the Republican leader in this House, and all but five of you followed him, opposed the measure that provided for gathering statistics of cotton consumed by powder mills and explosive manufac-turers. The use of cotton in the manufacture of gunpowder and explosive shells has recently become a large industry in the United States, and cotton prepared and partially prepared for use in these industries is not now accounted for in the statistics gathered and published by the Bureau of the Census, and it is estimated that \$90,000,000 worth of cotton is consumed annually in this way. Requests for this information have come from every section of the country. People interested in various phases of the cotton business want to know how much cotton is being consumed annually in the manufacture of gunpowder and explosive shells. The law now requires the Bureau of the Census to gather and publish statistics of cotton consumed by the cotton mills of the United States, but there is no authority in the law for collecting statistics of cotton consumed by the powder mills of the United States. If the cotton producers and

the public generally are entitled to know that the cotton mills of the United States have consumed 7,000,000 bales in the last 12 months, why should they not know that the powder mills of the country have consumed 2,000,000 bales? If we publish the statistics of cotton consumption and report that 7,000,000 bales have been consumed by the cotton mills and then refuse to report the 2,000,000 bales consumed in some other way, the statistics do not speak the truth; they are misleading and deceptive, [Applause.]

I said before, Mr. Chairman, and I repeat it here, that if we are going to have statistics on any agricultural product, those statistics should be full and complete. If it is right to publish statistics as to the disposition or consumption of four-fifths of the cotton crop of the United States, I submit that it is fair and just to show what becomes of the other one-fifth. [Applause.] It has been the policy of this Government to encourage the agricultural classes by showing them the value of intensive farming and of increased yield per acre, and in order to do this it has published statistics showing the farmer how and to what extent farm products are being consumed. But here we find the Republican Party in the House trying to reverse that policy, and, with the exception of five Republicans, that party voted solidly against my resolution the other day that provided for full and complete statistics of cotton consumed in the United States. They tried hard to defeat it.

sumed in the United States. They tried hard to defeat it.

Besides the desire for this information on the part of people interested in the cotton business throughout the country, the cotton producers of the South, where live 30,000,000 of American people, were unanimous in their request for this legislation.

[Applause.] But, Mr. Chairman, the justice of their cause and the unanimity of their appeal failed to secure the support of fifteen-sixteenths of the Republicans in this House. That old party of privilege voted against a measure which vitally affects the farmers of the United States who produce two-thirds of the world's cotton crop.

When the farmers of the South called upon the Congress to pass a measure which would give them the truth as to the amount of cotton consumed in the United States where were the Republicans who come here from the farming districts of the grain-growing West? I am sorry to say that you were on the side of an eastern Powder Trust that did not want this information given to the farmers of the South. [Applause.]

The Powder Trust did not and does not want the cotton producer to have information that will place him in a position to know the exact condition of the cotton trade and to use that information in demanding a fair price for his cotton. And when you western Republicans voted to deny to the cotton farmer of the South statistical information that would enable him to get a fair price for his cotton, you voted against the interest of the farmer of the West, for when the cotton farmer gets a good price for his cotton he is ready and able to pay the western farmer a good price for grain and live stock. [Applause.] So in voting against the farmers of the South, you voted against the interest of the farmers of the West.

We sell two-thirds of our cotton crop to foreign countries, and the more money we get for that cotton the more money we are able to pay the western farmer for what we buy from him. [Applause.]

But fortunately for the farmers of the South and fortunately for the farmers of the West, the western Democrats voted solidly for this just legislation requested by the farmers of the South. The farmer's friend in this House, it matters not from what section he comes, must cooperate with the friends of the farmer from other sections. And I want to say to the Democrats from the West and Northwest that we of the South appreciate your cooperation in securing for our farmers that which they are honestly entitled to-full statistics of the consumption of cotton, the principal product of the southern farmer. In your willingness to help us you have strengthened our desire to help you. I regret that the Republicans of the West and [Applause.] Northwest, with the exception of my good friends, Mr. Wheeler, of Illinois, and Mr. Sinnott, voted against a meritorious measure sought by the farmers of the South, and in doing so they voted against the best interests of the farmers of the West. had rather believe that the farmers of the West feel toward the farmers of the South as shown here by the votes of western Democrats than to believe that the western farmer is not in favor of justice to the southern farmer as shown by the Republicans from that section voting against this cotton-statistics measure. [Applause.]

I congratulate the West upon its Democratic representation here. Democrats here from the great and growing West are aiding in securing just legislation for the other sections of the country, and in return they are receiving the united aid of Representatives from other sections in obtaining legislation for

their people. [Applause.]

Mr. Chairman, be it said to their credit and to the credit of the brave and patriotic people of the West that they represent that no one of them by voice or vote has done anything to revive the unhappy recollections of the differences that existed 50 But they are working earnestly and intelligently for the good and growth of our reunited country. They are con-tributing strength to the ties that bind us together in the bonds of a common interest and a common destiny. [Applause.] They realize, Mr. Chairman, that they can serve their section best by being just and fair to the other sections of the country, and as a result of this patriotic course they are having the cordial good will and cooperation of Democrats here from all over the coun-They do not hurt but they help the great people that they represent. By the broad and friendly spirit that they display by their determination to be just to every other section of the country they are lifting the West higher and higher in the estimation of the membership here from the other sections of our great country. [Applause.]

I believe that the time is not far distant when the Republicans from the farming districts of the grain-growing West who make speeches against and vote against any measure here, it matters not how meritorious it may be, if it affects favorably the interest of citizens of the United States who live in the South, will be repudiated by the people at home and men sent here in their places who will promote peace and good will between the sections and contribute to the common weal of our country. [Applause.]

Mr. Chairman, what excuse do you suppose the Republicans from the West and Northwest gave for voting against gathering and publishing full and complete statistics of cotton consumed in the United States? Why, they said that it would give away Government secrets and tell the world how much cotton we were manufacturing into gunpowder and explosive shells, We sell munitions to the nations What a sham and pretense. of the earth, and cotton is only one of the ingredients that enters into its manufacture. But these Republicans would have us believe that they wanted to draw the curtain of secrecy around our military status and state of preparedness, and keep the world in doubt as to that situation here, when the truth is, Mr. Chairman, Republicans in this House at this session of Congress have gone into the secret places of our war equipment, and they have discussed here and published broadcast detailed information regarding everything about the Army and Navy of the United States. [Applause.] They have told how many rifles and field guns we have, and they have given the number of torpedo boats, submarines, and aeroplanes possessed by the Army and Navy of the United States, and that is not all. They have given the number of battle cruisers and big battleships, and they have told how many cartridges or rounds of ammunition we had, and they have called attention, Mr. Chairman, to the powder supply of our country. These ardent friends of the Du Pont Powder Trust, these discreet and careful Republicans, instead of letting the enemy find out for himself our state of preparedness, have told him everything pertaining to it and have even informed the world just how many times we could shoot in case of war. [Laughter and applause.]

Now, after detailing all the information regarding our preparedness for war, and after discrediting, as they have, our means of defense, they throw up their hands in holy horror and say we must not let the cotton farmer of the United States know how much cotton is being manufactured into munitions of war to be sold to the countries of the world because it might disclose a Government secret. [Applause.] The attitude of these gentlemen, Mr. Chairman, is this: It is all right to discuss here and publish to the world just how many ritles we have and how many cartridges we have, so that the eastern manufacturer can get an order to manufacture more, but when the cotton farmer makes the modest inquiry, " How much cotton do we consume in manufacturing these munitions?" phase of this munitions question becomes a Government secret, [Applause.] I think, Mr. Chairman, it is more of a Du Pont powder secret, for so long as they can keep the producer in the dark as to the amount of cotton consumed in manufacturing powder and explosive shells they can deceive him and keep him guessing as to just what the consumptive demand for cotton is and will be in the United States. [Applause.]

Now, why did you Republicans from the West vote against my Have you any hostility in your hearts toward the South? Are you not willing for the farmers of the South to have Government statistics speak the truth regarding their produce? I would vote for any measure that will give the western farmer statistics full and complete of his farm prod-The western Democrats voted for the measure, and we passed it by a party vote.

Mr. HAUGEN. Is it not a fact that the cotton statistics have been provided for for years, and did it not receive the hearty support of us on this side? You have been getting cotton sta-

tistics for years. We do not have the statistics on grain.

Mr. HEFLIN. We have statistics of cotton consumed by spinners, but I told you Republicans from the West that we did not have the statistics of cotton consumed in making gunpowder and explosive shells, and that the Director of the Census said that he had no authority to collect them. I told you also that it was estimated that two or three million bales of cotton were being consumed in that way, and yet you western Republicans voted against giving these statistics to the cotton farmers of the

South. [Applause.]
Mr. HAUGEN. I voted against the proposition because it

would be an absolute waste of money.

Mr. HEFLIN. Mr. Chairman, I do not yield to the gentleman to undertake to make a speech defending his unwise course. Money expended to obtain statistical truth and secure justice for the farmer is not wasted.

Mr. Chairman, the gentleman says that they have not got grain statistics. Why, the gentleman ought to know that we have grain statistics. The statistics tell the amount of grain that goes into the gristmills, flour mills, and they show the amount of grain produced annually in the United States; and let me tell the gentleman another thing that perhaps he does not know. The gentleman is as innocent of knowledge regarding the grain business as he was of a proper appreciation of the cotton business when he voted against my resolution the other day. Why, just a little while ago I phoned to the Treasury Department, to the Commissioner of Internal Revenue, and inquired, "How much grain is consumed by the distilleries in the United States in making beer and whisky?" and I was told that the amount was between forty and forty-two million bushels a year. I am glad the grain growers can have a way of telling just how much and in what way grain is consumed annually.

Let me say to the gentleman that I also phoned to the Direc-tor of the Census, and I said, "How much cotton is consumed annually by the powder mills and explosive-shell manufacturers of the United States?" He said, "We have no statistics on that subject and no authority to get them." So the grain grower has the statistical information that he needs and desires, but you Republicans from the grain-growing West voted to deny statistical information needed and desired by the cotton producers

of the South. [Applause.]
Mr. HAUGEN. Mr. Chairman, will the gentleman yield?
Mr. HEFLIN. I will yield for a question. I have but little time left.

Mr. HAUGEN. I will be glad to yield the time to the gentleman in which to answer my question. We have statistics, it is true, as to the corn crop in Iowa this year, and the gentleman as a friend of the department is certainly not proud of those statistics. They would be better wiped out. They do not come within 50 per cent of the facts.

Mr. HEFLIN. We would be glad to have some on cotton made into gunpowder that come within 60 per cent of the amount. We have none at all now. The gentleman is the first man that have heard complaining about the incorrectness of grain statistics

Mr. LEVER. Mr. Chairman, I yield the gentleman 10 minutes more.

Mr. HAUGEN. Mr. Chairman, will the gentleman yield?

Mr. HEFLIN. Not now. But you western Republicans hid behind the sham and pretense that statistics of cotton made into gunpowder would give away a Government secret. No enemy could have a spy in this country who could have obtained more information about our Army and Navy than the Republican Party in this House has given to the country and to the world during this session of Congress. Nor could an enemy ever get a man who would have detailed it as the gentleman from Massachusetts [Mr. GARDNER] and others on that side did. But when the southern cotton farmer wants to know how much cotton is consumed by the powder factories of the United States in making powder that we sell to the world, why you say it will disclose a Government secret. [Laughter.]

Gentlemen of the committee, the Washington Post said not long ago that every section in the farming line has suffered some on account of the European war, but the South has suf-

fered more and longer.

That is true. The South has suffered more than any other section. Cotton, our principal crop, has been greatly injured and here we are from the section suffering most asking you to vote for a measure that would give us valuable information and at a cost of less than \$5,000 a year.

Mr. Chairman, with the exception of two western Republicans they voted solidly against this measure. Two gentlemen over there from the West [Sinnott and Wheeleb] voted with us. Some of you criticized Wheeleb of Illinois for voting with us, God bless him, but he had the courage to stand up and vote for right and justice in spite of anything that you could do to hold him down to the Powder Trust interest. [Applause.] Morean of Oklahoma, Austin of Tennessee, and Britt of North Carolina—five in all. You can count them on one hand, and the Republican Party, with that exception, stood like a brick wall against this just demand of the cotton farmers of the South. Were you afraid that you would expose a Government secret? You told the world how many thousand cartridges we had and everything that you could think of about the condition of the Army and Navy.

The Democrats of the West show no ill feeling and exhibit no sign of bitterness against the South. They are broad and liberal patriots, meeting the issues of the present and letting the dead past take care of itself. They are displaying here a feeling of cordiality and friendship for the people of the South, and that feeling and friendship finds warm-hearted response on the part of southern Democrats for the people of the West. [Applause.]

The sooner the people of the West realize that some of their Republican Representatives here are doing all in their power to stir up strife between the sections and are lending themselves to petty political projects in order to raise false issues and ride them into office, the better it will be for our great and growing country. I am a southern Democrat, and if I know my own heart I can say truthfully that it makes no difference with me what section of the country a measure here is favorable to. I will support it if it be just and meritorious.

I want to see the sections drawn closer and closer together in the bonds of friendship and fraternal love. I do not want the smallness of vision and the little prejudices of narrow-minded men here to check and hinder the growth and development of national unity and solidarity amongst the people in every section of our country. [Applause.]

Let us realize fully our duty as Representatives of the greatest people on earth in the greatest lawmaking body in the world, and by the character of our contributions to the sum of national friendship, cordiality between the sections, honesty, patriotism, and statesmanship cause our country to rise higher and higher in the scale of being until she becomes the ideal Republic among the nations of the earth. [Applause.]

Philippine Independence.

EXTENSION OF REMARKS

HON. CYRUS CLINE,

IN THE HOUSE OF REPRESENTATIVES,

Monday, May 1, 1916.

Mr. CLINE. Mr. Speaker, 18 years ago to-day the United States entered upon a mission of world-wide importance. It put the American flag in Cuba for the sole purpose of relieving that island from the curse of Spanish tyranny, and giving the inhabitants of the island political independence. At the same time the United States joined with the inhabitants of the Philippine Islands in the far-away Pacific who were then in rebellion against Spain, under which nation it had been a vassal for 300 years. The Filipino people believed then, as they had a right to believe, that they were fighting for their personal liberty and independence.

The question may never be definitely settled, but there is sufficient data, reliable, too, to assume that the inhabitants of the Philippines united with the American Army with the implied understanding that the United States was an ally of the Filipinos in securing independence for the inhabitants of the islands and establishing a separate and independent government.

After the Spanish Government had been driven from the islands and completely conquered the Filipinos were surprised to find that they had simply transferred their subordination from the Spanish Government to that of the United States. These, in brief, are the historic facts. I am not discussing the question whether the result was a wise one or not, whether it was eventually for the benefit of the Filipino or not; I am simply stating the preliminary facts to show how we came to be in the present attitude toward the Filipino people. No man in public life and who was connected with the legislation at that time had the remotest idea that we had not in mind a purpose to do for the Filipino exactly what we had done for

the Cuban; possibly not as soon, but in a reasonable time to establish for the inhabitants of the Philippines a separate and independent government. No one supposed that we had at that time entered upon a policy of humanitarianism for Cuba and at the same time and as a part of the same national action a policy of usurpation and subjugation in the Orient. The conduct of our affairs in the Philippines has developed a national issue. The Democratic Party since 1900 in every national Democratic platform has not hesitated to declare itself on the Philippine question. We have four times said substantially that "we favor an immediate declaration of the Nation's purpose to recognize the independence of the Philippine Islands as soon as a stable government can be established." We could not do otherwise than that and be faithful to the political creed we as a party have subscribed to and which doctrine as a party we hold sacred. That apostle of human liberty, the greatest exponent of the rights of man ever known in all the world's history, uttered these undying words, as immortal truth itself:

We hold these truths to be self-evident; that all men are created equal; that they are endowed by their creator with certain inalienable rights, among which are life, liberty, and the pursuit of happiness; that to secure those rights governments are instituted among men, deriving their just powers from the consent of the governed.

These principles are as axiomatic to-day as they were 100 years ago. No real Democrat repudiates them or subverts them. To do so now in this critical juncture would be the rankest perfidy and most dishonorable. Through all the history of the Democratic Party it has clung without wavering to that elemental and fundamental truth announced by the founder of our party.

Mr. Speaker, I have great admiration for the Filipino, whose ancestors were for three centuries, more or less, under Spanish domination. At some time or other during this long period, laying in the pathway of the world's travel, they have been the prey of the great nations of western Europe and eastern Asia. Plundered, robbel, and exploited, the products of their labor stolen by aliens, they at last broke away from the blighting despotism of Spain for the purpose of setting up a new independent government.

The venality of the conqueror sums up all the crimes of successful conquest. There is a mysterious element in human life that demands equality and resists crushing domination in the application of every system of government or economics, whether it be a highly developed system or not.

Representative government is the only sure guaranty of any character that personal liberty and personal rights will be protected. The wholesale intrusion of the individual into the political structure of a State government is an American idea of the construction of civil institutions. A strong centralization of power, either in the hands of a usurper or in the government itself, can not exist with our theory of popular government. That the doctrine of the right to control a different people than that participating directly in the government, either by conquest or purchase, implies a government by force of arms can not be disputed, and that it is a European and not an American doctrine is also true. There never has been a conquest of territory except by force of arms, and that conquest rarely maintained except by a resident force of arms in the subjugated territory.

Through some unaccountable source we exercise control over and possession of the Philippine Islands, with more than 9,000,000 people, two times as many as we had when we denounced England for our own subjugation-lands wholly populated by a race different from ours and more than 7,000 miles away, differing in religion and history, in color and civilization, having nothing in common with us except the desire to manage their own affairs and govern themselves as we do ourselves. We have nothing in common with the Filipinos and never can have, because of race differences that are insurmountable. Projected into the character of the Filipino, that has become a constituent part of his nature and that of all Asiatic races through centuries of heredity, are differences of religion, civilization, and fundamentals in morals and government. These people are opposed to us in every essential of life, character, and personality; yield to us a suspicious obedience, view us with an increasing aversion, while we proclaim to them and to the world our belief in the essential principles of personal lib-No great publicist has ever put our claim to subjugate the inhabitants of that Archipelago upon any other basis than that of conquest, or that we are the trustee of a "manifest destiny.

Development of social life and government has a uniform basis. Mutual dependence is everywhere forced upon all classes. All have the same aspirations, the same intellectual aptitude, the same inclinations—the only difference is in degree—and all are the product of natural evolution. I may not hesitate to say

that this national mobilization—this consolidation—of races, all arising out of a law of necessity and a desire not only for lighter burdens of government, but for no government at all by alien races, have introduced into world politics, in acute form, new and far-reaching problems.

These problems are not those to come at some future time; they are here now. The fast-breeding nations of India, China, northern Africa, and Japan, some of whom are now dominated by a handful of Europeans-these hundreds of millions, moved by the new spirit of this age, adjusting themselves with white men through the rising tide of commerce, with a mighty and successful struggle will throw off this restriction by foreign power and establish, I care not how crude it may be, a representative system of government by and for themselves. Let me amplify what I mean by very recent history of Japan. Half a century ago her commerce and taxes were controlled by a foreign power. She had no foreign relations, no navy, but a small army, and she stood in mortal fear of being swallowed up by China. In less than 25 years she has become an independent sovereign nation, whipped China, sliced off Korea and Formosa, and ranked herself as the seventh naval power in the world. She engaged in war with one of the most formidable Governments on earth, hurled her navy against the great war vessels of the Russians, sunk them like broken reeds, and sent 24,000 prisoners to Tokyo. She did more than that. She brought Russin to her knees in arbitration and divided Manchuria to herself, and then formed a defensive alliance with England, the greatest naval power in history. Do such great movements that shifts power from continent to continent, mean nothing to us?

The brown man in the Pacific is asking this great enlightened and Christian Nation, that holds the strong arm of a great world power over him in complete subjection, what the fate of himself and his children is to be in his own land many thousands of miles away. He has a right to know; it is the highest and most sacred right that ever stirred the breast of mortals, Involved in that right is the most exalted hope and aspiration of the soul. I would rather cast my vote in this Congress tonight to liberate the Filipino people than to cast it on any other issue that ever confronted me. I believe when I do that I shall have exercised the greatest power that can ever come to me to be performed. The consciousness that my vote and my voice have been enlisted to relieve from political bondage an alien race of ten millions of people engrosses me with the magnitude of an overwhelming purpose. The greatest heroes of any nation and of any age are those who by matchless fortitude and unequaled bravery have dared to sacrifice all and do all to perpetuate and exalt the cause of personal liberty; but I believe the man exercising his constitutional power, conferred upon him by a liberty-loving people, who casts his vote to give a larger liberty to a strange race and to establish political freedom among men of another hemisphere, has exercised a power superior to any other that a great, free, and enlightened people can clothe him with. I am wondering whether we have wandered from a century of tradition into a new realm of civil government or whether we have come to believe that representative government is a failure. Let me quote one sentence from John Stuart Mill:

The government of a people by itself has a meaning and a reality, but such a thing as a government of one people by another does not and can not exist.

Around that principle have clustered all the race problems and all the political problems of government. We intrenched ourselves upon the same rock in our declaration that "all men were created equal and endowed with certain inalienable rights, among which were life, liberty, and the pursuit of happiness." On that theory are constructed all the States of this federation, and in it rests all our ambitions in the common struggle with a common hope to a common destiny.

Believing as I do in the essential principles that lie at the base of representative government, there can be no hesitation in the performance of our full duty toward the Philippines. We have always predicated our final action on the power to maintain a stable government. When that time arrived, we were ready to give the Filipino people the opportunity to work out their own destiny. That the Filipino people are now maintaining a stable government is not seriously disputed by anyone. About all the administration officers in the Philippines, including a large portion of the Philippine Commission, the legislature, the heads of departments, all municipal officers of the islands, judges of courts, nearly 9,000 teachers in the public schools; in fact, all of the numerous offices are now filled by Filipinos. Until very recently the only test required of the Filipinos by the opponents of independence, especially by the Republican leaders, was that the people of the islands should show themselves capable of maintaining a stable government. When they met

that test, the reasons for the denial of independence by them shifted to other grounds, as it always will.

What is the policy of the Republican Party relative to this question? It has never made a frank, unequivocal statement of its attitude in its national platform. What it has said was vague, indefinite, and ambiguous. This is a sample of its indirection. I quote from the Chicago platform of 1912:

The Philippine policy of the Republican Party has been and is inspired by the belief that our duty toward the Filipino people is a national obligation which should remain entirely free from partisan politics.

A more studious attempt to avoid the entire question could scarcely have been made. No man can discover any policy in that declaration. The truth is that the Republican Party is so infiltrated with the doctrine of Alexander Hamilton, a doctrine antagonistic to real popular representative government and so wedded to the special interests of the country that it does not propose to relinquish control over the Philippines, no matter how efficient they may prove themselves to be. Their position has shifted from that of national honor to one of commercial expediency. Who is to be profited by the reten-tion of the Philippines? Not the hundred million common people, not the patriotic citizens of the United States who want that security that comes to the country through avoidance of "entangling alliances" with any other power; not the millions of taxpayers who must foot the bills for their retention, mounting into the millions every year. No one of these classes of citizens profit by their retention. It is the few special interests in this country who desire the privilege of exploiting the resources of that innocent people in the archipelago. As an illustration, witness the grabbing at one time of more than 56,000 acres of the richest sugar lands in the islands and the defense of the act by the Republican Party and the Republican administration at the time when the Filipinos declared the action to be a direct violation of the organic law of the islands.

The assertion that the Filipino people are not capable of self-government is a mere subterfuge to deny a worthy people the same rights that we ourselves not only enjoy, but fought for the privilege of enjoying. Skulking behind that so-called reason are the real reasons, both commercial and moral, masquerading to defeat the rights of the people of the Philippines, and repudiate the historic traditions of the Nation for more than a century.

than a century.

I speak only for myself. When my party is on trial on a declaration it has four times promulgated in its platform and one of the principles upon which it came into power, when that platform so long adhered to by my party is attacked by the enemy that seeks to discredit it and drive it from power, I subvert my individual opinion and justify my party and give it my unqualified support. An assault upon my party by its relentless enemy can get no aid or comfort from me to gloat and glorify over and thereby discredit my party leaders. I believe the combined wisdom of my party on measures is superior to that of any single member of the party. When the time comes that either Democrats or Republicans believe that they are at liberty to violate solemn platform pledges and follow the direction of some party under cover so far as the general public is concerned, then the disintegration of that party begins and that solidarity on principles that distinctly divide the parties so essential to success is lost.

But, Mr. Speaker, I am in favor of granting independence to the Philippines for another reason. The geographical position of the islands being more than 7,000 miles from our shores, their education and capability for self-government makes them a sorious menace to the peace and happiness of this Republic. In all the discussion on this question no man has questioned that proposition. Mr. Speaker, do men think that a people whom we have taught that life, liberty, and the pursuit of happiness is an inalienable right and that no man has a right to govern another man without his consent; do you believe that the Filipino with that knowledge will long content himself as a subject of an alien Government residing 7,000 miles from hm? Do you believe it is the duty of a patriotic and liberty-loving citizen to condemn him if he refused to submit to such foreign rule?

Ah, gentlemen, if it was your purpose in the beginning to deny to the inhabitants of the Philippines in the end that, which you promised them, you have already gone too far. You ought not to have educated the Filipino. You took to him the American school-teacher, the English language, and taught him the science of representative government and all it means to the human race. You told him 18 years ago that when he was able to maintain a stable government you would withdraw from the islands and leave him to work out his own destiny. In my judgment, you will be compelled to perform your agreement

with him. If you do not, he will unite with some formidable power and wrest from us those rights we now withhold from him. Pseudo patriots ask us if we want to pull down the American flag in the Philippines. That flag does not represent in the Philippines what it does here. If the American flag is to be traduced there, to represent colonial aggression instead of personal liberty, as it does here, it ought to come down whenever it does not in the fullest sense represent the liberty and independence of the people over which it floats. The price paid for it in blood and treasure as the representative of a free and enlightened people was too great to now dishonor it as a representative of subjugation.

Last week I listened in this Chamber to speeches on the life and character of Abraham Lincoln when a grateful people were about to take over the birthplace of that immortal in fitting remembrance of the event. He was greatly and justly praised for his invaluable services to the Nation, eulogized for the emancipation of the negro race. His words uttered on that battle field west of this Capitol fell in hushed silence on the member-

ship of this House:

Four score and seven years ago our fathers brought forth on this continent a new Nation, conceived in liberty and dedicated to the proposition that all men were created equal.

He concluded that memorable address with those words, that are household words with a hundred millions of people in this Republic:

And that a Government of the people and by the people and for the people shall not perish from the earth.

The sting of conscience must be severe if the Republican who professes to believe in Abraham Lincoln and follow him as his disciple can cast his vote for the further continued bondage of the people in the far-away Pacific. It is my hope that justice may ultimately be done the Filipino people before they compel us to respect those rights that all civilized nations have pronounced inalienable.

Philippine Independence Bill.

EXTENSION OF REMARKS

HON. WALTER L. HENSLEY,

IN THE HOUSE OF REPRESENTATIVES, Monday, May 1, 1916.

Mr. HENSLEY. Mr. Speaker, I am indeed glad to have the privilege and opportunity of voting on this bill, which provides for the independence of the Philippine people. I never believed it wise, in the first place, for this Government to hold those islands, and I do not think it is wise now to hold them. I wish

we could give those people their independence immediately. When on this day 18 years ago Commodore Dewey sailed into Manila and signally defeated the navy of Spain the whole United States, upon the receipt of the information concerning the battle, was thoroughly thrilled. Our purposes as we understood them, and as I now understand them to have been, were to serve these struggling people, a people who were desirous of obtaining their independence and who are as much entitled to their independence as any other people on the face of the globe. Our service to these people was rendered after they had been fighting for a long period of time. They had practically won in their fight against Spain, but we at the proper and crucial time aided them in striking down the shackles that Spain had fastened upon them centuries ago. And from that very hour some of our people apparently were desirous of taking the place of Spain as the master and owner of those islands. I do not believe that any government can afford to bold an alien people and control them against their will. Most especially do I insist that a republic such as we have can not afford to engage in a business of this character. I think it a good rule to follow, that a people who have a desire for liberty, having impulses emanating from a desire to be free and independent, and who are willing to fight and die for that principle, are entitled to their independence and are capable of self-government.

President McKinley and Admiral Dewey said that the Philippine people were as capable of self-government as the Cuban people, yet we gave the Cuban people their independence long since, but up to this time we have failed to do our duty by the Philippine people. They have continued their efforts for independence. We have just listened this day to a most remarkable speech made by the Commissioner from those Islands, Mr. Quezon. They have not ceased during all these years to con-

tend for the very things for which our forefathers contended when they were fighting for the establishment of this very Government of ours.

The Democratic Party in four national platforms promised these people their independence, and now it is high time we were keeping the plighted faith by complying with those platform promises made to those people. President Wilson is doing his full duty, and the administration is doing its full duty, in pressing this measure, and now it is up to Congress to perform its full duty in the premises. Those islands have cost much treasure of men and gold. Many a boy has fallen victim to some of the many deadly maladies which are prevalent in those islands; and as for myself, I would not give one manly, courageous Missouri boy for the whole archipelago, so far as the material wealth is concerned; and the mothers and fathers who have lost their boys in this service no doubt feel more keenly upon the subject than I possibly can.

The chairman of the Committee on Insular Affairs, Mr. Jones, of Virginia, says that we have spent, first and last, around \$1,000,000,000 upon this foreign possession of the United States, and that the yearly cost to us is something like \$40,000,000. Think of the enormity of this cost! While we may have rendered the people of those islands some service, our retention of those islands to-day and the contention made by the people of this country for the retention of those islands is not predicated upon a desire to serve those people; neither is it for the glory of

this country.

The cost annually of maintaining them represents nearly \$1,000.000 to each State of the Union, but, Mr. Speaker, over and above the monetary consideration, I call attention to the military aspect of the question. You can not interthe military aspect of the question. You can not interview a military man anywhere or any other person who is familiar with the situation but who will say to you that the Philippine Islands are our most vulnerable spot; that they constitute our great military weakness and that if we maintain them we must maintain larger military forces both of the Navy and the Army. Now what do we find in connection with this measure? We find the section of our country that is clamoring the loudest for military preparedness is likewise insisting upon us keeping the islands. They tell us that our Navy must be made much stronger in order to retain them, and then when the opportunity is presented to them to grant those people their independence and rid ourselves of this tremendous liability these same people—these representatives are almost solidly against such action. It reminds me of the arguments and statements made upon this floor concerning the building of the Panama Canal. The people of our country were told that by digging the canal we could reduce the naval expenditures one half because our Navy could be passed through the canal from ocean to ocean, but since the digging of the canal the same fellows tell us now we must have a larger Navy and Military Establishment because we have the canal

This talk of hauling down the flag is a sham and a pretense. The real cause can be seen on the surface upon close investigation. You want those islands and people to make profits to protect the bonds which were bought by the banks of this country for 40 cents on the dollar and to exploit those people generally. It is the profits you hope to make out of them, and the honor to this country and the service to those people are the last considerations you give the question. Of course the Republican side is standing solidly against this bill. In that I am not surprised, but I am indeed both surprised and sorry to see a few of the Democrats from a few of the Eastern States standing with the other side upon a question which means human liberty to ten or twelve millions of people.

The Philippine Bill.

EXTENSION OF REMARKS

OF

HON. RICHARD OLNEY, 2D,

OF MASSACHUSETTS,

IN THE HOUSE OF REPRESENTATIVES,

Monday, May 1, 1916.

Mr. OLNEY. Mr. Speaker, upon May 1, 1898, Admiral George Dewey with a powerful fleet of American warships sailed into Manila Bay, sank a squadron of Spanish battleships and cruisers, and the sovereignty of Spain in the Far East came to an end.

Upon May 1, 1916, 18 years afterwards, the Sixty-fourth Congress of the United States discussed for 12 hours the Clarke

amendment to the Jones bill, providing independence for the Filipinos in not less than two nor more than four years, sub-

ject to the discretion of the President.

In the Democratic caucus preceding the debate in the House I was one of several Democrats to raise my voice against the so-called Clarke amendment. Hoping and trusting that the time may come when the Philippine Islands will receive independence, but believing that the United States Government can not consistently and honorably fix a definite time when the Filipinos are capable of self-government, that our national honor is at stake, that our flag unsullied must remain unsullied, that as a Government we must retain our self-imposed guardianship over our adopted child in the Far East, and that we should not relinquish it to be preyed upon by other nations more rapacious and less charitable, I am proud to have been a part of that decisive majority which voted on the memorable and historic night of May 1 to strike out from the Jones bill the Clarke amendment.

If the Clarke amendment had been adopted our flag would no longer wave glorious and unstained, a blot would have appeared upon our escutcheon which centuries of time could never have effaced, and we would have departed from American ideals of

justice, honor, and humanitarianism.

I beg to introduce the following letter from Richard L. Gay, secretary of the Massachusetts Board of Trade, in which are included the constituent Business Men's Association and Boards of Trade of Abington, Dedham, Norwood, Quincy, Rockland, Stoughton, Weymouth, and Whitman:

MASSACHUSETTS STATE BOARD OF TRADE, Boston, April 28, 1916.

Hon. RICHARD OLNEY, 2d, Washington, D. C.

DEAR SIR: At a meeting of the Massachusetts State Board of Trade, in executive council, held April 26, 1916, the following preamble and resolutions were unanimously adopted:

resolutions were unanimously adopted:

"Whereas there has been introduced in the United States Senate an amendment to the Philippine bill, termed the Clarke amendment, which calls for the full surrender of all responsibility and control of the Philippine Islands in from two to four years from the passage of the act, and this bill is now before the National House of Representatives; and

"Whereas it does not appear that the United States can at this time with justice to the Philippines or to the United States, surrender the obligations and duties assumed or set any definite date for such action: Be it

"Resolved, That the Massachusetts State Board of Trade hereby expresses its belief that it is unwise and premature to attempt to set a definite time for turning over the government of the Philippines to the people of these islands until these obligations are more fully completed on the part of the United States, and at such time as may appear to be to the best advantage of the peoples most concerned; and be it

further "Resolved, That a copy of these resolutions be sent to our Representatives in Congress by the secretary."

RICHARD L. GAY, Secretary.

Live-Stock Markets.

Excerpts from statements made for the market committee of the American National Live Stock Association at the hearings on the Borland resolution, Washington, D. C., April 3-6, 1916.

EXTENSION OF REMARKS

HON. DAN V. STEPHENS,

OF NEBRASKA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, April 13, 1916.

Mr. STEPHENS of Nebraska. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I submit the following excerpts:

[Excerpts from the statement of Mr. Walter L. Fisher and others at the hearing before the Subcommittee of the Judiciary Committee on the Borland resolution Apr. 3, 1916.]

AFTERNOON SESSION.

Mr. Fisher. Mr. Chairman and gentlemen, I represent the American Live Stock Association in this matter, and I wish to say at the outset that, as Congressman Borland has already stated to you, that association was not in any way responsible for the introduction of Congressman Borland's resolution.

Mr. Carlin. Will you tell us at the beginning what your association is comprised of:

Mr. Fisher. The American National Live Stock Association, Mr. Chairman, is the national organization of the live-stock interests of the United States. There are in that business or industry what there are in most other lines, local organizations, district or State organizations, and a national organization, and the live-stock producers are organized in that way.

The facts that I have enumerated, the fact that the animal is to be treated in that way, adds immensely to the complications of the busi-

In addition to that, however, when you come to send the animal to market you have not an inert product; you have something which not only is perishable because of the fact that it is a living organism, but you have something which must be shipped alive and kept in good condition until it is disposed of. The result is that cattle that are sent into these great central markets which have originated and have been established throughout the country can not be kept any great length of time. They not only deteriorate physically, as has already been told you, but they involve a very considerable expense in their care and keep, and when disposed of they must be slaughtered promptly. The packer or the slaughterer, whoever he may be, can not afford to keep them. He must kill them comparatively quickly. Some of the products must be quickly disposed of. The bulk of the beef products must be quickly disposed of. The bulk of the beef products must be quickly disposed of. The bulk of the beef products must be quickly disposed of time.

But the development of this industry has progressed in the development of by-products, and we are told by many of the packing interests that they are making their profits on the by-products. The producer of the sieer is unable to see where his interest is at all affected by the fact that the profit is made on the horns and the hoofs or the hide, as contradistinguished from the roast beef and the beef steaks that come out of the same animal. One of their great causes of complaint is that the producers have not such a knowledge of the business nor has the public such a knowledge of the business as enables it to determine with any degree of intelligence at all just exactly what the financial operations of the packing concerns are, just why it is that certain things are charged to one item and other things can be produced to the same animal. One of their great causes of the business at the development of the interest of the produce of the

commission of that kind in Australia; so that the question is one of growing magnitude.

They see these profits increasing, and they are not much concerned with the question as to how it is gotten at, whether, when they divide the total product, they find that there is only a fraction of a cent on a particular unit. They are interested in the gross net result. They look at the total business, and they find that many of the concerns and individuals engaged in ralsing these animals have made very heavy losses. They look at the situation such as now exists in this country, where they compare the prices on the current market during any particular period of time or during a particular year, as, for instance, the year 1915, with previous years, and they find that in spite of the fact that there is an abnormal demand, a demand which has been created by the European war and the conditions growing out of the European war; that nevertheless, according to the statistics which they have compiled, the producer of meat products has received less for his product than he did before, and that the only claim by those who take the most optimistic view of it on the part of the packer, as, for instance, the annual report of Swift & Co., is that they have paid a slight increase, an exceedingly slight increase, over previous years. The basis of those statistics that are behind that claim we know nothing about, and the producers of beef know nothing about it. They have no opportunity to analyze them whatever. They are not being analyzed by any representative of the Government, and the result is the natural result that you would expect to find under those circumstances, a constantly growing discontent on the part of the producers of meat products in this country—producers of the animals from which the meat products are manufactured.

Even if that were all there was to it, it would be perfectly apparent that one of the things that ought to be done, and done guickly, is to

this country—producers of the animals from which the meat products are manufactured.

Even if that were all there was to it, it would be perfectly apparent that one of the things that ought to be done, and done quickly, is to have a thorough-going, searching investigation of the conditions, if only for the purpose of making it clear that the discontent is not well founded. Let us assume that everything that may be said on this subject is true, there can be absolutely no controversy about the fact that the producers of meat animals in the United States are at present thoroughly dissatisfied with the conditions that exist with regard to marketing their product. That is manifested in very many ways, but for the present I will confine myself to what has been done by these associations. There will be placed before you resolutions which have been adopted in meeting after meeting of the State and local organizations of the live-stock producers, and the resolutions of the American National Live Stock Association.

For some years clients of mine who are in this business and others who are not clients, but who have talked to me about it, have been talking to me about the importance of having a real investigation. They do not believe that the investigations which have heretofore been made have been real or have gotten at all to the bottom of this thing. Nor do they believe that the methods which have been applied in the attempt to cure such abuses as did appear in those previous investigations have been sound, and they have urged the undertaking of some sort of an investigation. I have said to them at all times that, in my opinion, it was perfectly futile to undertake an investigation of this matter unless they meant business, and meant to go to the bottom of it: and finally, within the past few months the American National Live Stock Association passed resolutions as the result of a report of a special committee on this subject. They have undertaken to do what they can to secure just such an investigation. They have appo

Mr. Carlin. In what branch of the business is he engaged?

Mr. Fisher. I should say that he is engaged in every phase of the business, from the production of the cattle up to the final marketing. It is the Haggin & Tevis organization that he represents, one of the very largest in the business anywhere in the world.

Mr. Carlin. He is not a packer?

Mr. Fisher. No. I do not represent, nor does the American Live Stock Association in any way represent, the packing interests. They represent the producers. Mr. A. E. de Riccles is a very large dealer in live stock in a variety of ways, located at Denver. Mr. Burke, of Omaha, Nebr., is primarily concerned in the feeding and marketing of cattle. Gov. Kendrick, the fourth member of the committee, is the governor of Wyoming to-day and, as I understand it, a large producer and feeder of cattle. Mr. I. C. Pryor, of Texas, is one of the largest cattlemen in that State, which is so largely devoted to the cattle interests.

interests.

Mr. Carlin. You have had a large experience in public affairs and considerable experience in this matter. What do you think is the

Mr. Carlin. You have had a large experience in public affairs and considerable experience in this matter. What do you think is the remedy?

Mr. Fisher. If I were able to tell you with absolute confidence at the present time, I would tell you without any hesitation, but I think, Mr. Carlin, that that is the real question that we are to get at, What is the remedy? In order to determine what the remedy is, the very first and all-essential thing is a comprehensive study of this question. We can not tell what the remedy is until we have really determined what the conditions are, and what the facts are, and that is exactly what I have been telling these people.

Mr. Nelson. Your present purpose is, then, to ascertain facts for the purpose of prosecution under the antitrust law?

Mr. Fisher. Not at all. I have said to them, and I have said to the Department of Justice of the United States, "If there are specific infractions of the law, of course the Department of Justice ought to prosecute them. If there are cases where violations of the law are suspected to exist, but it is not known whether they do or not, of course it is the duty of the Attorney General to investigate and then act according to the development of the investigations." But the first thing is not to prosecute; the first thing is to ascertain what are the facts, what is going on in this business, and then use prosecution, except for punishment of past offenses, only as a means toward constructive results.

Mr. Carlin. As to the profits in the business, I think it is admitted that the producer is making a profit.

Mr. Fisher. It would not be admitted by me or by my clients. In some instances yes, and in other instances no. It would be possible, unquestionably, to call breeders of cattle before this committee, or before any other Investigating body, and show that that particular man made a good, round profit. It would be possible to produce perhaps, before the same committee, those by whom it would be demonstrated that they had made losses, and the cause

Mr. Carlin. Now, as to the feeder; where does he get the benefit of the competition?

Mr. Fisher. Unfortunately, he does not get it. That is the difficulty. The leeder must sell his finished product when it reaches that stage in its development where you cross the divide—where after that, although he may carry the animal, the food which he gives him ceases to be increasingly profitable to him. He reaches a point, when the animal has been matured to a certain stage, where it is the best thing to sell the animal—the animal is ready for manufacture into meat. After that, although he may be fed, although his weight may possibly be increased, and although the feeding which is done after that time may not be a total loss, nevertheless it ceases to be relatively profitable from that time on, and therefore he reaches a point where it is advisable from every point of view—the consumer's as well as the producer's—that that animal should be sold and slaughtered. What does he do with it? He must dispose of that animal, and he must dispose of it to comparatively few concerns. That is just where the first inquiry comes in, What is the percentage of the total live-stock business of the United States that is carried on by the five large packing concerns? If we can ascertain that fact, we can determine at once what the competition is that the feeder has for his stock.

What the competition is that the feeder has for his stock.

Whether the figures that will be presented to you are accurate or not, they will serve by way of illustration, and as the discussion proceeds it will become increasingly apparent to you that, if they are not accurate, one of the most important things for you to get is accurate information upon this subject—information of such official character that there can not be left any reasonable doubt on the subject. That is important. It is not necessary to draw any of these inferences. I am not drawing inferences. I do not think it is important for this committee to know any more than the fact that there is this discontent—that there is this information or misinformation existing in the country which leads to the discontent—and that therefore it is absolutely imperative that some official investigation shall be made that will settle the facts, so that the country at large and the producers of cattle included will know what the facts are in connection with their business. They do not know now.

Mr. Carlin. Have you examined the report made as a result of the conference in Chicago?

Mr. Fisher. It fell to my lot to attend that conference; and the most remarkable thing about that conference was the absence of the packing interests—I do not say they were entirely absent, but relatively absent—and the comparative refusal or neglect to take any part whatever in the discussions

If you will read the account, the document which you have in your hand, which has now been published, you will find that in the early stages of the discussion the most recurrent and important thing that constantly came up was that one speaker after another expressed his regret that they were not given the benefit of having packers' representatives there who were prepared to talk and talk intelligently on this subject. They were not there. When the question of a five-day market was started, some interest was manifested, as you will always find. Let us assume that the packing interests are inno

charges made against them, and that their only interest at present is merely to quiet this agitation, to avoid this discussion or any investigation, on the general plea that it is not necessary, and what they want to do is to avoid any discredit that would come out of the mere fact that an investigation is being nad. You will find under circumstances like this—and more so as you increase toward a consciousness of something wrong in the way they are doing their business—a constant tendency to divert the inquiry outo side lines and side issues, and you will find this manifest in that hearing and the subsequent proceedings. Mr. Brand, of the Department of Agriculture, presided at that meeting, and I have talked at some length with him, and with others in the Department of Agriculture, as I have talked with members of the Trade Commission, and the Attorney General's office, and I think that it is entirely proper to say that there is not any one of them that feels that they have gotten, or in a position as matters now stand to get, thoroughgoing and reliable information on these very important matters.

Mr. McManus. Did they say why they could not get it?

Mr. Fisher. One reason why they could not get it at the Chicago meeting was that there was not anybody present to answer the questions.

Mr. McManus. Do you know whether any of the precises have over

important matters.

Mr. McManus. Did they say why they could not get it?

Mr. Fisher. One reason why they could not get it at the Chicago meeting was that there was not anybody present to answer the questions.

Mr. McManus. Do you know whether any of the packers have ever made any public offers to the Live Stock Association?

Mr. Fisher. It know this, that the other night Mr. Veeder, if you want to know, attorney for Swift, discussed this matter quite informally with me at a meeting which was purely incidental, and said that what the packers wanted was that they should have an investigation that would really settle something, and then have periodical examinations, like a bank examination. I said, "What is your idea?" "Who is going to conduct the investigation?" He said that inasmuch as the publications that would follow would have to be made up by the Department of Agriculture, he thought that was a good agency for the purpose. Let us not fool ourselves or anybody else; the Department of Agriculture can not get to the bottom of this matter. It has not any power. It can not subpean witnesses. It can not examine accounts. I immediately suggested that to Mr. Veeder. He said that the packers would voluntarily consent. Let me say for the interests that I represent that that is not the kind of an investigation we think will be of any use to the country. We want an investigation we think will be of any use to the country. We want an investigation that does not depend on consent. We want an investigation that, if a witness is called in and put on the stand and asked to make a sworn statement, either under oath in an open examination, speaking orally, or on paper, as a result of the written interrogation that is put to him, we want him so that when he answers he will be liable for perjury if he has made a false statement, and that will apply to all the witnesses on both sides, and we will know we will get somewhere.

Mr. Fisher. He is the attorney for Swift & Co.

Mr. McManus. You agree, then, that it is generally under

Mr. Fisher. He is now the president of Morris & Co., being a young man about 23 or 24 years old
Mr. Nelson. As Mr. Morris made this offer, would it include all the packers?
Mr. Fisher. Not unless you assume that they are already so closely bound together that when one speaks they all speak. I do not know what the deduction would be from the statement.
Mr. McManus, If Mr. Morris's offer were not sufficient, would it be any use for others to make the same offer?
Mr. Fisher. Yes; it would be of use; but it will not divert the people whom I represent from their determination to get a more searching and satisfactory and conclusive investigation to get a more searching and satisfactory and conclusive investigation to get a more searching and satisfactory and conclusive investigation to have the Investigation by the Federal Trade Commission?
Mr. Taggart. You are here in support of this investigation, to have the Investigation by the Federal Trade Commission?
Mr. Fisher. I should say this—I want to answer you with absolute candor; When this committee that I represent was appointed, and when I was retained as counsel, Mr. Bolland's resolution was not before the House We had been studying the question, and our first study is as to how we think the investigation can best be made. We are not entirely clear that the Federal Trade Commission can make such an investigation in this matter as will be final and satisfactory if it acts only by itself, but we do believe that the Federal Trade Commission should make an investigation, and to that extent we are in support of this resolution. We hold the Congress of the United States responsible to us and to the public, including the packers, and we do not want anything that I say or that any of the representatives of our association says to be understood as in any way closing the doors to that investigation which, when all these departments and agencies of the Federal Government have acted, we may think it is still necessary to make in order to get results. Your attention has already

and, second, on the amount of time and energy they are able and willing to and do, in fact, put into the investigation. We believe they ought to investigate, and we believe that they are an effective agency to investigate, as compared with the Department of Agriculture, for instance, but we do not want it understood that that means that the Department of Agriculture should not go ahead. Quite the contrary. This question is a fundamental question of law and economics, and it has got to be studied from both sides. The Department of Agriculture has got to be studied from both sides. The Department of Agriculture has got to keep on, and it has to have more money and put more power in the elbow back of the economic investigation which the Bureau of Markets is making. They are doing first rate as far as they have gone. They have limited money and limited men, and they are doing well. But they get only what they get voluntarily. They get only what the packers see fit to give them and what they can gather together and digest effectively with the force they have. I have sat in conference with these men, and they are, as we believe, sincerely interested in working this problem out to a right solution. They say, "Yes; we can get a certain amount of information, but there are other parts that we can not touch. We have no power to subpena; we can not issue an order; we can not do what the Federal Trade Commission can do." On the other hand, they are studying the economic conditions in relation to marketing, not only in this country but abroad. That would be of immense value in a constructive study of this whole matter, and that is what we want. We are not interested merely in punishing somebody for what he has done. We shall continue the first place, where we want to cure the wrong methods. Take, for instance, a question that has been raised here before you this morning: Ought the packing concerns to be the owners of and in control of the terminal facilities and stock yards of the country? Ought they to be? For my part, wit

alties.

Mr. Fisher. It may lead to both; probably will lead to both. If they find that there have been within the statute of limitations—that is, before it has run, and where there are no immunity baths—violations of the law, of course they will report them to the Attorney General, and I presume the Department of Justice may prosecute, but of far greater interest to us than any prosecution by the Attorney General is the light that will be thrown on the question of what steps, if any, ought to be taken to make it impossible to repeat these violations, aside from purely punitive steps. We might put everyone of the officers of any one or all of these packing concerns in the penitentiary, let us say. I do not say that they should be there—far from it. I am not making that suggestion.

Mr. Meeker. I am glad of that.

any one of all of these packing concerns in the penitentiary, let us say. I do not say that they should be there—far from it. I am not making that suggestion.

Mr. Meeker. I am glad of that.

Mr. Fisher. I do not know; but let me say this, that when they are cleared by an immunity bath, when they are let out of a criminal prosection, not on the grounds of innocence, but because of the fact that they have, by answering certain questions, secured for themselves immunity, it does not carry conviction to the producing nor the consuming public in the United States.

Mr. Meeker. We have had one since.

Mr. Fisher. I understand. But the question, as you know and I know, Mr. Meeker, is the question of the difficulty of proving that violations of the iaw have occurred, even where they have occurred, even where you are morally certain of it. The difficulty is in proving the fact in a criminal court, with the presumptions in favor of the accused. I am not attempting to get back of it; I am not attempting to intimate that in that particular case the result was not justified. I am merely saying that prosecutions of that kind do not even tend to remove the feeling of discontent that prevails in this great industry, and it spreads all over the country.

Let us see for just a minute what is the history of this thing. Let us take some of the concedea facts, not statistics, but some of the broader facts. It is true that some years ago, following the Garfield report, the Department of Justice believed that these gentlemen, the large packing concerns, were in an unlawful combination, and that they were prosecuted, and that they were released at that time because of the plea of immunity. It is true that a subsequent prosecution occurred which resulted in their acquittal on those particular matters. It is true, however, that during the same period the National Packing Co. was formed, which was formed for the express purpose of taking into one ownership the then existing competitors of the large packing concerns, and that is conceded

they could not. They divided the National Packing Co., not among its original holders; they did not bring back into the business any of the concerns or individuals who had previously been engaged in coappetition. They merely divided it into so many units among the existing combination; that is to say, the combination which had confessedly previously existed. So that the remedy that was applied in the dissolution of the National Packing Co. was the remedy of restring competition, not between the large packing concerns and independent manufacturers, but between the members of this group of large packing concerns.

facturers, but between the members of this group of large packing concerns.

We have tried that in several other instances. Do you gentlemen know of any instance where it has succeeded? Take the Standard Oil Co. or the National Tobacco Co., or any of the concerns that have been dissolved in that fashion. Do you know any place where that remely has been applied and actually in practice has been found to be successful? If you do we would like to know it, because it is entirely indifferent to us what kind of remedy we get, provided we get a remedy. We do not want anything that is not a remedy, to try to fool ourselves and be fooled by it. What happens? We find these concerns growing, and growing in substantially the same proportions. We find them doing not exactly but substantially the same relative amounts of business of the total amount done by this group that they did before. It is so easy for them to act together upon merely the general understanding that they shall do about that percentage of the business. If there are a few cattle in the yards in Chicago at a given date and it is understood that out of that number of cattle Swift will take about so many, Armour about so many, Morris about so many, Salzberger & Sons—now, passing under the hands and control of a group of bankers, and the active management of Mr. Wilson, formerly with Morris & Co.—if we find that they buy just about the same number, or at the end of the year that they come out about the same mumber, or at the end of the year that they come out about the same many here of you gentlemen were starting out and it was understood you were to buy about one-third each, or one one-half and the other two one-fourth each, of the stock that was there, just by knowing each other's relative purchases you would know where you would come out and if you had some common understanding to that effect you would know just how far competition would go, would you not?

All those 'chings are helpful, but the real problem remains down at

All those things are helpful, but the real problem remains down at the bottom. What I have said fully illustrates the unsatisfactoriness of merely coming to the conclusion, even though it be justified by the record, that there has not been an act performed which can be punished under the criminal code. What we want to do is to get away back and beyond that if we can. We want to find out how these things are. For instance, there is a very interesting question as to publicity that goes along with this thing. Are the avenues of publicity controlled by the packing concerns, or are they not? It is alleged and believed by the stock people of the country that the agencies of publicity are controlled by the larger packing interests. They believe that they are interested—in fact in many instances they know, by admission or otherwise, that they are interested—in the trade journals that are published, and that information as to market conditions is thus at least tainted at the source, or may be tainted.

Mr. Carlin. This resolution simply provides for an investigation to

Mr. Carlin. This resolution simply provides for an investigation to ascertain whether there has been any violation of the antitrust law. It has been stated here by somebody that a special investigator from the Attorney General's office has been proceeding for six weeks to make a special investigation and ascertain whether there has been a violation of the antitrust law. Mr. Fisher's position—which looks to make a special investigation and ascertain whether there has been a violation of the antitrust law. Mr. Fisher's position—which looks to me to be a very logical one—goes far beyond any such proceeding as this and treats it as an economic proposition, and says that the commission ought to ascertain just what the economic situation is so that we may, by legislation, remedy that. The criminal statutes will apply to those who have violated existing law; but his position, as I understand it, is that an additional law may be needed to remedy the economic situation, which this resolution does not touch.

Mr. Borland, I have no pride in the terms of this resolution, no pride of opinion whatever. But I was pointing out just a minute ago the fact that if the investigation is committed to the Federal Trade Commission, they have three powers. They have not only the power that is expressly given to them to investigate violations of the antitrust law, which would be criminal, but they have the power to proceed civilly to compel corporations to cease and desist from unfair practices, and they have the power to recommend legislation to Congress. Having the basis before them of an investigation which we believe is the most thorough investigation we now have within sight—within reach—they could recommend, and we hope they will recommend, some constructive legislation. I have no pride of opinion as to the terms of the resolution.

Mr. Borland, The first thing to do is to impress on this committee.

Mr. Borland. The first thing to do is to impress on this committee or commission the necessity of finding some remedy for this situation, and I am satisfied that the committee, myself, and other Members of Congress can find a way to put the activities of the Government to work. I am satisfied we can find the way.

Mr. Borland. I am not going to take any more of Mr. Fisher's time. I just wanted to clear up this question which the committee asked me. But I thank Mr. Fisher for permitting me to break in on his remarks. Mr. Fisher. This is your hearing, not mine.

Mr. Doolittle. I should like to have an expression from Mr. Fisher, representing the live-stock interests officially here, on that exact question, because the resolution which I have introduced, and which, by a strange coincidence, was introduced the same day that Mr. Borland's resolution was introduced, did direct a special investigation committee of Congress, as you have just suggested, and that went to the Committee on Rules, by a strange coincidence, instead of to the Committee on the Judiciary.

Mr. Carlin, Mr. Fisher, I am directing my remarks to the question of procedure. Assuming that the question is of the magnitude that you and those whom you represent think it is, what is the best method of procedure to get before Congress an intelligent idea upon which to form a rule of action for the future as to whether these men have been guilty of a combination? That is a matter that would be taken care of by statute, and is taken care of by statute; but how as to help the producer of beef, the feeder of beef, to get a proper price for his cattle is, after all, the real question that I am interested in, and I think the country is interested in. Therefore, on the question of how to proceed, I should like to hear you.

Mr. Tearms. On the question of procedure I do not rest fully qualified to answer for reasons that I study will be apparent to ryan. It depends entirely on the question as to which agency is in a better position, as a matter of fact, to give time and attention to this matter. As I have smitter of Congress.

Mr. Cartis. Or a commission.

Mr. Tearlis. Or a convertise field.

Mr. Tearlis. Or a commission.

Mr. Tearlis. Or a convertise field.

Mr. Tearlis. Or a

trative agencies as we are—and say, "Gentlemen, there are some phases of this thing that none of these agencies has gotten at the bottom of, and we want you to tackle it." It may be that some of them will not pursue the course that we would like, and it may be that some of them will not pursue the course that the packers would like, and they want to come and tell you so, and they ought to have the right, and we ought to have the right, to do it. Let us use every agency we have to get all the facts we can, and let us give them the money to get them. I know that the Department of Agriculture can not do this work effectively without more money, and the great benefit of passing this resolution, if you pass it, will be, as Congressman Bonlaxb has said, that having said, in your opinion, this is a subject that ought to be investigated, Congress will feel under a moral obligation, if not a legal obligation, to provide the necessary funds. I say that because it has been said that this Federal Trade Commission could take this thing up anyhow on its own initiative. That is not so clear. They can take up some things. The language of that statute has never been construed. It is a new statute, and it is a question whether, if we branch out into some of these inquiries, they have the power of initiative, if somebody comes in and complains because of unfair competition.

Mr. Fisher. Let us suppose that is true—but I question it—I am not interested in the margin of profit, if the gross results are highly profitable, and if the methods by which the business is carried on are objectionable, and particularly if in the effort to extract from the goose as many golden eggs as possible they are impairing, or in danger of impairing, the health of the bird. That is what we are afraid of.

Mr. Mekker. Is not the question of whether the right fellow is getting any margin or profit?

Mr. Fisher. Surely. The most significant thing about this whole subject would be a series of charts showing, on the one hand, the fluctuations in the price of live stock, and, on the other, fluctuations in the price of meat. The one will go along with a wavy little line like that indicating], and the other will be all peaks and depressions. A chart showing the fluctuations in the price of live stock has been prepared, for instance, and published in the Wallace Farmer. Take pork products. This is published in what is regarded by many of the leading agricultural papers of the United States. It is really one of the most interesting things you can imagine. I have some of these charts here. Mr. Burke will explain them to you.

Mr. Fisher. Where do you get these figures?
Mr. Merker. These are from Armour & Co.'s records of 10 years ago. 1905.

Mr. Fisher. What is the difference?

Mr. Meeker. It is the average live price paid for all grades and kinds of cattle by Armour & Co. for the year 1905, 4.60; for the year 1915, 7.16; I will read it to you by years:

	Cents.
1905	4. 60
1906	4. 72
1907	. 5. 11
1908	
1909	. 5.47
1910	. 5. 06
1911	. 4. 93
1912	. 5.82
1913	. 6.88
1914	. 7. 12

The highest year was 1915, 7.16.

Mr. Fisher. Those figures would not interest me at all unless I had an opportunity to check them and test them, and if they proved to be as you stated, as being the prices paid by Armour & Co., I would want to know what other packers paid. I find, for instance, a most interesting difference between the figures, in the prices Swift & Co. and certain of the other packers pay. They do not seem to libe. I undertake to say to you that the supposed margin of profit on the handling of cattle that the packers are supposed to make per animal or per hundred pounds has been stated as many as four ways in four statements by men who made the statements, they claiming to be as certain about their figures as Mr. Merker as about his. Mr. Merker does not call attention to the difference in the price of corn.

Mr. Fisher. Before you leave, gentlemen, let me hold up and show you a diagram prepared by the Wallace Farmer. I thought they had not gotten to cattle, but it seems that their last diagram is on cattle. It may interest Mr. Merker. The line here is the line they estimate to be the line above or below which there is a profit or loss; that is to say, the sales above show a profit and the sales below a loss. What I told you about mountain peaks and canyons you can see there. Look at this price here. That is all in one year. Up to this point at one time and down to this point at another and back and forth, all within the period of a year, seesawing back and forth. The average price of commodities is shown through the center of the diagram. I do not know whether it is accurate. I know it is made by an intelligent organization that is trying to get at the facts for its readers, and I say it illustrates the importance of having an investigation, so that when we get through with it we will feel we have gotten something, and we can take the materials and build constructively. If it is necessary to prosecute, the prosecution, in my opinion, ought to be a means to an end of getting constructive result

of the feeders and their figures?

Mr. Fisher. Certainly. As far as I am concerned, this investigation could go as far as you like, and I would like to see it start with the cattle down where they produce and wind up with the meats that are sold to the consumer. Read the testimony of the Master Butchers' Association as given before Mr. Brand and hear what they have to say about it. They do not understand why these violent fluctuations in prices for cattle on foot go on and the price of beef goes along just a little up and and just a little down. They do not understand why they do not come in contact with this change in demand that causes these fluctuations. They are told it is some mysterious thing. This combination of all the information that flows into the packing houses and the packing offices in Chicago from all the little markets

in the country, therefore you can not put your finger on it and you can not analyze it. We want to analyze it. We would like to know whether it is true. On the face of it, it does not look right to us.

an not analyze it. We want to analyze it. We would like to know whether it is true. On the face of it, it does not look right to us.

Istatement of Edward L. Burke, representing the market committee of the American National Live Stock Association, at the hearing on the Borland resolution at Washington, on April 3, 1916, before the Judiciary Committee of the House of Representatives.]

Members of the Judiciary Subcommittee and gentlemen, House Roll No. 148, known as the Forland resolution, gave expression to what has been vaguely in the minds of thousands of people for many years. It involves the question of the meat supply of the Nation, a subject of such tremendous importance that it should be understood by all, but unfortunately no subject of equal importance is as little understood by the average citizen. The Department of Commerce ranks the slaughtering and meat-packing industry as first in this country. On no other theory than the lack of clear and definite information on the part of the public can the present condition of the live-stock and meatindustry be explained. The producers have been too widely scattered to have any effective organization or any voice in the shaping of the industry, the public are too uninformed. For many years the only effective and organized force has been the buying interests, and they have shaped the course of the Industry with no one to interfere. In doing so they have thrown over it a cloak of mystery and darkness, which accounts for the ignorance of the public. Now that the situation has become intolerable there is a demand that the cloak be torn away and the white light of publicity turned on.

In this statement we shall attempt to bring out only the prominent features of the live stock and meat situation as they relate to the five large packers, viz. Swift & Co., Armour & Co., Morris & Co., Sulzberger & Sons Co., and the Cudahy Packing Co., whom we shall hereafter the garnel as the packers, features which stand out so prominently that they almost knock one down.

A widespr

"Time was I shrank from what was right,
From fear of what was wrong;
I would not brave the sacred fight,
Because the foe was strong."

Never were truer words said when applied to conditions at the live-

Recause the foe was strong."

Never were truer words said when applied to conditions at the livestock markets.

For the sake of brevity we shall not attempt to go into detail. The subject is so large and so complicated and has so many ramifications that it would take days to run them all down. In the hope of making it simpler and clearer I am attaching to this statement a small drawing, a copy of which I have placed on the wall. Consider the entire livestock industry and meat industry as represented by two bottles with a long, narrow neck or passage connecting them. The left-hand bottle represents the supply. The supply is divided into two parts, representing the grower, on the left, and the feeder, on the right. Next to the feeder is the narrow neck, which is his only outlet, and which we will call the "ultimate consumer." It is as easy for a camel to go through the eye of a needle as it is for the feeder to get through that narrow passage called the neck of the bottle without being squeezed. It requires no strategist to see that the narrow passage is the coign of vantage, and that he who controls it can name the amount of toil. As long as the present system lasts so long will this point be the crux of the situation. The neck of the bottle contracts or expands in proportion as the competition is small or great. If competition does not keep this passage open, then the only recourse the feeder has is to call in disinterested outside forces which are strong enough to keep the current moving freely from left to right. Publicity and Government regulation might be able to do this. The producers now feel that the time has come when, for the good of themselves and the consumer, one or both of these forces are absolutely necessary. In the statement which we have to offer please note carefully the position of the various factors with reference to the bottles, as it is all important. We shall try to show you the congestion at the narrow passage and its bad effects.

The producer has only the commission man stationed ther

Taking these points up in the order named above for more detailed discussion, we shall handle Nos. 1, 2, and 3 together, as they are so closely connected.

The rapid concentration of the slaughter and distribution of meat animals in this country and South America into the hands of a few men is the feature which most distributs the producer and which he feels needs the most careful investigation. A simple statement of the feels needs the most careful investigation. A simple statement of the feels needs the most careful investigation. A simple statement of the feels needs the most careful investigation. A simple statement of the feels needs the most careful investigation. A simple statement of the feels needs the most careful investigation. A simple statement of the feels needs to a sufficient the feel statement of the feels needs to sufficient. Less than 20 years ago the working capital of the feel statement of

"Of course they could have paid a higher price for cattle had they so desired, but they could also have bought them much lower if they so wished."

so desired, but they could also have bought them much lower if they so wished."

Emil Ingwersen, with Rosenbaum Bros. & Co., at the stockyards, Chicago, and for 16 years next to the head buyer for Swift & Co., writes me under date of February 17, 1916:

"Your paper (referring to an address at Wichita, Feb. 9, 1916, by E. L. Burke', deals directly with price control and elimination of competition. These are undoubtedly two of the main factors that bring about the unsatisfactory market conditions."

T. J. McCrosky, commission merchant of Kansas City, representing the Kansas City Live Stock Exchange, in the hearing at Chicago, November 15, 1915, before Charles J. Brand, Chief of the Office of Markets, United States Department of Agriculture, says:

"Personally, all I have or hope to have I would not be afraid to leave to any one of the packers Individually, but when it comes to dealing with their corporate power, a power which they have concentrated unto themselves so that they can dictate what they shall pay for our goods, that is all wrong. How are, we going to correct It? I don't know, but there has been an insidious and gradual spreading of this power so that the fluctuations that our friend Mercer complained of, of \$1.40 to \$1.25 in two days, was not brought about by supply and demand. If was brought about by that power in the hands of the few instead of being diffused as it was at one time."

Here is another from McCrosky:

"Now, there must be some advantage when men can take millions out of the business and the people that furnish the raw supply are

Here is another from McCrosky:

"Now, there must be some advantage when men can take millions out of the business and the people that furnish the raw supply are many of them in failing condition as Mr. Mercer has stated. My idea is that there should be some way whereby we can build up and maintain a competition that will bring the actual meritorious values of the products of the country on a basis of supply and demand."

J. H. Mercer, live stock commissioner of Kansas and secretary of the Kansas Live Stock Association, at the same hearing says:

"We expect, gentlemen, fluctuations. We expect daily fluctuations at the market centers on our products; but what concerns us is what brings about those violent fluctuations which cause men to go broke in one day. That is the information that we are endeavoring to seek at this time. I do not know, and a large number of men in the State of Kansas with whom I have talked, do not know, and we are here to day

to devise ways and means, if possible, for you who represent other interests of the product to eliminate those conditions.

"There is no panic on, and at this time in my judgment the packers who are here to-day well know that I have written them on this subject that I believe if there ever was a time in the history of man when men ought to be reaping handsome profits, it is now under the conditions that are prevailing throughout the land. I believe it. I may be wrong. I am only a man and have certain opinions, but other products of our country are reaping handsome profits. I can not solve the proposition. I can not give you the information why these things exist, but they do exist and I believe that there are men here, representatives of the packing industry, who can help and I believe they ought to come forward and assist us in eliminating those conditions so that people who are interested in the production of these things can go on. I know hundreds of men in our State, little producers, that have lost their homes in the last three years. Men that handle cattle by the thousands, have lost thousands of dollars, but their resources are able to keep them in the business."

John A. Kotal, secretary of the United Master Butchers' Union of America, at the same hearing, says:

"That we have reason to beleive that there is a discrimination in prices, contrary to the Sherman law, and we recommend an investigation."

J. P. Bowles, a commission man of Chicago, at the same hearing, in

prices, contrary to the Sherman law, and we recommend an investigation."

J. P. Bowles, a commission man of Chicago, at the same hearing, in reply to an inquiry as to the amount of competition on fat cattle at the Chicago market, as compared with 10 or 12 years ago, says:

"I would be very glad to answer Mr. Burke. I will answer him by another little story of the name that he has used publicly here, Doud & Kelfer. I can remember when they bought 239 carloads of cattle in one day. I do not think Doud & Kelfer averaged 2 carloads of cattle a day in 1915, not reflecting on their business."

The chairman asked Mr Bowles whether other competitors had taken their place, to which he replied:

"The number of buyers are very much reduced."

Again, he says later:

"Those that are buying are only buying in small proportion to what they did."

The National Live Stock Exchange, in a pamphiet gotten out Novem-

The National Live Stock Exchange, in a pamphiet gotten out November 1, 1915, and widely circulated, says:

"To-day there are fewer buyers of fat cattle, hogs, and sheep on the public markets of the United States than at any time during the past 20 years."

These are the opinions of experts, practical men in daily contact with the situation. I might go on indefinitely quoting from like authorities, to demonstrate to you the unanimity of opinion on this subject. It isn't necessary to rely altogether on expert advice to determine what conditions are. One has only to visit the markets and spend a few hours on the fences of the sale pens, watching the trading, if he wishes a practical demonstration.

For the past 20 years the firm in which I am interested has been a large feeder of cattle and hogs, averaging about 3,000 cattle per year, and at least that many hogs. As nearly as I can remember, during the past 10 years we have never been able to sell a single load of fat cattle to a buyer outside of the five packing concerns, nor do I recall that we have ever had a competitive bid. Our experience is that of hundreds of thousands of feeders who furnish the Nation with beef and pork.

Fourth, Preparation to suppress competition. We have the highest

recall that we have ever had a competitive bid. Our experience is that of hundreds of thousands of feeders who furnish the Nation with beef and pork.

Fourth. Preparation to suppress competition. We have the highest opinion of the ability of the gentlemen we are discussing. They will admit they are ambitious and farseeing and have built for the future, and we agree with them. Working systematically during the last 20 years, toward their goal, they have evolved a system of preparedness that would do credit to a military genius. The stakes are high and worth playing for. No monopoly is worth much if it can not be protected. What could be simpler, having once gotten a foothold on the narrow neck of the bottle referred to, than to fortify it so that interlopers can not get in; at least, on even terms? The easiest way to do that was to get control of as many of the marketing facilities as possible. The drawing submitted shows what these are. Naturally the stockyards are the most important. Independent owners, in order to increase receipts, would be most anxious to secure competitive plants and would furnish locations for them. We have reason to believe that most of the stockyards at the central markets, terminals, exchange buildings, rendering works, cattle loan companies, live-stock journals, and many farm papers, are either controlled or under the influence of the packers. It seems altogether wrong to the producer that all these facilities for handling stock at the market centers should be under the control of the men who purchase the stock. (See Exhibit I., p. 4, and M.) We think that only men with altruistic characteristics could safely be trusted to occupy the dual position of buyer and owner of the selling facilities. Possibly such characteristics are latent in the gentlemen under discussion. Unfortunately, control of these facilities does not end there. There is a very strong temptation to get into politics and intermeddle with State sanitary boards, with State veterinarians, and live-stock commissions, and a

the markets are:

(a) Not starting to purchase stock until 10 or 11 o'clock, which forces the seller to dispose of his cattle in much shorter time than if the market opened at 8 o'clock, as formerly.

(b) The following of shipments from one market to another for purposes of discrimination—that is, buying for less than market value so as to discourage forwarding—although one of the leading packers at our El Paso meeting said that his firm was no longer doing that.

(c) The manipulation of the market in the shape of violent fluctuations in prices on foot when there is no corresponding fluctuations in prices for the finished product. The declines are more rapid than the advances, and a large proportion of the receipts is bought on the declines.

These tremendous fluctuations over very short periods are the bane of the business, and the producers are not well enough educated in economics to understand why they are necessary with the demand for finished products steady. The cattle market seems to them a veritable will-o'-the-wisp. They want some one to tell them how to catch it before it escapes. The tricks in the trade are many, but time does not permit further detail as to methods. I refer you for this to Mr. A. B. de Ricgles's statement before Charles J. Brand. Chief of the Office of Markets, in Chicago, November 15 and 16, 1915 (Exhibit B), pages 9 to 11, inclusive, and pages 18 to 23, inclusive, and to my statement at the same meeting (Exhibit E), both of which statements we shall file with you. The producers think that the two-day market has been a source of tremendous loss to them and benefit to the packers. In fairness to the packers, we wish to state that they recently signified a willingness to support a five-day market. We shall be glad to have them show their faith by their works.

Sixth. For years the producer has been greatly puzzled about the effect of supply and demand on prices. All his preconceived notions on this subject have been upsef. Unquestionably prices ultimately do respond to diminished supplies and increased demands, as shown in the general advance in prices on all classes of live stock since 1912. But there seems to be an influence and force somewhere which interferes with the free and prompt action of this law. The action of the markets for fat cattle and hogs during 1915 is a fine example. Taking into account the tremendous increase in exports and the decrease in beef imports in 1915 as compared with 1914, the net supply for home consumption during 1915 was 325,000 beef cattle less than for 1914. Conditions in the country, especially during the last four months of the year, were as good or better than in 1914, so that domestic demand should have been at least equally as good. In spite of all this, prices for fat cattle were

of the United Master Butchers' Union of America, covers this point in a statement at the Brand hearing at Chicago, November 15, 1915, as follows:

"We are of the opinion that the relative values charged to the retailers of cut meats, especially in pork, are out of proportion to the cost of live hogs."

At the same hearing Charles D. Deibel, of St. Louis, representing the same union, shows a gradual shrinkage in the retail butchers' profits on beef carcasses from 1894 to 1914 of 25 per cent. He further shows that wholesale prices for beef carcasses weighing 500 pounds advanced 40 per cent from 1894 to 1904. During the same period, according to the 1915 yearbook of the Chicago Farmers and Drovers Journal, the advance on 1,050 to 1,200 pound native steers in Chicago was only 13 per cent. From 1904 to 1914 the advance on 500-pound beef carcasses was 93 per cent, while during the same period, according to the yearbook of the Drovers Journal, the price for 1,050 to 1,200 pound native steers advanced 86 per cent. If the producer doesn't get the benefit of the full advance paid by the retail butcher, the question is, Who does? We refer you to the three-page detailed statement of comparative cost and selling price by Mr. Deibel, marked Exhibit G, pages 32 to 34, and also the 1915 yearbook of the Chicago Drovers Journal, page 48.

Eighth. Perhaps the most serious feature of the live-stock industry in the country to-day is the utter lack of confidence on the part of the meat producers in the market methods of the few men who buy their producet. It is very unfortunate that this fact has been entirely overlooked by the live-stock journals at the various markets and by certain authorities who have recently reviewed the live-stock situation in this country. (See article entitled "Live-stock prospects for 1916" in the Chicago Drovers Journal last yearbook.) Naturally, it is also ignored in the packers' annual statements covering 1915 business, but any summary of the situation which overlooks this attitude of the producer loses

spring.

To be sure, there are other causes, such as soft corn and the foot-and-mouth disease. But the fact that producers had no confidence that prices would be governed by the law of supply and demand caused them to market immature animals last December, January, and February at tremendous losses and at the expense of the future food supply of the

to market immature animals last December, January, and February at tremendous losses and at the expense of the future food supply of the country.

Every household in the land must help pay the bill. It will take more than a temporary advance in prices to restore confidence, mostly owing to unstable conditions in the industry. This country has close to 11,000,000 less cattle than it had nine years ago (with almost 20 per cent more population). Unfortunately for the consumer, there is a prospect of a beef shortage and very high prices. This is one of the times during the past three years when cattle feeders (the few who are fortunate enough to have fat cattle) are receiving fair prices. Present prices, however, are small satisfaction to the great majority who have sold at a loss. What the producer wants is a fairly steady market on which to sell his finished product. He is engaged in a highly useful and legitimate business; but, in spite of himself, he is forced to take greater chances than the ordinary gambler on the board of trade or New York Stock Exchange.

Ninth. One of the most imperiant features of this very complicated problem is the apparent complete indifference of the packers to the welfare of the producers. One would think that they would make it their business to know something about the cost of production and the welfare of those who furnish them with raw material. They appear, however, to have become so absorbed in the building and running of their immense plants that they have entirely forgotten the existence of the producer. No doubt, too, it is natural that men who have been eminently successful should have superlative confidence in themselves and supreme indifference for the other fellow.

Ninth. We wish to make it clear that we have no fault to find with big business and large profits as such, but bulging profits at one end of

the industry and losses and adversity at the other do not go well together. The losses during the past three years have not been confined to any particular locality. They cover the entire corn belt. The statements we have from Mr. J. H. Mercer, of Kansas (see Exhibit G, p. 25), and from 56 feeders in lowa (see pp. 28 and 29, Exhibit A) are merely typical. Thousands of other sworn statements of a similar import from the best beef producers in the country could easily be obtained.

statements we have from Mr. J. H. Mercer, of Kansas (see Exhibit G. p. 25), and from 50 feeders in low (see pp. 28 and 29, Exhibit A. p. 25), and from the best beef producers in the country could easily be a more produced by the country of the country of the country could easily be a more producers in the country could easily be a more producers in the country could easily be a more produced by the carlous resolutions passed during the last three months by many prominent live-stock associations at their annual meetings, including the Corn Belt Meat Producers' Association of Iowa; Nebraska Live Stock Feeders' Association; the Missouri Cattle, Swine, & Sheep Feeders' Association; the Kansas Live Stock Association; the Stock Association; the Real of the Corn Belt Meat Producers' Association and the American National Live Stock Association; and the American National Live Stock Association, at El Passo. All of these associations, representing the very best and most enlightened sentiment west of the Missouri River and including the leading men identified with the live-stock industry, are of one mind and their resolutions are all of similar import, as you will see from copies of them which I shall submit to you. That powerful organization, the National Live Stock Association, at El Passo. All of these associations are all of similar import, as you will see from copies of them which I shall submit to you. That powerful organization, the National Live Stock Association, at the country of similar properties of the stockers. This organization has become so aroused that recently, theolarly through a company of the producers of the stockers. This organization has become so aroused that recently, theolarly through a company and the submit all the data on the subject of price so filter stock. I shall submit all the data on the subject of price control that the exchange has gotten out. (See Exhibit 1.) To realize the importance of this movement it must be understood that the commission men trade every day with the packers' oup

Statement by Ed. C. Lassiter, of Falfurrias, Tex.

[Statement of Hon. Roscoe Stubbs at the Borland hearing, before the subcommittee of the Judiciary Committee, Tuesday, Apr. 4, 1916.]

Statement of Hon, Roscoe Stubbs at the Borland hearing, before the subcommittee of the Judiciary Committee, Tuesday, Apr. 4, 1916.]

Mr. Stubbs, Mr. Chairman and gentlemen of the committee, I did not expect to be bere. You are very fortunate, in view of the fact that I am not loaded up with a two hours' talk. I was appointed to represent the American Live Stock Association, together with some other gentlemen, and I am a member of the Texas Cattle Raisers' Association, and have during the last few years had some connection with the cattle trade and the cattle business of the country. I think Mr. McClure here has presented an argument that is enough in and of itself to settle the whole question of the need of an investigation. I know that there is deep and widespread dissatisfaction with the methods of marketing cattle. The cattle men of the country make great complaint about the idea of having a big run of stock, hogs or cattle, on the market, maybe 15,000 or 20,000 or 25,000, and not a buyer appear until 10 or 11 o'clock in the morning, and then they all come out, Armour and Morris and Cudashy and Swift—the whole crowd comes out—within two or three minutes of each of cert. and they proceed to take the cattle and plaint of that particular thing.

There has been mighty serious complaint and almost a feeling of revolt against the idea of hogs zoing down a dollar or a dollar and a quarter in a couple of days, and the price of hog products staying pretty nearly normal; and that happened, and it has generally happened, when there is a big harvest of hogs coming on in the fall, and the price remains low during the time that the packing houses are filling their plants with bacon and hams, and then the price goes up.

We had two bunches of hogs to sell last year off our little place, a little ranch, and the first lot that we sold were ready for market and had to go, and we lost a good bunch of money on them. The last lot we sold after the prices had gone up, perhaps along in Pebraray. I do not market the stuff from the

body wants them to have, to have a legitimate and a reasonable and stable market for his product.

There is a demand for it. It is a necessity of life. You can not get along without it. And I want to tell you men here that if you would go out on these plains and see the men and the women who live out there for a lifetime, who produce these herds of cattle that supply these markets with beef, so as to know the way they live, you would be willing to use all the agencies of this Government to the fullest extent to protect their rights and their interests. There is nobody that wants to make any charges against any legitimate industry of this country, gentlemen, that can not be sustained by facts. There is nobody who wants to soil any man's character or his reputation for fair dealing and right methods in business. But, gentlemen, we have got the best reasons in the world to believe that these packers have not used fair methods altogether; and I submit to you the records of the State of Texas I have in my possession—not here, for I did not expect to come here at all—but I have in my possession a telegram from the attorney general of the State of Texas, which says that Swift and Armour and Morris plead guilty to forming a trust in the cottonseed business in Texas. They bought up some mills there and contracted, as I understand, the oil, and It has almost ruined a great number of the small cottonseed mill people in Texas, and there was a charge of trust brought against them; and, gentlemen, I have from the attorney general of Texas the statement that these men came in and plead guilty to having formed a trust, were fined for violation of the laws of Texas—and and the deal and the seem owned, according to this telegram, and they were expelled from the State of Texas from doing business in connection with the cottonseed business. If that is not true, I will give Mr. Meekkr a chance to dispute to row, with all due respect, it is not exactly true; and that is a matter of no consequence in this thing, I think. We were fine

Mr. Doolittle. May I suggest, since it has been suggested that it has nothing to do with this, that you show in your statement a connection?

Mr. Stubbs, I will show the connection between the cottonseed mills and the cattle industry.

Mr. McManus, If there is any connection, you might show it.

Mr. McManus, I believe that the National Live Stock Exchange was fined, was it not?

Mr. Stubbs, No; the feeders are.

Mr. McManus, No, sir.

Mr. Stubbs, No; the feeders are.

Mr. McManus, No, sir.

Mr. Stubbs, I wanted to show to these gentlemen here that you were in that kind of business, and if it is not true it is up to you to show that you are not. We have a telegram from the attorney general of Texas, and I believe that he told the truth. If he did not we would be mighty glad to have you prove a clean bill of health on Texas; but I want to state that I bought 100 tons of cottonseed cake and I paid about \$500 more than before you got a hold of those mills there and the price was jacked up. I am perfectly willing to pay the price if it comes in in a legitimate way, but I think these things ought to be investigated. I think, gentlemen, when these packers will come down into Texas and organize this little business off there for the cottonseed-cake mills, and that sort of stuff, it is evident that they have had some experience in the business at home.

Mr. Carlin. What do you mean by cake mills?

Mr. Stubbs. Well, sir, they take the cottonseed and out of it there is a product called cottonseed cake that we feed to cattle, and it is used very extensively all over the State of Texas on the ranches. They can keep cattle alive there through drought and during the winter season when the grass is not very good, and it is a very important product to the cattle business.

Mr. Volstrand. Is that what is left after squeezing the oil out of the cotton seed?

Mr. Stubbs. Yes, sir; it is part of it. I want to say to you gentlemen that it looks like going pretty far when the cattle raisers of this

Mr. Vol.strad. Is that what is left after squeezing the oil out of the cotton seed?

Mr. Stubbs. Yes, sir; it is part of it. I want to say to you gentlemen that it looks like going pretty far when the cattle raisers of this country produce the raw material for the packing houses, and then a good many of them pay 7 or 8 per cent interest on the money they borrow from the packing-house bank, and then the packers go down in Texas and try to get control and a monopoly of the cottonseed cake that we feed to the cattle—it looks like they were getting pretty close under the skin, and there are a good many people down in that country who feel pretty sore about it. I do not have any feeling about that particularly myself. I think that if the cattlemen of this country are not able to get out and take care of themselves they ought to get licked and skinned and have to pay the penalty which they will have to do, but we are coming here to Congress and this is our remedy. And I want to tell you that in El Paso, Tex., where the National Live Stock Association met, and in Wichita, Kans., where the National Live Stock Association met, and in Houston, Tex., there was a unanimous feeling that this thing ought to be gone into and gone into to the bottom, and they passed resolutions in all these great associations—the Texas association represents the owners of perhaps 2,000,000 head of cattle—along the line of asking for relief from Congress. They wanted the fines cut out as punishment, because they feel that they have to pay these fines.

Mr. Stubes, * * I wanted to get back to this question of what these resolutions were in these different places. They were along the line that these fines that the courts have been administering to packers for violations of law were a joke, and that they wanted the

fines cut out and imprisonment substituted. Where people show a disposition to per control of the food reviewed of a control of the food reviewed of a control of people struggling to live, where there are coulding and increase the price of necessities of life, where there are come people jugging with the price of necessities of life, where there are some people jugging with them now, and that they think there are some people jugging with them now, and that they think there are some people jugging with them now, and that they think there are some people jugging with them now, and that they think there are some people jugging with them now, and that they then now the control as the control of the control

Mr. Stubbs. * * But I want to tell you gentlemen that whenever you take any man who looks to cutting down the small profits that have been made in the cattee industry down in the far Southwest desert country he will be making a mistake. You are going to shut out the beef of this country, and I believe that right now, on account of the low prices that have prevailed in the last year, you are going to pay higher prices than you ever ought to have to pay in the next three or four months if you supply people with beef throughout this country, for our feed lots are generally pretty empty. There may be enough to come on from grass, etc., to fill in the gap, but it will not be the first-class, finished beef.

There is a feeling among a great army of feeders, stockmen, that they can not afford to take the chance of losing all the money they have got left by feeding cattle, and consequently Mr. Lanigan told me—and he is one of the best posted feeders and raisers of cattle in the whole country, owns large ranch interests in Texas—that he believes that 40 per cent of the feed lots in Kansas were empty at this time, because of the uncertainty of the markets, and one of the most serious things in connection with this market situation is the proposi-

tion that the price goes away down low when they have got a lot of stuff to market, when of necessity they have to market it. It is not like wheat and cotton in any sense. You can not hold this over or store it. You have got to send it to market and take your profit or your loss, no matter how great it is. Now, I am extending this thing further than I expected to. I want to say that nearly every stockman I know believes that there is a packers' trust; they have an understanding. They do not know anything about how it operates; but there are a good many things, just like a fox would go in on a snowy night and get a chicken and leave the feathers and the neck and the legs there, and you would see his tracks and you would not see him, but you would know that there had been something there, and pretty near know what had been there. They feel that way about this packing-house business. They can see these tracks and the dead carcasses around here and there, and they feel that these circumstances added together are about as conclusive as that one and one make two.

I think that the Texas law is a mighty good law, and where they find

they feel that these circumstances added together are about as conclusive as that one and one make two.

I think that the Texas law is a mighty good law, and where they find that people are abusing their rights, especially in connection with food products, that the Government should appoint a receiver for their plant and take charge of it and operate it; not dismember it, not stop the business. But I want to say to you that if you do take some action of that kind and put some effective remedies into operation in this country, I believe that it would be a mighty good thing for everybody concerned with the feeding business and the packing business and the producing end and the consumer. When these prices get up so high as they are going, some of them now—they tell me that bacon is soaring away up high. Nearly all of this bacon was bought at a low price, with a low price of hogs, and with the storehouses full the price of bacon goes skying. Is that in the interests of the consumer? Does not that keep hundreds and thousands and millions of men from eating bacon who like it just as well as you do or I do? I want to tell you there are two ends to this thing. You have got a mighty serious job here, and I want to see you think seriously about it, and I believe you are going to do that.

I am very much obliged to you for the opportunity you have given me to talk, and I am glad that I came on here to talk to you. I have lad a good time, and I will bid you all good-by, because I have got to get out of here pretty quick.

[Statement of Mr. John Landergin, of Amarillo, Tex., at the Borland hearing, before the subcommittee of the Judiciary Committee, Tues-day, April 4, 1916.]

[Statement of Mr. John Landergin, of Amarillo, Tex.. at the Borland hearing, before the subcommittee of the Judiciary Committee, Tuesday, April 4, 1916.]

Mr. Carlin, Mr. Borland, whom will you have next?

Mr. Carlin, Mr. Borland, whom will you have next?

Mr. Golland, I will ask Mr. Landergin to address the committee at this time.

Will you, Mr. Landergin, tell the committee which associations you represent, your official connection with them, if any, and make such statement as you desire?

Mr. Landergin, Mr. Chairman and gentlemen, I am here to represent the American National Live Stock Association and the Texas Cattle Raisers' Association.

Mr. Carlin, In what part of Texas do you live?

Mr. Landergin, I live in the Panhandle, at Amarillo, Tex., and I am a cattle producer feeder, and shipper. I am thoroughly dissatistic that the producer feeder, and shipper. I am thoroughly dissatistic stock, When I say this I voice the sentiments of hundred of recites and producers in my district, as was shown by them at a meeting of the Texas Cattle Raisers' Association held recently at Houston, Tex., of which association I am vice president. This association represents more than 2,000,000 head of cattle, valued at more than \$100,000,000. The members assess themselves 5 cents per head on the cattle rendered to the association, which will amount to more than \$100,000 for the exclusive use of the marketing committee of the American National live Stock Association which was appointed at the last annual meeting of that associations and the producers of live stock and the few men who buy their products.

We believe that the four or sive big packers in this country who work together as a unit absolutely fix the price of our live stock and also fix the price of our dressed meat to the consumer. They probably will tell you that the fault lies with the retailer. We would differ with them on that point. There are thousands of retailers who compete for the trade with the consumer, and sell for a small margin of profit, and have not g

Mr. Nelson. Did any facts come to your attention that led you to figure on that definitely?

Mr. Landergin. Yes. I could give something in the way of an explanation. I think it was Cadally Packing Co.—one of the representatives of the packers at Wichita—that made the statement that their average on beef sales for the year was \$11.46 per hundred; that was of all beef sold. If the average was \$11.46, they killed thousands upon thousands of cheap cattle as compared to the high-priced cattle and the 1,400-pound cattle represented in this account sales. If the average, including all the cheap cattle that they killed, was sold for \$11.46. I think that if they sold at a relative value, the difference in those animals was worth 14 cents a pound, and if it was worth 14 cents a pound, they have made even more than I have stated, but at \$13 or \$12.50 they would make decidedly more than they have stated to us at our different meetings.

Mr. FISHER. What finally happened to this company of yours, Mr.

Mr. Fisher. What finally happened to this company of yours, Mr. Landergin?

Mr. Iandergin. We went out of business, all right.

Mr. Fisher. What happened to the president of that company?

Mr. Landergin. I think the president of that company was stolen from us by the big packers. The big packers got him, anyway, and when they got him they got our trade with him.

Mr. Nelson. Do you mean to imply they gave him some position? Did they give him a position of some kind in the packing business?

Mr. Landergin. He was a wholesaler of meats in the East; he sold lots of meat down there. I am not thoroughly familiar, as these gentlemen know, with the inside working of a packing house. I was a buyer. I was also interested in the company, but I bought the live cattle. Our company made a deal with this man; that is, we went in with the company and made a contract with the company that we would not sell out to a big packer without giving the company a chance to buy the stock; and we all did that, as a matter of fact, which was a fair proposition, and that if the company did not want to buy the stock he was at liberty to sell to whoever he pleased. After we had been in business a little over a year, the big packer commenced to want to buy so out. There was not anybody in the company who was willing to sell. We were satisfied with the business. Everybody that had stock in the company was satisfied. They offered pretty fair profits on our stock if we would sell to them, and when it was fully determined and they became fully satisfied. They offered pretty fair profits on our stock if we would sell to them, and when it was fully determined and they became fully satisfied. They offered pretty fair profits on our stock if we would sell to them, and when it was fully determined and they became fully satisfied. They offered pretty fair profits on our stock if we would sell to them, and when it was fully determined and they became fully satisfied. They offered pretty fair profits on our stock if we would sell to them, and when it was

bought it is.

Mr. Meeker. Is it operated to-day?

Mr. Landergin. They operated it for a short time and then closed it up. We had a 20 years' lease on the stockyards and packing company and they took the lease and bought our stock at a very small price.

made?

Mr. Morgan. You say you are anxious to have an investigation made?

Mr. Landergen. Yes, sir.

Mr. Morgan. Have you in your mind any remedy? What kind of legislation can we pass to remedy this situation? I would like to have your views about it.

Mr. Landergen. I do not believe I have a concrete idea. That is what we to find out. I know what I personally would like to have. I believe the packers are in a trust, and I would like to have that trust broken so that independent packing companies could go back in the business, the same as they were years ago.

Mr. Carlin. If that is the difficulty, there is plenty of law now in existence to remedy that condition.

Mr. Landergen. I think those are the things we want. That would create more competition. We need competition, but we do not feel like we have had free bidding when we go to market with our cattle.

Mr. Morgan. Do you believe we can create enough packing companies to have real competition?

Mr. Landergen. I certainly do, if there were not any packers' combine. I really do believe it. I think there are plenty of men and lots of capital that would be glad to go into business if they were not afraid to go in for this reason. Really, the way the cattlemen of the country look at it, the big packers are just a gigantic combine or trust; and the result is they are absolutely afraid to go up against that combine or trust; the capital of the country is afraid. I do not believe that I could borrow a dollar, if I wanted to, to go into the packing business. I think the moneyed interests of the country would be afraid to lend it to me, because they would be afraid I would meet the same fate I did before.

Mr. Morgan. Are you not aware of the fact that in this line, as well as many others, that really competition is all a thing of the past, so far as real competition is concerned?

Mr. Landergen. We handle young cattle, although we have them at

Mr. Landergin. We handle young cattle, although we have them at all ages. For this coming summer we will have 10,000 big steers to market—cattle that are going to market.

Mr. Carlin. That is your particular business that handles that much?

Mr. Landergin.

much?
Mr. Landergin. Yes, sir.
Mr. Meeker. Do you find it profitable or unprofitable?
Mr. Landergin. We find it very uncertain. Some years we lose plenty of money, and some years we make money, but on the making side of it for the last three years it has been very remote. Any cattle

we have made any money on for the last three years have been scarce. There was a time prior to that that we made good money in handling cattle.

Mr. Landergin. I think so, Mr. Chairman, only that I would like to say one more thing. If we are permitted to have a thorough investigation, and if we find out that the facts are as Mr. Meeker and other packers have stated to us—if they are facts—when we are sure we have had a thorough investigation, and the producers of this country will be absolutely satisfied. will be absolutely satisfied.

Mr. McManus. If Mr. Fisher will look at some of the colossal records before he submits any such request, he will discover that such a proposition must include feeders, breeders, retailers, stockyards, banks, loan companies, etc., whereas the only quarrel that I have ever heard in 20 years around the packing houses is a very simple matter, limited to three or four subjects, readily thrashed out by reasonable men sitting around a table. That is exactly what I think.

Mr. Carlin, It seems it is a suggestion for you to talk the matter

over.

Mr. Fisher. It is not worth time to discuss it even here. We have had the same suggestion all the while: "If you would just take our word for it, and if you will not look into these colossal accounts, but if you will take a confessedly complicated matter and just let us simplify it for you, you will agree that we are all right, and there is not a shadow of question that justifies all this discontent."

Istatement of M. L. McClure, president of the National Live Stock Exchange at the Borland hearing before the subcommittee of the Judiciary Committee, Tuesday, Apr. 4, 1916.]

Mr. McClure, As president of the National Live Stock Exchange, which is the national organization of the commission men of the United States. I am appearing here at the request of the market committee of the American National Live Stock Association. I am directed to appear by our executive committee, and I want to support the resolution. As far as I am able to determine at this time our organization is almost unanimous in its desire to have this matter investigated, but we do not want to appear in the light of attacking the packers; but we believe it to be for the best interests of all concerned that a thorough investigation be ordered. Our customers whom we represent and who have been feeding cattle for the market, have with few exceptions lost money during the past three years, there only being a few months during the past three years, there only being a few months during the past three years that prices realized for fat stock have been sufficiently high so that they made money. They believe that their loss is caused by restricted competition at the markets where their cattle are offered for sale. They know that there has been a gradual decrease of competition among the buyers and also a decrease in the number of buyers during the past 15 years, and that now the buying end is practically represented by the men employed by the five leading packing houses. I am familiar with this situation for the reason that the commission firm with which I am connected loans large sums of money to feeders. During 1913, 1914, and 1915 these loans were practically all paid, but many farmers and feeders lost almost their entire feed crop in furtening the cattle. I know this from meeting these men from day to day, and feel that I am fully informed as to conditions and the feelings of the feeders in this matter.

With large exports of meat products during 191

and out the cause of this depression in the industry, and they need a remedy provided.

If this investigation is ordered and the packers can show a clean bill our customers will then know that this depression in their business is from natural conditions and not from restraint of trade, and then they can govern themselves accordingly. If the commission find that there is unlawful or other restraint of competition, then we ask and we understand it is part of the duties of the commission to provide a way out of this unfortunate situation. What is asked is to arrive, if possible, at what is causing this depression in an important industry.

This is big business on both sides of the question. At the 18 principal live-stock markets in the United States during 1915 about 10,500,000 cattle were marketed, about 25,000,000 hogs, and about 15,000,000 sheep, their value running over a billion of dollars. The packers have millions invested in their business, and all these interests are so vast that no one wants to destroy, but all want to improve for the public good. We hope that Congress will have the Federal Trade Commission proceed with the investigation with malice toward none, with charity for all, and nothing less will satisfy either the producers or the consumers.

Mr. Fisher. Mr. Chairman, might Lask just one question if Mr.

for all, and nothing less was account for all, and nothing less was sumers.

* * *
Mr. Fisher. Mr. Chairman, might I ask just one question, if Mr. McClure is here?

Mr. Carlin. Yes.
Mr. Fisher. Mr. McClure advanced his statement, and at the same time I would like to know whether he heard Mr. Burke's statement?

Mr. McClure. Yes, sir.
Mr. Fisher. Does that express your sentiments, and do you agree with it?

Mr. McClure. Yes; I think it is a very good paper, and it expresses my ideas exactly.

Mr. McClure. Yes; I think it is a very good party, and the my ideas exactly.

Mr. Stubbs, Gentlemen, I heard that paper and I was compelled to hear that on the railroad, traveling here, so that I can sympathize with you; but I can tell you I think it is a pretty good document. I believe it tells the truth.

Mr. Borland. Mr. Chairman, I will now call for ex-Gov. Roscoe Stubbs, of Kansas. Gov. Stubbs.

Mr. Carlin. Governor, we will be glad to hear you.

[Statement by Ed. C. Lasater, Falfurrias, Tex.]

No development of recent years has potential in it as important benefits for the American consumer and the producer of meat animals as the appointment of a marketing committee by the American National Live Stock Association at its meeting in El Paso in January.

The recent action of the Cattle Raisers' Association of Texas at its meeting at Houston in indorsing the purposes of this marketing committee and pledging its membership to the raising of a fund of \$100,000 has given great imperus to this movement. If the other associations affiliated with the American National Live Stock Association shall subseribe a proportionate amount this will practically assure the raising of a fund of between \$600,000 and \$8500,000. The employment of such a fund in cooperation with existing governmental agencies, and possibly with some agency especially created for this purpose will reveal all of the essential facts relating to the production, manufacture, and distribution of meat products. No subject before the American public today is of more vital importance, considering the fundamental necessity of supplying the corbonal way of conduct his purpose will reveal all experiences and distribution of other and the entire of conduct his business in a manner which will mean a standard of living for him corresponding to that enjoyed by the city dweller, while maintaining the fertility of his soil, which is essential to the preservation of every one of the country's industries.

The marketing committee will seek, through exhaustive investigations, to establish what proportion of the price paid by the consumer goes to each of the three agencies which are necessary in the industry of supplying the consumer with these products; that is, the producing interest, the packing interest, and the retail distributions. Each one of these perform an essential function, as stated, and there should be a division of the total price paid by the consumer, which represents equity as among these several interests, in proportion to capital used and service rendered markets are organized to-day the producer has no apportunity to trade with the packer; the packer makes the price. The packer makes the price of the packer of the packer, the will never the packer. In addition to this, the live-stock producers must crea

This investigation will not only establish what is equitable, but will reveal such wasteful practices as exist, and will enable reforms to be worked out which will mean to the consumer such prices as he can

This investigation will not only establish what is equitable, but will reveal such wasteful practices as exist, and will enable reforms to be worked out which will mean to the consumer such prices as he can afford to pay.

The actions of the packers for many years, confirmed by statements made by their representatives before the executive committee of the Cattle Raisers' Association of Texas, at its annual meeting in Houston, March 21 to 23, inclusive, has shown an entire unconcern as to whether retail distribution is conducted in an efficient and economical manner or not, as well as a shortsighted disregard of the well-being of the producer. The packer so conducts his business, taking full advantage of his dominating industrial and financial position, as to secure to himself his margin regardless of the havoc wrought to the producer or the burdens placed upon the consumer by an unintelligent and wasteful conduct of retail distribution.

Conditions surrounding the producer's business, which conditions are absolutely beyond his control, so seriously threaten the producer that a continuance of the packer's policy will force the producer of the United States out of business, with the serious results to the consumer which the English consumer is now suffering, as the result of national neglect of the country producer, and of following the false theory that the consumer was not concerned with the marter of where meats were produced, whether at home or in foreign countries.

The packer is in a position to bring about speedy reforms in retail distribution, and the distributing of his products as a function with which he should be concerned if he is to be allowed to perform the manufacturing or converting function, which represents the lowest risk of any of the various phases of the industry.

To-day the packer forces the producer's business, with the result of average lower prices to the consumer.

How burdensome such a cost of credit is can be understood when you realize that none of the nations of the world have inc

The Philippines.

EXTENSION OF REMARKS

HON. ROBERT F. HOPWOOD,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES, Monday, May 1, 1916.

Mr. HOPWOOD. Mr. Speaker, our duty to the Philippines can be determined in no better way than to revert to the history

of their acquisition.

When on April 19, 1898, President McKinley sent a special message to Congress asking to be empowered to use the military and naval power of the United States to secure a full and final termination of hostilities between the Government of Spain and Cuba-let me observe in passing that this good custom and constitutional requirement of asking Congress as to when our Navy and Army shall be used seems to have fallen into disuse-Congress, in pursuance of the request, on April 19 passed a joint resolution authorizing the President to use the Army and Navy in carrying out a demand that Spain relinquish her sovereignty over Cuba and withdraw her forces from its territory. Two days afterwards Spain dismissed our minister, breaking off diplomatic relations, and both nations prepared for the conflict.

Ten days later, on May 1, the world was electrified by the report of a naval battle in Manila Bay that brought back the memory of the naval heroes of our former wars. Alongside the names of John Paul Jones, Oliver Perry, and David G. Far-ragut we inscribed another name that shall shine with increasing splendor through all the centuries that America shall endure. George Dewey is entitled to more honor at the hands of his countrymen while still living than we have accorded him. Let us throw a few flowers on him now and not reserve them all until his eyes are closed to earth and he dwells with the immortals forever.

His entrance into Manila Bay that last night of April, under the guns that commanded the harbor and over the mines, was the gliss that commanded the harbor and over the hines, was typical of his bravery. With only six war vessels he sought an enemy with more than twice that number in a harbor lined with shore batteries and mines. He said to his men "We are to seek the Spaniard and smash him as soon as we find him."

Montojo's fleet opened the battle at daylight on May 1. Dewey stood on the bridge calmly waiting his time. After a full half hour from the time the enemy fired the first gun he signaled to Capt. Gridley, "You may fire when ready, Gridley."

Within two hours from that time the Spanish fleet was destroyed with 1,600 men killed and wounded, while not a man

was killed on the American fleet.

Within three months from the breaking out of the war Spain opened negotiations for peace. President McKinley immediately responded and indicated the

terms on which peace might be secured.

'The third item mentioned related to the Philippines.

The protocol of August 12, 1898, was drawn up and signed by the Secretary of State, and Mr. Cambon, French ambassador, acting for Spain, in which, under article 3, it was agreed that—

The United States will occupy and hold the city, bay, and harbor of Manila pending the conclusion of a treaty of peace, which shall determine the control, disposition, and government of the Philippines.

September 16, 1898, instructions were given to the United States peace commissioners, in which the President says:

States peace commissioners, in which the President says:

Without any original thought of complete or even partial acquisition, the presence and success of our arms at Manila imposes on us obligations which we can not disregard. The march of events rules and overrules human action. Avowing unreservedly the purpose which has animated all our effort, and still solicitious to adhere to it, we can not be unmindful that without any desire or design on our part the war has brought us new duties and responsibilities, which we must meet and discharge as becomes a great Nation on whose growth and career from the beginning the Ruler of Nations has plainly written the high command and pledge of civilization. * * In view of what has been stated the United States can not accept less than the cession in full right and sovereignty of the island of Luzon.

On October 26, 1898, Mr. Hay, Secretary of State, sent word to the United States peace commissioners as follows:

The information which has come to the President since your departure convinces him that the acceptance of the cession of Luzon alone, leaving the rest of the islands subject to Spanish rule, or to be the subject of future contention, can not be justified on political, commercial, or humanitarian grounds. The cession must be of the whole archipelago or none. The latter is wholly inadmissible and the former must therefore be required. The President reaches this conclusion after most thorough consideration of the whole subject, and is deeply sensible of the grave responsibilities it will impose, believing that this course

will entail less trouble than any other, and besides will best subserve the interests of the people involved, for whose welfare we can not escape responsibility.

On December 10, 1898, the treaty of peace between the United States and Spain was signed. It provided, among other things, that Spain should cede to the United States the archipelago known as the Philippine Islands; that the United States should pay to Spain the sum of \$20,000,000; and that the civil rights and political status of the native inhabitants of the territories thus ceded to the United States should be determined by Con-

In this manner the Philippines came into the possession of the United States. First, by right of conquest, and, second, by purchase from the Government of Spain, which had been in undisputed possession of them for centuries. This transfer of sovereignty was in accordance with the wishes of the great mass of the Filipino people. That the islands have been benefited by our occupation and control beyond measure needs not to be All that we have of civilization, culture, educational facilities, sanitation, and Christian helpfulness has been carried to them, and in 18 years they have received more at our hands than they had from Spain in 400 years of Spanish domination.

President McKinley in his last annual message to Congress

I have on other occasions called the Filipinos the "wards of the Nation." Our obligation as guardian was not lightly assumed. It must not be otherwise than honestly fulfilled, aiming first of all to benefit those who have come under our fostering care. It is our duty so to treat them that our flag may be no less beloved in the mountains of Luzon and the fertile zones of Mindanao and Negros than it is at home, and that there as here it shall be the revered symbol of liberty, enlightenment, and progress in every avenue of development.

These were grand words, full of wisdom, sympathy, and patriotism. While we have done much for these "wards of the Nation," will any man say that the noble purpose of our martyr President has been fully performed? Shall we prove recreant to the obligation imposed upon us as guardian of these untutored children by costing them adults while not absolutely in the control of the second of the sec children by casting them adrift while yet absolutely incapable of guiding their ship of state through the perilous seas that encompass them? Never in the history of the world were the times so unpropitious for such a venture. Old nations that have stood the storms of centuries are going down under the raging seas of such stress as have never before beat about this old world. How can we expect a new nation to begin its existence by launching on such a sea as this? Should we cast the Fili-pinos off under such conditions we will stand convicted before the world of a cowardly shirking of the responsibilities which the Providence that overrules the affairs of men cast upon us the day that Admiral Dewey fought and won that glorious battle in Manila Bay, of which this day is the eighteenth anniversary. What will the American people say about such an inglorious celebration of his victory as upon its anniversary to ignobly abandon all that he fought for.

We hear the cry in this House from time to time, "Stand by the President," and when we of the opposite political faith believe him to be right we willingly do so. I would like to ask, however, when has it become a crime for a Member of Congress to have his own opinion, whether that opinion coincides with that of another man they call President or not? And to express such an opinion freely when he pleases to do so. When the day shall come that Members of this House for fear of the criticism of an arrogant and subsidized press shall tamely submit to support any measure, whether their conscience and judgment approves it or not, merely because some man, whatever his station in life, says so, then America shall have fallen to the lowest depths of degradation and shame. This is a Republic.

Let Congress be careful to keep it such.

When it comes to standing by some one in this instance, I choose to stand by McKinley.

Does anyone think that a people who have been not ruled but exploited for centuries by the ruling power can be brought to the stature of manhood in the short period of 18 years? No one believes it or claims it. Yet with all their immaturity and lack of knowledge of how to go in and come out before men, the President, who is held up by his party as the great humanitarian, asks Congress to cast them off. And this he does, while Mexico, a similar people in some respects, yet with infinitely better opportunities to acquire the education and training to fit them for selfgovernment, is absolutely unable to establish any government

worthy the name.

The only possible thing that could happen, if we leave and abandon our trust in the Philippines, is that another nation with, perhaps, entirely different ideals and motives will go in and possess the islands. We have already granted to the Filipinos a large measure of self-government, and they now have a majority in both branches of their legislative assembly. One of the first things they proposed to do when they came into control was to cut in two the appropriations for health and sanitary work. When the Americans began their work of sanitation in the islands they were hotbeds of all the diseases known to the Orient; smallpox, cholera, the plague, beriberi, and many other diseases ravaged and destroyed the natives annually by the thousands. The Americans have driven out these diseases and rendered the islands as sanitary in all respects as our own

Dr. Heiser, who was the guiding spirit in this great work, when he learned that the assembly proposed to abandon this most important work, requested the privilege of addressing them on the supreme importance of continuing it. They agreed they would hear him for 20 minutes. When he appeared before them he talked for three days. He told them of the conditions he found when he began his great humanitarian work in 1902 and what wonders had been accomplished. He told how they used to tie their insane people to stakes under their houses and leave them to die, while now they are all cared for in beautiful and sanitary asylums and many of them cured. He told about gathering the lepers, who went about as they pleased, scattering the infection, and placing them all on one island, where a splendy did sanitary town was built with all modern conveniences to care for them. The island (Culion) chosen is 15 by 30 miles in extent and is said to be one of the most beautiful of the More than 8,000 lepers have been transferred to this island. The town is a model for cleanliness and has a fine hospital, schools, churches, theater, playgrounds, and so forth. Prior to the establishment of this colony about 1,000 persons a year contracted the disease. To-day the islands are saved from this awful annual toll. The treatment of the disease is given careful scientific study, and within the past few months 23 cases have been discharged from the hospital as cured.

This work alone has justified our occupation and government of the Islands. A thousand other things have been done for these people that can not be recounted here.

Alfred Tennyson sat one stormy night in his study, and through the whirlwind and the storm that raged without he heard the church bell ring the dirge of the dying year. As he listened the bell seemed to have a voice that spoke to his prophetic soul. For all great poets are prophets as well. And this is part of what the bell said:

Ring out the want, the care, the sin,
The faithless coldness of the times;
Ring out, ring out my mournful rhymes,
But ring the fuller minstrel in.
Ring out false pride in place and blood,
The civic slander and the spite;
Ring in the love of truth and right,
Ring in the common love of good.
Ring out old shapes of foul disease;
Ring out the narrowing lust of gold;
Ring out the thousand wars of old,
Ring in the tousand years of peace.
Ring in the valiant man and free, Ring in the vallant man and free, The larger heart, the kindlier hand; Ringe out the darkness of the land, Ring in the Christ that is to be.

More than 60 years have passed since the poet heard the ringing of the midnight bell at the closing of the old year. The hearts of men have pondered its sentiments and wondered whether we could banish the old wrongs and bring in the better day so vividly portrayed.

The work done by America in the Philippines has helped to

hasten the time when the better day shall dawn.
"The want, the care, the sin" of the world are being amelio-

rated, and those unfortunate ones who have suffered by reason thereof are to-day accorded more sympathy and help than ever

"The love of truth and right" and "the common love of good" have come to have a place in the hearts of men they did not have in former years.

'Old shapes of foul disease" are being throttled to the death. and particularly in those fair islands of the sea where formerly they brought such suffering and sorrow to those who dwelt

'The thousand wars of old" unfortunately still rage among men. Perhaps this terrible scourge must have one mad orgy before slinking away among the horrible ghosts of the past. Let us hope that when peace comes it may be the "thousand years of peace" foretold by the poet.

"The valiant man and free with larger heart and kindlier hand" I believe is here.

Men do not, perhaps, profess so much to-day as in former years, but I am constrained to believe that a wider and more blessed charity fills the world.
"The Christ that is to be."

What does the poet mean? there another to come? No; never another like that one who spoke as never man spoke before or will speak again. That ser-

mon on the mountain top is becoming sweeter through all the centuries. His loving, tender judgments of men and women has come floating down the years as sweet incense, cheering the hearts of the weak ones of earth to hope again that for them the glad day of deliverance will come. He was never too weary to stop by the wayside to talk to some poor, lame, blind, or leprous ones and bring healing to their poor bodies and souls as well. He who never wrote a line to leave behind Him, yet so filled the hearts and minds of his disciples that they spent their lives in telling to us, as far as they could, what manner of man He was. He was the Supreme Man of the ages. He was the Son of God. The world has not yet comprehended Him, but He is more and more filling the world with His glory, and some day, as Tennyson dreamed, He will be to the world "the Christ that is to be."

One day the Master, in order to make plain a truth, told a story in a few simple words that has settled for all time what is man's duty to his less fortunate brother. He told of a man who had been beset by robbers, stripped of his clothing, sorely wounded, and lying by the roadside. A priest and a Levite traveling that way saw the man but passed by on the other side. By and by another man came along; he was of a despised race, and if the priest would not extend help, nothing could be expected of the Samaritan. But behold! He stops; he goes to the poor suffering man and binds up his wounds, using such simple remedies as he had with him to alleviate his sufferings. He then places him tenderly on his beast and takes him to the inn. He pays the innkeeper for caring for the poor fellow and tells him to minister to him until he is entirely recovered and he will pay the bill when he comes again.

This story applies with great force in the case of the Fili-We Americans found them as we were pursuing our way along the highway of life, and they were wounded by the inhumanities of their fellows. We assumed the burden of caring for them. So far we have helped them, but we have not yet brought them safely to the inn, where we can be sure

they are secure. Let us leave no duty unperformed that will place them in absolute security before we think of abandoning them. Most earnestly I oppose the provision in this bill authorizing the President to surrender all right of possession, supervision, jurisdiction, control, or sovereignty now existing and exercised by the United States in and over the territory and people of

the Philippines within the next four years.

On Illiteracy.

EXTENSION OF REMARKS

HON. DUDLEY M. HUGHES. OF GEORGIA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, May 4, 1916.

Mr. HUGHES. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD, I include an article from the Macon (Ga.) Telegraph on the subject of illiteracy, in which article is incorporated a plan of correction inaugurated most successfully by the very distinguished gentleman from Georgia, Judge Park, which is worthy of the highest commendation.

The article is as follows:

OLD FIELD SCHOOL" IN WORTH FIGHTS ILLITERACY—ONLY SCHOOL IN STATE HELPING TO WIPE IT OUT—ALL GEORGIA WANTED ON RECORD BY 1920.

[By Edna Cain Daniel.]

QUITMAN, April 29.

At the recent meeting of the Georgia Educational Association in Macon, a definite movement was formulated with the aim of stamping out illiteracy in Georgia by 1920.

To begin with, Congressman Park seems to be the type of man who likes to apply definite remedies to the problems which come in the range of his activities. Most of us are deeply concerned with such a serious problem as illiteracy, but it does not seem to occur to us to apply the obvious remedy of establishing schools, especially at our own expense, Judge Park seems to be the only man in Georgia who has hit upon this simple plan of establishing a school and paying for it himself, while waiting for the State to organize its educational forces so that no man need be unlettered and no child be turned away from the door of opportunity because it lacks trained and alert faculities.

HOW THE SCHOOL BEGAN.

He was judge of the city court of Worth County when the idea of establishing this school first occurred to him. Before him came all sorts of people, many of them in trouble of some kind. He knew practically everybody in Worth County by name; he knew their family histories and the handicaps many of them worked under on out-of-the-way farms. He looked back of the evidence of legal cases, to the causes and beginnings, and dealt with people not in the law's cold formulas altogether, but in terms of human understanding. In many of the adults who came before him he saw not stupid or vicious men, but rather a generation which had grown up just after the War between the States

and in those poverty-stricken and troubled times in the South had not had opportunities for education.

He got into the habit of asking them if they could read and write and in the case of those who had apparently had little opportunity penalities imposed were made as light as possible. A youth convicted in his court of some minor offense was asked the usual question, and when he said he could not read, Judge Park said: "I will suspend sentence against you if you will come to my house and let me teach you." The boy presented himself that evening and there began his complete reclamation. Out of this sort of thing the school just developed logically.

The boy presented himself that evening and there began his complete reclamation. Out of this sort of thing the school just developed logically.

Judge Park saw the great need of it, and when the idea had ripened in his consciousness he announced one day that he would conduct a free school for one month at the Worth County courthouse for everybody who wanted to come to it, just as if gathering in the countryside for tutelage was nothing unusual in the routine of a busy professional man. Over 50 pupils presented themselves on the opening day. Among them was a Confederate veteran, John Denby, who learned to read and write at the age of 61. Mothers and fathers and even grandparents came to the school and at this first term 21 adult persons learned to read and write. Judge Park had suggested the plan of this school to some of the lawyers and courthouse officials with a view of having their assistance in teaching, but as I recall the story he told me about it. none of them seemed to take it seriously or had the time to give to it. He taught the school himself with the assistance, perhaps, of one of the county school-teachers.

It was evident from the beginning that the school was popular with the people and was doing a real definite good. Judge Park taught the school himself at the courthouse for several summers and later, after he was elected to Congress, when his increasing duties made it impossible for him to give the time to it, he employed some of the best of the county's teachers, paying their salaries and buying the supplies for the school out of his own purse.

In response to a popular demand, the school has been moved from the courthouse out to the country districts. Each year after the crops are "inid by " it is conducted for one month at one of the school houses, preferably in a remote community, where the school stimulates community pride and the regular school begins to improve and is better attended after a session of the "old field school," due to increased interest of the older members of the communit

THE BLUE-BACK SPELLER USED.

THE BLUE-BACK SPELLER USED.

I spent one day at the "old field school" during its last session, and I recommend a similar visit to anyone who may have an idea that a school of this sort is a dull, behind-the-door sort of place of which the community is not exactly proud. It was one of the happiest schools I ever saw. The day was hot and the ride long and dusty, and the schoolhouse was a little gray building with pine woods and fields around it over which the heat waves shimmered.

Judge Frank Park was hearing the morning spelling lesson when I arrived; it was not a written lesson, if you please, according to modern pedagogy, it was the kind of spelling lesson that goes with "the old oaken bucket that hung in the well" days, when we all stood around the room in a long line and the teacher gave out the words. And if it was a hard one like "caout-choue," which you find over in the back of the book past the fables, it went on down the line until it got to the little runty red-headed boy, who spelled it correctly and went "head" past the beauty and chivalry of the entire class.

You have guessed by this time that Judge Park was using Webster's blue-back speller for that class. It was a large class standing up all around the room, all sizes and ages of boys and girls and grown folks. At this term of the school 167 pupils were enrolled and the services of three of the county teachers were engaged. With the teachers setting the example, the uniform adopted for the school was blue overalls and gingham dresses. The schoolroom would not hold the school and out in front a bush arbor had been built to accommodate the overflow.

PRACTICAL EDUCATION HEEE.

PRACTICAL EDUCATION HERE.

in front a bush arbor had been built to accommodate the overflow.

PRACTICAL EDUCATION HERE.

While the school was designed originally for the adult illiterates, or for people who did not have time or opportunity to go to school regularly, none is turned away and the pupils range in age from 6 to 60 years. Webster's blue-back spelier is one of the principal textbooks used, and I found myself on familiar ground with the class in spelling. When the word "cygnet" was given out Judge Park paused to ask what a cygnet is and a little lesson in natural history ensued which was very diverting. Later on when the class in arithmetic was called and the quick thrust of problems in mental arithmetic was called and the outek thrust of problems in mental arithmetic spurred the mind, those urchins in blue overalls made my head swim and I realized I was outclassed. I knew more about post-impressionism than they did, probably, but when the teacher said, "Suppose you are away from home and out of work; you have got to eat, so you go to a man and ask for a job. He has nothing to offer except a ditch he wants dug. It is to be 210 yards long, if fect wide, 1½ feet deep, and he agrees to pay you 18 cents a yard—how much does he owe you?" and a little snub-nosed boy fired the answer back before I even started on the ditch; I decided old field schools might be generally helpful.

All the lessons in mental arithmetic dealt with the practical everyday problems of farm work, the marketing of produce, estimating the amount of timber in a tree or the cost of cutting a drainage ditch. Government builteins selected by Judge Park with a view to the needs of his pupils are among the textbooks and the people become acquainted with the practical value of these bulletins and learn how to secure others they may need. One day in every week at the old field school is devoted entirely to farm-demonstration work, and one or more of the field agents in the employ of the Government come to give lectures on tick erradication, seed selection, and similar s

HAS REDUCED ILLITERACY.

In 10 years this school, taught one month cach summer, has markedly reduced the percentage of adult illiteracy in the county, and the promissory note signed with a cross mark is almost unknown. Mr. W. R. Summer, the county school commissioner of Worth, finds the old field school has stimulated school development in the county. The brightest of the county's teachers like to work in this school. And at the noon hour on the day of my visit, when I saw Judge Park sitting in the shade discussing the crop prospects with a group of the older men, I thought I understood. It is hard to describe exactly what I felt about that school, but I may use a newspaper term and say it had a lot of heart interest.

The school ends with a big barbecue or a picnic dinner and instead of a learned literary address there is an old-fashioned spelling match under the trees, a free-for-all contest in which there are no handicaps the old-field school can not remedy.

One particularly pleasing story I heard about the school related to two red-headed brothers, twins, who lived on a little Worth County farm. With the start they got in this school they set out to educate themselves. One twin stayed at home and farmed while the other went to school alternate years until they worked their way through prep schools and college. In 1913 one of them graduated at Princeton College and took a position as principal of a high school in a large western city, while the other one graduated at Princeton in 1914.

THE BLOT OF ILLITERACY.

in 1914.

The blot of illiteracy.

Statistics show that in the North illiteracy predominates in the cities, while in the South it is more in evidence in the rural population, and if all classes of the population are considered no section of this country can claim freedom from adult illiteracy. The Federal census of 1910 showed that 7.7 per cent of the total population over 10 years old could neither read nor write. This made five and a half millions of persons between the native-born and foreign population. Even Boston had 24,488 illiterates over 10 years old, and there were 13,812 in Washington City.

When we begin to consider this problem, the first truth to be realized is that illiteracy is not so much a reproach to the individual so unfortunate, but to organized society. There must be something wrong with the social institutions of a democracy in which such a vast number of adults are illiterate. The campaign proposed by the Georgia association is only a part of a general national campaign to wipe out illiteracy in the adult population. It has been suggested that cooperative effort on the part of the Nation and the States, associations and individuals, will be most effective. It was this method France employed and reduced the number of illiterates from 45 in the hundred to 5. In one year 1,000,000 men, women, and children over school age in France were enrolled in the schools learning to read and write.

Students of this social problem regard the work done in the Worth County school and in the moonlight schools of Rowan County, Ky., as inspiring examples of what any community can do to reduce its own adult illiteracy.

It would seem that any community in Georgia which determined to stamp out liliteracy would, first of all, have a social survey to determine the number. But whatever method is employed, the spirit of Judge Park's old-field school can not be improved upon. And he best expressed it when he said to me: "Treating these big human problems as a whole is often overwhelming and confusing, but there is

Agriculture Appropriation Bill.

EXTENSION OF REMARKS

HON. LOUIS T. McFADDEN. OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, April 27, 1916.

Mr. McFADDEN. Mr. Speaker, in the consideration which this House has been giving to the Agriculture appropriation bill, appropriating a little over \$24,000,000 of the people's money from the United States Treasury, we were asked the other day to vote \$50,000 to provide for the machinery to run the migratory-bird law department. Then, among other things, several thousand dollars were to be appropriated for investigating a disease said to be developing among wild ducks, because they drink too much salt water in the Salt Lake Valley region of Utah, and so forth. To-day we are urged by the estimable chairman of the Committee on Agriculture to appropriate \$120,750 to continue in force a department operated under the cotton-futures act, approved August 18, 1914. This act has been declared unconstitutional by the Federal courts of the United States, as will be seen by referring to the Federal Court Reporter, volume 226, page 135, in the case of Hubbard and others against Lowe, internal-revenue collector. By this action this whole department under this decision has become inoperative, or at least such should be the case.

As a matter of fact, the department is fully manned by Democratic employees engaged chiefly in the pleasant and profitable occupation of drawing their salaries without doing so bit of legally authorized work. Thus in all probability many very worthy Democratic politicians from the sunny South are being given lucrative employment through the kindness of

the present Democratic administration.

I herewith submit estimates furnished by the department con taining information on the administration of the migratory bird law, which has also been declared unconstitutional.

Protection of migratory birds, 1917, \$99,680 (committee allow Salaries	
As follows: In Washington— 1 administrative assistant, in charge migratory bird la \$2,500.	w,
1 assistant biologist, \$1,800. Out of Washington— 31 inspectors, at \$1,500 each. 4 field assistants, at \$100 per month each (4 months). 2 field assistants, at \$75 per month each (4 months).	
295 cooperating wardens, at \$1 per month each. Traveling expenses Supplies and equipment Miscellaneous expenses	37, 600 1, 000 4, 540
Total estimate, 1917	99, 680 50, 000
Increase (but as 1 cierk, \$1,200, is transferred to t statutory roll, the actual increase is \$50,940)	he 49, 680
Protection of migratory birds, 1915, \$50,000.	\$28, 244, 97
In Washington— 1 administrative assistant, in charge of migratory bird law, \$2,500 (9 months). 1 administrative assistant, acting in charge migratory bird law, \$2,500 (\$\frac{1}{2}\$ month). 1 clerk, \$1,260 (2 months). Out of Washington— 4 inspectors, at \$1,500 each. 1 inspector, \$1,500 (10\frac{2}{2}\$ months). 1 inspector, \$1,500 (10\frac{2}{2}\$ months). 1 inspector, \$1,500 (10\frac{2}{2}\$ months). 1 inspector, \$1,500 (9\frac{2}{2}\$ months). 1 inspector, \$1,500 (9\frac{2}{2}\$ months). 2 inspectors, at \$1,500 each (7 months). 2 inspectors, at \$1,500 each (6 months). 1 inspector, \$1,500 (5\frac{2}{2}\$ months). 1 unspector, \$1,500 (5\frac{2}{2}\$ months). 1 unspector, \$1,500 (5\frac{2}{2}\$ months). 1 warden, \$1 per month each (11 months). 1 warden, \$1 per month (9 months). 1 warden, \$1 per month (9 months). 1 warden, \$1 per month (7\frac{2}{2}\$ months). 2 wardens, at \$1 per month (6 months). 4 warden, \$1 per month (7 months). 2 wardens, at \$1 per month each (5\frac{2}{2}\$ months). 4 warden, \$1 per month each (5\frac{2}{2}\$ months). 4 warden, \$1 per month (6\frac{2}{2}\$ months). 5 wardens, at \$1 per month each (4\frac{2}{2}\$ months). 1 warden, \$1 per month (6\frac{2}{2}\$ months). 1 warden, \$1 per month (6\frac{2}{2}\$ months). 2 wardens, at \$1 per month each (5\frac{2}{2}\$ months). 1 warden, \$1 per month (4\frac{2}{2}\$ months). 1 warden, \$1 per month (6\frac{2}{2}\$ months). 1 warden, \$1 per month (6\frac{2}{2}\$ months). 1 warden, \$1 per month (6\frac{2}{2}\$ months). 2 wardens, at \$1 per month each (4\frac{2}{2}\$ months). 1 warden, \$1 per month (6\frac{2}{2}\$ months). 5 mardens, at \$1 per month each (1\frac{2}{2}\$ months). 1 warden, \$1 per month (1\frac{2}{2}\$ months). 5 man protectors, at \$1 per month each (1\frac{2}{2}\$ months). 5 man protectors, at \$1 per month (1\frac{2}{2}\$ months). 5 man protectors, at \$1 per month (1\frac{2}{2}\$ months).	16, 264. 87 251. 08 182. 85
Total expenditures, 1915	44, 943. 77
Mrs	

The gentleman from South Carolina [Mr. Lever], chairman of this committee, has just stated in answer to a question from the gentleman from Pennsylvania [Mr. Moore] that there are now employed the following men in the administration of the cotton-futures act, now supposed to be inoperative because of its

unconstitutionality

In Washington: One cotton technologist, \$3,000; 2 specialists in cotton classing, at \$3,000 each; 1 inspector of cotton standards, \$3,000; 1 specialist in cotton classing, \$2,640; 1 specialist in cotton classing, \$2,500; 1 specialist in cotton classing, \$2,400; 1 assistant in cotton business methods, \$2,250; 1 assistant in cotton classing, \$2,100; 2 assistants in cotton business methods, at \$2,100 each; 2 assistants in cotton business methods, at \$1,800 each; 1 assistant in cotton marketing, \$1,800; 2 assistants in cotton classing, at \$1,800 each; 1 assistant in agricultural technology, \$1,440; 6 assistants in cotton classing, at \$1,400 each; 1 assistant in cotton marketing, \$1,400.

Out of Washington: One specialist in cotton classing, \$2,500;

assistant in cotton classing, \$2,100.

That makes 26 in all.

Mr. Speaker, this is only a part of the expense of this department which is now being maintained at Government expense to aid worthy Democrats to maintain a livelihood. This is being done by the party which promised the people economy in the management of public affairs if intrusted with the re-

sponsibilities of government.

The record to date of the Democratic administration is that it has flagrantly abused its promises to the people regarding economies, and its appropriations have been the largest of any administration. The Sixty-third Congress exceeded the appropriations of the last Republican Congress by over \$100,000,000. Even now, when the country needs additional money for na-tional defense and the constantly increasing expenses of running the Government, the administration seems willing to appropriate for salaries and the creation of a new department, but seriously objects to any material increase in appropriations

looking toward the safety of the people of the United States. Because of their embarrassment in collecting sufficient revenue to meet the constantly increasing expenditures, they are seeking new methods of taxation which are a direct burden to the people and are especially expensive to collect. In order to collect these taxes new departments have been created and more collectors employed, who are always friends of the present administration.

Mr. Speaker, in my judgment many items in this bill are subject to just criticism, chief among which is the item of \$546,000 under the head of "Bureau of Marketing." I fear the department is becoming top-heavy, and is being used to create lucrative positions for the faithful.

Mr. Speaker, I understand that the Committee on Rules is to bring in a rule which will attach to the Agriculture appropriation bill three important amendments. Any one of these amendments is so important that it might well engage our attention for a week or more, in order that we may have a chance to study the amendments and ascertain whether they are proper measures, and, if enacted, whether they would have a wholesome effect on the country at large and the section most affected. I understand, however, that the Rules Committee proposes that the debate on these three important amendments shall be limited to one hour on one measure and one hour and a half on the other two.

There can be but one interpretation of such action on the part of the Democratic majority of this House in attaching to an appropriation bill legislation as important as these three measures are reported to be, namely, first, a United States warehouse act; second, a United States grain-grades act; and, third, a cotton-futures act. All three of these amendments have been, when previously enacted, declared void by the courts of the United States. I do not now wish to argue on the merits of these amendments, but I do wish to most emphatically denounce the methods adopted to force through in this manner legislation so important to the country without a chance for discussion. Because these amendments are attached to an appropriation bill, the President is deprived of the power of veto if, in his judgment, some of these riders are unfit to become law.

Mr. Speaker, it is no wonder that many of the laws enacted by the present administration in this hasty, gag-rule manner have been declared unconstitutional when tested by the courts. I am surprised that the administration now in power should attempt to legislate by gag rule, which has been so vociferously condemned by the Democratic Party in the past and was used successfully to defeat the Republican Party in the last presidential election, and used as one of the main arguments against Cannon rule and the so-called "Cannonism." The action proposed The action proposed will in the end be the undoing of the Democratic Party as represented by the majority in this Congress.

The Democratic Members of this House have already aided in a practical revolution and criticism of the methods previously used by this House in the discussion and passage of measures under less drastic rules than this one. The methods you now propose to adopt, thereby establishing a precedent, make even the erstwhile Speaker Cannon blush with shame.

Mr. Speaker, I can not consistently vote to continue such appropriations as I have mentioned in these remarks. I desire most vehemently to enter my protest against legislation by rule in

this manner.

Hulbert Stadium Bill.

EXTENSION OF REMARKS

HON. CHARLES P. COADY, OF MARYLAND,

IN THE HOUSE OF REPRESENTATIVES.

Monday, May 8, 1916.

Mr. COADY. Mr. Speaker, on April 21, 1916, my colleague from New York [Mr. Hulbert] introduced a bill (H. R. 14905) to appropriate the sum of \$1,545,397 for the improvement of east Potomac Park as a public recreation ground in accordance with the comprehensive plan approved by the War Department. and, also, I believe, by the Fine Arts Commission. Of course, a project of this character has the hearty approval of every person interested in the athletic development of the American youth, but I hardly realized its national, indeed international significance, until my attention was called to an article published in the New York Times of Sunday, April 23, 1916. On next Friday afternoon, May 12, at 2 p. m., the Committee on Appropriations will hold a hearing on this bill, which will be attended by representatives of athletic organizations from all over the country, and I have felt it would be a matter of a good deal of interest to incorporate, under the leave granted me to extend my remarks, the article above referred to:

WHY AMERICAN ATHLETES LEAD—SYSTEM, THOROUGHNESS, AND UN-FLAGGING EFF ET CHIEF CAUSES, SAYS F. W. RUBEIN—ADVANCE EVER UNDER WAY—SPORTS FAR MORE GENERAL OVER HELE THAN IN OTHER LANDS, AND BOYS BETTER TRAINED—FAVORS NATIONAL STADIUM— A. A. U. HEARTILY FAVORS PROJECT FOR GREAT FIELD AT WASHINGTON WHERE 1920 OLYMPICS MAY BE STAGED.

At this time, when the subject of preparedness is of vital interest to Americans, there is refreshment in the fact that, unheralded and unsung, some millions of American youths have equipped themselves mentally and physically to lead good, sound, healthy lives, to fulfill thoroughly the duties of good citizens, and, if the dire necessity should arise, to place at their country's disposal the finest of spirit, trained never to waver under stress of conflict, and the sturdlest of bodies, drilled to respond with their last particle of energy to the commands of their wills. They are the athletes of the land, bronzed and strong-lunged, wiry, powerful, and agile from exercise on track, field, and road, tennis court and golf links, diamond and gridiron. Their collective name is legion, and—here is the joy-impelling climax—no other country in the world has anything approaching them numerically or in athletic provess.

prowess.

They are not pacifists, these young men trained in the great school of out of doors, and yet they balance no chips upon their shoulders. If an emergency should arise, however, they would be found standing shoulder to shoulder, a formidable array.

SURPASS NOT EACH BUT ALL NATIONS.

Yes; the United States outclasses in athletics any other of what might have been termed up to July, 1914, the "World's brotherhood of nations." More than this—much more than this—it exceeds substantially in athletic effectiveness, if not in number of athletes, the entire combined civilized world.

Thus far there have been held under the auspices of the international Olympic committee five Olympiads—at Athens in 1896, at Paris in 1900, at St. Louis in 1904, at London in 1908, and at Stockholm in 1912. Every Olympic meet has been won by American athletes, and in the five meets the representatives from these shores have captured twice as many first prizes as those taken by all other nations combined. In this one matter, at least, Americans need fear no disillusionment—their athletic countrymen lead the world. In order to get the views of an expert on the whys and wherefores of this important fact, a Times reporter chatted the other day with Frederick W. Rubien, secretary-treasurer of the Amateur Athletic Union and president of the Metropolitan Association, who has given unsparingly of his time and strength to the development of athletics in the United States. "Thoroughness" was the keynoto of Mr. Rubien's explanation.

ATHLETES NURTURED FROM BOXHOOD.

ATHLETES NURTURED FROM BOYHOOD,

"Over here," he said, "we have the most admirable system of developing picked athletes from the bud to the full flower of achievement that has ever been known. From mere boyhood the youth who can outrun or outjump his fellows or who gives evidence of being especially well adapted to some other specific branch of athletic activity is encouraged, watched, guided, warned, where necessary, and constantly stimulated and aided in every possible way to increase his provies naturally and gradually and to improve his form, eliminating little weaknesses of method that may prove grave imperfections if allowed to remain. As the boys grow and enter school and college or join the ranks of the athletic clubs they are studied by an ever-increasing number of expert eyes and receive the advice and admonition, the praise or censure of men who are masters in athletic selection and in the methods of living and working that bring the maximum results in competition. Then our young athletes mingle with and contest against the best in their lines, and the fittest survive, their names cross the boundaries of State and nation, and they are in line for the highest honors the athletic world has to offer.

"In other lands the processes differ widely from ours. Systematic, long-continued training is a thing almost unknown. The young Englishman who is to compete in an important meet will probably put in a few days of what he calls training in anticipation of it, but he will go through no arduous weeks of strictly supervised work in preparation for the final tests of speed and strength. This condition has existed in France also, while in Germany, Austria-Hungary, and the Scandinavian lands they have until recently gone in almost exclusively for gymnastics as a mixture of sport and exercise and to keep themselves physically fit.

AMERICAN TRAINERS ENGAGED.

"America's Olympic victories have, however, taught a lesson to European nations which several of them have taken to heart. Sweden some years ago engaged Ernie Hjertberg to train its Olympic team and to apply American methods in the training of Swedish athietes. A few years ago a German commission visited this country with the specific object of studying the system which developed athietes filled with the bounce and ginger characteristic of American performers. The German athiete is strong but slow of thought, and it is hard to get him 'on his toes.' As a result of this visit A. C. Kraenziein, America's former hurdle champion, was employed as director of athietics for the German Empire. Austria employed Al Copiand, and Lawson Robertson had been engaged in the same capacity by Hungary, but the war postponed his trip.

his trip.

"In a general way it may be said that other lands, overwhelmed by reiterated proofs of the supremacy in athletic fields of this country, are now, or were until the war broke out, going to school to this country, with the determination, if possible, to emulate the methods which had brought about our striking success. As for their own methods, they have little of value to offer us in return. It is impossible to interest Americans to any extent in the gymnastics which overrun the central empires, and training ideas in England and France are chiefly conspicuous by their absence.

RECORDS ARE NEVER SAFE.

"In our own country we are constantly advancing. Records fall right and left, and even the most remarkable figures are not safe for a week from the activities of the sharpshooters. This does not mean that better native capacity is at America's disposal now than in the days of 10 or 15 years ago, when 10 flat in the hundred or 15-2

in the high hurdles was a nation-wide sensation. It does mean that training systems have been improved and applied more generally throughout the land. It means, too, that more Americans than ever before are going in for athletics and that changes of striking value have been made in competition conditions, methods, and form.

"For instance, Dad Moulton, the veteran trainer, has constructed at San Francisco a track composed of layers of straw under cinders. The durability of this may be questioned, but it certainly adds spring to the stride of a sprinter. Experiments are made frequently with a view to developing a track best adapted to fast work. Sod turned upside down has been used a great deal.

"Then, again, in jumping the take-off has been much improved. The path has been made like a billiard table, and athletes, energetic of mind as well as of body, have devised new and more favorable positions in which to clear the bar, with the head slightly, if any, higher than the body. Pacific coast jumpers originated the method of taking the bar in a sidewise position, and this has proved very effective. In the pole vault Mike Murphy trained his men to give a sort of jerk, or shoot, to the body as they cleared the bar, thus attaining greater momentum and perceptibly increased height.

STERLING ATHLETES OF FAR WEST.

STERLING ATHLETES OF FAR WEST.

"In this connection I might say that the Pacific coast has in the fullest bloom or in the process of development at this time some wonderful athletes, tall, rangy chaps, capable under favorable conditions of startling performances. There have been some skeptical voices raised hereabouts with reference to certain record-breaking achievements out toward the setting sun, but I have no doubt whatever of the authenticity of the figures. Such men as Kelly, Simpson, and Murray are sterling athletes, likely at any time to do something in the mark-shattering line. Then, too, conditions on the border of the great western ocean are eminently favorable for high athletic standards. Climatic conditions are such that the men are able to keep in training the whole yerr round, and all the circumstances favor good figures for the occasions when they are in top form. Something has been said, in casting doubt upon the accuracy of the heralded records, to the effect that in the great Panama-Pacific meet, under A. A. U. auspices, startling figures were not attained. On that day, however, a wind with a tang and a chill attached came sweeping down through the foothills and made the conditions less favorable than was desirable.

"One element of the highest importance in the great movement which has placed American athletics on its present pinnacle is the clean lives led by those who aspire to develop track or field ability. From childhood, from the earliest days, when the youngsters begin to realize that they can run or jump pretty well, they learn to eschew the things that weaken physical energy. Cigarettes, excessive pastries, in fact, excesses of all kinds, they are taught, will militate against their chances of success.

HAS HELPED TO BAN DRUNKENNESS.

"As recently as 20 years ago a Sunday walk through the east side and other sections of the city would reveal the presence of almost uncountable intoxicated youths. This has been done away with in very great measure, and largely through the general upspringing of athletic ambitions. Liquor is anathema to the sound-minded young athletes. Each Sunday you will find perhaps a thousand of them off on an arduous road run, a race that calls for perfection of condition, and they have no time for nor patience with injurious indulgences.

"As for future Olympiads, we are hardly likely to see the world games held in 1920 in Habana, although that city is eager to stage the contests. There are considerations which argue strongly against the selection of the West Indian metropolis. The tropical climate there would make it essential that the meet be held in December, a time when it is very doubtful whether our men could get away from their duties for the trip, even if they could be kept in condition until winter. It is highly improbable, too, that the facilities and accommodations in Habana would be found adequate. Almost certainly European countries would be only meagerly, if at all, represented at that season of the year.

FAVORS STADIUM AT WASHINGTON.

"There is a pretty good prospect, however, that the world games of 1920 may come to this country. The event hinges largely upon the success of a measure introduced in Congress the other day by Congressman MURRAY HULBERT, of this city, which provides for the crection in Washington of a stadium of proportions and construction belitting the Capital city of the great Republic of the Western Hemisphere. If this project goes through—and the Amateur Athletic Union, as well as other bodies of strength and influence, is earnest in its support of the plan—not only will the Government have a fitting arena for the staging of such contests as the Army-Navy football game, but, which is of vastly greater import, it will be able to play host in proper style to all of the nations of the world where athletics is encouraged.

"Other countries have financed their Olympic teams from the initian holding of the world games. Trainers, grounds, traveling expenses—all essential expenditures have been met by the national purse. Uncle Sam, however, has never unbuckled his wallet to shed a cent in the support of those of his children who have crowned him with the world's athletic supremacy. It is high time that he showed a substantial interest in the matter, and he will have done so in a way highly pleasing to the athletic organizations, as well as creditable to the country, if this projected stadium is erected.

TO REUNITE OLD-WORLD ATHLETICS.

"If this should come to pass—and quick action is necessary if the next Olympic games are to be held here—the athletes of the now warring lands of Europe would find upon this side of the water in 1920 a common meeting ground, a field of athletic reconcillation.

"In a general way American athletes are in a better situation to-day than ever before. The death of James E. Sullivan was a grievous blow, but it has been demonstrated that the Amateur Athletic Union is by no means a one-man body. A development, especially pleasing to the officers of the union and to all who have the best interests of American athletics at heart, is the way in which college men are participating in its meets. The Intercollegiate Association, the Middle Western and Southern conferences, and the Institutions of the Far West find under Amateur Athletic Union auspices a common meeting ground wair-h offers a wider range for their athletic activities and promotes among them a good fellowship and friendly feeling that have at times in the past been lacking."

Equal Suffrage Amendment.

EXTENSION OF REMARKS

HON. WILLIS C. HAWLEY, OF OREGON.

IN THE HOUSE OF REPRESENTATIVES,

Thursday, May 11, 1916.

Mr. HAWLEY. Mr. Speaker, recently there was held at the capitol, at Salem, Oreg., a very representative gathering of the citizens of the State. This body adopted a resolution favoring immediate action on the equal-suffrage amendment. In support of this proposed amendment to the Constitution of the United States, I express the hope that the Committee on the Judiciary will report the amendment without delay. I am very earnestly in favor of its adoption.

in favor of its adoption.

Resolution unanimously passed at a mass meeting in the capitol, Salem, Oreg., by about 400 citizens.

Be it resolved, That the men and women voters at this meeting in the capitol, Salem, Oreg., on April 29, 1916, do protest at the action of the Judiciary Committee of the Sixty-fourth Congress, in preventing the Susan B. Anthony amendment enfranchising women from being voted upon by the representatives of the people on the floor of the House, and do also protest against the inconsistent attitude of the party in power—the Democratic Party—in withholding the right of full ditzenship from half the people—the women—and further request that this resolution be forwarded to the President of the United States, the Speaker of the House, Members of the House Judiciary Committee, and to our Oregon delegation, requesting that they be read into the Congressional Record by Senator Lane and by Congressman Hawley.

Florence B. Cartwright, Chairman.

Forest Reserves in Arkansas

SPEECH

HON. OTIS WINGO.

OF ARKANSAS,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, April 18, 1916.

The House in Committee of the Whole House on the state of the Union had under consideration the bill (H. R. 12717) making appropriations for the Department of Agriculture for the fiscal year ending June 30, 1917.

Mr. WINGO. Mr. Chairman, my amendment seeks to abolish what is left of the two forest reserves in Arkansas without waiting for them to be finally eliminated by proclamations of the President. The House will recall that during the three years that I have been a Member of this body I have been insistent in my demands that neither of these reserves should have been established; that the great bulk of the lands included in them were more fit for agriculture than for forestry conservation; that their maintenance was not only an unwarranted public expense but a burden upon the State of Arkansas, as it checked the rapid development of that country; and that for these reasons they should be abolished. I have not been content with my efforts upon the floor, but I have been persistent in my efforts with the Forestry Bureau, and am very much

in my efforts with the Forestry Bureau, and am very much graffiled by the fact that as a result of my efforts there has been eliminated a vast area from that portion of the reserves located in my district.

In the late summer of 1915 the Forestry Bureau agreed to eliminate a large area in both of these forest reserves, which action was approved by the Secretary of Agriculture, and formal request for the elimination of 433,664 acres from the Ozark National Forest and 280,000 acres from the Arkansas National Forest was submitted to the Secretary of the Interior September 6, 1915, as stated by Mr. Potter, the acting director, to me in a letter which I received shortly thereafter. Final action, however, on this was not taken until February of this year, at which time the President issued his proclamation making this elimination. With reference to these two eliminations I received the following letters:

UNITED STATES DEPARTMENT OF AGRICULTURE, Forest Service, Washington, February 28, 1916.

Hon. OTIS WINGO,

Hon. OTIS WINGO,

DEAR MR. WINGO: In accordance with the verbal promise made to you February 24 you were notified by telephone that the proclamation and the provisions of existing withdrawals, shall be opened and become provisions of the string was an Executive order dated April 21, 1914, modified the boundaries of the Arkansas National Forest by excluding the therein described lands; and Whereas it appears that the public good will be promoted by further modifying the boundaries of the Arkansas National Forest by eliminations; in the State of Arkansas, and restoring the boundaries of the Arkansas, and restoring the soundaries of the Arkansas National Forest by eliminations of the forest of congress approved State of the public lands therein in a manner authorized by the act of Congress approved June 4, 1897 (30 Stat, 11 at 34 and 36), entitled "An act to authority expense in the verbal promise making appropriations for sundry civil expenses of the Government for the fiscal year ending June 4, 1897 (30 Stat, 11

eliminations to the counties, was mailed to you the same evening, and I have to-day transmitted by telephone to your office the tabulation which appears below, showing the elimination by counties on the Arkansas Forest.

County.	Gross area in acres.	Net area in acres.
Garland. Logan Montgomery Perry Pika Polk Salina Scott Yell	44, 706. 95 480. 00 85, 796. 28 10, 779. 25 7, 556. 52 30, 569. 20 6, 497. 48 93, 788. 72 7, 438. 50	11, 423.00 120.00 16, 558.00 670.00 2, 457.00 5, 750.00 - 920.00 20, 714.24 440.00
Total	287, 612.90	59, 056, 24

The following tabulation in regard to the Ozark may also be of service to you:

County.	Gress area in acres.	Net area in acres.
Pope. Johnson Stone Franklin Cleburne Conway Newton Baxter Marion Searcy Van Buren	12,041.90 14,754.90 123,795.94 1,904.82 39,102.66 637.14 27,125.96 10,421.19 2,560.00 35,816.19 165,503.57	4, 370, 90 11, 785, 29 41, 733, 36 1, 371, 69 14, 913, 63 327, 58 10, 740, 13 5, 231, 18 880, 00 16, 683, 26 72, 150, 21
Total	433, 664. 27	180, 185. 73

The above information in connection with that contained in another office letter of this date comprises all the data available.

Very truly, yours,

A. F. POTTER, Acting Forester.

DEPARTMENT OF THE INTERIOR, GENERAL LAND OFFICE, Washington, February 28, 1916.

General, Land Office, Washington, February 28, 1916.

House of Representatives.

My Dear Mr. Wingo: Inclosed herein is a photostat copy of proclamation signed by the President February 23, 1916, excluding certain areas indicated as eliminations on the inclosed diagram from the Arkansas national forest, Arkansas, and providing for the restoration of the public lands therein to settlement in advance of entry. Under said proclamation such lands will be subject to settlement only under the homestead laws from 9 o'clock a. m.. April 26, until and including May 23, 1916, and thereafter to entry and disposition under any publicland law applicable thereto.

The excluded areas are in the western-central part of the State, in Saline, Garland, Perry, Yell, Scott, Montgomery, Pike, and Polk Counties, are mountainous, and heavily altenated (the best of such lands having passed into private ownership, and a small area is under withdrawal for power-site purposes).

The unwithdrawn, unappropriated public lands are interspersed throughout the exclusions, and portions thereof are reported to have some agricultural value. Such lands are in Camden and Little Rock land districts.

Printed copies of said proclamation have not as yet been received. Very respectfully,

D. K. PARROTT, Acting Assistant Commissioner. ARKANSAS NATIONAL FOREST.

(Fourth proclamation.)

A PROCLAMATION BY THE PRESIDENT OF THE UNITED STATES OF AMERICA.

and after, but not before, 9 o'clock a. m., on the ninety-first day after said date.

Persons who go upon any of the lands to be restored as herein provided and perform any act of settlement thereon from and including the date of this proclamation until 9 o'clock a. m., standard time, on the sixty-third day from and after the date hereof, or who are on or are occupying any part of such lands at said hour, except those having valid subsisting settlement rights initiated prior to reservation and since maintained, and those having preferences to make entry under the provisions of the act of Congress approved June 11, 1906 (34 Stat., 233), entitled "An act to provide for the entry of agricultural lands within forest reserves," and acts amendatory, will be considered and dealt with as trespassers and preference will be given the prior legal applicant, notwithstanding such unlawful settlement or occupancy: Provided, however, That nothing herein shall prevent persons from going upon and over the lands to examine them with a view thereafter to going upon and making settlement thereon when the lands shall become subject thereto in accordance with this proclamation. Persons having prior settlement rights or preferences, as above defined, will be allowed to make entry in conformity with existing law, and regulations. In witness whereof I have hereunto set my hand and caused the scal of the United States to be affixed.

Done at the city of Washington this 23d day of February, in the year of our Lord 1916, and of the Independence of the United States the one hundred and fortieth.

Woodbow Wilson.

By the President:

Scorctary of State.

On February 21 I called on the department to advise me of the total number of acres that had been eliminated or made available for entry under the forest homestead act since I became a Member of Congress, and in response received the following letter:

United States Department of Agriculture, Forest Service, Washington, February 28, 1916.

Washington, February 28, 1916.

Honse of Representatives.

Dran Sir: Your letter of February 21 is received.
On April 21, 1914, the President issued an Executive order eliminating from the Arkansas National Forest 12,041.87 acres in Montgomery County, Ark., 5,084.91 acres of which were public land and 3,048.13 acres in Pike County, of which 1,018.44 acres were public land. The figures showing the public land would be true only at the time the elimination was made, because some of it may have since been entered under the public-land laws. The President signed proclamations eliminating 433,664 acres from the Ozark National Forest and 287,612 acres from the Arkansas National Forest on February 17 and 23, 1916, respectively.

During the present administration the Secretary of Agriculture has also listed with the Secretary of the Interior 68,174 acres within the national forests in the State of Arkansas, to be opened to settlement and homestead entry. The total area of all lands either climinated or made available for entry under the forest homestead act since March 4, 1913, is, therefore, 804,540 acres.

Very truly, yours,

H. S. Graves, Forester.

Mr. Chairman, I have other correspondence in regard to my

Mr. Chairman, I have other correspondence in regard to my activities in this matter, but shall not take the time to read them to the committee at this time. While I have been very much gratified at these eliminations, I am still not satisfied and insist that both of these reserves should be abolished in their entirety, and for that reason I have offered the pending amend-These reserves should never have been created, and that they were unwisely created is shown by the fact that nearly a million acres have been eliminated therefrom by different proclamations in the last few years. Some of the best agricultural lands are still retained in the reserves, lands that are far superior from an agricultural standpoint to some of the lands that were eliminated. There were at least 70,000 acres that were eliminated that were not as good agricultural lands as other public lands that were retained in the reserves, so I urge the committee to accept my amendment. Why maintain these reserves at a net loss of from eighteen to twenty thousand dollars a year, when the only object obtained is to protect the timber lands of lumber companies and railroads and private individuals?

The CHAIRMAN. The time of the gentleman has expired. Mr. WINGO. I ask unanimous consent, Mr. Chairman, for five minutes more

The CHAIRMAN. Is there objection to the gentleman's request?

There was no objection.

Mr. WINGO. Last fall I was in this reserve, and especially that included in Montgomery County, of which the town of Mount Ida is the county seat. I stood in the door of the court-house of that splendid county and had my attention called to one of the most prosperous little farms that was the subject of one of the disputes that arose, it being contended by the Forestry Department when the entryman first desired to enter it that it was not fit for agricultural purposes. Finally it was released, and the entryman has developed it into a typical hill farm, upon which he is making a home and by actual demonstration has shown that lands that are contended to be unfit for agricultural purposes are rich from an agricultural standpoint and are more valuable for agriculture than for forestry. I

can cite other instances where good farming lands have been retained in these reserves that, after persistent effort and considerable annoyance, the entrymen were permitted to hold for

agricultural purposes

The trouble with those connected with the Forestry Service, and who report upon the character of these lands, is that they do not fully appreciate the productive value of lands of that character. I recently drove through the great peach orchard at Highland, Pike County, Ark., which is the largest peach orchard in the world, and is located upon a red gravelly ridge that is of the same character of lands as those that are now retained in the reserve, and which the department says is unfit for agricultural purposes. Pike County adjoins Montgomery County, and a part of the reserve includes a part of Pike The great bulk of the lands remaining in these reserves are of the same character of land as this peach-orchard land, and the lands upon which industrious farmers in Scott, Polk, Pike, and Montgomery Counties have made their homes, and thereby demonstrated to a practical certainty that the lands were chiefly valuable for agricultural purposes.

Mr. MANN. Mr. Chairman, will the gentleman yield? The CHAIRMAN. Does the gentleman from Arkansas yield to the gentleman from Illinois?

Mr. WINGO. Yes.
Mr. MANN. What is the land worth?

Mr. WINGO. That is largely a question of opinion. It might appear to the gentleman from Illinois that some of these lands are not worth more than \$2 an acre, while to others they would be worth from ten to twenty-five dollars an acre.

Mr. MANN. I had supposed it was worth from twenty-five

to thirty dollars at least.

Mr. WINGO. In my candid opinion the lands are worth \$50 an acre for farming purposes—that is, they will be ulti-mately—but in the hilly country there you can buy cut-over lands for \$10 an acre, but this price does not indicate their real value. In my candid judgment in a few years they will be selling for from twenty-five to fifty dollars an acre, as the country is being rapidly developed, and the value of these lands for farming purposes is fully appreciated.

The value of lands in a new country that is rapidly developing is always one of opinion, and depends not only upon the purchaser, but the purpose for which he intends to use it.

Mr. MANN. The gentleman does not call this a new country,

does he?

Mr. WINGO. Why, yes; certain portions of this are new, while some are old. One of the oldest towns in the State is located in that reserve, but the country has not been fully developed, because about 20 years ago—

Mr. MANN. It might not be a developed country, but it would not be my idea of a new country. However, that will be neither here nor there. I supposed this land was very good agricultural land when the timber was cut off.

Mr. WINGO. It is, the greater part of it. Mr. MANN. Is a part of it swampy?

Mr. WINGO. No; this is not in the swamp-land area of the State. It is in what you would call the foothills of the Ozarks. The creek and river bottoms are very rich, and only in the last few years have the people appreciated the value of red gravelly hill lands that are now being rapidly developed and which would have been more rapidly developed had not the growth of that country been retarded by the establishment of these reserves

Mr. MANN. If these forest reserves were abolished and the orders of the President were vacated, as suggested by the gentleman's amendment, would these lands be open for homestead

Mr. WINGO. Yes; that portion that is now public land.
Mr. MANN. But the people would not take it for homesteads

before, because it was not considered so valuable.

Mr. WINGO. The gentleman must remember that this has been in the forest reserves quite a while. They were established about the time that the rapid development of this part of the country commenced and about the time of the building of the railroads through that territory.

Mr. MANN. How long ago?

Mr. WINGO. I forget how long ago the original order was made, but it was several years ago; but the greater part of the development of that country has come within the last 10 or 15

Mr. MANN. Several years does not seem so long to me, and I hope not to the gentleman.

The CHAIRMAN. The time of the gentleman from Arkansas

has expired.

Mr. WINGO. I ask unanimous consent to extend my remarks by inserting certain correspondence to which I have referred.

The CHAIRMAN. The gentleman from Arkansas asks unanimous consent to extend his remarks in the Record. Is there any objection?

There was no objection.

Mr. LEVER. Mr. Chairman, I make the point of order against

the amendment.

Mr. WINGO. I desire to be heard on the point of order. My amendment is to strike out and save \$11,000 of expenses. It will reduce expenditures. It is plainly in order. While it may not be in order on this particular paragraph, it certainly is in order at other places in the bill, and I believe it is in order here, because it strikes out an item of expense and reduces the expenses of the department under discussion.

Mr. LEVER. It is a change of existing law.

The CHAIRMAN. The Chair will suggest to the gentleman that his amendment not only strikes out, but it seeks to insert a

provision, which is a change of existing law.

Mr. WINGO. Yes; but the only effect of it is to make a saving, because it abolishes the necessity for this expenditure. It destroys the necessity for the expenditure by abolishing the reserve and the project that is sought to be maintained by the appropriation.

Mr. Chairman, I shall insert in the RECORD a statement with reference to the receipts and expenditures under the 10 per cent and 25 per cent provisions of the existing law.

Mr. JOHNSON of Washington. What are the receipts? The centleman is bringing up the same problem that we have on the

Washington reserve.

Mr. WINGO. I did not want to take the time of the committee; but as the gentleman requests it, the statistics are set out in a letter from A. F. Potter, Acting Forester, to me, which is as follows:

DEPARTMENT OF AGRICULTURE,
FOREST SERVICE,
Washington, D. C., October 8, 1915.

Hon. Otis Wingo, House of Representatives.

House of Representatives.

Dear Sir: In further reference to your letter of September 13:
On April 21, 1914, the President signed a proclamation eliminating 15,090 acres from the Arkansas National Forest. The elimination of 433,664 acres from the Ozark National Forest and 280,000 from the Arkansas National Forest has been approved by the Secretary of Agriculture, and formal request that the elimination be made was submitted to the Secretary of the Interior September 6, 1915.

During the present administration the Secretary of Agriculture has listed 67,750,63 acres with the Secretary of the Interior to be opened to settlement and entry. Of this area I can give you the following information:

formation:

formation:

First. Approximately 25,566 acres have never been filed upon by either the preferred applicant or by anyone else.

Second. Approximately 12,133 acres were not filed upon by the persons in whose favor the land was listed, but by some one else.

From the above figures, you will readily see that the people who applied for approximately 37,700 acres of the area listed, did not care for the land when it was placed at their disposal.

Amounts apportioned to the State of Arkansas out of receipts from national forest resources for road and school purposes are as follows:

Thenthelies are cent raid to State for roads and schools.

Twenty-five per cent paid to State for roads and schools.

	Arkansas National Forest.	Ozark National Forest.	Total for State.
Fiscal year 1913 Fiscal year 1914 Piscal year 1915	\$9,285.04 5,788.58 4,924.99		\$12,854.02 9,983.19 8,738.93
Total	19,998.61	11,577.53	31,576.14

Since these sums are not apportioned to the different counties by the Forest Service, but are turned over to the proper State authorities by the Treasury Department, the Forest Service has no record of the amount of apportionment. This should be obtained from the State treasurer.

Amounts derived under the 10 per cent provision for road and trail work in the national forests in the State.

	Arkansas National Forest.	Ozark National Forest.	Total for State.
Fiscal year 1913. Fiscal year 1914. Fiscal year 1915.	\$3,714.02 2,315.43 1,970.00	\$1,427.59 1,677.85 1,525.57	
Total	7,999.45	4,631.01	12, 630. 46

Very truly, yours,

A. F. POTTER, Acting Forester.

Mr. JOHNSON of Washington. Will the gentleman yield for

a question? Mr. WINGO. I have only five minutes, and I would rather not yield now. The object of my amendment is to meet this

kind of a situation. That is a rapidly developing country, and the problems of constructing roads is a very serious one. local communities, by their local road taxes and local funds, raised by assessments, try to construct their local roads, but they have neither the authority nor the funds to construct roads through the forest reserves. The public lands in these reserves are exempt from taxation, so the whole burden of road improvement, which must be met by local taxation, is borne by the local landowners, which is not fair. My amendment seeks to meet this injustice by taking the entire funds arising from the sale of timber on these forest reserves and using these funds thus obtained in the construction of roads in the counties in which the timber is sold. To give you an illustration of the injustice of the present situation, I received a letter a few days ago from the gentleman having in charge the preliminary survey for a highway that is intended to go through these reserves. could make the survey through the private lands, and the private-land owners, if they wish, can, under the law, provide to bear the burden themselves for the survey through their own lands, but there are no funds available to meet the expenses of the survey through the Government lands, nor is there any provision of law whereby such funds can be made available, unless my amendment is adopted.

Mr. MANN. Will the gentleman yield?

Mr. WINGO. Yes.
Mr. MANN. The gentleman says "they" are trying to put
through a highway. Who is "they"?

Mr. WINGO. The local association of citizens who are back of the proposed highway. This highway would run through my district and will have spurs running through some of the As I understand, the main highway, as well as the counties spurs, will run down through at least one county in which the reserves are located.

Mr. MANN. The gentleman refers to a highway running down through the county. Is this a local matter, or is it to be put

through by somebody else?

Mr. WINGO. No. As I understand, the local associations are trying to get together, so that it will be brought into what they call the proposed Jefferson Highway.

Mr. MANN. What is the Jefferson Highway? Mr. WINGO. The proposition, as I understand it, is to construct a read from Kansas City to the Guif.

Mr. MANN. For automobilists?

Mr. WINGO. I presume it will be used by automobiles. I am not in favor of an automobile highway, but am not opposed to them, provided we can get local highways to meet the needs of the farmer.

Mr. MANN. I am simply trying to describe it. Mr. WINGO. It will be a part of that highway.
Mr. MANN. I do not think it would do any harm for them to

run outside of these little local forest reserves.

Mr. WINGO. Well, I want this amendment adopted, so that the proceeds from the sale of timber can be used in the construction of roads through Government land, which, of course, by their very nature will be local highways.

Mr. MANN. The gentleman will understand that if we do it in this case it will be very difficult to refuse it when it is asked for forest reserves that are very large, and where they would

want a road every mile or two.

The CHAIRMAN. The time of the gentleman has expired.

Shall We Rob the Filipino of His Freedom.

EXTENSION OF REMARKS

HON. JULIUS KAHN. OF CALIFORNIA,

IN THE HOUSE OF REPRESENTATIVES, Monday, May 1, 1916.

Mr. KAHN. Mr. Speaker, the Democratic Party is now reaping the inevitable fruits of its misguided, shortsighted, and un-American policy toward the question of Philippine independence. When we acquired the islands Americans at first hesitated to assume the burden of doing their share in "serving humanity," in aiding in the regeneration of the backward areas of the earth. But after thoughtful consideration they passed directly upon the question in the election of 1900, resulting in an overwhelming defeat for the party that advocated shirking a national duty. Compelled thus unwillingly to assume the burden of administering the islands, they turned to the task with characteristic fortitude, and through a nonpolitical adminis-

tration of 12 years created the cleanest and most efficient government on the face of the earth. President McKinley, keenly alive to the responsibility we had assumed before the world, appointed an able nonpartisan commission headed by Mr. Taft, which, as the sole legislative body down to 1907, wrote all the fundamental laws for the government of the islands. Never before in history has a single group of men had so wonderful an opportunity to start a people on the road to self-government, and their work stands to-day as a model in the government of dependencies. As soon as they had constructed the foundation of government in all its branches-police, health, education, finance, and the multitude of other political activities incident to the simplest form of government—Mr. Taft visited the United States and succeeded in securing for the Filipinos an elective When one contemplates the great work Mr. Taft accomplished in the islands and the slurs heaped upon him now by the Democratic advocates of "scuttle" and Filipino politicians, because he reminds them they are yet children in the art of self-government, it is not strange that some Americans, who at heart are sincerely desirous of seeing their country live up to its best traditions and duty, have become so disgusted with the attitude of the Filipino politician as to be willing to join hands with those who never were the true friend of the Filipino, and be willing to see such a bill as the one now before us placed upon the statute books.

Down to the time the present administration took charge of this Government American politics had never entered into consideration in Philippine appointments. Hardly had Mr. Wilson entered the White House than he appointed an entirely new Philippine Commission, heading it with a Democratic Member of this House. Not content with thus announcing to the world that politics would hereafter govern in Philippine appointments, the selected head of the new commission proceeded to the Philippines and created absolute chaos in the government by demanding resignations right and left, giving as his reason, in many cases, that the incumbents could not be trusted because they were Republicans. In order to make himself solid with the native politicians he announced that he was the champion of immediate independence. These gentlemen, who had turned their eyes longingly on the government positions which, in the interest of efficiency, it was necessary to fill with Americans, and on the Treasury, over which Americans had held a restraining hand, flocked to the standard of the New Freedom, and things began to move rapidly so far as Americans in the insular service were concerned. Never, perhaps, in history has greater chaos been injected into a government in so short a time. The culmination of this vicious attack on Americans took place in the last legislature, when they passed a law offering an open bribe to Americans to leave by promising all who should apply for retirement by a given date one-third of their annual salaries for the next three years. Can the gentlemen of this House conceive of a greater insult to Americans under their own flag? Is it any wonder that under such an administration the bands have been compelled to cease playing the Star-Spangled Banner at the end of the daily evening concert on the Luneta, Manila's fashionable promenade? Not satisfied, however, with securing all the government offices, the same legislature has provided for the purchase of the Manila railroad. For any democratic government to enter the railroad business is dangerous; for a Filipino government to do so is calamitous. The wonder grows as to whether these gentlemen charged with the direction of Philippine affairs ever saw or heard of a government-owned railroad in Latin America. Is it surprising that one of the four Americans appointed to the Philippine Commission resigned long since, and another has been on extended leave and, according to press dispatches, will not return?

FREEDOM OR INDEPENDENCE?

Those who advocate the abandonment of our national duty propose to give the Filipino independence. Have they ever inquired, or do they care, whether this means freedom? The citizens of California are free, but they are not independent. The citizens of Mexico are independent; who has the temerity to say they are free? But we have given the Filipino freedom—yes; we have even given him the New Freedom. We have freed him from the yoke of tyranny in government and in the church. We have given him freedom of access to the courts, the personal freedom insured by habeas corpus. We have freed his mind from ignorance through the introduction of a model school system. We have freed his body from disease through the introduction of a magnificent system of sanitation and public health. We have given him freedom to worship according to the dictates of his own conscience.

Do the good people of America understand how long this religious freedom would stand under a Filipino government? Fortunately, we are under no delusions in this respect. The schism in the Philippine church, started by the proscribed priest Aglipay, tells us exactly what will happen. This man started a movement to establish a Philippine church, with himself as pope and a hierarchy of Filipino archbishops, bishops, and other prelates. The movement became so strong and their seizure of church property so widespread that it seriously menaced the government at one time and compelled the commission to provide special acts whereby the matter of church titles could be determined in the interests of public order. The movement was typical of the working of the Filipino mind. He loves pomp and show and ceremony, and, above all, the power of domination over the body and spirit of his weaker brother. Is it possible the churches of America can not see the hand of destiny in the fact that the only Christian people of Asia have come under the protection of the Stars and Stripes? Do they favor such legislation as proposed in this bill?

WHENCE COMES THE DEMAND FOR FILIPINO INDEPENDENCE?

It is well in answering the arguments of those who now demand that America withdraw from the islands, regardless of our national honor and international obligations, to analyze the reasons back of each element which seeks to bring this about.

First, we have the pacifists. I would not charge these worthy people with physical cowardice, but if we analyze their mental processes we will find that the fear of war and preparedness for war makes them moral cowards. They are afraid to champion any national policy which might by the widest stretch of imagination bring us into conflict with other nations in any part of the world. Down to a period of which the Spanish War forms the end, America was free to develop her own resources within her own territory. Whether we regret it or not, the fact remains that under the powerful stimulus of prosperity engendered by Republican administrations we were so rapidly outstripping the power of our people to absorb our own manufactures that we were compelled to seek foreign markets. Such a policy of expansion does not necessarily involve territorial aggrandizement; but to attempt to circumscribe it is as futile as to attempt to forestall the physical processes of nature herself. It is a part of the inevitable and natural growth of a nation. When a nation arrives at this stage of her development she must fortify herself through trained diplomacy and farsighted national policies to take her place among the powers of the Because our acquisition of the Philippine Islands has brought us closely in touch with the problems of the Orient, the pacifist shudders at the thought of possible conflict, because he is opposed as a fundamental principle to national preparedness against war. His view is shortsighted. Trade rivalries on a basis of free and friendly competition is absolutely inevitable, and no more involves necessity for resorting to war than everyday commercial competition involves resort to the courts.

The next group who have actively opposed retention of the Philippines and now actively advocate the policy of scuttle, is the small but noisy crowd whose headquarters are in New England, but having a few followers elsewhere, under the banner of the Anti-Imperialistic League. These people also have such a narrow vision that they believe because we were compelled to take the remaining Spanish colonies as the result of our war for the freedom of Cuba that America must inevitably become so drunk with the desire for glory that we shall seek territory wherever we can find it, regardless of its effect upon our national prosperity or our national policy of maintaining ourselves in a strong continental position. The constant moral aid and comfort given to the Filipino insurrectos by this class, when they were denying us the right to prove our benevolent intentions toward the Filipinos, and the libels published against our soldiers at a time when they were engaged in the most arduous and thankless task of restoring order in the Philippines, should make any red-blooded American spurn the advice of such a group as this.

There is another group made up of dilettantes in government, who, ignoring all practical application of the theory of government, wrap the mantle of righteousness about them and with sanctimonlous air, speak of "the consent of the governed." I shall refer to this subject later on in answering the arguments which are advanced in favor of granting the Filipinos independence.

There is another group who demand this legislation consisting of those Democrats who now find themselves confronted with the responsibility of government after advocating thoughtlessly for 15 years in their national platform the policy of "scuttle." These gentlemen find no difficulty in explaining away the one-term plank or in imposing canal tolls on American vessels, but have at present a highly developed conscience when the Filipino politicians remind them of their past errors.

The remaining element demanding independence is a small group of Filipino politicians who in their own land are as noisy as the pacifists and anti-imperialists in America. They no more represent the real sentiment of the business man or of the "man with the hoe" than does the pacifist or the anti-imperialist represent thorough-going, straight-forward, dyed-in-the-wool Americanism.

THE ARGUMENTS FOR INDEPENDENCE.

Three principal reasons have been advanced why the Filipinos should at this time be granted independence. These are:

First. The argument that just governments derive their powers from the consent of the governed.

Second. That the islands are an economic burden.

Third. That it is essential to our national defense that we get rid of them.

No theory of government has been so badly overworked as the talk about "the consent of the governed." It is merely a half truth, and a half truth, skillfully distorted, is worse than a downright lie.

We have in this country approximately 100,000,000 people. At the last election only 13,000,000 of these were accorded any right to say how they were to be governed. By what right do these 13,000,000 impose their will upon the remaining 87,000,000 American citizens? By what theory do those Democrats who talk about "the consent of the governed" in the Philippines deny the right of suffrage in many of their own States to their own wives and mothers and daughters? If we analyze the figures in the last election still further, we find that it is not even the 13,000,000 people who voted who are imposing their will upon the remainder of our population. There was cast in the last election for President the following popular vote:

 For Wilson
 6, 292, 718

 For Taft
 3, 369, 221

 For Roosevelt
 4, 057, 429

That is to say, the Democratic Party, which is the minority party to the extent of 1,133,932 votes, now governs the whole United States. If we apply the same test to the Philippine Islands, we find that out of a population of approximately 8,000,000 people at the last elections but slightly over 200,000 voted. That is to say, those Filipino politicians who come here and loudly demand their independence under "the consent of the governed" theory were elected to office under a very liberal election system by which only one person in forty was permitted to say how he should be governed or who his political leaders should be.

It is not true that the Filipino is not consulted as to how he shall be governed. He has had an elective assembly since 1907, and this House, I believe, is unanimous in believing that we should now make both these legislative houses elective.

When we see the magnificent response to the demand of the British Empire which such self-governing colonies as Canada, Australia, New Zealand, and South Africa are now making, how can anyone stand here and have the effrontery to say that these self-governing dependencies are groaning under the British yoke, because some doctrinaire of a revolutionary period in history evolved a high-sounding phrase regarding the "consent of the governed"? No one has ever sought to deny, or now would deny, the Filipino the maximum amount of self-government he is capable of carrying, but the difference between autonomy and independence is that between the nadir and the zenith.

Let us see how the author of the "consent-of-the-governed" theory applied it to Latin America. Jefferson, in a letter to Adams, January 22, 1821, two years before the Monroe doctrine was enunciated, said:

was enunciated, said:

I feared from the beginning that these people were not yet sufficiently enlightened for self-government, and that after wading through blood and slaughter they would end in military tyrannies more or less numerous. Yet, as they wished to try the experiment, I wished them success in it; they have now tried it and will possibly find their safest road will be an accommodation with the mother country which shall hold them together by the single link of some chief magistrate, leaving to him power enough to keep them in peace with one another and to themselves the essential power of self-government and self-improvement until they shall be sufficiently trained by education and habits of freedom to walk safely by themselves. Representative government, native functionaries, a qualified negation on their laws, with a previous security by compact for freedom of commerce, freedom of press, habeas corpus, and trial by fury, would make a good beginning. This last would be the school in which their people might begin to learn the exercise of civil duties as well as rights.

Thus did the author of the "consent of the governed" apply

Thus did the author of the "consent of the governed" apply his doctrine to the conditions of Latin America—a case of theory giving way to practical conditions. But the members of the Democratic Party are less consistent in their Philippine policy than was Jefferson in applying his theories to conditions in Latin America. Starting with the off-quoted statement of the President while yet a Princeton professor that we can not

give the Filipino self-government any more than we can give him character, they found themselves, in March, 1913, in con-trol of the Government as a minority party which for nearly two decades had advocated an impossible policy regarding the Philippines merely because they were the opposition party. Compelled to give some heed to the noisy crowd demanding an independence bill, the representatives of that party in this House introduced a very good bill to increase the participation of the Filipino in his own government, but coupled it with a vicious preamble for political effect. This bill passed the House at the last session. When President Wilson addressed Congress last December he called attention to the Philippine bill, but he had changed front; he called it a bill "to alter and reform the government of the islands," and the Hitchcock bill made a radical and significant change in the preamble. It now purported to grant them independence when "in the judgment of the United States (not of the Filipinos) it will be to the permanent interest of the people of the Philippine Islands." the significant change. This bill was in a fair way to pass the Senate when the whole program was upset by an amendment providing for independence in not less than two nor more than The Democratic Party was therefore brought face to face with their own folly. After a great deal of running to the White House they decided to hold a caucus on the bill. Press reports with every appearance of accuracy say the chairman read a letter from the President indorsing the "scuttle" policy, and the bill is here to-day in consequence.

It would be interesting to know by what mental process the President has arrived at the conclusion that we can now wish self-government upon them, that this is the judgment of the United States, that this is for the permanent interests of the islands, or that a people held in bondage by Spain for 300 years can be educated in self-government by the stroke of a

pen in the period of a brief decade.

The second argument frequently advanced as to why we should grant the Filipinos absolute independence is that the islands are an economic burden. It is true that the islands have been costly, but this is true only of the insurrectionary period. The actual cost of the Philippine insurrection is perhaps impossible of ascertainment; but when have Americans ever balked at the question of expense in the assertion of their rights of sovereignty? Who ever stopped to consider the cost of the war with Mexico in its ultimate effect on our history? What historian weighs the cost of our Civil War against the achievement of personal rights? Where is the American who to-day regrets the cost of putting down the Philippine insur-rection as against the opportunity we have had to serve a part of mankind? Shall we be frightened from the course to which for nearly two decades we have directed our footsteps because in its initiation it was costly? During the hearings upon this bill before the Senate committee a careful estimate was submitted of the cost per year from 1903 to 1914. This is probably the most careful estimate ever compiled and it shows that the yearly average cost has been slightly in excess of \$9,000,000. It must be borne in mind that these figures include a large amount of capital investment in the way of barracks and quarters, and the large expense in fortifications on the island of Corregidor at the mouth of Manila Bay. The annual cost will be reduced very materially in the next decade, because our plant is practically completed. Offsetting this expenditure of \$9,000, 000 per year, what have American business men reaped in return? There is at present approximately \$75,000,000 of American capital invested in the Philippine Islands, and in addition we sold to the Philippine Islands last year goods to the value of \$26.381,069. The islands must have capital to The vast forests of hardwood, the areas availdevelop them. able for sugar cultivation, and the wonderful opportunities for rubber cultivation are but a few of the possibilities for development by American capital. But no capital, American or foreign, will ever undertake such investments under a Filipino government. The risks are too great.

But when anyone refers to making money in the Philippines immediately the cry of "sordidness" and "selfish interests" is raised. The same people raise these cries who do not believe that there is any connection between the expansion of commerce and the growth of democracy. They would tell the Filipino that he can be happy on an empty stomach; but where in history has a government or a people progressed where business prosperity was not the corner stone of government? What interest has the man who has to sleep on a park bench in the theory of the "consent of the governed"? Ask him, and he will tell you that all human happiness is bound up in three square meals a day and a little left over wherewith to purchase those things which satisfy the human craving for happiness. One need look no further to

ascertain the ability of the Filipino to maintain an independent government than to inquire to what extent he controls the retail, wholesale, export, and import business of his own country. The Filipino is not a business man. Most of the rich element among the Filipinos have made their money in dealing in the products of the country and lending money to the poor at usurious rates, but they dispose of their products within the islands to foreign export houses. They do not know what it is to seek the markets of the world. If you go into the retail district of Manila, except in the poorer district where you find the retail shops presided over by Filipino women, the entire retail business is conducted by the Chinese, Hindus, Spaniards, and Americans, with a slight sprinkling of Germans and Englishmen.

Not only is the Filipino not a business man but he has no conception of finance as applied to government. I venture to state without fear of contradiction that there is not a single Filipino in the archipelago to-day who can tell you why his currency is stable under American government and was absolutely unstable under the Spanish régime. The whole financial policy of the government since our occupation has been managed by Americans, and will fall to the ground the moment the Filipino is permitted to take it over. We have seen some very able gentlemen from the Philippine Islands come to this country and in a perfectly admirable way urge further recognition of their people along the lines of self-government. Some of them, unfortunately, have committed the terrible mistake of advocating independence for the islands. But scarcely one of them, I venture to say, could tell you what governs the rate of exchange between Manila and the financial centers of the world. It is the fiscal policy which has been the downfall of these Latin-American Republics where revolution has for a hundred years been chronic. What reason have these Members to advance who, here in this House, propose to throw the Filipino upon the charity of the world to prove that they are any more capable of managing the finances of their government than are the Dominicans, Haitians, Nicaraguans, Mexicans, and many others who for nearly 100 years have made a dismal failure of government in a region which is not surpassed in richness on the face of the globe?

Since our occupation we have issued Government and municipal bonds, under authority of Congress, in the Philippine Islands to the extent of \$16,125,000. In addition we have guaranteed the interest on many millions of railroad bonds in order to develop transportation facilities and bring prosperity to the rural districts. What does this bill propose to do in the way of guaranteeing payment of these bonds? Their holders are almost exclusively American citizens, who get their checks for interest regularly from the United States Treasury. Do the advocates of independence propose that there shall be a default of interest on an account payable on the books of the United States Treasury? What is there in this bill which will prevent default on these bonds? Not a word. One need look no further to discover the disingenuousness which lies back of this bill.

I wish here to quote from a speech delivered by the present Secretary of Commerce at the Lake Mohonk conference in 1911. Mr. Redfield is a business man. He visited the Philippine Islands and saw them from the viewpoint of an American and a business man. Mr. Redfield said:

OBSERVATIONS IN THE PHILIPPINES.

a business man. Mr. Redfield said:

OBSERVATIONS IN THE PHILIPPINES.

I have long been familiar with the feeling among the American business men of whom I am one, and have long been familiar with the feeling among American business men, of indifference to the Philippines. Many have said to me that they were not worth while; some have said they were useless; some have said they were too expensive; few have shown any knowledge of the subject. I went to see for myself, not as a Member of Congress, and without introductions to the officials, and I saw.

Just beyond the Philippines lies another great tropical dependency of another power. Very briefly I want to put Java and the Philippines into clear contrast before you. Java has 50,000 square miles, the area of this State. She supports thirty millions of people. She is a food exporter. The Philippines have about 115,000 square miles—more than twice the area—just as fertile and equally capable of cultivation. They have not quite eight millions of people, and they import food. I know that the Philippines export hemp. I have been in the great warehouses and have seen bales made up. I know they export copra. I went there largely because they did; but to-day they are importing into the Philippines; they are importing five or six million dollars worth of food every year—rice—to make good the shortage in the rice crop; while Java, with less than half the territory and nearly four times the population, exports coconut oil, copra, coffee, tea, sugar, and tobacco. Why? Go from one to the other and see.

The work of the Hollander is written all over Java. The work of the American has barely scratched the surface of one corner of the Philippines; and yet, speaking as a business man of the possibility of the development of commerce, I say without hesitation that the Philippines have all that Java has and more; that they are capable of as great economic development as Java; and since Holland draws every year \$100,000,000 to gold as her financial return from Java aione, the United

which time he has no return, and then he and his three associates sit down and draw one hundred thousand a year net revenue from their hundred thousand trees without care or thought of labor. For, he it known, the market price of copra is five times as great as the price of producing it.

The world's supply is scanty, and the Islands of the great Dutch Indians and the Philippines are straining every nerve to meet the demand of the world for ecconut oil, which is far insufficient. I am sumply speaking on a subject of something with which I am familiar. Now will you go with me from Manila north a way?

I have here an advertisement of a Manila railway. It is a somewhat shocking thing to advertise that express trains will run on an average of from 3 to 21 miles an hour. I took those trains. In the 150 miles or less between San Fabian and Manila you pass through three languages. Let us stop and look at one of the native taos in his field, It is, perhaps, the dry season. He is not in his field because there is no irrigation yet. That field lies idle half the year. It is not so in Java You can not escape the irrigation ditches there in city or country. You can go nowhere in Java and fall to see the irrigation ditches.

country. You can go nowhere in Java and fail to see the irrigation ditches.

It is not so in the Philippines yet, and the fields lie idle half the year for lack of water, and therefore the people are going on scanty food for lack of water. And it was a pittful thing in that railroad train that morning to hear the president of La Union Province beg the American engineer for a well-driving apparatus that his people might have pure water to drink, and to hear my friend the engineer tell him, "No, I am sorry, not now. We have 43 well-driving apparatuses, it is true, but we can not spare one now for La Union. Your people must go without good drinking water until we have means sufficient."

We will go over the farm of the tao in the dry season, when the streams have run to waste and water has not been saved for lack of means. I do not mean to imply that they are not doing much. I will come to that, but it is not done yet. It is too big a job to do all at once. Let us go over the dry fields that are idle. The carabao, idle for about six months for lack of water, the farmer himself must feed the animals during that time. And look at the little sugar mill. I have been reasonably familiar with sugar machinery for 25 years. Twenty-five years ago we had graduated 100 years before that particular sugar mill. As it stands there, and when it runs, it is wasting from one-half to three fourths of all the juice it is made to extract, and the tao can buy no new sugar min, is the first place because he does not know enough, and in the second place because it he did he has no money with which to buy it.

the can buy no new sugate milit, as the first plues because he does not know enough, and in the second place because if the did he has no money with which to buy it.

There is one other consideration of which I must speak before I close. It was a striking thing to leave the Island of Formosa on the right hand at 9 o'clock in the evening, and to have Luzon on the left hand at 11 o'clock the next morning. Japan and the Philippines are very much closer together than some of us realize. I do not think there is any danger on that account, but I have in my pocket a proposition from an American newspaper to sell the Philippine Islands to Japan, a proposition which contains more condensed ignorance in one sheet of paper with the situation is here, indies and gentlemen. The warper philosophy of this situation is here, indies and gentlemen. The warper philosophy of this situation is here, indies and gentlemen. The policy of this situation is here, indies and gentlemen. The policy of Paris is the policy that a springs from Essen and Solingen; the policy that arises from Roubalx and St. Etienne; the policy of Herlin is the policy that springs from Essen and Solingen; the policy that is leading Italy to Tripoll to-day is not found in Rome but in the industrial activitie of Main. We shall entirely mistake the great essence economic and commercial forces. The heads of these attoms seem to lead, but they only follow. They must move as they go. It is inconcelvable that England's export commerce should diminish; the moment it diminishes England begins to wither. Germany must continue to expand, or Germany's power begins to diminish, and the Kaiser France begins to die. Holland would collapse were it not for her possessem to lead, but they only follow. They must move as they go. It is inconcelvable that England's export commerce sourselves. Ten years ago it might be said our great productivity was sufficient only for our own needs; to day it is no longer true. You and I know, and fellow Americans will keep our factories idle a la

thirds of the adult male population of those islands are able, under the present very simple qualifications for voting, to exercise a deliberate judgment either against or in favor of it.

It would be interesting to know to what extent the Secretary of Commerce has been consulted by his chief in aiding to force this bill through under the caucus whip.

The third argument for independence is that the islands are a The third argument for independence is that the islands are a menace to our national defense. I have before mentioned the significant fact that the pacifists and the anti-imperialists are in favor of this bill; but to show you further the superficial knowledge in dealing with this subject which has characterized this movement from the beginning I quote the following from the report of the Committee on Insular Affairs in reporting this bill to the House:

the report of the Committee on Insular Affairs in reporting this bill to the House:

It must by this time be apparent to all thoughtful people that the determination of the political status of the Philippines can not longer be wisely, if indeed safely, postponed. The war which is spreading death and ruin over Europe and large portions of Asia has brought the United States face to face with the vital question of preparedness against foreign aggression, and Congress is called upon to make adequate provision for the national defense. The popular demand for the strengthening of the military and naval arms of the Government is both loud and insistent, but before it can be wisely determined to what extent the Army shall be increased and the Navy enlarged it is absolutely essential that those charged with responsibility for the country's safety shall know whether the Philippines are to be given independence or be held as a colony to be fortified and defended. If they are to be included in any scheme of national defense which may be adopted, the cost to the American people will be many millions greater than would otherwise be necessary. If, on the other hand, the policy shall be to retain control over them, but, in the event of foreign attack, not to attempt their defense but to abandon them to their fate, as has been suggested by military men, we shall risk inviting the scorn of the world and of standing humiliated in the presence of mankind. The issue is clean-cut, and there is no escaping it. If the Philippines are to be held indefinitely, the same protection must be extended to them as is afforded every other foot of United States territory. The difficulty, if not the impossibility, of successfully defending territory located in the Eastern Hemisphere, and separated from continental United States by the Pacific Ocean, must be apparent to the average intelligence, and yet holding and governing them against the consent of their linhabitants increases rather than lessens the obligations to defend them.

If the United

This remarkable report, giving as a reason why we should upset the stable equilibrium now existing in the Orient, pur-ports to cite, without giving their names, the opinions of military men that in the event of war we should be compelled to abandon the islands to their fate. I have no doubt that military and naval men have made such statements, but the error which the committee makes is in the conclusions to be drawn therefrom. So long as the islands are ours the American people will never abandon them to their fate, any more than they would abandon New England or California. In the event of a war in the Pacific that nation will retain the Philippine Islands at its close which has control of the sea. This is a fundamental maxim of military policy, and while I do not think for a moment that the Philippines now or at any future period will be in danger so long as the American flag flies over them, yet if we follow the course which destiny has marked for us, and as the President has said, "take leave to be strong upon the sea," the Philippine Islands will remain ours for eternity

The difficulty with the gentlemen who wrote this report is their failure to grasp the fundamentals of military policy, which is so common with the average American. Has England abandoned Australia to her fate? Is New Zealand trembling in her boots lest the enemies of the British Empire come thundering at her gates? Of course not. The British fleet from its home base makes shipping safe in the harbors of Sydney and Melbourne, and an American fleet, stronger than any other power can muster in the Pacific, based on San Francisco Bay, covers every island of the Pacific over which the American flag flies with the silent pressure of its might. Abandon the islands to their fate! Nobody but an ultrapacifist would ever think of it.

If the Filipino were more experienced in the ways of the world, he might ask himself whether, indeed, he ought to trust his fate to a committee of this House or to a political party which in a report on a bill advocating the independence of the islands practically says to him, "We shall abandon you, in the event of foreign attack, to your fate." It is the logical conclusion of the course upon which the Democratic Party has been sailing on the Philippine question since the islands came under our sovereignty.

CUBA OFFERS NO PRECEDENT.

It is frequently urged by the advocates of the "scuttle" policy that because we set up an independent government in Cuba we should do the same with the Philippines. The two I of eternal justice?

causes are totally dissimilar. Although on the impulse of the moment we declared our purpose regarding Cuba, in order to set ourselves right in the eyes of the world that we did not covet the island, but would tolerate no longer the intolerable conditions of Spanish rule, we knew at the time that we should always remain responsible to the world for a stable government in the island. Cuba is not an independent nation to-day. The Platt amendment made the island a dependency of the United We have already been compelled to take advantage of our rights under that amendment once, and I firmly believe that our rights under that amendment once, and I firmly believe that if we are compelled to do so again when the American flag is raised over the "pearl of the Antilles" she will be left only the shadow of independence. She has never settled with us for the cost of the last intervention, and she knows that we shall not continue to pour out millions to do her house cleaning. She is at our very doors, and under no circumstances would the American people ever consent to see her oppressed by a foreign power. For all practical purposes the Caribbean must become an American lake, as is demonstrated by the restraints we have already placed upon Cuba, Santo Domingo, Haiti, Nicaragua, already placed upon Cuba, Santo Donnigo, Hart, Arcaragua, and Panama. We are equally responsible to the world not to upset the stability of the Orient. By what possible show of consistency does the Democratic Party propose to turn loose consistency does the Democratic Party propose to turn loose an irresponsible government on the shores of Asia and at the same time reserve naval bases and coaling stations in the islands? Are we to sit idly by while other powers land troops, restore order, and take their compensation by a mortgage on the revenues of the islands? What they propose is to throw away everything but the possibility of conflict with other powers.

The present bill was an excellent measure, granting the Filipinos a greater measure of autonomy, "altering and reforming the government of the Philippines," to quote the language of the President—though going further than I believe justifiable at this time—until the Senate amondment changed its whole purthis time-until the Senate amendment changed its whole purpose; and the proposition regarding coaling stations is merely a sample of its inconsistency. To require us to sit idly by with folded hands while the Filipino makes another Haiti or Mexico of his new government will be the logical outcome of such a piece of legislation as this. The Democratic Party was wrong when it pulled down the flag in Hawaii; it is wrong now in proposing to pull it down in the Philippines.

INTEREST OF THE PACIFIC COAST IN THE RETENTION OF THE PHILIPPINES.

The people of the Pacific coast are vitally interested in everything in the Pacific. That policy up to the present time was well known to the world. It has consisted in upholding our sovereignty over all the islands which have come under our control, unaccompanied by any aggressive designs on the territory of any power whatsoever, and such a share in the trade of the Orient as we could secure through free competition, through the "open door."

The people of the Pacific coast have seen with dismay the revocation of the canal-tolls act, which would have favored American shipping. They have viewed with genuine alarm the disappearance of the American flag from the Pacific. They have borne with what fortitude they could until another election the discrimination against their products in the Democratic tariff policy.

They expect to maintain and build up their trade with the Philippines. If American trade with the islands meant the slightest oppression of the Filipino people, I for one would be the last person to stand here and argue for their retention. But we have not oppressed the Filipinos. Nor shall we oppress We shall continue to insure them every principle of freedom and the fullest participation in their government they are capable of assuming. We do not propose to exploit them. We will dea! with them honestly and patriotically; and mutual benefits will result.

What the Filipino does not understand is that personal happiness under any form of government is impossible unless accompanied by financial prosperity. In company with many other people whose political ideas were derived from Spain, he believes that happiness can be obtained through the search for some ideal in government. For nearly a century people so believing have made a travesty of the name of democracy and republics and have found their ideals, when unaccompanied by commercial prosperity, turn, like Dead Sea fruit, to askes on their lips.

The enactment of this bill into law in the form recommended

by the majority members of the committee, and presumably supported by the present Chief Executive, will be the most infamous outrage ever perpetrated upon an ignorant, misguided, and help-less people. In the hour of their fate, when their mute appeal from across the Pacific shall have fallen on deaf ears, what then will be the answer of the authors of this measure before the bar The Philippines.

SPEECH

OF

HON. DAVID A. HOLLINGSWORTH,

01 0110,

IN THE HOUSE OF REPRESENTATIVES,

Monday, May 1, 1916.

Mr. HOLLINGSWORTH. Mr. Speaker, I am opposed to the passage of this bill in its present form, fixing, as it does, a definite time for the withdrawal of American influence from the Philippines. It would mean anarchy in the islands from the first, and eventually they would become the prey, war prizes, of the looting militarist powers of the Old World or of the Orient.

the looting militarist powers of the Old World or of the Orient.

Humanity, national honor, and the solemn trust assumed by our Government at the close of the Spanish-American War forbid this, forbid the abandonment of the Philippines at least until the Nation shall have discharged its full duty to the native islanders as pointed out by President McKinley in his last message to Congress, in which he called the Philippines the "wards of the Nation," and further explained that—

"wards of the Nation," and further explained that—
Our obligation as guardian was not lightly assumed. It must not be
otherwise than honestly fulfilled, aiming first of all to benefit those
who have come under our fostering care. It is our duty so to treat
them that our flag may be no less beloved in the mountains of Luzon
and the fertile zones of Mindanao and Negros than it is at home, and
that there as here it shall be the revered symbol of liberty, enlightenment, and progress in every avenue of development.

I express a doubt also if the time will ever come, consistent with national honor and the humanitarian sentiments of the American people, when any complete severance of the relations between the United States and the Philippine Islands can take place or be desirable. The just and humane rule that the strong must aid in the protection of the weak applies equally to nations as to individuals, and was never more exemplified or necessary than at the present time, when one-half the world is at war, and the other half urged by powerful influences to make such colossal preparations for war as to render possible, if not probable, a world-wide holocaust.

The Philippines came to us as the natural and seemingly inevitable result of the Spanish-American War, a war begun as no other war in history, solely in the interest of suffering humanity, and ending as all other wars of the United States have ended, in real uplift of national character and a complete vindication of the American policy of calling into service when needed in the exigencies of war volunteer citizen soldiery instead of maintaining on a war footing, after the manner of foreign monarchies, big and expensive standing armies in times of peace; and when the Filipinos, through the good offices of the United States, shall have reached in education and uplift the point where they are capable of intelligent self-government and learn the wisdom of our national policy, they are likely to have imbibed a sincere love for the American flag and our free institutions, such as that suggested by President McKinley, and to then voluntarily ask to remain a Territorial part or a

the spineless policy of this bill?

The McKinley administration did not covet or seek the islands. The islands had no volition or choice. The power of Spain being broken, there was no alternative but for the United States to accept the trust. An unseen hand seemed to point the way, and an overruling Providence was believed at the time to guide the negotiations which led to the protocol with Spain.

State in the Great Republic of the New World. If they do this

of their own free will and accord, who will there be to advocate

Thus was the American flag raised in the Philippines.

The exact terms of the protocol of August 12, 1898, on this subject, signed by the Secretary of State and Mr. Cambon, the French ambassador, on behalf of Spain, read:

The United States will occupy and hold the city, bay, and harbor of Manila, pending the conclusion of a treaty of peace, which shall determine the control, disposition, and government of the Philippines.

"The march of events rules and overrules human actions," said President McKinley in his instructions to the United States pence commissioners, adding that "without any original thought of complete or even partial acquisition, the presence and success of our arms at Manila imposes on us obligations which we can not disregard, * * * new duties and responsibilities which we must meet and discharge as becomes a great Nation on whose growth and career from the beginning the Ruler of Nations has plainly written the high command and pledge of civilization."

With Old Glory thus raised in the Orient, we are asked to-day—almost commanded by the Executive—to order it hauled down, furled, and laid away, as was the first American flag raised in Hawaii and afterwards taken down by order of a former Chief Executive of the same party faith, only to be again raised in honor when the Republican Party came into power. Gem of the Pacific, no American to-day with an ounce of red blood in his veins thinks of abandoning this island.

I can not with my convictions of duty aid in the sacrifice of national honor proposed by this bill. The American flag, once raised in honor, shall never be lowered in dishonor by my vote while I remain a Member of the American Congress. I would rather resign at once and let some one of easy conscience take my place who can substitute expediency and sycophancy for national honor and duty.

I am pleased to see indications on the floor of the House, in the brave, patriotic utterances of some Members on the opposite side of the Chamber, which lead to the belief that, joining with a solid Republican vote, such disgrace to the Republic can be averted.

Alarming reports are spread among the timid about alleged want of preparedness and an increased danger of war if we retain the Philippines, but at the beginning of the Spanish-American War, which brought the islands into our keeping, the so-called preparedists of to-day had not begun their propaganda. American ideals adverse to big standing armies and big navies still obtained in the hearts and consciences of a brave, free people.

President McKinley did not hesitate on this account or bewall the want of a big Military Establishment, but with true courage and American simplicity he called for volunteers and, utilizing the virile strength, wealth, and conserved resources of the country, he made quick preparations to meet the contingency, and soon victory without exhausting delays crowned his efforts.

So it was in the Revolutionary War, in the War of 1812, the War with Mexico, and in the War between the States.

A Nation of the population, power, strength, and resources of the United States can never be said to lack real preparation to defend itself. The great powers pointed out as threatening sources of alarm and danger had greater inducements to attack us in former years, when we were at war, than they have now, when they are at war and we are at peace.

Besides, the present world war has demonstrated that distant and far-separated colonies are not always a source of weakness. The loyalty of India, Australia, and other oriental dependencies of Great Britain, and of Canada and other Provinces nearer home, are illustrations of this truth. And even if there be danger, is that any reason for America, the foremost Nation in all the world, hoisting the white flag before danger develops? Has the red blood of our forefathers degenerated? Were those responsible for the addition of Florida, Louisiana, Texas, California, New Mexico, Arizona, Oregon, and Alaska to our national domain actuated by wise statesmanship, or were they by chance mere blind stumblers upon destiny? That they were real empire builders is revealed by results, and the imperial majesty of the Republic to-day attests their broad-minded, far-reaching vision and their present title to a Nation's grafitude. The world applauds these empire builders, as the Republic looms big with the responsibility and leadership of the future.

But wherein do their achievements differ from the patriotic work of President McKinley in the final negotiations with Spain for the relinquishment of sovereignty over the Philippines? His vision of the future seems to have approached divine inspiration, and to abandon his work now, with our assumed trust only half fulfilled, would be an unparalleled blunder, a sacrifice of national honor, a forfeiture of our right to leadership in the world's affairs, and a distinct repudiation of that high destiny designed for the American Republic, as many believe, by God himself, in the future federation of the world.

I may be optimistic; I do not believe in gloomy forebodings. I can not share in the pessimistic ideas of official place hunters or self-constituted critics of public thought, who profess to believe that this Nation is going to the bowwows unless their advice and guidance be followed by Congress.

Barring myself I do not look upon this Congress as spineless or spiritless, as has been charged by the ignorant and designing. Patriotic, able leadership on both sides of the Chamber will be found, when history comes to be written in the calm moments to follow the present world's upheaval, to compare favorably with any Congress in history since the right to organize Congresses by a self-governing people was wrested from King George at Yorktown. The cry of big business, prosperous because of the unhappy war in Europe, recently whispered in the country

by critics from Wall Street and ammunition-producing centers, to the effect that the Republic is standing to-day in the midst of a world of savage nations, unprepared in arms and unready in spirit, a listless guardian, with trouble brewing on all its borders, and with its people plagued by a degraded partisanship and divided allegiance, is not only unpatriotic but it is a monstrous libel on the public life of America. It should be condemned instead of quoted and exploited by honest fairminded citizens of all parties, whose patriotism and love of country ought to rise above party spirit and above the viewpoint of petty critics or self-seeking official military place hunters.

It is not a time for insinuation or innuendo; patriots of all shades of political conviction should stand together, subordinating partisanship and selfish personal interests to the general welfare and glory of our common country. It is truly an hour

of peril.

Democratic leaders do well to ask that in war emergencies all patriotic citizens and officials stand back of the President in any honest endeavor he may make to subserve the best interests and peace of the American people, and I for one prointerests and peace of the American people, and I for one pro-pose to do this except where his demands involve questions of vital principle, but the asking of support for this bill in its present form on the mere possibility of war increasing our mili-tary burdens in the Philippines is not based upon sound reason-ing. It is no excuse for repudiating a solemn trust assumed toward the simple-minded natives of the islands after our own action had released them from the yoke of bondage by which a foreign monarch had for three centuries held them in subjection and helpless ignorance,

It is asking too much of freemen; too much of a Nation of generous impulses and uplifting helpfulness toward all man-

kind.

I propose in my vote to-day to stand by the administration of President McKinley in its settlement of the Spanish-American War; stand by his soul, heart, and conscience, as I knew and understood them from intimate personal association with the man, and by the wise councilors of state whose advice he sought, and by the Congress of the people to whom, in a constitutional way, he made recommendations, but never sought to dominate or control.

The Shipping Situation.

EXTENSION OF REMARKS

HON. JOSHUA W. ALEXANDER, OF MISSOURI,

IN THE HOUSE OF REPRESENTATIVES,

Monday, May 8, 1916.

Mr. ALEXANDER. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD, I include the following:

WASHINGTON, D. C., May 8, 1916.

Washington, D. C., May 8, 1916.

So important did the members of the United States section of the International High Commission find the shipping question in South American countries that they deem it their duty especially to report the statements brought to their attention by residents of the countries visited as well as by members of the commission from the Republics of Central and South America attending the Buenos Aires conference.

Without exception in every country we found the shipping question uppermost in the minds of Government officials, bankers, and business men. Practically every business man with whom the members of the commission discussed conditions emphasized the absolute need of greatly increased ocean tonnage, while the members of the American colonies in the various cities sought every opportunity to improve conditions.

It was pointed out repeatedly that under the normal circumstances preceding the war the operation of many lines to European countries for both passengers and freight, making the trips in less time than steamers plying to the United States, gave Europe a greater advantage in the sale of merchandise, not only because of the larger tonnage available and quicker service, but because of the lower freight rates enjoyed. Representatives of the American business houses declared that it would be very difficult to extend American trade with such a handicap.

As a result of the war, the cost of ocean tonnage to South American

that it would be very difficult to extend American trade with such a handicap.

As a result of the war, the cost of ocean tonnage to South American ports has increased enormously, and instead of an improvement in the conditions the fear seems to be well grounded that they will become worse. As an illustration of present rates, it may be stated that before the war the rate on coal from the United States to Buenos Aires was 16 to 20 shillings per ton; for a considerable time recently it has been 102 shillings and 6 pence, and on occasions the rate has been as high as 120 shillings. As a result coal has been selling in Buenos Aires at \$28 to \$30 a ton, nearly \$25 of this price being represented in freight payments. Before the war it sold in cargo lots at \$7.75 to \$8.

Rates on hardware, drugs, paper, and general merchandise have increased in like proportion and notices of general advances approximating 50 per cent additional were given to Buenos Aires houses about the middle of April. Even at these prices immediate acceptance of

cargo space was necessary. We are advised bottoms are available in very much larger proportion from Great Britain than from other countries, and British merchants are enjoying rates 50 to 75 per cent less than American manufacturers. The situation as to rates does not obtain in the Argentine alone, but applies in all the countries. A number of notable cases were brought to the attention of members of the commission where important contracts have recently gone to Europe which would have been given to the United States but for the wide difference of freight rates which made it impossible for our manufacturers to commete

difference of freight rates which made it impossible for our manufacturers to compete

It was pointed out by the representatives of American shippers in these countries that very much higher rates to the United States, as against Europe, seriously militate against our manufacturers in the purchase of raw materials, which become available to European manufacturers at lower cost because of the cheaper transportation. This, of course, adds to the difficulty our manufacturers encounter in marketing manufactured products in competition with Europe.

American houses in Brazil and the Argentine informed the commission that they had been notified in the middle of April that a number of ships now in service from New York to South American ports would be taken off of this direct service and would soon make the trip from New York via Europe, thus still further restricting a service already so seriously impaired as to constitute a grave menace to our South American commerce.

The representatives of all the Governments participating in the

American commerce.

The representatives of all the Governments participating in the Buenos Aires conference took every opportunity to urge that the shipping conditions could only be improved on the initiative of the United States. They made clear their hability to finance new steamship enterprises, but at the same time promised that cooperation would be given in every way that their Governments could aid. It was also urged upon us that, while the present situation constituted a serious emergency calling for the quickest possible relief, the development of the commerce of the United States with South American countries in times of peace necessitated very much greater tonnage than had ever been available, while fast passenger lines were also essential if increased trade and communication between the countries were to be developed.

The United States commission does not as a commission assume to say what remedies should be applied by our Government, but they are convinced that there is no more vital question affecting our commerce with the Latin-American countries than that of providing greatly increased shipping facilities.

The Late Representative Witherspoon.

MEMORIAL ADDRESS

THOMAS U. SISSON.

OF MISSISSIPPI,

IN THE HOUSE OF REPRESENTATIVES,

Sunday, March 5, 1916.

The House had under consideration the following resolutions (H. Res.

The House had dade considered that 157):

"Resolved, That the business of the House be now suspended, that opportunity may be given for tributes to the memory of Hon. Samuel A. Witherspoon, late a Member of this House from the State of Mississippidal.

A. Witherspoon, late a Member of this sistippi.

"Resolved, That as a particular mark of respect to the memory of the deceased, and in recognition of his distinguished public career, the House, at the conclusion of these exercises, shall stand adjourned.

"Resolved That the Clerk communicate these resolutions to the Senate.

Senate.

"Resolved. That the Clerk send a copy of these resolutions to the family of the deceased."

Mr. SISSON. Mr. Speaker, in listening to the tributes that have been paid to the memory of my good friend I find we are struck with this great and convincing fact: We are all agreed; there is no discordant note; we all have the same opinion of the man. In discussing the character of any other man we would, as a rule, find a variety of opinions as to the chief characteristic and as to the particular quality of the man that commended him, but in every word that has been spoken about "Sam" Witherspoon there is absolute harmony. Not a man has spoken upon this occasion but that has said that "Sam" Witherspoon was a man of courage, honesty, and integrity. And, above all, not an expression has fallen from the lips of any man who has discussed Mr. Witherspoon's character but that it resolved itself into this: There was not enough shadow in his soul to hide a single sinister thought. When he spoke he spoke his honest conviction, and every man that heard him knew that he was speaking his conviction.

He was a man of courage, without being cruel.

He was a man of honesty, without effort to display it.

He was a man of the strongest affections, but never ostentatious in displaying them.

He loved his people and delighted to serve them, but never bent his convictions to win their applause.

He loved principle, but respected the convictions of others.

He despised sham and hypocrisy and never forgave it in

He never bent his knee to power and had a contempt for all who did.

And he never in any moment of his life hesitated to follow his own honest convictions, whatever the result might be to him personally.

I have never known a man who considered himself so slightly as to his future profit and loss, either political or financial, when it came to taking a position which he thought was right.

It pained him to differ with his colleagues here, but it never deterred him from the performance of duty as he saw it. If every Member of Congress had the courage and conviction of "Sam" Witherstoon, this body would be elevated in the minds and hearts of the American people, and once again become a virile force in this Government and in the enforcement

of its views upon legislation. "SAM" WITHERSPOON never WITHERSPOON never bent the pregnant hinges of his knee that either political or financial thrift might follow fawn-How many men yield their convictions, not only upon mere policy, but how many yield their convictions on great questions to the dictates of others in high place? But no living man can say that Samuel Andrew Witherspoon ever yielded a conviction to any man. He was made out of that iron stuff that makes the great mountain peaks in the range of the human race; that causes people to look back upon the mighty form and know that there was indeed a man. When you begin to enumerate the really great men that have lived on the earth,

you find the number small, yea, very small.

Men to be leaders must be men who can differ courageously and persistently on a question of principle with the frowning

multitude.

If Martin Luther had not been a man possessed of enormous courage and conviction, he could never have been the great mover of the Reformation. If John Calvin had not been himself a man of mighty convictions, as well as mighty intellect, he could never have been the founder of a great religious faith. If Washington and Jefferson and the great men of America had not been men of great conviction, this Republic could never have been established. To preserve their work is our task. WITHERspoon realized this and was devoted to the Constitution, and however popular a measure, he voted against it if he did not believe it was constitutional.

Men like Sam Witherspoon make justice, truth, and honesty

prevail in politics, in religion, and in social life.

I would rather have the tributes paid to my memory when I shall depart this life that have been paid to Sam Witherspoon to-day than to have all the wealth of the world. It is such characters as this that make the world worth living in, that make for progress and advancement, because so often the great, in the minds of the present generation are nothing more nor less than an intellect capable of catching the popular will and fancy at the time-a mere drifter with the tide. Such men are forgotten ere they pass away. It is easy for men to do this, but it is hard to go against the mighty current; and it is a man like WITHERSPOON who, when the current is in the face, is willing to stem the tide, and when the flood strikes is like a mighty rock in the way of a raging torrent. He made of himself an impediment, and upon that impediment other less important materials collected and hung about the mighty form until there gathered

enough obstruction to stay the current.

Mr. Witherspoon in religion was a Presbyterian. He came from a stock of Presbyterians. He traced his ancestry in America back beyond the Revolution. His kinsman, Dr. Witherspoon, a Presbyterian minister, was a signer of the Declaration of Independence, and a careful study of the life of Dr. Witheror independence, and a careful study of the life of Dr. Witherspoon and of the subject of these memorial exercises shows a wonderful similarity. I have known many Witherspoons. I have known his close and distant relatives and I have never known a Witherspoon that did not possess to some degree some of the qualities possessed by Sam Witherspoon. His family has been one of the most prominent in the history of American polities and it has been a family that has been one. has been one of the most prominent in the history of American politics, and it has been a family that has always been on the side of religious and political liberty. The sweetest trait of the Witherspoon family is that they never for one moment in politics forget that Government is established for people and not for the favored few. They all believe in the so-called plain people and have always been their champions. So it was natural for our friend to stand for the rights of the poor and the downtrodden. He loved the man that toiled; he loved the man who with sun-crowned hand produced the wealth of the world and he believed in his soul that if you gave to him absoworld, and he believed in his soul that if you gave to him absolute and equal rights the Republic would be safe, but he believed also that the Republic is dead, destroyed, if men of influence, of capacity, could get control of the powers of Gov-

ernment and use these powers to their private advantage and to the disadvantage of the great mass. Oh, that all of us could imitate him in our love for the plain people of the world, and become such a champion of liberty as was SAM WITHERSPOON. Like the pebble that falls from the mountain side, while he lived we may not realize his greatness, but after he is gone the pebble of influence starts down the mountain side, it continues to collect the snow and débris, and before it gets down to the foot of the mountain it is a mighty avalanche. Who knows to-day but that the influence of Sam Witherspoon may become one of the potent factors in American life, and that his efforts—while they seemingly failed here—to have the people restored to the rights that they ought to have under this great and glorious Republic will at some distant day be realized?

When the Master lost his life at the hands of the Jewish mob, was there then a politician, a general, a statesman, or an emperor who believed that his simple life would have such an influence upon the world; that all the Governments that to-day make up the great civilization of Europe and America would have as the basis of their laws, their philosophy, and religion that which was taught by the simple Nazarene? And, as Mr. WITHERSPOON endeavored to make his life as nearly as possible like that of his Master, so is he loved and revered and honored, and will be when the sun shall grow dim with age, when the firmament shall be rolled up as a scroll, when time shall cease and eternity roll. Sam Witherspoon's memory and influence will live on in immortal youth, and his influence will touch the farthest shores of the most distant eternity. When men shall imitate his honesty of purpose in statecraft, we will be able to erect here on this American soil a magnificent temple of liberty in which will dwell forever peace, love, unity, and happiness. Mankind will then rise up and call us blessed, that through this influence men might become great, happy, strong, prosperors and good.

Our Rights Upon the Sea.

EXTENSION OF REMARKS

HON. S. D. FESS.

OF OHIO.

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, May 9, 1916.

Mr. FESS. Mr. Speaker, on the 18th of March I submitted the documents covering our controversy over the submarine issue arising out of Germany's announcement on the 10th of February that armed merchantmen of her enemies would be attacked without warning. Since that date many notes have passed between our country and Germany on this issue, due to the attack upon the unarmed French steamer Sussex in the English Channel March 24.

On the following day our Government sent a note to Germany, which was not made public until the 27th of April. The

note defines armed-liner law.

NOTIFIES BELLIGERENTS THAT UNITED STATES RECOGNIZES RIGHT OF DEFENSE BY MERCHANTMEN—LIMITS ACTS OF WAR CRAFT—MUST NOT ATTACK WITHOUT WARNING UNTIL STATUS OF VESSEL IS FULLY DETERMINED—AND MUST DISPLAY COLORS—MERCHANTMEN WITH MANDATORY ORDERS TO ATTACK WAR CRAFT NOT IMMUNE THEM-

TEXT OF THE MEMORANDUM.

The memorandum, which sets forth the attitude of the administration clear detail, follows:

MEMORANDUM ON ARMED MERCHANT VESSELS.

By direction of the President a memorandum was prepared during March, 1916, in regard to the status of armed merchant vessels in neutral ports and on the high seas. This memorandum is now made public as a statement of this Government's attitude on that subject:

DEPARTMENT OF STATE Washington, March 25, 1916.

I.

The status of an armed merchant vessel of a belligerent is to be considered from two points of view: First, from that of a neutral when the vessel is on the high seas.

First. An armed merchant vessel in neutral ports.

(1) It is necessary for a neutral Government to determine the status of an armed merchant vessel of belligerent nationality which enters its jurisdiction, in order that the Government may protect itself from responsibility for the destruction of life and property by permitting its ports to be used as bases of hostile operations by belligerent warships.

(2) If the vessel carries a commission or orders issued by a belligerent Government and directing it under penalty to conduct aggressive operations, or if it is conclusively shown to have conducted such operations, it should be regarded and treated as a warship.

(3) If sufficient evidence is wanting a neutral Government in order to safeguard itself from liability for failure to preserve its neutrality may reasonably presume from these facts the status of an armed merchant vessel which frequents its waters. There is no settled rule of international law as to the sufficiency of evidence to establish such a presumption. As a result a neutral Government must decide for itself the sufficiency of the evidence which it requires to determine the character of the vessel. For the guidance of its port officers and other officials a neutral Government may therefore declare a standard of evidence, but such standard may be changed on account of the general conditions of naval warfare or modified on account of the general conditions of naval warfare or modified on account of the circumstances of a particular case. These changes and modifications may be made at any time during the progress of the war, since the determination of the status of an armed merchant vessel in neutral waters may affect the liability of a neutral Government.

Second. An armed merchant vessel on the high seas.

(1) It is necessary for a belligerent warship to determine the status of an armed merchant vessel of the high seas, since the rights of life and property of belligerents and neutrals on board the vessel may be impaired if its status is that of an enemy warship.

since the rights of life and property of belligerents and neutrals on board the vessel may be impaired if its status is that of an enemy warship.

(2) The determination of warlike character must rest in no case upon presumption but upon conclusive evidence, because the responsibility for the destruction of life and property depends on the actual facts of the case and can not be avoided or lessened by a standard of evidence which a belligerent may announce as creating a presumption of hostile character. On the other hand, to safeguard himself from possible liability for unwarranted destruction of life and property the belligerent should, in the absence of conclusive evidence, act on the presumption that an armed merchantman is of peaceful character.

(3) A presumption based solery on the presence of an armament on a merchant vessel of an enemy is not a sufficient reason for a belligerent to declare it to be a warship and proceed to attack it without regard to the rights of the persons on board. Conclusive evidence of a purpose to use the armament for aggression is essential. Consequently an armament which a neutral Government, seeking to perform its neutral duties, may presume to be intended for aggression might in fact on the high seas be used solely for protection. A neutral Government has no opportunity to determine the purpose of an armament on a merchant vessel unless there is evidence in the ship's papers or other proof as to its previous use, so that the Government is justified in substituting an arbitrary rule of presumption in arriving at the status of the merchant vessel. On the other hand, a belligerent warship can on the high seas test by actual experience the purpose of an armament on an enemy merchant vessel and so determine by direct evidence the status of the vessel.

SUMMARY.

The status of an armed merchant vessel as a warship in neutral waters may be determined, in the absence of documentary proof or conclusive evidence of previous aggressive conduct, by presumption derived from all the circumstances of the case.

The status of such vessel as a warship on the high seas must be determined only upon conclusive evidence of aggressive purpose, in the absence of which it is to be presumed that the vessel has a private and peaceable character, and it should be so treated by an enemy warship.

In brief, a neutral Government may proceed upon the presumption that an armed merchant vessel of belligerent nationality is armed for aggression, while a belligerent should proceed on the presumption that the vessel is armed for protection. Both of these presumptions may be overcome by evidence—the first by secondary or collateral evidence, since the fact to be established is negative in character; the second by primary and direct evidence, since the fact to be established is positive in character.

The character of the evidence upon which the status of an armed merchant vessel of belligerent nationality is to be determined when visiting neutral waters and when traversing the high seas having been stated, it is important to consider the rights and duties of neutrals and belligerents as affected by the status of armed merchant vessels in neutral ports and on the high seas.

First. The relations of belligerents and neutrals as affected by the status of armed merchant vessels in neutral ports.

(1) It appears to be the established rule of international law that warships of a belligerent may enter neutral ports and accept limited thospitality there upon condition that they leave, as a rule, within 24 hours after their arrival.

(2) Belligerent warships are also entitled to take on fuel once in three months in ports of a neutral country.

(3) As a mode of enforcing these rules, a neutral has the right to cause belligerent warships falling to comply with them, together with their officers and crews, to be interned during the remainder of the war.

(4) Merchantmen of belligerent nationality, armed only for purposes of protection against the enemy, are entitled to enter and leave neutral ports without hindrance in the course of legitimate trade.

(5) Armed merchantmen of belligerent nationality under a commission or orders of their Government to use, under penalty, their armament for aggressive purposes, or merchantmen which, without such commission or orders, have used their armaments for aggressive purposes, are not entitled to the same hospitality in neutral ports as peaceable armed merchantmen.

Second. The relations of belligerents and neutrals as affected by the status of armed merchant vessels on the high seas.

(1) Innocent neutral property on the high seas can not legally be confiscated, but is subject to inspection by a belligerent. Resistance to inspection removes this immunity and subjects the property to condemnation by a prize court, which is charged with the preservation of the legal rights of the o

(4) Enemy property, including ships and cargoes, is always subject to seizure and coademantion. Any enemy property taken by a belligerent on the high seas is a total loss to the owners. There is no recrease in a prize court. The only means of avoiding loss is by flight or successful resistance. Enemy merchant ships have therefore the right to arm for the purpose of self-protection.

Olea Deligerent warship is any vessel which, under commission or competity of the purpose of self-protection.

(1) A belligerent warship is any vessel which, under commission or strength of armament, and its defensive on offensive force are immaterial.

(3) A belligerent warship has, incidental to the right of seizure, the right to visit and search all wessels on the high seas for the purpose of seasons of the high season of the property of armount, and its defensive of offensive force are suggested in the season of the purpose o

On the 10th of April Germany made reply to our memorandum of the 25th of March, in which responsibility for the destruction of the Sussex was not admitted:

Berlin, April 12, 1916.

April 10:

"The undersigned has the honor to inform your excellency, Ambassador Gerard, in response to communications of the 29th and 30th ultimo and the 3d instant regarding the steamers Sussex, Manchester Engineer, Englishman, Berveindeule, and Eagle Point that the mentioned cases, in accordance with our notes of the 30th and 31st ultimo and the 4th and 5th instant, have been subjected to careful investigation by the admiral staff of the navy, which has led to the following results:

"First. The English steamer Beneficial Control of the Suspension of the Suspension of the following results:

results:

"First. The English steamer Berwindvale.—A steamer, which was possibly the Berwindvale, was encountered on the evening of March 16 in sight of Bull Rock Light, on the Irish coast, by a German submarine. The steamer, as soon as she noticed the submarine, which was running unsubmerged, turned and steamed away. She was ordered to halt by a warning shot. She paid no attention, however, to this warning, but extinguished all lights and attempted to escape. The vessel was then fired upon until halted, and without further orders lowered several boats. After the crew entered the boats and received enough time to row away the ship was sunk.

"The name of this steamer was not established; it can not be stated.

"The name of this steamer was not established; it can not be stated with assurance, even with the help of the details which were furnished by the American Embassy, that the above-described incident concerns the steamer Berwindvale Since, however, the steamer sunk was a tank steamer like the Berwindvale, the identity of the ships may be assumed. In this case, however, the statement made that the Berwindvale was torpedoed without warning would conflict with the fact.

"Second. The British steamer Englishman.—This steamer on March 24 was called upon to halt by a German submarine, through two warning shots, about 20 sea miles west of Islay (Hebrides). The vessel proceeded, however, without heeding the warning, and was therefore forced

by the submarine by artillery fire to halt after an extended chase, whereupon she lowered boats without further orders.

"After the German commandant had convinced himself that the crew had taken to the boats and rowed from the ship, he sank the steamer.

"Third. The British steamer Manchester Engineer.—It is impossible to establish through the investigation up to the present whether the attack on this steamer, which according to the given description, occurred on March 27 in the latifude of Waterford, is attributable to a German submarine. The statement regarding the time and place of the incident gives no sufficient basis for investigation. It would therefore be desirable to have more exact statements of the place, time, and attendant circumstances of the attack reported by the American Government. In order that the investigation might thereupon be brought to a conclusion, non of Mach 28 was called upon to halt by a German submarine through signal and shot about 100—not 130—sea miles from the southwest coast of Ireland, but proceeded. She was thereupon fired upon until halted, and without further orders lowered two boats, in which the erew took their places. After the commandant convinced himself that the boats, which had hoisted salls, had gotten clear of the strength of two, not 'a storm wind,' and a light swell, not 'a heavy sea,' as stated in the given description, prevailed. The boats therefore had every prospect of being picked up very quickly, because the place of the silking lay on a much-used steamer path.

"If the French steamer Sussex—Ascertainment of the fact whether the Channel steamer Sussex was damaged by a German submarine was rendered extremely difficult, because no exact details of time, place, and attendant circumstances of the shiking were known, and also because it was impossible to obtain a picture of the ship before April 6. Consequently he investigation had to be extended to all actions undertaken on the day in question—March 24—in the Channel in the general region between Folkstone an

graphically from the English paper, the Daily Graphic of the 27th ultimo.

A comparison of the sketch and the picture shows that the craft attacked is not identical with the Sussex. The difference in the position of the stack and shape of the stern is particularly striking.

No other attack whatever by German submarines at the time in question for the Sussex upon the route between Folkstone and Dieppe occurred. The German Government must therefore assume that the injury to the Sussex is attributable to another cause than an attack by a German submarine.

For an explanation of the case the fact may perhaps be serviceable that no less than 26 English mines were exploded by shots by German naval forces in the channel on the 1st and 2d of April alone. The entire sea in that vicinity is, in fact, endangered by floating mines and by torpedoes that have not sunk. Off the English coast it is further endangered in an increasing degree through German mines which have been laid against enemy naval forces.

Should the American Government have at its disposal further material for a conclusion upon the case of the Sussex, the German Government would ask that it be communicated, in order to subject this material also to an investigation.

In the event that differences of opinion should develop hereby between the two Governments, the German Government now declares itself ready to have the facts of the case established through mixed commissions of investigation, in accordance with the third title of The Hague agreement, for the peaceful settlement of international conflicts, November 18, 1907.

The undersigned, while requesting that you communicate the above to the Government of the United States, takes occasion to renew to the ambassador the assurance of his distinguished esteem.

On the 18th day of April our Government addressed Germany the now famous note, considered by many as an ultimatum:

TEXT OF THE AMERICAN NOTE TO GERMANY.

DEPARTMENT OF STATE, Washington, April 18, 1916.

The Secretary of State to Ambassador Gerard:

The Secretary of State to Ambassador Greard:

You are instructed to deliver to the Secretary of Foreign Affairs a communication reading as follows:

"I did not fail to transmit immediately, by telegraph, to my Government Your Excellency's note of the 10th instant in regard to certain attacks by German submarines, and particularly in regard to the disastrous explosion which, on March 24 last, wrecked the French steamship Sussex in the English Channel. I have now the honor to deliver, under instructions from my Government, the following reply to Your Excellency:

"Information now in the possession of the Government of the United States furly establishes the facts in the case of the Sussex, and the

inferences which my Government has drawn from that information it regards as confirmed by the circumstances set forth in Your Excel. 2.05 o'clock in the afternoon, the unarmed steamer Sussee, with 325 or more passengers on board, among whom were a number of American citizens, was torpedoed while crossing from Folkestone to Dieppe. The used only for the conveyance of passengers across the English Channel; and was not following the route taken by troopships or supply ships. About 80 of her passengers, noncombatants of all ages and sexes, including the control of the conveyance of passengers across the English Channel; and was not following the route taken by troopships or supply ships. About 80 of her passengers, noncombatants of all ages and sexes, including the control of the

"Vessels of neutral ownership, even vessels of neutral ownership bound from neutral port to neutral port, have been destroyed, along with vessels of belligerent ownership, in constantly increasing numbers. Sometimes the merchantmen attacked have been warned and summoned to surrender before being fired on or torpedoed; sometimes their passengers and crews have been vouchsafed the poor security of being allowed to take to the ship's boats before the ship was sent to the bottom. But again and again no warning has been given, no escape even to the ship's boats allowed to those on board. Great liners like the Lusitanta and Arabic and mere passenger boats like the Sussex have been attacked without a moment's warning, often before they have even become aware that they were in the presence of an armed ship o' the enemy, and the lives of noncombatants, passengers and crew, have been destroyed wholesale and in a manner which the Government of the

United States can not but regard as wanton and without the slightest color of justification. No limit of any kind has, in fact been set to their indiscriminate pursuit and destruction of merchantmen of all kinds and nationalities within the waters which the Imperial Government has chosen to designate as lying within the seat of war. The roll of Americans who have lost their lives upon ships thus attacked and destroyed has grown month by month until the ominous toll has mounted into the hundreds.

"The Government of the United States has been very patient. At every stage of this distressing experience of tragedy after tragedy it has sought to be governed by the most thoughtful consideration of the extraordinary circumstances of an unprecedented war and to be guided by sentiments of very genuine friendship for the people and Government of Germany. It has accepted the successive explanations and assurances of the Imperial Government as, of course, given in entire sincerity and good faith, and has hoped, even against hope, that it would prove to be possible for the Imperial Government so to order and control the acts of its naval commanders as to square its policy with the recognized principles of humanity as embodied in the law of nations. It has made every allowance for unprecedented conditions and has been willing to wait until the facts became unmistakable and were susceptible of only one interpretation.

"It now owes it to a just regard for its own rights to say to the Imperial Government that that time has come. It has become painfully evident to it that the position which it took at the very outset is inevitable, namely, the use of submarines for the destruction of an enemy's commerce, is, of necessity, because of the very character of the vessels employed and the very methods of attack which their employment of course involves, utterly incompatible with the principles of humanity, the long-established and incontrovertible rights of neutrals, and the sacred immunities of noncombatants.

"It it is still the p

On the day after sending the note to Germany the President

addressed the Congress on the issue, as follows:

On the day after sending the note to Germany the President nuldressed the Congress on the issue, as follows:

Gentiemen of the country of which it is my plain duty to inform you very frankly.

It will be recalled that in February, 1915, the Imperial German Government announced its intention to treat the waters surrounding Great Britain and read of the training of the country of the training the found within any part of that portion of the high seas, and that it warned all vessels, of neutral as well as of belligerent ownership, to keep out of the waters at had thus proscribed, or else enter, them at their peril. The Government of the United States earnestly protested. It took the position that such a policy could not be pursued without the practical certainty of gross and palpable violations of the law of nations, particularly if submarine craft were to be employed as its instruments, inasmuch as the rules prescribed by that law, rules founded upon principles of humanity and established for the protection of the lives of noncombatants at sea, could not in the nature of the case be observed by such vessels. It based its protest on the ground that persons of neutral nationality and vessels of mentral ownership would be exposed to extreme and intolerable risks, and that no right to close any part of the high seas against their use or to expose them to such risks could nawfully be asserted by any belligerent Government. The law of nations in these matters, upon which the Government. The law of nations in these matters, upon which the Government. The law of nations in these matters, upon which the Government. The law of nations in these matters, upon which the approval and by the express assent of alt civilized nations.

Notwithstanding the earnest protest of our Government, the Imperial German Government at once proceeded to carry out the policy of at any rate the dangers to neutral vessels, would be reduced to a minimum by the instructions which it had issued to its submarine commanders, and assured the Government

festly proved impossible for it to keep such methods of attack upon the commerce of its enemies within the bounds set by either the reason or the heart of mankind.

In February of the present year the Imperial German Government informed this Government and the other neutral Governments of the world that it had reason to believe that the Government of Great Britain had armed all merchant vessels of British ownership and had given them seeret orders to attack any submarine of the enemy they might encounter upon the seas, and that the Imperial German Government felt justified in the circumstances in treating all armed merchantmen of belligerent ownership as auxiliary vessels of war, which it would have the right to destroy without warning. The law of nations has long recognized the right of merchantmen to carry arms for protection and to use them to repel attack, though to use them in such circumstances at their own risks; but the Imperial German Government claimed the right to set these understandings aside in circumstances which it deemed extraordinary. Even the terms in which it announced its purpose thus still further to relax the restraints it had previously professed its willingness and desire to put upon the operations of its submarines carried the piain implication that at least vessels which were not armed would still be exempt from destruction without warning, and that personal safety would be accorded their passengers and crews; but even that limitation, if it was ever practicable to observe it, has in fact constituted no check at all upon the destruction of ships of every sort.

were not armed would still be exempt from destruction without warning, and that personal safety would be accorded their passengers and crews; but even that Ilmitation, if it was ever practicable to observe it, has in fact constituted no check at all upon the destruction of ships of every sort.

Again and again the Imperial German Government has given this case of the commanders of the sould not be thus dealt with, and yet it has again and again permitted its undersea commanders to disregard those assurances with entire immunity. Great liners like the Lusitania and the Arabic, and mer ferryboats like the Sussez, have been attacked without a moment's warning, sometimes before they had even become aware that they were in the presence of an armed vessel of the enemy, and the lives of noncombatants, passe great many the commanders of the United States can not but regard as wanton and without the slightest color of justification. No limit of any kind has, in fact, been set to the indiscriminate pursuit and destruction of merchantmen of all kinds and nationalities within the waters, constantly extending in area, where these operations have been carried on, and the roll of Americans who have lost their lives on ships thus attacked and destroyed has grown month by month until the ominous attacked and destroyed has grown month by month until the ominous attacked and destroyed has grown month by month until the ominous attacked and destroyed has grown month by month until the ominous attacked and destroyed has grown month by month until the ominous attacked and destroyed has grown month by month until the ominous attacked and destroyed has grown month by month until the ominous attacked and destroyed has grown month by month until the ominous attacked and destroyed has have been consistent at a truly terrible example of the destruction of the French cross-channel steamer Sussex. It must stand forth, as the shifting of the steamer Lusifonia did, as so singularly tragical and unjustillable as to constitute a truly terrible

sever diplomatic relations with the Government of the German Empire altogether.

This decision I have arrived at with the keenest regret; the possibility of the action contemplated I am sure all thoughtful Americans will look forward to with unaffected reluctance. But we can not forget that we are in some sort and by the force of circumstances the responsible spokesmen of the rights of humanity and that we can not remain silent while those rights seem in process of being swept utterly away in the maelstrom of this terrible war. We owe it to a due regard for our own rights as a Nation, to our sense of duty as a representative of the rights of neutrals the world over, and to a just conception of the rights of mankind to take this stand now with the utmost solemnity and firmness.

I have taken it, and taken it in the confidence that it will meet with your approval and support. All sober-minded men must unite in hoping

that the Imperial German Government, which has in other circumstances stood as the champion of all that we are now contending for in the interest of humanity, may recognize the justice of our demands and meet them in the spirit in which they are made.

On the 5th of this month Germany made reply to our note, which in the main seems to meet our demand. The significant statement is in the following words:

In accordance with the general principles of visit and search and the destruction of merchant vessels recognized by international law, such vessels, both within and without the area declared a naval war zone, shall not be sunk without warning and without saving human lives, unless the ship attempt to escape or offer resistance.

TEXT OF GERMANY'S REPLY TO OUR NOTE,

unless the ship attempt to escape or offer resistance.

BERLIN May 5, 1916.

(By wireless to Sayville.)

Following is the text of the note of the German Government in reply to the American note respecting submarine warfare, delivered yesterday by Gottlieb von Jagow, the foreign secretary, to Ambassador Gerard:

The undersigned, on behalf of the Imperial German Government, has the honor to present to his excellency the ambassador of the United States, Mr. James W. Gerard, the following reply to the note of April 20 regarding the conduct of German submarine warfare:

"The German Government handed over to the proper naval authorities for early investigation the evidence concerning the Sassex, as communicated by the Government of the United States. Judging by the results that the investigation has hitherto yielded, the German Government is alive to the possibility that the ship mentioned in the note of April 10 as having been torpedoed by a German submarine is actually identical with the Sussex.

"The German Government begs to reserve further communication on the matter until certain points are ascertained, which are of declsive importance for establishing the facts of the case. Should it turn out that the commander was wrong in assuming the vessel to be a man-of-war, the German Government will not fall to draw the consequence resulting therefrom.

"In connection with the case of the Sussex the Government of the United States made a series of statements, the gist of which is the assertion that the incident is to be considered but one instance of a deliberate method of indiscriminate destruction of vessels of all sorts, nationalities, and destinations by German submarine commanders, nationalities, and destinations by German submarine commanders, nationalities, and destinations by German submarine commanders.

"The German Government must emphatically repudiate the assertion by reference to concrete facts.

"The German Government will only state that it has imposed farroaching restraints upon the use of the submarine

consideration of neutrals interests, in spite of the fact that these restretiens are necessarily of advantage to Germany's enemies. No such consideration has ever been shown neutrals by Great Britain and her ailies.

"The German submarine forces have had, in fact, orders to conduct the submarine warfare in accordance with the general principles of visit and search and the destruction of merchant vessels recognized by international law, the sole exception being the conduct of warfare against enemy trade carried on enemy freight ships encountered in the war zone surrounding Great Britain. With regard to these, no assurances have ever been given to the Government of the United States. No such assurances are contained in the declaration of February 8, 1916.

"The German Government can not admit any doubt that these orders were given or are executed in good faith. Errors actually occurred. They can in no kind of warfare be avoided allogether. Allowances must be made in the conduct of awal warfare against an enemy resorting to all kinds of ruses, whether permissible or Illicit.

"But apart from the possibility of errors, naval warfare, just like warfare on land, implies unavoidable dangers for neutral persons and goods entering the fighting zone. Even in cases where the naval action is confined to ordinary forms of cruiser warfare, neutral persons and goods repeatedly come to grief.

"The German Government has repeatedly and explicitly pointed out the dangers from mines that have led to the loss of numerous ships.

"The German Government has made several proposals to the Government of the United States in order to reduce to a minimum for American travelers and goods tile inherent dangers of naval warfare. Unfortunately the Government of the United States would have been instrumental in preventing the greater part of the accidents that American citizens have met with in the meantime.

"The German Government repeatedly declared, it can not dispense with the use of the submarine wapon in the conduct of warfare against e

is actuated by considerations which are above the level of the disputed question.

"The German Government attaches no less importance to the sacred principles of humanity than the Government of the United States. It again fully takes into account that both Governments for many years cooperated in developing international law in conformity with these principles, the ultimate object of which has always been to confine warfare on sea and land to armed forces of belligerents and safeguard as far as possible noncombatants against the horrors of war.

"But although these considerations are of great weight, they alone would not, under present circumstances, have determined the attitude of the German Government. For in answer to the appeal by the Government of the United States on behalf of the sacred principles of humanity and international law, the German Government must repeat once more, with all emphasis, that it was not the German, but the British, Government which ignored all accepted rules of international law and extended this terrible war to the lives and property of noncombatants, having no regard whatever for the Interests and rights of neutrals and noncombatants that through this method of warfare have been severely injured.

"Un audit of the sacred principles of the sacred principles of neutrals and noncombatants the illegal conduct of British warfare, while

been severely injured.

"In self-defense against the illegal conduct of British warfare, while fighting a bitter struggle for national existence, Germany had to resort to the hard but effective weapon of submarine warfare.

"As matters stand, the German Government can not but reiterate regret that the sentiments of humanity, which the Government of the

United States extends with such fervor to the unhappy victims of submarine warfare, are not extended with the same warmth of feeling to many millions of women and children who, according to the avowed intention of the British Government, shall be starved, and who by sufferings shall force the victorious armies of the central powers into ignominious capitulation.

"The German Government, in agreement with the German people, fails to understand this discrimination, all the more as it has repeatedly and explicitly declared itself ready to use the submarine weapon in strict conformity with the rules of international law as recognized before the outbreak of the war, if Great Britain likewise was ready to adapt the conduct of warfare to these rules.

"Several attempts made by the Government of the United States to prevail upon the British Government to act accordingly failed because of flat refusal on the part of the British Government. Moreover, Great Britain again and again has violated international law, surpassing all bounds in outraging neutral rights. The latest measure adopted by Great Britain, declaring German bunker coal contraband and establishing conditions under which English bunker coal alone is supplied to neutrals, is nothing but an unheard-of attempt by way of exaction to force neutral tonnage into the service of British trade war.

"The German people knows that the Government of the United States has the power to confine the war to armed forces of the belligerent countries, in the interest of humanity and maintenance of International law. The Government of the United States would have been certain of attaining this end had it been determined to 'nsist, against Great Britain, on the incontrovertible rights to freedom of the seas. But as matters stand the German people is under the impression that the Government of the United States would have been certain of attaining this end had it been determined to 'nsist, against Great Britain, on the incontrovertible rights to freedom of the seas. But as matters

guided not alone by the friendship connecting the two great nations for over 100 years, but also by the thought of the great doom which threatens the entire civilized world should the cruel and sanguinary war be extended and prolonged.

"The German Government, conscious of Germany's strength, twice within the last few months announced before the world its readliness to make peace on a basis safeguarding Germany's vital interests, thus indicating that it is not Germany's fault if peace is still withheld from the nations of Europe. The German Government feels all the more justified in declaring that responsibility could not be borne before the forum of mankind and in history if after 21 months of the war's duration the submarine question, under discussion between the German Government and the Government of the United States, were to take a turn scriously threatening maintenance of peace between the two nations.
"As far as lies with the German Government, it wishes to prevent things from taking such a course. The German Government, moreover, is prepared to do its timost to conflue operations of the war for the rest of its duration to the fighting forces of the belligereats, thereby also insuring the freedom of the seas, a principle upon which the German Government believes, now as before, that it is in agreement with the Government of the United States.

"The German Government, guided by this idea, notifies the Government of the United States that German awal forces have received the following order:

"In accordance with the general principles of visit and search and the destruction of merchant vessels, recognized by international law, such vessels, both within and without the area declared a naval war zone, shall not be sunk without warning and without saving human lives unless the ship attempt to escape or ofter resistance.

"But neutrals can not expect that Germany, forced to fight for existence, shall not be sunk without warning and without saving human lives unless the ship attempt to escape or ofter resistan

This latest position on the sensitive submarine issue indicates clearly Germany's desire to avoid the steps which might lead to severing diplomatic relations. It was partially anticipated in the address of the chancellor, Von Hollweg, in the Reichstag on the 5th of April, about 10 days after our note on the Sussex, out of which the latest controversy arose. The address in part, as given out from Berlin, is as follows:

BERLIN, April 5, 1916.
(By wireless to Sayville.)

In the Reichstag to-day Chancellor Bethmann Hollweg, in the most comprehensive speech he has delivered since the war began, derided the reports—calumniously circulated by the allies, he said—that Germany

contemplated an attack upon the United States after the European war was ended, and had designs upon the territory of South American

States.

The chancellor, whose address was delivered to a crowded house, also spoke of the questions presented in relation to the principle of nationality, considering the Polish, Lithuanian, Livonian, Belgian, and Flemish problems. He insisted upon the necessity of guaranteeing the peace of Europe after the war, and also of securing this result by giving to these races opportunity of free evolution along the lines of their natural individualities and mother tongues.

"TOWARD A FUTURE OF LIBERTY,"

At the conclusion of his address the chancellor elicited great applause

At the conclusion of his address the chancellor elicited great appliause by saying:

"The spirit of union shall lead us, as it shall lead our children and grandchildren, through the struggles of their fathers, toward a future of strength and liberty."

The chancellor began his address with a review of the military situation. He said that since his last speech in the Reichstag the Dardanelles enterprise had ended as a failure; that the Serbian campaign, with the assistance of Austria-Hungary and Bulgaria, had been brought to a victorious conclusion, and that Montenegro and Albania likewise were now in the hands of Germany's allies; that the British attempt to relieve Kut-el-Amara, in Mesopotamia, had been vain; that the Russians, although they had succeeded in occupying Erzerum with superior numbers, had found their advance checked by strong Turkish forces; that Russian attacks against the front in East Galicia and Italian attacks against the Isonzo positions had been beaten back. Moreover, he said, the Russians had driven columns against the German lines, but their assaults had broken down before Field Marshal von Hindenburg and his "heroes."

The chancellor declared that the reports of the enemies of this nation that the German military force had been expended were erroneous, as the Verdun battle had proved that where operations were prepared with great forcesight and where the bravery of German troops was called into play one advantage after another had been obtained. He then expressed the nation's thanks to the solders and their leaders.

Discussing attempts which he said were being made to starve Germany, Dr. von Bethmann Hollweg continued:

"I understood that in 1915 our enemies would not give up this hope, but I do not understand how cool heads, after the experiences of 1915, can cling to It. Our enemies forget that, thanks to the organizing powers of the whole nation, Germany is equal to the task of distribution of food supplies.

"Moral Reserves" Against Starvation.

" MORAL RESERVES " AGAINST STARVATION.

"Our enemies forget that in cases in which there is a real shortage the German Nation is able to make use of moral reserves which enable us to lower our standard of life, which has risen remarkably during the last decades. What would it mean, for instance, if the consumption of meat should temporarily be lowered to the level of the seventies? I should think our adversaries would remember how strong was the German race of those days."

Conditions of life in Germany were not easy, the chancellor continued, but the difficulties were being met in admirable fashion by the entire nation, especially the poorer classes. The crop reports indicated, he said, that all the winter crops were good; in fact, the reports had not been so favorable for many years previously. The harvest of 1915 was the worst of decades; nevertheless, the stocks of grain for breadmaking not only would be sufficient, but provided for a considerable reserve with which to begin the new year.

"We shall not run short of anything in the future, as we have not done in the past," he said

The chancellor asserted that it was the intention of Germany's enemies to extend the war to the women and children of the nation by starving them, and that for this purpose Great Britain and her allies had mierfered with the trade of neutrals.

"The American note of November 5, 1915, gave an exact description of British violations of the nations' laws," he continued, "but as far as I know it has not been answered up to this day.

"No fair-minded neutral, no matter whether he favors us or not, can doubt our right to defend ourselves against this war of starvation, which is contrary to international law. No one can ask us to permit our arms of defense to be wrested from our hands. We use them, and must use them. We respect legitimate rights of neutral trade and commerce, but we have a right to expect that this will be appreciated, and that our right and our duty be recognized—to use all means against this policy of starvation, which is a jeering insult not only to all la

"THERE MUST BE A NEW BELGIUM."

Amid profound silence and the deep attention of the whole house the chancellor turned to the Polish problem and to that of nationalities in general, saying:
"Neither Germany nor Austria-Hungary intended to touch the Polish question, but the fate of battles brought them in contact with it. Now this problem stands before the world and needs to be solved. Germany and Austria-Hungary must and will solve it. History will not admit that after such earthquakes things will ever become what they were before

that after such cartinuages things will ever become what they were before.

"After the war there must be a new Belgium.

"Formerly Poland was left in the hands of the tchinovnik [Russian police agent]. Even members of the Russian Duma have frankly admitted that he ought not to return to the place where Germans, Austrians, and Poles have honestly labored in the interests of this unfortunate land.

"Mr. Asquith also mentions the principle of nationality. If he puts

tunate land.

"Mr. Asquith also mentions the principle of nationality. If he puts himself in the position of this unconquered and unconquerable adversary, can he really suppose that Germany will ever of her own free will deliver into the hands of reactionary Russia the nations between the Baltic and the Volhynian swamps who have been freed by her and by her allies—no matter whether they are Poles or Lithuanians or Livonians of the Baltic?"

DENIES HOPE OF AMERICAN CONQUESTS.

Dr. von Bethmann Hollweg protested vigorously against the report that Germany now or in the future contemplated aggression against the United States.

"The latest offspring of the calumnlating campaign directed against us," he said, "is a report that after the end of this war we shall rush against the American Continent, and that we shall attempt to conquer Canada.

"This is the silliest of all the imputations invented against us. Equally silly are the reports that we contemplate the acquisition of any territory on American soil, as in Brazil, or in any American country whatsoever.

"We fight for our existence and for our future. For Germany and not for space in a foreign country are Germany's sons bleeding and dying on the battle field. Every one among us knows this, and it makes our hearts and nerves so strong. This moral force strengthens our will in order not only to weather the storm; but also to achieve final victory."

in order not only to weather the storm, but also to achieve final victory."

The chancellor intimated that any suggestions of peace on the basis of the destruction of Prussian military power would make possible only one answer—the German sword.

Dr. you Bethmann Hollweg turned to the subject of eventual conditions of peace after a brief reference to the entrance of Portugal into the war. He pointed out that in his speech of September 9 he had declared readiness to enter into discussion of peace, but that then, as now, Germany's enemies declined his offer.

"Let us suppose I suggest to Mr. Asquith to sit down with me at a table and examine the possibilities of peace," he continued, "and Mr. Asquith begins with a claim of definitive and complete destruction of Prussia's military power. The conversation would be ended before it began. To these peace conditions only one answer would be left, and this answer our sword must give.

PETERE SLAUGHTER BLAMED ON ALLIES,

PUTURE SLAUGHTER BLAMED ON ALLIES.

"If our adversaries want to continue the slaughter of human beings and the devastation of Europe theirs will be the guilt, and we shall have to stand it as men."

The chancellor introduced a personal touch in the following passage: "When I was ast at headquarters I stood with the Emperor at a place to which I had accompanied him one year previously. The Emperor remembered this and, deeply moved, pointed out the enormous changes that had taken place since that time. Then the Russians were on the ridge of the Carpathians. At Corlice we had just begun to break through the enemy's lines, and Hindenburg's powerful offensive had just been started. Now we are deep in Russia.

"The British and French at that time had attacked Gallipoli, and were hoping to arouse the Balkans against us. Now the Bulgarians stand firmly on our side. Then we were engaged in the defensive Champagne battle, and now, at the Emperor's word, the cannon resound in the Verdun battle. Deep gratitude to God, to the army, and to the nation filled the Emperor's heart.

AIMS TO RESCUE EUROPE FROM CHAOS.

AIMS TO RESCUE EUROPE FROM CHAOS.

"Our enemies wish to destroy united, free Germany," the chancellor went on. "They desire that Germany shall be again as weak as during past centuries, a prey of all lusts of domination of her neighbors, and the scapegoat of Europe, beaten back forever in the dominion of economic evolution, even after the war. That is what our enemies mean when they speak of definitive destruction of Prussais's military power. "And what is our intention? The sense and aim of this war is for us the creation of a Germany so firmly united, so strongly protected, that no one ever will feel the temptation to annihilate us; that every one in the world will concede to us the right of free exercise of our peaceful endeavors. This Germany, and not the destruction of other races, is what we wish. Our aim is the lasting rescue of the European Continent, which is now shaken to its very foundation."

SAYS PEACE MUST BE LASTING.

Referring to the conditions which he wished to see prevail at the end of the war, the chancellor said:

"This new Europe in many respects can not resemble the past. The blood which has been shed will never be repaid and the wealth which has been destroyed can only slowly be replaced. But whatever else this Europe may be it must be for the nations that inhabit it a land of peaceful labor. The peace which shall end this war shall be a lasting peace. It must not bear the germ of new wars, but must provide for a peaceful arrangement of European questions."

The chancellor declared that England wished to see military operations ended, but hoped then to continue the commercial war with redoubled violence, adding:

"First the British endeavor to destroy our military and then our economic policy. Everywhere there is brutal lust of destruction and of annihilation and domination, to cripple a nation of 70,000.000 people."

of annihilation and domination, to the people."

As to colonial questions, he quoted Bismarck to the effect that the fate of colonies was decided on the Continent. He asserted that Germany's enemies were now actively engaged in inventing new formulas in order to maintain the spell of illusion, hatred, and deception which bound them.

ALLIES! "LUST OF REVENGE."

ALLIES' "LUST OF REVENGE."

"Of all the nations in the war," he continued, "only Germany has been threatened by her enemies and by their responsible spokesmen with annihilation, with partition of her realm, with destruction of her essential political and economic forces, no matter whether they called them Prussianism or militarism or barberism. The forces which before the war bound together the anti-German coalition were lust of conquest, lust of revenge, and jealousy against German competition in the world's markets. During the war they have remained powerful with the Governments of our enemies in spite of all defeats.

"This is still the object and aim of the war alike in St. Petersburg (Petrograd), Parls, and London.

"To this we oppose that Germany in this war had only one aim, namely, to defend herself, to maintain her existence, to hold her enemies back from the German frontiers, and whenever their lust of destruction had shown itself to drive them back as quickly as possible.

"We did not want this war. We felt no desire to change our frontiers when the war began against our will. We threatened no nation with annihilation of her existence or with destruction of her national life."

"LOVED PEACE MORE THAN ALL OTHERS."

"LOVED PEACE MORE THAN ALL OTHERS."

The chancellor pointed out the roots of Germany's present strength,

The chilacetor pointed out the roots of calculations asying:

"And what gives us this force to conquer and overcome the difficulties caused by the interruption of our over-seas trade, and, on the front, numerically superior enemies? Who can readily believe that greed of land inspires our columns at Verdun and makes them accomplish every day new deeds of heroism or shall a nation which gave to the world so many valued intellectual and useful gifts, which during 44 years loved peace more than all the others—shall this nation overnight be transformed into barbarians and Huns?

"No, gentlemen; these are the inventions of the evil conscience of those who are guilty of the war and are now fearing for their power and influence in their own countries."

With respect to the intentions of Germany in the case of Belgium, the speaker said:

"We must create real guaranties that Belgium never shall be a Franco-British vassal; never shall be used as a military or economic fortification against Germany. Also in this respect things can not be what they were before. Also here Germany can not sacrifice the oppressed Flemish race, but must assure them sound evolution which corresponds to their rich natural gifts, which is based on their mother tongue and follows their national character.

"We want neighbors that do not form coalitions against us, but with whom we collaborate and who collaborate with us to our mutual advantage. Remembrance of the war will still echo in the sadly tried Belgian country, but we shall never allow that this will be a new source of wars—shall not allow it in our mutual interests."

On the 8th the President sent his answer to the German Gov-

On the 8th the President sent his answer to the German Government, which is an acceptance of the German position, so long as the instructions to the submarine commanders as outlined above are respected.

PRESIDENT WILSON'S ANSWER TO GERMANY.

WASHINGTON, May 8, 1916.

Washington, May 8, 1916.

The American ambassador in Berlin was instructed to-day by cable to deliver the following note to the German minister of foreign affairs:

"The note of the Imperial German Government under date of May 4, 1916, has received careful consideration by the Government of the United States. It is especially noted, as indicating the purpose of the Imperial Government as to the future, that it 'is prepared to do its utmost to confine the operations of the war for the rest of its duration to the fighting forces of the belligerents' and that it is determined to impose upon all its commanders at sea the limitations of the recognized rules of international law upon which the Government of the United States has insisted.

"Throughout the months which have elapsed since the Imperial Con-

rules of international law upon which the Government of the United States has insisted.

"Throughout the months which have elapsed since the Imperial Government announced, on February 4, 1915, its submarine policy, now happily abandoned, the Government of the United States has been constantly guided and restrained by motives of friendship in its patient efforts to bring to an amicable settlement the critical questions arising from that policy. Accepting the Imperial Government's declaration of its abandonment of the policy which has so seriously menaced the good relations between the two countries, the Government of the United States will rely upon a scrupulous execution henceforth of the now altered policy of the Imperial Government, such as will remove the principal danger to an interruption of the good relations existing between the United States and Germany.

"The Government of the United States feels it necessary to state that it takes it for granted that the Imperial German Government does not intend to imply that the maintenance of its newly announced policy is hany way contingent upon the course or result of diplomatic negotiations between the Government of the United States and any other beligerent Government, notwithstanding the fact that certain passages in the Imperial Government's note of the fourth instant might appear to be susceptible of that construction. In order, however, to avoid any possible misunderstanding, the Government of the United States notifies the Imperial Government that it can not for a moment entertain, much less discuss, a suggestion that respect by German naval authorities for the rights of citizens of the United States upon the high seas should in any way or in the slightest degree be made contingent upon the conduct of any other Government affecting the rights of neutrals and noncombatants. Responsibility in such matters is single, not joint; absolute, not relative.

"Lansing."

"LANSING."

The State Department made the following statement for the public after the note was sent to Berlin:

STATEMENT BY MR. LANSING.

The greater part of the German answer is devoted to matters which this Government can not discuss with the German Government. The only questions of right which can be discussed with that Government are those arising out of its action or out of our own, and in no event those questions which are the subject of diplomatic exchanges between the United States and any other country.

The essence of the answer is that Germany yields to our representations with regard to the rights of merchant ships and noncombatants on the high seas and engages to observe the recognized rules of international law governing naval warfare in using her submarines against merchant ships. So long as she lives up to this altered policy we can have no reason to quarret with her on that score, though the losses resulting from the violation of American rights by German submarine commanders operating under the former policy will have to be settled.

While our differences with Great Britain can not form a subject of discussion with Germany, it should be stated that in our dealings with the British Government we are acting as we are unquestionably bound to act, in view of the explicit treaty engagements with that Government. We have treaty obligations as to the manner in which matters in dispute between the two Governments are to be handled. We offered to assume mutually similar obligations with Germany, but the offered to assume mutually similar obligations with Germany, but the offer was declined. When, however, the subject in dispute is a continuing menace to American ives it is doubtful whether such obligations apply unless the menace is removed during the pendency of the proceedings.

The treaty with the British Government referred to is the convention negotiated by ex-Secretary Bryan under which the two nations agree that any dispute arising shall be submitted to an investigating commission for one year before entering into hostilities. An ofter to enter into such a treaty with Germany brought a request for information, but formal negotiati

From the very beginning the encroachments of both belligerents upon the rights of neutrals upon the seas have been ominous. On the 11th of January last I called attention of the country to this situation, at which time I submitted documents of substantiation. (See Record, pp. 940-979.) On the following day I submitted the Lansing note, of date October 21, covering our contention with Great Britain. Later I submitted further documents touching interference with mails.

On April 3 the press carried the following dispatches from Paris and London:

SEIZURE OF LETTERS IS DENIED BY ALLIES—GREAT BRITAIN AND FRANCE JUSTIFY DETENTION OF PARCEL-POST MATTER—CONTRABAND IS OB-TAINED—RUBBER, METAL, SAUSAGES, AND ODD LOT OF OTHER MER-CHANDISE FOUND ON SHIPS.

The French and British Governments, through their diplomatic representatives, to-day handed their joint memorandum to the American and other neutral Governments, explaining their policy with regard to the examination of mall, in response to requests that such explanation be made to certain neutral powers.

The note declares that the Government will, for the present, continue to abstain from seizing and confiscating on the seas genuine letter mail, but points out that the inviolability of mails stipulated by The Hague convention of 1907 in no way affects the allies' right to examine and, if there be occasion, to stop and seize merchandise disguised as mail matter in sacks.

in sacks.

With regard to parcel mail the memorandum states that from the point of view of their right of examination and eventual seizure, merchandise shipped as mail in parcels has not and will not be treated differently from merchandise shipped in any other way.

LONDON, April 3.

The memorandum of the allies prepared by the French Government in answer to the complaint of neutral countries with respect to the detention of mails on shipboard has been presented to the Governments of all the neutrals whose mails have been intercepted.

The memorandum specifically denies that the allies copied or censored any legitimate postal correspondence. It discusses the number of vessels from which contraband has been removed. Examination of the Danish steamer Hellig Olav, which was taken into Kirkwall, has just been completed by the British authorities, but not in time for this case to be included in the memorandum.

It is stated officially, however, that in the second-class mails carried by the Hellig Olav were found considerable quantities of sample rubber gloves and dental rubber done up in newspapers.

It also is stated that cereals, coffee, tea, cocoa, sausages, condensed milk, soap, lard, olive oil, innumerable small packages of dried fruit and chocolate, and three large packages of bacon were found in a later post. Four sheets of some metal, as yet unidentified, were discovered between photo cardboards.

DERIDES OUR MAIL PROTEST-LONDON CHRONICLE POINTS TO LETTERS
DESTROYED IN TORPEDOED LINERS.

[Special cable to the New York Times.]

LONDON, Tuesday, April 4.

Commenting on the French memorandum on the subject of interference with the malis which has been sent in reply to the American Government protest—which memorandum has been fully approved by the British Government—the Daily Chronicle says:

"During 1915 the central powers sank 12 mail-carrying liners without warning. They sent ruthlessly to the bottom not only parcels post, but also letters which The Hague Convention declared inviolable; yet here, where they had legal ground of protest, none of the neutral Governments has in any single instance sent a protest against the destruction of their letters to the central powers.

"Why should Germany have been allowed without objection to steal a horse and we be criticized for looking over the hedge?"

On the next day the press carried the following dispatches from London, Berlin, Petrograd, and Washington:

BRITISH BLOCKADE TAKES DRASTIC FORM—NEW OLDER, APPLYING CONTINUOUS VOYAGE TO CONDITIONAL CONTRABAND, PROVES ESTROACTIVE—MILLIONS TIED UP IN CARGOES—SHIPPERS PIND ON EVE OF TRIAL THEY MUST ALTER THEIR DEFENSE BEFORE PRIZE COURT.

LONDON, April 4

Representatives of owners of conditional contraband cargoes awaiting adjudication in the prize court must at the last moment entirely change their defense, as their legal advisers have reached the conclusion that the British order in council of March 30 last is definitely retroactive.

Since Sir Edward Grey, the British foreign secretary, informed the State Department at Washington in his note of February 10, 1915, that the British Government did not apply the doctrine of continuous voyage to conditional contraband, except on goods consigned to order to an unknown consignee or to a consignee within enemy territory, millions of dollars worth of conditional contraband has been shipped from the United States to neutral ports.

In cases where seizures were made the attorneys for the owners of goods had prepared their defense, relying on this statement, coupled with the fact that the order in council of October 29, 1914, definitely ratified article 35 of the declaration of London, which provided that the doctrine of continuous voyage was not applicable to conditional contraband. Acting on Sir Edward Grey's statement, coupled with the above order in council, the State Department at Washington advised American shippers that they could send cargoes to neutral ports consigned to neutral consignees.

At the same time the attorneys for the American meat packers informed the State Department that they intended to continue shipments to neutral ports under this doctrine.

Meantime many conditional contraband cargoes were seized, the most important of which was the case of the American steamer Joseph W. Fordney, loaded with cattle feed, the trial of which was set for to-day. With the defense all prepared for trial, a bombshell was thrown into the camp of the American claimants by the promulgation of the order in council of last week, which reverses the previous contention of the British Government and subjects conditional contraband to the same treatment as absolute contraband.

The full extent of the blow was not realized, h

On account of an unfinished case of a Swedish vessel the prize court to-day postponed consideration of the American cases until to-morrow.

UPHOLDS CHINA SEIZURES—BRITAIN REFUSES TO RELEASE TEUTONS AND TURKS TAKEN FROM LINER.

WASHINGTON, April 4, 1916.

Great Britain's refusal to release the 38 Germans, Austrians, and Turks taken from the American steamer China near Shanghal was re-ceived to-day at the State Department and will be given out for publi-

cation later.

The British note is understood to insist on the right of that Government to seize enemy subjects returning to take part in the war.

This, it is understood, the United States is prepared to vigorously dispute. The intention of the State Department is to demand the unconditional release of the prisoners according to many precedents.

DUTCH MAIL IS SEIZED-POSTAL MATTER TAKEN FROM TWO SHIPS BOUND FOR NEW YORK.

BERLIN, April 4, 1916. (By wireless to Sayville.)

Dispatches from The Hague state that the Dutch steamships Zaanaijk and Veendijk bound for New York, were compelled to leave al their mail in England. Similar action, it is said, was taken in the case of the Tobora, which was on the way to Batavia.

The Tabora, a German steamship, was held in port at Dar-er-Sallaam, German East Africa, after the outbreak of the war, and apparently has been seized.

COPENHAGEN, April 4, 1916.

The United Steamship Co. has received a cable that the British authorities have seized the letter post of the Scandinavian-American liner Frederick VIII, leaving Kirkwail Tuesday for New York.

The Berlinkske Tidende, in an editorial, says that the seizure of the letter post is surely not in accordance with The Hague conventions and rules, and declares that the explanation given by the allies that such seizures are only intended to prevent smuggling is, in the present case, unintelligible, because the Frederick VIII was bound westward.

DEMAND FOOD OF GERMANS-PEOPLE RIOT IN RUSSIAN TOWNS OCCUPIED BY INVADERS.

PETROGRAD, April 4, 1916.

According to information received from Dvinsk, serious food riots are taking place in Russian towns now occupied by the German Army. It is reported from Vilkomir that a hungry mob, having plundered the shops in vain for bread, marched to German military headquarters and besieged the commandant, clamoring for food. On being informed that nothing could be done to help them, the population became furious and hurled cobblestones at the commandant and his staff.

A street battle ensued between the mob and German patrols, in which a considerable number were killed or wounded.

Ten days later, April 13, our State Department made public its correspondence with the British foreign office regarding the British enemy trading act of December 23:

[From the New York Times.]

[From the New York Times.]

The United States, in Mr. Lansing's communication of January 25, did not formally protest the act, but expressed the fear that it was "pregnant with possibilities of undue interference with American trade," and reserved the right to protest against its application to persons domiciled in the United States, even if of belligerent nationality.

L. Worthington Evans, replying for Sir Edward Grey, admitted that the British Government had no right to legislate even regarding Great Britain's enemies domiciled in the United States, but insisted that the act was intended to exercise rights of British sovereignty only over those residents within its jurisdiction. The British reply admits further that the old principle of the domicile is extended to the principle of nationality in determining permissible commerce, but adds that the act was so framed as to allow discretion that would work to prevent injury to neutrals. The rights of neutrals, says the British note, will be carefully looked after.

Mr. Lansing's note is the first instance in the correspondence growing out of the war in which Congress is mentioned. Speeches in Congress on the restrictive tendency of British regulations were made before the note was dispatched, and Mr. Lansing, in setting forth the position of the Government, says it is the feeling of the American people and of Congress.

TEXT OF LANSING'S NOTE.

TEXT OF LANSING'S NOTE.

Secretary Lansing's note to Ambassador W. H. Page at London, directing him to bring the matter to the attention of Sir Edward Grey, is as follows:

"Your 3601 and 3602, January 19.

"Department has given consideration to enemy trading act, approved December 28 last, the apparent object of which is to prevent any person doing business in the United Kingdom from trading with the enemies of Great Britain or persons having enemy association in any other part of the world, and the department has reached the conclusion that this act is pregnant with possibilities of undue interference with American trade if in fact such interference is not now being practiced.

"As it is an opinion generally held in this country, in which this Government shares, that the act has been framed without a proper regard for the right of persons domiciled in the United States, whether they be American citizens or subjects of countries at war with Great Britain, to carry on trade with persons in beligerent countries, and that the exercise of this right may be subject to denial or abridgement in the course of the enforcement of the act, the Government of the United States is constrained to express to His Majesty's Government the grave apprehensions which are entertained on this subject by this Government, by the Cougress, and by traders domiciled in the United States. It is, therefore, necessary to bring these views to the attention of Sir Edward Grey, and to present to him a formal reservation, on the part of this Government, of the right to protest against the application of this act, in so far as it affects the trade of the United States, and to contest the legality or rightfulness of imposing restrictions upon the freedom of American trade in this manner.

"Lansing,"

GREAT BRITAIN'S REPLY.

The reply of the British Government was delivered to Ambassador Page for the British secretary of state of foreign affairs by L. Worth-ington Evans, as follows:

Foreign Office, Foreign Trade Department, Lancaster House, St. James, S. W., February 16, 1916.

Vour Excellency. I have the honor to acknowledge the receipt of your excellency's note of the 26th ultimo relative to the possible effects of the trading with the enemy (extension of powers) act, 1915, on United States commerce.

The act was framed with the object of bringing British trade with the enemy regulations into greater harmony with those adopted by the French Government since the commencement of the war by applying in some degree the test of nationality in the determination of enemy character in addition to the old test of domicile, which experience has shown can not provide a sufficient basis under modern commercial conditions for measures intended to deprive the enemy of all assistance, direct or indirect, from national resources.

His Majesty's Government realized, however, that the application of this principle to its fullest extent, while entirely legitimate and in accordance with the practice of other countries might, if applied at the present time to commercial activities as widespread as those of British subjects, involve avoidable inconvenience and loss to innocent traders.

British subjects, involve avoidable inconvenience and loss to innocent traders.

They were careful, therefore, in devising the necessary legislation not only to avoid any definition which would impose enemy status upon all persons of enemy nationality and associations, but also to take powers of discrimination which would enable them to apply the purely commercial restrictions contemplated only in regard to those persons from whom it was necessary in British interests to withhold the facilities afforded by British resources.

His Majesty's Government have, therefore, abstained from a course of action admittedly within their rights as belligerents, which is not only the existing practice of the French Government, but in strict accordance with the doctrine openly avowed by may other States to be the basis upon which their trading with the enemy regulations would be founded in the event of war, and have confined themselves to passing a piece of purely domestic legislation empowering them to restrict the activities and trade of persons under British jurisdiction in such a manner and to such an extent as may seem to them to be necessary in the national interest.

His Majesty's Government readily admits the right of persons of any nationality, resident in the United States, to engage in legitimate commercial transactions with any other persons. They can not admit, however, that this right can in any way limit the right of other Governments to restrict the commercial activities of their nationals in any manner which may seem desirable to them by the imposition of prohibitions and penalties which are operative solely upon persons under their jurisdiction

In claiming this right, which appears to them to be inherent in sovereignty and national independence, his Majesty's Government desires to assure the United States Government that they will exercise it with every possible care to avoid injury to neutral commerce, and they venture to think that the voluntary limitation of their powers by the terms of the trading with t

L. WORTHINGTON EVANS, For the Secretary of State.

Mr. Speaker, Germany contends that we are not as rigid in Mr. Speaker, Germany contends that we are not as right in our insistence that England respect international law as we are with Germany. The two cases are not parallel, as one concerns life while the other concerns property. However, it must be understood that this country will be compelled to deal with Great Britain sooner or later. The two issues can not now be combined. Each must stand upon its own footing.

The seriousness of the German controversy, involving more than property rights, as it goes to destruction of life, must not cause this country to overlook the inevitable conflict that must be adjusted with Great Britain. Great Britain has been able to use the world war as an emergency occasion to tighten her grip upon the maritime world. She has not forfeited an advantage, but has constantly increased her profit on the seas, using the war as an excuse. The United States will become a sea power. That is our destiny. Every step in this direction will be contested by the "mistress of the sea." Nothing is clearer than this inevitable consequence, as substantiated by this last note of April 24, the official reply to our note of six months and three days ago. The two should be studied together. The first is found on page 1063 of the Congressional I here append its answer, the latest English pro-RECORD. nouncement:

THE BRITISH AMBASSADOR TO THE SECRETARY OF STATE.

BRITISH EMBASSY Washington, April 24, 1916.

Sin: I have the honor, in obedience to instructions received from Sir Edward Grey, His Majesty's principal secretary of state for foreign affairs, to transmit to you herewith a memorandum embodying the reply to the representations of your Government in regard to restrictions on trade, which were communicated to Sir Edward Grey in Mr. Page's note of November 5 last, in pursuance to your instructions dated October 21.

I have, etc.,

CECIL Spring-Rice.

[Inclosure.] MEMORANDUM.

The communication addressed by the United States Ambassador in London to Sir E. Grey on the 5th November, 1915, has received the careful attention of His Majesty's Government, in consultation with

their allies the French Government, and His Majesty's Government have now the honor to make the following reply:

2. The first section (paragraphs 3-15) of the United States note relates to cargoes detained by the British authorities in order to prevent them from reaching an enemy destination, and the complaint of the United States Government is summarized in paragraph 33, to the effect that the methods sought to be employed by Great Britain to obtain and use evidence of enemy destination of cargoes bound for neutral ports and to impose a contraband character upon such cargoes are without justification.

3. The wording of this summary suggests that the basis of the com-

that the methods sought to be employed by Great Britain to obtain and use evidence of enemy destination of cargoes bound for neutral ports and to impose a contraband character upon such cargoes are without justification.

3. The wording of this summary suggests that the basis of the complaint of the United States Government is not so much that the shipments intercepted by the naval forces were really intended for use in the neutral countries to which they were dispatched as that the dispatch of goods to the enemy countries has been frustrated by methods which have not been employed by belligerent nations in the past. It would seem to be a fair reply to such a contention that new devices for dispatching goods to the enemy must be met by new methods of applying the fundamental and acknowledged principle of the right to intercept such trade.

4. The question whether the exercise of the right of search can be restricted to search at sea was dealt with in Sir E. Grey's note of the 7th January, 1915, and His Majesty's Government would again draw attention to the facts that information has constantly reached them of attempts to conceal contraband intended for the enemy in innocent packages, and that these attempts can only be frustrated by examination of the ship and cargo in port. Similarly, in Sir E. Grey's note of the 10th February, 1915, it was pointed out that the size of modern steamships, and their capacity to navigate the waters where the allied patrols have to operate, whatever the conditions of the weather, frequently render it a matter of extreme danger, if not of impossibility, even to board the vessels, unless they are taken into calm water for the purpose. It is unnecessary to repeat what was said in that note. There is nothing that His Majesty's Government could withdraw or that the experience of the officers of the allied feets has tended to show was inaccurate.

5. When visit and search at sea are possible, and when a search can be made there which is sufficient to secure beligerent rights, it may be

"Further, in a large ship the greater bulk of the cargo renders it casier to coneeal contraband, especially such valuable metals as nickel, quantities of which can easily be stowed in places other than the holds of a large ship.

"I entirely dispute the contention, therefore, advanced in the American note, that there is no difference between the search of a ship of 1,000 tons and one of 20,000 tons. I am sure that the fallacy of the statement must be apparent to anyone who has ever carried out such a search at sea.

"There are other fagts, however, which

of the statement must be apparent to anyone who has ever carried out such a search at sea.

"There are other facts, however, which render it necessary to bring vessels into port for search. The most important is the manner in which those in command of German submarines, in entire disregard of international law and of their own prize regulations, attack and sink merchant vessels on the high seas, neutral as well as British, without visiting the ship and therefore without any examination of the cargo. This procedure renders it unsafe for a neutral vessel which is being examined by officers from a British ship to remain stopped on the high seas, and it is therefore in the interests of the neutrals themselves that the examination should be conducted in port.

"The German practice of misusing United States passports in order to procure a safe conduct for military persons and agents of enemy nationality makes it necessary to examine closely all suspected persons, and to do this effectively necessitates bringing the ship into harbor."

7. Sir John Jellicoe goes on to say:

"The difference between the British and the German procedure is that we have acted in the way which causes the least discomfort to neutrals. Instead of sinking neutral ships engaged in trade with the enemy, as the Germans have done in so many cases in direct contravention of article 113 of their own Naval Prize Regulations, 1909, in which it is laid down that the commander is only justified in destroying a neutral ship which has been captured if—

"(a) She is llable to condemnation, and
"(b) The bringing in might expose the warship to danger or imperit the success of the operations in which she is engaged at the time—

"we examine them, giving as little inconvenience as modern naval conditions will allow, sending them into port only where this becomes necessary.

"It must be remembered, however, that it is not the allies alone

necessary.

"It must be remembered, however, that it is not the allies alone who send a percentage of neutral vessels into port for examination, for it is common knowledge that German naval vessels, as stated in paragraph 19 of the American note, 'seize and bring into German ports neutral vessels bound for Scandinavian and Danish ports.'

"As cases in point, the interception by the Germans of the American oil tankers *Liama* and *Piotuvia* in August last may be mentioned. Both were bound to America from Sweden and were taken into Swingmunde for examination."

8. The French Ministry of Marline shares the views expressed by Sir J. Jellicoe on the question of search at sea, and has added the following statement:

1. Jellicoe on the question of search at sea, and has added the following statement:

1. La pratique navale. telle qu'elle existait autrefois et consistant a visiter les navires en mer, méthodo que nous a légace l'ancienne marine, cans out present son incuinas de la navigation actuelle. Les Américans out present son incuinas de la navigation actuelle. Les Américans out present son incuinas de la navigation actuelle. Les Américans out present son incuinas de la navigation actuelle. 1 UNAUTHORIZED TRANSLATION OF PARAGRAPH S OF THE BRITISH MEMORANDUM.

Naval practice, as it formerly existed, consisting in searching ships on the high seas, a method handed down to us by the old navy, is no longer adaptable to the conditions of navigation at the present day. Americans have anticipated its insufficiency and have foreseen the necessity of substituting some more effective method. In the instructions issued by the American Navy Department under date of June 20, 1898, to the cruisers of the United States the following order is found (clause 13):

"If the latter (the ship's papers) show contraband of war, the ship should be select; if not she should be set free, unless by reason of strong grounds for suspicion a further search should seem to be requisite."

requisite."

Every method must be modified having regard to the modifications of material which men have at their disposal on condition that the method remains humane and civilized.

The French Admiralty considers that to-day a ship, in order to be searched, should be brought to 1 port whenever the state of the sea, the nature, weight, volume, and stowage of the suspect cargo, as well as the obscurity and lack of precision of the ship's papers, render scarch at sea practically impossible or dangerous for the ship searched.

On the other hand, when the contrary circumstances exist the search should be made at sea.

Bringing the ship into port is also necessary and institut when the

should be made at sea.

Bringing the ship into port is also necessary and justified when, the neutral vesse: having entered the zone or vicinity of hostilities, (1) it is a question, in the interests of the neutral ship herself, of avoiding for the latter a series of stoppages and successive visits and of establishing once for all her innocent character and of permitting her thus to continue her voyage freely and without being molestel; and (2), the belligerent, within his rights of legitimate defense, is entitled to exercise special vigilance over unknown ships which circulate in these waters.

circumstances may call for. International law only requires that the practice in princ courts of the belligerent untion should afford a fair court to arrive at a just conclusion upon the evidence. Subject to that condition, each nation may regulate the practice to be followed in its prize courts. As an instance, the recent Italian decree of 30th May, 1bif, may be quoted in article 6, of which it is cancied that the The division of prize-court proceedings into two distinct phases, the first bearing and the hearing on further proof, under the early British and American practice was merely a rule of procedure. Similarly the exclusion of extraneous evidence until the making of an order for further proof was only a rule of procedure. His Majesty's Government when the proof was only a rule of procedure. His Majesty's Government when the proof was only a rule of procedure. His Majesty's Government was a rule of procedure. The Majesty of Government was a rule of procedure was developed, and we have a rule so soon as they were advised that the rules were obsolete and might work injustice.

12. The old practice and procedure had become archaic in form and belonged to days long before the modern improvements in leval procedure were developed, days when, for instance, the parties interested affected their rights. The aiterations in the prize-court practice and rules were conceived and made in the spirit of those improvements. The objects with which the old practice was abolished were to prevent delay, to eliminate technicalities, and to place their respective cases fully be the proof of th

\$97, 480, 000 88, 132, 000 234, 960, 000

18. In the face of such figures it seems impossible to accept the contention that the new prize-court procedure in Great Britain has practically destroyed much of the export trade of the United States to neutral countries in Europe, and the inference is suggested that if complaints have been made to the administration of Washington by would-be exporters, they emanated not from persons who desired to engage in genuine commerce with the neutral countries but from those who desired to dispatch goods to the enemy under cover of a neutral destination, and who found it more difficult to conceal the real facts from the prize courts under the new procedure.

17. At this point it would have been opportune to introduce a reply to the contention that appears at first sight to be advanced in paragraph 13 of the United States note that Great Brinin, while interfering with foreign trade, has increased her own with neutral countries adjacent to Germany, but this is rendered unnecessary by the explanation given by Mr. Page at the time that he presented the note and since confirmed by a statement given out to the press at Washington that no such meaning is to be attributed to the paragraph. Moreover, the subject has been dealt with in the note which Sir E. Grey sent to Mr.

Page on the 13th of August last and again in the note given to the State Department by the British Ambassador at Washington on the 27th of December.

18. The next passage in the United States note (par. 14) relates to the principle of noninterference with goods intended to become incorporated in the mass of merchandise for sale in a neutral country, or, as it is more commonly known, with goods intended to be incorporated in the "common stock" of the country. The United States Government urge with some force that trade statistics are not by themselves conclusive in establishing an enemy destination, and that such statistics require careful scrutiny. On the other hand, the mere fact that goods, no matter of what description or in what quantities, are ostensibly destined to form part of the common stock of a neutral country can not be regarded as sufficient evidence to prove their innocence or to justify the assertion that any attempt to raise questions as to their ulterior destination is unwarranted and inquisitorial. It is a matter of common knowledge that large quantities of supplies have since the war broke out passed to our enemy through neutral ports. It was pointed out in Sir E Grey's note of the 17th of July, 1915, that it would be mere affectation to regard some of those ports as offering facilities only for the commerce of the neutral country in which they are situated. They have, in fact, been the main avenues through which supplies have reached the enemy from all parts of the world. In the case of goods consigned to these ports the ships' papers convey no suggestion as to their ultimate destination, and every device which ingenuity can suggest or which can be contrived by able and anscrupulous agents is resorted to for the purpose of giving to carefully organized arrangements for supplying the enemy the appearance of genuine transactions with a neutral country. His Majesty's Government can not bring themselves to believe that it is the desire of the United States Government that traffic of this kind sh out hindrance

out hindrance

19. The question whether goods dispatched to a neutral port were intended to become part of the mass of merchandise for sale in that country is one of fact. Quite apart from the conclusions suggested by the figures, there is a considerable body of evidence that many of the goods which have been shipped to neutral ports during the war were never intended to become part of the common stock of that country, but were earmarked from the beginning for reexport to the enemy countries. If they had been intended to form part of the common stock they would have been available for use in that country; yet at one time in the early days of the allies' efforts to intercept all the commerce of the enemy, when they found it necessary to hold up certain cargoes of cotton on their way to Sweden, it transpired that though the quays and the warehouses of Gothenburg were congested with cotton, there was none available for the use of the spinners in Sweden.

with cotton, there was none available for the use of the spinners in Sweden.

20. Confirmation of the fact that many of the shipments to neutral ports were never intended to become part of the common stock of the country is also to be found in some of the contracts which have come to light since the policy of intercepting all commodities on their way to or from the enemy country was introduced. One of those which has been disclosed is a contract with a firm in Germany for the sale of no less than 50,000 bales of cotton linters at a price which was about double that which linters were fetching in any other country than Germany. The whole quantity was to be shipped to neutral ports. Various shipments made under this contract have been held up, and in all cases the goods were shipped with papers and under conditions which concealed the enemy destination altogether. Sweden is not in normal times a large importer of cotton linters, and it certainly would not be reasonable to maintain that, because the ship's papers did not disclose this contract of sale or the enemy destination, shipments of linters under this contract should be regarded as intended to become part of the mass of merchandise for sale in Sweden.

21. However sound the principle that goods intended for incorporation in the common stock of a neutral country should not be treated as contraband may be in theory, it is one that can have but little application to the present imports of the Scandinavian countries. The circumstances of a large number of these shipments negative any conclusion that they are bona fide shipments for the importing countries. Many of them are made to persons who are apparently nominees of enemy agents, and who never figured before as importers of such articles. Consignments of meat products are addressed to lightermen and dock laborers. Several thousands of tons of such goods have been found documented for a neutral port and addressed to firms which do not exist there. Large consignments of similar goods were addressed to a baker,

some of the decisions in the United States prize courts during the Civil War.

23. In the presence of facts such as those indicated above, the United States Government will, it is believed, agree with His Majesty's Government that no belligerent could in modern times submit to be bound by a rule that no goods could be seized unless they were accompanied by papers which established their destination to an enemy country, and that all detentions of ships and goods must uniformly be based on proofs obtained at the time of seizure. To press any such theory is tantamount to asking that all trade between neutral ports shall be free, and would thus render nugatory the exercise of sea power and destroy the pressure which the command of the sea enables the allies to impose upon their enemy.

24. It is, of course, inevitable that the exercise of belligerent rights at sea, however reasonably exercised, must inconvenience neutral trade, and great pressure is being put upon the United States Government to urge the technical theory that there should be no interference at all with goods passing between neutral ports, and thus to frustrate the measures which the allies have taken to intercept commerce on its way to or from the enemy. It may not be out of place to recall that the position is somewhat similar to that which arose in the United States in the war between the North and the South. All students of international law and of military history are aware that the blockade of the Southern States was the most important engine of pressure possessed by the North, and that it was on the point of being rendered ineffective

through the use of blockade runners of neutral ports of access. It is well known that the United States Government took immediate steps to stop such trade, and that the United States Supreme Court extended the doctrine of continuous voyage so as to cover all cases where there was an intention to break the blockade by whatever means, direct or

was an intention to break the blockade by whatever means, direct or indirect.

25. The configuration of the European coast is such as to render neutral ports the most convenient for the passage of German commerce, and just as it was essential to the United States in the Civil War to prevent their blockade from being nullified by the use of neutral ports of access, so it is essential to the allied powers to-day to see that the measures which they are taking to intercept enemy commerce shall not be rendered illusory by the use of similar ports. The instructions issued by Mr. Seward during the Civil War show that he regarded the continuance of the blockade against the Southern States as absolutely vital, and he repeatedly instructed American representatives abroad to assure foreign governments that, while he was fully allve to the great inconveniences caused by the cutting off of the supplies of cotton from Europe, yet he could not, as American Secretary of State, "sacrifice the Union for cotton." The American representatives in Europe in their published reports again and again expressed the opinion that, whatever might be the policy of the Government, the peoples of Europe would never consent to side with the power that upheld slavery against the power which represented freedom. Their opinion was entirely justified by the result, and in fact neither the French nor the English Governments took any decided steps toward breaking the blockade, in spite of the tremendous pressure which was brought to bear upon them, and the terrible suffering of the cotton operatives of this country. Indeed, President Lincoln himself acknowledged, in a message to the laboring classes of Manchester, his high sense of the spirit of self-sacrifice which they had exhibited in their policy toward America. His Majesty's Government have, of course, no desire to enter upon any examination of the issues involved in that historic conflict, but no one will question the respect which is due to the determination then shown by the French and Britis

on what they believed to be the side of slavery or consent to action which they held might be fatal to the democratic principle of government, however great the pressure exerted by commercial interests might be.

26. His Majesty's Government desire to assure the United States Government that every effort is being made to distinguish between bona fide neutral commerce and that which is really intended for the enemy. The task is one of exceptional difficulty, and the statistics show that a great volume of imports intended for the enemy must have passed through adjacent neutral countries during the war. As an instance, the imports of lard into Sweden during the year 1915 may be taken. In that year the total import of lard into Sweden from all sources was 9.318 tons, of which no less than 9,029 tons came from the United States. In the three years before the war, 1911–1913, the annual average import of the same article was only 88s, of which 63s tons came from the United States. It is difficult to believe that the requirements of Sweden in respect of lard, even when every allowance is made for possible diversions of trade due to the war, could suddenly have increased more than tenfold in 1915. The inference, indeed, is irresistible that the greater part of these imports must have had another and an enemy destination.

27. It may readily be conceded that the efforts to intercept enemy commerce passing through neutral countries can not fail to produce some soreness and dissatisfaction. His Majesty's Government have therefore spared no pains in their endeavor to mitigate the inconvenience which must inevitably be occasioned to neutral traders. In pursuance of this object they are resorting to the policy of ascertaining the total requirements of the country concerned, and intercepting such imports as may be presumed, because they are in excess of those requirements, to form no part of the normal trade of the country, and therefore to be destined for the enemy.

28. The total net imports of a particular commodity by any

in order to bring about a more extended adoption of this equitable system.

31. Moreover, the fact that a neutral country adjacent to the enemy territory is importing an abnormal quantity of supplies or commodities, of which her usual imports are relatively small, of which the enemy stands in need, and which are known to pass from that neutral country to the enemy, is by itself an element of proof on which the prize court would be justified in acting, unless it is rebutted by evidence to the contrary. Hostile destination being a question of fact, the court should take all the relevant circumstances into consideration in arriving at its decision, and there seems to be no reason in principle for limiting the facts at which the court is entitled to look in a case of this kind.

32. The second section of the United States note (paragraphs 16-24) deals with the validity of the measures against enemy commerce which were embodied in the British order in council of the 11th March, 1915, and in the French decree of the 13th March, and maintains that these measures are invalid because they do not comply with the rules which have been gradually evolved in the past for regulating a blockade of enemy ports, and which were summarized in concrete form in articles 1-21 of the Declaration of London.

33. These rules can only be applied to their full extent to a blockade in the sense of the term as used in the declaration of London. His Majesty's Government have already pointed out that a blockade which was 'limited to the direct traific with enemy ports would in this case have but little, if any, effect on enemy commerce, Germany being so placed geographically that her imports and exports can pass through neutral ports of access as easily as through her own. However, with the spirit of the rules His Majesty's Government and their allies have loyally compiled in the measures they have taken to intercept German imports and exports. Due notice has been given by the allies of the for before the announcement of the intentions all commerce on its way to or from the enemy countries have been treated with great liberality. The objects with which the usual declaration and notification of blockade are issued have therefore been fully achieved. Again, the effectiveness of the work of the allied deets under the orders referred to is shown by the small number of vessels which escape the allied patrols. It is doubtful whether there has ever been a blockade where the ships which slipped through bore so small a proportion to those which were intercepted.

34. The measures taken by the allies are aimed at preventing commodities of any thad from reaching or leaving Germany, and not more than the subject of the subject of the control of the measures which the allies have taken were deart with at length in Sir E. Grey's note of the 23d of July, and there is no need to repeat what was there said. It need only be added that the rules applicable to a blockade of enemy ports are strictly followed by the allies in cases where they apply, as for instance, in Minor or of the coast line of German East Africa.

35. Some further comment is perhaps necessary upon the statements made in paragraph 19 of the United States note, where it is said that, because German coasts are open to trade with Scandauvian countries, the measures of the ali

in Germany of many articles most necessary to the enemy in the prosecution of the present war must be well known to the United States Government.

36. Attention is drawn in the same paragraph to the fact that cotton has since the measures announced on the 11th March been declared to be contraband, and this is quoted as an admission that the blockade is ineffective to prevent shipments of cotton from reaching the enemy countries. The reason for which cotton was declared to be contraband is quite simple. Goods with an enemy destination are not, under the order of council, subject to condemnation; they are restored to the owner. Evidence accumulated that it was only for military purposes that cotton was being employed in Germany. All cotton was laid under embargo, and its use in the textile factories was prohibited except in very special cases or by military permission. In these circumstances it was right and proper that cotton with an enemy destination should be subjected to condemnation and not merely prevented from passing, and it was for this reason that it was declared to be contraband. The amount of cotton reaching the enemy country has probably not been affected in the least by its being made contraband on the 20th August, as supplies from overseas had been cut off effectually before that date. Even the "Konfektioniār," a German technical paper, dealing with the textile industry, admitted in its issue of the 1st July that not a gramme of cotton had found its way into Germany for the preceding four weeks.

37. Before seaving the question of the validity of the measures which France and Great Britain have taken against enemy commerce, reference must be made to the statement made in the thirty-third paragraph of the United States note that "the curtaliatory, and therefore illegal, can not be admitted." His Majesty's Government are quite unable to admit the principle, that to the extent that these measures were occasioned and necessitated by the lilegal and unjustifiable proclamation issued by the German Govern

by the illegal conduct of the enemy, they do not, in reality, conflict with any general principle of international law, of humanity, or civilization; they are enforced with consideration against neutral countries, and are, therefore, juridically sound and valid.

38. The more abstract question of the legitimacy of measures of retailation adopted by one belligerent against his opponent, but affecting neutrals also, is one of which His Majesty's Government think the discussion might well be deferred. It is a subject of considerable do notice that the Government of the States seem to rejard all such measures of retailation in war as lilegal if they should incidentally inflict injury upon neutrals. The advantage which any such principle would give to the determined law-breaker would be so great that His Majesty's Government can not conceive that it would commend itself to the conscience of mankind. To take a simple instance, suppose that of the conscience of mankind. To take a simple instance, suppose that of the conscience of mankind. To take a simple instance, suppose that of the conscience of mankind. To take a simple instance, suppose that of the commerce of his enemy—an action which is llicitimate and calculated to inflict injury upon neutrals as well as upon the other belligerents—what is that belligerent to do? Is he precluded from meeting in any way this lawless attack upon him by his enemy? His Majesty's Government can not think that he is not entitled by way of retailation to scatter mines in his turn, even though in so doing he also into the contract of the contract of the contract of the belligerents for warlke purposes, could he object to the other belligerents for warlke purposes, could he object to the other belligerent acting in the same way? It would seem that the true view must be that each belligerent is entitled to insist on being allowed to meet his enemy on terms of equal liberty of action. If one of them is allowed to make an attack upon the other capacities of neutral rights, his opponent an

42. Sir E. Grey's note of the 23d July was intended to make this point clear, and so far from having intended to "give the impression that Ilis Majesty's Government do not rely upon its soundness or strength," His Majesty's Government wish to lay stress on the fact that the principle that no encroachment should be made upon the jurisdiction and the competence of the prize court is one which they regard as vital.

tion and the competence of the prize court is one which they regard as vital.

43. Apart from the cases where a question may arise as to the validity of orders or instructions on which naval action was based, circumstances frequently give rise to claims for compensation on behalf of individuals who consider they have suffered unjustly from the exercise of rights jure belli, as, for instance, from the delay in releasing their ships, or so forth. His Majesty's Government desire, therefore, to repeat what was said in Str E. Grey's note of the 10th February, that the British prize court rules give the court ample jurisdiction to deal with any claims for compensation by a neutral arising from the interference with a ship or goods by the naval forces.

44. His Majesty's Government attach the utmost importance to the maintenance of the rule that, when an effective mode of redress is open to individuals in the courts of a civilized country by which they can obtain adequate satisfaction for any invasion of their rights, recourse must be had to the mode of redress so provided before there is any scope for diplomatic action. This is the course which His Majesty's Government have always themselves endeavored to follow in previous wars in which Great Britain has been neutral, and they have done so because it is the only principle which is correct in theory and which operates with justice and impartiality between the more powerful and the weaker nations. To that principle His Majesty's Government propose to adhere now that they are themselves the belligerent, and that it is against them that the claims are advanced.

45. Inquiry has been made into the four cases of the Majestense, the Done Least to Leaster and the Sagar mentioned in the Leaster States.

45. Inquiry has been made into the four cases of the Magicienne, the Don José, the Labuan, and the Saxon, mentioned in the United States note (par. 27) as instances during the American Civil War where His Majesty's Government put forward, through the diplomatic channel, claims for damages for seizure and detention of British ships alleged to have been made without legal justification. In two of these instances it is said at the time the deman is were made the cases were before the American prize courts for adjudication. The results of the inquiry are

contained in an appendix to this note. The cases have there been dealt with in some detail, because they are cited as indicating that it was the practice of Her Majesty's Government during the American Civil War to claim, through the diplomatic channel, damages for seizures of British ships alleged to have been made without legal justification. The cases do, in fact, establish the very proposition for which His Majesty's Government is now contending, viz, that in the cases where the prize court has power to grant relief there is no ground for putting forward claims through the diplomatic channel. In two of the cases the United States Government themselves discontinued the prize-court proceedings and admitted the right to compensation, and in the others they maintained the jurisdiction of the prize court, and Her Majesty's Government acquiesced.

46. The statements contained in paragraph 31 of the United States note have led to a careful review of the practice which is now followed in the British courts with regard to vessels and cargoes which are released. It has been ascertained that in the case of vessels brought in for examination and allowed to proceed without discharging any part of their cargo no dues are charged. Where part of the cargo is discharged and passes into the jurisdiction of the prize court, the terms of the release are, of course, subject to the control of the court, and His Majesty's Government are therefore hardly in a position to give any definite undertaking with regard to the incidence of the expenses and charges which may have been incurred. In general, however, they realize that, in cases where goods are released and it transpires that there were no sufficient grounds for their seizure, no dues or charges should fall upon the owner. The statement that waivers of the right to put forward claims for compensation are exacted as a condition of release is scarcely accurate, but they are prepared to concede that such waivers would be a hardship to the owners of the goods released. In these c

Furthermore, any discussion of the cases in this note might prejudice the chances of the claimants of recovering compensation through the prize court in cases where they consider that they are entitled to redress.

49. Finally His Majesty's Government desire to assure the United States Government that they will continue their efforts to make the exercise of what they conceive to be their belligerent rights as little burdensome to neutrals as possible. Some suggestions have already been referred to in this note which, it is believed, would have that effect, and they are quite ready to consider others. For instance, they have already appointed an impartial and influential commission to examine whether any further steps could be taken to minimize the delays involved in the present methods of dealing with neutral vessels. Again, it has been suggested that it would be a great commercial convenience if neutral shippers knew, before they made arrangements for ship space and for financing their consignments, whether they would be held up by belligerent patrols. A scheme is already in operation which ought to surceed in accomplishing this object. Other suggestions of a like nature might perhaps be made, and the allied Governments would be prepared to give favorable consideration to any proposal for the alleviation of the position of neutrals, provided that the substantial effectiveness of the measures now in force aganst enemy commerce would not be thereby impaired.

50. His Majesty's Government are of opinion that it is to such mitigations that the allies and the neutrals concerned should look for the removal of the difficulties now encountered rather than to abrupt changes either in the theory or application of a policy based upon admitted principles of international law carefully adjusted to the altered conditions of modern warfare. Some of the changes which have been advocated would, Indeed, if adopted in their entirety, render it impossible for the allest to persist with effect in their endeavors to deprive the ene

Our Merchant Marine.

EXTENSION OF REMARKS

HON. FRANK BUCHANAN,

OF ILLINOIS.

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, May 9, 1916.

Mr. BUCHANAN of Illinois, Mr. Speaker, Mr. Andrew Furuseth, the international president of the seamen's union, has given the best part of his life to improve the working conditions of the seamen. He is one of the best informed men in the world on the question of our merchant marine. He strived for 20 years to secure the enactment of the seamen's law, which, if applied in letter and spirit, will reward Mr. Furuseth for his faithful, courageous, and able efforts. The delay in the enforcement of the seamen's act has been a disappointment, and in some instances an irritation. To the supporters of the act, however, it is encouraging to believe that since the 1st of April, 1916, the law has been, in part, enforced, which has resulted in much good, and it is hoped that in the future the law will be fully complied with, which will give seamen greater liberty and freedom, better working conditions, equalize the cost of opera-tion of foreign-owned ships, making American ports with American-owned ships, and Andrew Furuseth's faithful and able efforts will be crowned with glory.

OUR MERCHANT MARINE.

[By Andrew Furuseth, before the Economic Club, of Boston, February 23, 1916.]

ruary 23, 1916.]

Mr. Chairman, it is a matter of common knowledge and general agreement that the oversea merchant marine of the United States was steadily decaying from about the time of the Civil War to the beginning of the present European war. The reasons are economic, but they are created by law. The causes for this decay have been variously stated to be:

First. Our antiquated navigation laws.

Second. Excessive building cost of American vessels as compared with foreign vessels.

Third. Excessive cost of operation of American vessels as compared with foreign vessels.

As shortly as I can I shall try to deal with these statements and the remedies suggested.

OUR ANTIQUATED NAVIGATION LAWS.

OUR ANTIQUATED NAVIGATION LAWS.

When those who use this phrase—a phrase so widely disseminated and so generally used that it is assumed to need no explanation—are asked for specifications they say, "We furnish better accommodations for our seamen than do other nations." But when our laws dealing with seamen's accommodations are placed side by side with those of England, France, Germany, and Norway we find that our laws are not as liberal to the seamen as the laws of those countries. Then they say: "We furnish a better scale of food." But when we compare the English scale of food, as it existed up to 1906, we find it identical with the scale of food on American vessels up to February 21, 1809, and that the present scale of food of the two nations is about the same. We further find that the scale of food in vessels of Norway, Denmark, Germany, and France differs very slightly from our own, and that there can not be very much distinction in "the cost of food per person" in either of them.

Then it is claimed that American vessels carry more men. Comparing the same class of vessels belonging to any of these nations with similar vessels under the American flag and employed in the same trade, it will be found that there is no real difference in the number of men employed and that the American vessels sometimes carry one or two men more, sometimes two or three less.

Finally, it is suggested that it is a question of wages; and this is true, in so far as it applies to vessels sailing from ports of the United States. The only difference in wages between foreign and American vessels trading between ports of other countries is in the wages of the officers and this is not by any means an important amount. I shall deal with the question of wages later.

THE COST OF CONSTRUCTION.

THE COST OF CONSTRUCTION.

Summing up the testimony of the shipowners as it has been given to the committees of Congress and to the Merchant Marine Commission, we find that some of the witnesses testified that the cost of an American vessel is about 33 per cent higher; others claimed that it is 50 per cent higher. One of these contentions is as correct as the other. If an American-built vessel costs \$900,000 the claim is made that it can be built on the Clyde for \$600,000. This would make the differential about 33 per cent; but if the vessel was built on the Clyde at \$600,000, and the same vessel would cost \$900,000 if built in an American yard, it would be correct to say that the difference is 50 per cent.

Of course, the more expensive vessel carries a financial burden throughout her normal life; that is, in proportion to her higher original cost. Given 6 per cent interest on money invested, 6 per cent insurance, and 5 per cent deprectation, if the vessel costs \$300,000 more, she will have to earn annually about \$50,000 more than the vessel that costs \$300,000 less before she can begin to pay dividends.

The origin of this difference is in the monopoly of the American shipbuilder. The cure is free ships. Let the shipowner buy his vessel where he can buy it cheapest and sail it where he can make the most money. The emergency shipping act furnished a remedy, though it is not a complete one. In order to make it complete, those vessels so registered must be admitted to the constwise trade. When this is done the cost of construction will be equalized, and the privilege of participating

in the coastal and the intercoastal trade will be such as to induce for-eign vessels to come under the American flag.

The vessels built in foreign yards are now compelled to be on an equality with vessels under a foreign flag, except that they have the pro-tection of a powerful neutral during the war. If in trade between Atlantic ports and the Orient they can not carry part cargo from the Atlantic to the Pacific coast, or vice versa; if they bring a cargo from Europe to New York, and have charter to bring cotton from a southern port back to Europe, they must go empty from New York to the loading port. This is an inexcusable economic waste, detrimental to the ship-owner and the shipper alike.

THE COST OF OPERATION.

Let us assume that two vessels, one under Belgian, the other under American flag, are trading between Antwerp and Boston. These vessels will buy their supplies in either of the two places, where they can be bought cheapest. The same situation exists between San Francisco and Sydney, or between Puget Sound and Japan, so that the only difference is in the wage cost, and we have only to deal with the question of

Sydney, or between Puget Sound and Japan, so that the only difference is in the wage cost, and we have only to deal with the question of wages.

The wages of the seamen has been and is now the going wages of the ports of shipment. The wages of the port of shipment is very largely determined by the wage level of the country tributary to the port in question, modified, if at all, by the wages of the port to which the vessel is bound.

The United States is a high-wage country, and the wages paid here are higher than in other countries, except in New Zealand and Australia. Vessels, regardless of their flag, if in the same or similar trade and shipping their men in any port in the world, pay substantially the same wages for the same kind of work, so that the Boston wage rate is paid by the Norwegian, the English, or the French, if they hire their men in Boston; the Liverpool wage rate is paid by the Norwegian, French, or American, if they hire their men in Liverpool.

This has been so clearly understood that in 1884 the Congress of the United States made it the basis of an act "To remove certain burdens on the American merchant marine and encourage the American foreign-carrying trade, and for other purposes."

One of the main features of this act was to permit the American shipowner to discharge the crew hired in an American port; to hire another crew in the same port with his competitor; to come to the United States and go back to a foreign port without reshipping in the United States, and thus get away from the American-wage rate. This was an effort to equalize the cost by leveling the American wage down to the rate paid by the competitor. The act was approved on June 26, 1884, and was enacted upon petition from the American and foreign vessels trading between foreign ports. It, however, failed of its purpose in American ports; first, because it contemplated and provided for the imprisonment of seamen coming on an American shipowners. It is still the law.

This law resulted in equalizing the wage cost of American

Its chief result was to increase the drift from the sea on the part of Americans.

The imprisonment of seamen for leaving American vessels in American ports was abolished by the act of December 21, 1898. From that time the seamen had a right to quit; they could not be held against their will, unless they were Chinese, who were prevented by the exclusion act from coming on shore, and this gave to the vessels of the Pacific Mail and to the Dollar vessels engaged in the oriental trade an advantage above all other vessels—even over the Japanese vessels—in the wage cost of operation. These vessels shipped their men in Hongkong at about \$15 Mexican per month; the Japanese shipped their men in Japan, paying 25 yen per month.

The differential in wages against the American vessel continued, and it ranged from 20 per cent in British ports to 30 or 40 per cent in some Baltic and Mediterranean ports, and then rose to more than 200 per cent in ports of India or China. These facts are testified to by the shipowners and their spokesmen.

Taken together with the difference in the cost of construction, the difference in wages was fatal. The American ship could not compete. To overcome these handicaps the American ship owner was exempted from taxation of floating property, from payment of fees levied in the enforcement of the navigation laws, and was further permitted to disregard any safety line in loading; he can now load his vessels to any depth he thinks proper; he can carry as much of a deck load as he may think safe; there are no laws restraining him. He has shed practically all liability, which has been reduced to the "freight money pending" and the income from sale of the wreck. While this is conditioned on having an efficient crew, he escapes by organizing a separate corporation for each vessel, so that when the vessel is lost the corporation has no assets.

He is permitted and encouraged to obtain and employ the cheapest men that can be found. With the exception of the licensed officers he could and did disregard any

TREATIES WITH OTHER COUNTRIES,

In treaties entered into with other maritime nations we had agreed to mutually arrest, detain, and surrender seamen who might desert or refuse to continue to labor in our high-wage ports under contracts which they had signed in low-wage ports. These treaties were further assisted by statutes, enforceable upon demand made by the consul of the nation to which the vessel belonged. When such demand was made, we used our peace officers to hunt down the deserter and to deliver him back. In other words, we used our police power to keep the wage rate of our competitors below that of our own. He hired his men in the cheapest wage ports and compelled them to stay by their contracts in our high-wage ports, thus gaining an advantage which enabled him to drive the American flag from the ocean.

To assist in meeting this condition, Congress passed the laws of June 26, 1884, of June 19, 1886, and the mail subsidy act; but these laws were not sufficient. American money went into foreign vessels, and because "The heart of man is with his treasure." its interest is now to prevent any real change except such as can be met by other nations, and we hear the ever-repeated cry of—

This is a game at which all can play, and the higher the play the more money for the international shipowner. In this game he is in the position of the wife who witnessed a struggle between her husband and a bear—"Go it dearie; go it bearie."

position of the wire who witnessed a struggle between her husband and a bear—"Go it dearie; go it bearie."

Nation against nation; taxpayers paying, shipowners collecting. With it comes the cry for cheaper and ever cheaper men, compelled to live the lives of outcasts. The shlp-subsidy advocates would build sea power on ships; they claim that ships will bring men. The refusal of the American man to seek employment in our protected coastwise trade teaches them nothing. They can not or will not recognize the most stupendous fact of modern life—the schoolmaster and his work; they will not or can not understand that modern education and the ancient status of seamen can not exist together.

The American man, feeling the situation, gradually deserted the sea; the American boy shunned it. This country had to depend upon foreigners, out of whom to make officers; to such an extent is this the case that if they had not been forthcoming a very large percentage of such merchant marine as we now have in the coastwise and foreign trade would be compelled to remain at the docks for want of men to serve as officers on them.

The same reason that caused the American to quit the sea has been operating in Great Britain, Norway, Sweden, Denmark, and in Germany along the seacoast, where the condition is best known and general education highest. As the men of these different nationalities quit the sea their places were taken by men from South Africa. India, the Malay Islands, China, and Japan. The sea power was gradually passing from the white race.

THE LA FOLLETTE SEAMEN'S ACT.

THE LA FOLLETTE SEAMEN'S ACT.

malay islands, Chima, and Japan. The sea power was gradually passing from the white race.

THE LA FOLLETTE SEAMEN'S ACT.

The remedy for this condition is in the La Follette seamen's act. It provides for the abrogation of the treaties and the repeal of the laws under which this country served as the slave catcher for shipowners of other nations. It provides in ports of call for the payment of one-half of the wages earned in order that the seamen may have the means with which to exercise and protect his new freedom. This act abolishes the ancient status.

In reshipping her men the foreign vessel comes under the same law as American vessels, which law prohibits any payment of wages before it has been earned, a standard of efficiency is imposed upon men shipping as abie seamen (part of deck or navigating crew), and the law further provides that in all vessels of more than 100 gross tons leaving ports of the United States at least 75 per cent of the crew in each department of the vessel must be able to understand any orders given by the officers of such vessel.

Foreign vessels coming to ports of the United States will thus be compelled, if their crews shall quit them, to hire men of the same skill and under the same law as men are hired by American vessels. As a result the wages paid by them will be the same.

This is an effort to equalize the wage cost by permitting the economic law of wages to level foreign wages up to the rates paid in our ports. This law has three very important purposes; important to the public: First, The obtaining of a better personnel in the interest of safety. If you have read about the disasters at sea and the constantly increasing losses of passengers, you will agree with Congress and the President at least in this part of the legislation.

Second. The equalization of the wage cost, already partly explained; but it will not stop by equalizing the wage cost in vessels leaving ports of the United States. The same selfishness that will induce the senum to leave his vessel to get higher pay

others from my estimate, because they, except the deep-sea fishermen, will not have sufficient training to make them useful.

The opposition.

That there should be determined opposition to this legislation was to be expected. The shipping interests of foreign nations would not be idle when there was a serious purpose to so change the seamen's status as to permanently interfere with their power over the seamen and their special privileges here in the United States.

The chambers of commerce in our most important seaports became at once very active. Through the press responsive to them they began a campaign which for misrepresentation, or ignorance of the real facts, and for its intensity, challenges comparison. On the one hand it was insisted that the law so discriminated against American vessels as compared with foreign vessels that it would drive the few remaining American vessels from the ocean. On the other hand it was contended that it is so antagonistic to foreign vessels that they will be driven from our ports and we will get into very serious foreign complications.

The National Chamber of Commerce appointed a committee to study this new naw. This committee no doubt tried to do its fully duty; they did not, however, call into consultation any of the men who had been prominently occupied in studying the condition and as a result had championed this law; they met in Washington and could no doubt have had the benefit of consulting with the Hon. William B. Wilson and the Hon. Rufts Hardy. I should gladly have given to them the same information I gave to the committees of Congress. They do not seem to have been looking for this kind of information. In substance, they recommended the repeal of sections 4, 13, 14, 16, 17, and a part of section 11. The provisions of this act liberating the seamen and calcu-

lated to equalize the wage cost of operation are found in these sections. These are the provisions to which foreign shipowners very naturally object. This fact is overlooked by the committee and in the referendum which the National Chamber of Commerce is submitting for vote

of its members.

The opponents of this legislation—led by the International Shipping Federation (Ltd.), with headquarters in London, members of its executive board in most maritime countries and representatives in all-finally claim that the law will be nugatory because the men will not

descrt.
With the prospect of higher wages in front of the seamen, the opponents say that the scamen will not embrace the opportunity. They will not descrt, or if they do it will be because of the blandishments of

ponents say that the scamen will not embrace the opportunity. They will not desert, er if they do it will be because of the blandishments of union delegates.

The treaties providing for the arrest, detention, and delivery of deserters began to be made in the beginning of the last century. The imprisonment of from 1 to 12 months for violating a contract to laborate the content came into general use in foreign ports. There were no seamen's unions or union delegates at that time. These treaties were negotiated and the laws were enacted because the shipping interests believed that the seamen would leave the vessels they were in to get higher wages in some other vessel. They believed that the hog will follow his nose to the warm swill unless there is a fence to stop him. They built the fence. The La Pollette seamen's act tears it down.

The shipowners know that the seamen will take advantage of the opportunity, that the vessels will be compelled to carry more efficient men and pay 'tigher wages, therefore they are opposing this law.

But why do American shipowners oppose it? Because there are between three and four hundred million dollars of American money invested in foreign vessels, and because, like all other bodies of slaveowners, they object to the liberation of their slaves. They consider it an attack upon their interests and a reflection upon their humanity and character. Are they not doing better for the slaves than the slaves could possibly do for themselves?

EXECUTION OF THE LAW.

The Department of Commerce is authorized and instructed to make rules for the enforcement of some of the most important sections of this act. Of course, the drafting of these rules is done by the Bureau of Navigation and the Bureau of Inspection, subject to approval by the Secretary of Commerce. The commissioner of navigation. Mr. Chamberlain, and the inspector general of steam vessels, Mr. Uhler, have been persistently and consistently opposed to this legislation. They opposed this legislation before committees of Congress and as delegates to the conference on safety at sea, held in London; they helped to build an international barrier against it. They on several occasions expressed the belief that it would tend to equalize the wage cost of operation, but that yet it was unwise. To intrust to them the drawing of these rules was very much in the nature of setting the fox to watch the geese. Honest? Of course they are honest. So is the fox.

This law has been in operation for three months in American vessels; where are the signs of improvement in the personnel? If it does not improve the personnel on American vessels, how can it improve the personnel on foreign vessels coming to ports of the United States? To this I answer, it has not, so far, improved the personnel on American vessels, because the law is not enforced on American vessels. It has not affected foreign vessels yet, because the law will not be in full operation on foreign vessels until some time in June this veer.

on American vessels, because the law is not enforced on American vessels. It has not affected foreign vessels until some time in June this year.

Of course, if the regulations which the Department of Commerce is authorized to make is of such nature that it will not improve the personnel on American vessels, if the regulations "limits and softens the choorious law" so as to permit shipowners to continue as of yore, it will necessarily leave foreign vessels untouched, because the regulations must be the same under the law.

You may ask, What is then the prospects of having an American merchant marine and of bringing the American to the sea? When will the improvement come? My answer is that is on the knees of the gods. But it will certainly come as soon as there shall be less American money in foreign vessels, or as soon as the shipping interests shall have less influence with the bureau chiefs who advise the too busy Secretary of Commerce, or when those bureau chiefs are promoted or die; fortunately, few men are immortal, and it is only after death. They say in England that governments may come and governments may go, but the permanent officials go on forever. I am sorry to state that this seems to apply to our country as well, though our bureau chiefs are not made permanent by law. We put new wine into old bottles and the wine is spoiled.

Congress may pass laws based upon a most careful consideration of human nature and the experience of the past, It may try to make when so that they may work nearly automatically, yet those who are entrusted with their execution may nullify them or bring them into ill repute. Thus our shipping commissioners has so far failed of its purpose, that a majority of seamen would gladity see the whole farce wiped out. There are no such places: the men are sent on board of the vessels, often laying at anchor away from the shore, and the signing on is done there, where the men are far found of its purpose, that a majority of seamen would gladity see the whole farce wiped out. There are n

will not come, or, coming, will not remain at sea except upon conditions that are humane and coupled with a living wage.

These conditions will gradually come through the proper enforcement of the La Follette Scamen's Act. Will you support it? Will you help to see that it is enforced?

WASHINGTON, D. C., March 31, 1916.

Hon. JOSEPHUS DANIELS, Navy Department, Washington, D. C.

Hon. JOSEPHUS DANIELS.

WASHINGTON, D. C., March 21, 1015.

May Dan ML. SECUREARY: Agreeable to your suggestion of this date which it is intended to attach to the Navy bill, and which is found in what seems to be bearing No. 21 of the Naval Committee, I beg to call your attention to section 19, found on page 1878.

One for each Senator, Representative, and Delegate in Congress, and five annually from among the apprentice seamen at each of the naval Irelands and the seamen at the congress of the naval relations.

Of course, the purpose is to bring the young American from the serve and Heessed officers in the merchant marine. Their training is to take place at many training stations and on beard naval vessels.

Of course, the purpose is to bring the young American from the seamen of beat the propose of the course, the purpose is to bring the young American from the seamen of bottom of the course, the purpose is to bring the young American from the sea. The insevitable result would be to block every road to advance the course of the course

These proposed officers will not only bar the way to officers' rank of the man trained in the forecastle but he will himself be an inefficient

man.

But the Navy needs a large number of sailors and firemen. Sailors and firemen are the large number of men on the auxiliaries. Where are they to come from? Is the European or the Asiatic going to serve? Can he be trusted to serve? If so, why does England intern all the Austrians and Germans that were sailing in her merchant fleet? If we unfortunately were to get mixed up in the present war the United States would probably have to intern about 30 per cent of its merchant seamen. If we were to join the side of the allies and Spain were to join the central powers, about 60 per cent of the sailors and firemen on the Atlantic coast might have to be interned. But why pursue this any further?

seamen. If we were to join the side of the allies and Spain were to join the central powers, about 60 per cent of the sailors and firemen on the Atlantic coast might have to be interned. But why pursue this any further?

Some European nations, such as Norway, will not permit a naval efficer to become either mate or master of a merchant vessel until he has had at least one year's training on such vessel.

I desire to call your attention to section 21, in which it is stated, "No person shall be enrolled in this class who is less than 18 or more than 45 years of age, nor unless he furnishes satisfactory evidence as to his ability and character from previous employers."

I talked with some seamen about this, both on the Lakes and on the Atlantic, and the invariable remark was, "Uncle Sam wants us to get a recommendation from the shipowner before he will permit us to fight and die for him. Well, he can got to * * * What do they think we are, anyway?"

In some European countries a master of a vessel is not permitted to give any character for ability or conduct to any seaman under his command. That is to say, he is not permitted to place it either on his discharge or his continuous-service book. It is recognized that it is too liable to be dictated by personal like or dislike.

In conclusion, permit me to suggest that if you will gradually exclude from American vessels those who can not understand the language of the officers, and thus leave opening for the young American to come, if you will permit the young man, after having served 24 months on deck at sea or on the Great Lakes, to join the Navy for one year, then to be discharged with an able seamen's certificate, if he shall deserve it, and thus go back to the merchant marine with such a certificate and be enrolled in the Naval Reserve. if you will do something similar for the firemen you will get the American to sea, you will gradually prepare and develop an efficient and reliable personnel for the merchant marine, and a recily valuable and dependable naval reser

Rural Credits.

EXTENSION OF REMARKS

HON. WILLIAM B. OLIVER. OF ALABAMA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, May 11, 1916.

Mr. OLIVER. Mr. Speaker, under the leave granted to extend remarks I print the following letter from Mr. Robert J. Bulkley in reply to a request from me for an expression of his opinion on rural-credit legislation:

CLEVELAND, OHIO, May 10, 1916.

Hon. W. B. OLIVER,

House of Representatives, Washington, D. C.

MY Dear Congressman: I am very glad indeed to respond to your request for an expression of my opinion on the rural-credit legislation. The subject having been thrashed out by numerous commissions and committees, it is obvious that the time has come for all friends of this legislation to try to get together and enact some law which can serve as the basis of actual experience and which can be perfected so far as may be necessary at a later time.

Fortunately, the Hollis till, which passed the Senate last week, and the Moss bill, which has been reported from the House Committee on Banking and Currency, both embody all the essential principles of a sound agricultural land-mortgage system, and the bills are not hopelessly at variance with each other. Both provide for the making of long-term loans on the amortization plan and for the management of the whole land-mortgage system through the cooperation of horrowers. Both provide that mortgages shall be made by associations operating within limited areas and only on the approval of neighbors who know the value of the land and are familiar with local conditions and at the same time have a personal interest in preventing the making of unsafe loans. The mobilization of securities behind the proposed farm-loan bonds, making such bonds national in scope, secured by mortgages in every part of the country, is an absolutely sound principle and is embodied in both bills. Both provide proper and adequate restrictions on the purposes for which mortgage loans may be made and on the amount which may be loaned to any one borrower. These provisions are necessary in order to prevent the additional credit facilities from being used for speculative purposes. The machinery of the system is, on the whole, well worked out in both bills. The method of its application amounts to a

in both bills, and I do not believe that it is unnecessarily complicated or cumbersome.

The principle of Government aid in the establishment of the system is adopted in both bills. The method of its application amounts to a subsidy, as the Government will invest in the stock of the proposed land banks without getting any dividends and without getting the benefit of any surplus that may be accumulated. It is gratifying to find a general agreement upon the necessity of substantial Government aid after all the controversy that has gone on about this question. I have always

advocated Government aid, but I have never believed it was necessary to make any Government gift or subsidy to the system. However, the provisions in these bills are sufficiently safeguarded, and can can be set any precedents, as there are already numerous precedents for the expenditure of Government money along lines which give direct benefits to only a part of the people. The principle of Government aid being established, the amount of it is rather less material, so long as it be sufficient to insure the proper starting of the system.

Not having had the benefit of recent committee discussions, it would be presumptious for me to criticize what seems to me to be technical defects. I do, however, venture a few suggestions concerning the application of principles.

The provision for joint-stock banks should be eliminated from the bill. It is more or less in conflict with every one of the sound principles system. The joint-stock member and which are it strength of the system. The joint-stock member and which are it strength of the system. The joint-stock bank will afford unnecessary competition to the coperative association; and to the extent that it does business which would otherwise go to the cooperative associations it weakens the security behind the farm-loan bonds and tends to increase the percentage of overhead expenses that must be borne by the land banks and cooperative associations. The multiplicity of bond issues which will be made by the joint-stock and banks will tend to confuse the investor on petition with the bonds of the land banks as well as with each other, thus causing needless expense for underwriting and selling of securities. I not provide the properties of the security behind the farm-loan bonds, and all of these issues will be in competition with the bonds of the land banks as well as with each other, thus causing needless expense for underwriting and selling of securities. In the other hand, their bonds must necessarily be under the disadvantage of being secured by morting and selling of

Permanent Standing Army.

EXTENSION OF REMARKS

HON. JAMES T. LLOYD.

OF MISSOURI.

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, May 9, 1916.

Mr. LLOYD. Mr. Speaker, I have never favored a large permanent standing army, and I believe that the establishment of such an army would be a mistake at the present time.

Prior to the Spanish-American War the authorized Regular Army was only 30,000 men. At present 100,000 is the limit of authority. Since 1898 many uses have been found for an army that did not then exist. Some of these came as the result of that war. It is now necessary to have a large contingent of the Army in the Philippines, at Hawaii, and Panama, and in addition to that it is necessary to keep a part of the Army in Alaska, Porto Rico, Haiti, and Santo Domingo.

Nearly 50,000 men are now stationed in these outlying possessions and dependencies and less than one-half of the Regular Army is on the mainland of the United States. The increase in population since 1890 has been about one-third, so that if the size of the Army should be determined by population the Army for use on the mainland should be at least 40,000, and this is about the number that is now employed in the United States proper.

A more serious menace has arisen than ever before. It now seems to be imperative to patrol the border between the United States and Mexico for the whole distance of nearly

2,000 miles, and this can not be done without a much larger Army than the United States now has. It is generally supposed by those who have given it careful attention that the increase from the 90,000 enlisted men at the present time to 140,000, as proposed in what is known as the Hay bill, would furnish a sufficient number to meet this extraordinary condition. In other words, to authorize a standing Army of 140,000 men would permit an addition to the present force of 50,000, as the number enlisted is only about 90,000.

Apparently all that is needed in increase is for the protection of the border territory. But slight increase, if any, is necessary in the outlying possessions, and conservative, careful individuals who have investigated the matter are convinced that an Army of 140,000 will meet the present con-

tingency.

Whatever is necessary to protect the interests of the United States should be provided, and if this number is not sufficient it should be increased; but for the present, at least, this will suffice. The probabilities are that enlistments will not be sufficient between this and December to increase the Army to

the full quota of 140,000.

Beyond the Regular Establishment officers and trained men are needed who in event of war with some other country may, on short notice, be prepared for active service. me exceedingly important. If war were declared at once with a nation which had a standing army ready for action, and its army could reach our shores, great damage might be done before our force could be enlisted, thoroughly drilled, and be prepared for active service. To meet this possible contingency without extraordinary expenditure and without a compulsory system of Army service is a difficult task. Something of preparation in this direction may be made by increasing the number of military cadets at West Point. Another expedient is by encouraging private military schools and a third is by the use of military tactics and school drills in colleges and high schools. It seems to me that the boy in college or in high school may well be given training that would fit him for prompt service in event he was needed in defense of his country.

The State military forces, known as the National Guard, need to be encouraged and increased, and they should be well drilled and thoroughly prepared for active military duty. This would mean much toward preparation to meet any extraordinary contingencies. I am opposed to compulsory military service in times of peace. I am auxious, however, that every reasonable expedient may be resorted to to avoid the necessity

of legislation which would authorize such a system.

I am in favor of peace and do not wish to encourage the warlike spirit. I am anxious that this Republic shall remain on terms of friendship with all the nations of the earth. I rejoice that President Wilson has kept this country out of war in recent times and has at all times maintained the honor and integrity of the Republic. I had never realized so much was dependent upon the President in war crises as I have seen since the European war began. Numbers of times war seemed imminent in our country, and no one could safely foretell what a day might bring forth, and yet the President is standing triumphant as the only executive amongst the great nations whose people are not in the throes of the greatest war catastrophe ever known. It may be said that this condition is due to the fact that our country is on peaceful terms with all mankind. I am certainly anxious that this condition may remain, and the time may never come when it will be necessary to meet any of these friendly nations on the field of battle. This country means more to the world at peace than it does in war. Its influence will accomplish more for the advancement of its own interests and the betterment of the world in a state of peace than is possible in times of

The secret of this Government's position lies in the fact that it is not seeking the property of another. It is not grasping for the territory that belongs to other countries. It is content with its own possessions. It is not seeking power by trying to destroy, nor to take from another by force. Its purpose is to build up in commerce, in industry, in intelligence, and in morality, but without menace or injury or attempt to retard the progress of any other country. The United States wants its fair share in the business of the world. It craves to be foremost in the humanitarian spirit. It expects to deal fairly, honestly, and justly with the nations of the world, and it wishes like treatment from them.

like treatment from them.

When the great conflict in Europe is ended the United States will probably be the first to extend the hand of real fellowship to each of the belligerents and to congratulate them that the war is past, and to insist that war shall be no more, and to encourage them to stand with the great Republic for peace, that all

the blessings of liberality and friendship may crown them in their efforts to restore the waste places, produced by war, and to go forward in the prosecution of the arts of peace.

This country may prompt them to stack their arms of offense and to make use of the mighty implements of peaceful endeavor. Or it may, by its own warlike preparation and forceful methods, say that its friendship is a sham, its expressions of sympathy a hollow mockery, and its cry for peace a delusion.

Mr. Speaker, my judgment is that the House bill provides for the necessary standing army for to-day. It may be necessary to increase it in the near future. I believe in whatever preparation is necessary to meet the conditions of this hour, but it is not necessary to make extraordinary expenditure beyond that which is needed to-day. This Government should be ready to meet any emergency, but it can hardly be expected to make unusual and extensive preparation for war, add largely to the personnel of the Army, without causing the question of good faith to be raised by the nations with whom we come in contact. There is nothing suspicious in meeting present condi-tions. There is nothing to alarm in an increase of the Army necessary to prepare us to meet the conditions which immediately confront us, but beyond this our efforts might be misunderstood, and our course lead to trouble. Any careful observer must realize that if this Nation should be so unfortunate as to be involved in war, preparations would have to be made which are not now contemplated. A call for volunteers would be forced upon the administration to meet the then impending crisis, and as a result there would come from every locality in the Republic patriotic young men from farm, shop, and store, from mine, factory, and field ready to follow the fortune of the Stars and Stripes and to enlist in their country's cause for the purpose of fighting their country's battles. must rely in the future upon the citizen soldiers to fight the battles of the Republic. We can safely depend upon the patriotism of the people to respond, as they did in 1776, and in all the wars with which our Nation has been connected. No people are more devoted to their homes, and will go further to defend them and the land of which they are a part, whether as natives or as adopted sons.

The people of the United States, I feel sure, are anxious for peace. I may be mistaken, but my candid judgment is that they are ready to make sacrifices to retain it. Not a sacrifice of honor or integrity, not a sacrifice that means national humiliation, but that reasonable kind of sacrifice which anyone makes to avoid trouble. But if war must come, they will willingly give their lives in their country's defense, and will make whatever sacrifices are necessary to be met to vindicate their

country's honor.

American rights are sacred; American standards are based upon justice; American ideals, because of their purity, must triumph. I am anxious that nothing shall occur to retard our country's progress, check its forward movement, or diminish its power or prestige. I am fully convinced that war is a blight on the body politic; it is a curse to civilization; it is the cause of sorrow, misery, and death; it is the determination of might and not the achievement of justice. It has no place in the realm of happiness or contentment and has no reward except punishment and distress.

I want no act of mine to encourage it; and yet, if the worst must come and it is necessary to meet some antagonists in the field of battle, I want this Republic to be fully prepared to repel the force of any foe with the least possible loss in life and property. This country was purchased with the blood of its patriots, it has been maintained with the same heroic spirit which they possessed, and it will live through whatever sacrifice is necessary to meet the contingencies of the future. Its devotion to its homes is its real protection. The loyalty of its citizens will prompt the action in defense and the courage of the people will lead to victory over any foe.

Philippine Independence.

EXTENSION OF REMARKS

HON. JAMES R. MANN,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, May 9, 1916.

to each of the belligerents and to congratulate them that the war is past, and to insist that war shall be no more, and to encourage them to stand with the great Republic for peace, that all

In the Washington Post May 3, last, following the defeat of the so-called Clarke amendment, which provided for immediate independence of those islands. The article is as follows:

MR. W. R. HEARST POINTS OUT NATION'S DUTY: COMMENDS PHILIP-PINE BILL'S DEFEAT-LOVALTY TO FUTURE INTERESTS OF COUNTRY MORE IMPORTANT THAN PARTY TIES, NAYS FAMOUS EDITOR-CRIME TO ADANDON ISLANDS.

To the EDITOR OF THE WASHINGTON POST:

The 28 Democrats who bravely strove to save the Nation from the disgrace of abandoning its duties and from the mistake of sacrificing its opportunities in the Philippines are as much national heroes as the men who fought to save the country from the evils of conquest in the Revolution or of dismemberment in the rebellion.

The sacrifice of high purpose and high principle would hardly have been greater had we failed in the Revolution, the sacrifice of territory and essential integrity would hardly have been severer had we lost in the rebellion than the sacrifice the Nation would suffer to-day in prestige and possessions through a timid and stupid abandonment of its obligations and opportunities in the Philippines.

DESERVE GRATEFUL REMEMBRANCE.

These 28 men who refused to be bound by a party caucus to do a traitorous act of national danger and dishonor were patriots before they were partisans, and deserve the grateful recognition and remembrance of patriotic citizens of whatever

They have rendered a great service to their country-a service for which they should receive their reward not only in the approval of their own conscience but in the universal consideration and esteem of a grateful people.

Surely these broad-minded, far-seeing statesmen will be remembered and respected when the little spineless, spiritless followers of a timorous and traitorous administration are for-

These courageous Democrats who saved both their country and their party from injury and ignominy will be denounced as disloyal by party bigots, but there is no disloyalty in refusing to follow disloyal leaders.

LOYALTY TO COUNTRY ALL-IMPORTANT.

Benedict Arnold was an American general, but those would be pronounced traitors to-day who would have followed him into the camp of the enemy, while those who refused to follow him are esteemed patriots.

Loyalty to the present and future interests of our beloved country is more important in the minds of sincere citizens than

loyalty to any individual or to any party policy.

The abandonment of the Philippines would mean more than mere loss of wealth and territory and power and prestige to the United States.

It would mean the betrayal of this island empire to Japan, and would make Japan that much more populous and powerful, and bring her frowning forts and formidable fleets that much nearer to our defenseless shores.

PROTECTING THE PHILIPPINES.

What nonsense to say that we would protect the Philippines as our wards when the island fortifications would be left to the lazy neglect and childish incompetence of the Filipinos, our fleets withdrawn from their harbors, our soldiers recalled from their shores.

Is it not easier to defend the Philippines as our possessions, fully fortified with our ships and guns, than it would be to defend them as wards without our armament and without authority?

Yet the same unwise and insincere demagogues who say we would protect the Philippines as our wards advocate the abandonment of the Philippines because we would be unable to protect them as our possessions.

WOULD BE THE COLOSSAL CRIME.

The abandonment of the Philippines would be the colossal crime of our history, the crowning folly of our career as a

It would be an indictment of Democracy and impeachment of our republican form of government, a reflection upon the capacity and patriotism of our people, a slur and slight upon the intelligence and efficiency of our citizenship.

It would be a first and fatal step toward the relinquishment of

American supremacy in the Pacific.

It would mean a final disaster to American trade in the Orient and a dull and despicable repudiation of America's duties

The abandonment of the Philippines would be moral, political, and economic high treason.

The party which would commit such an act of moral obliquity political treachery, and economic stupidity should be tried and convicted and forever expelled from the councils of the nations by the American people.

UNITED STATES AT A CRISIS.

The United States stands at the crisis of its career.

It has become the greatest of modern nations.

It has grown not merely through natural national development, but through legitimate expansion and immigration.

It has increased through the extension of its territory and the absorption of other peoples into its population.

At first our Nation was but a line of liberated colonies strung along the Atlantic coast.

Then, after due and dogged opposition from the Tories of the time, the Floridas were added.

Then, to our glory and Thomas Jefferson's immortal memory,

the immense Louisiana territory was acquired.

Then, in spite of the trepidation of the timid, our title to the far Northwest was substantiated.

Then Texas was admitted and California, Arizona, and New Mexico were absorbed.

All of which the reactionaries resented and the petty Americans opposed.

One statesman went so far as to say that California would never be a fit habitation for anything but horned toads-California, which now could supply gold and grain and flowers and fruit and oil and soil and homes and harvests for the world.

Then Alaska was bought and pronounced worthless by the stupid and shortsighted, until its hills were found to be sheathed with copper and its river beds paved with gold.

All the time those who lacked imagination to see the possibilities in new lands and larger developments dignified their dullness by the name of conservatism and stood stolid in the path of progress.

DESIRE OF TRUE AMERICANS.

Still our country grew.

It was our destiny.

Still the glowing star of our extending empire took its western way.
We fought the Spanish War and won the Philippines.

Of course history repeats itself.

Of course the reactionaries rise to-day to repudiate our opportunities and obligations there as they did in Florida, in Louisiana, in California, in Alaska.

Of course the miniature Americans want the Nation to shrink to their small size, and the short-sighted politicians and pedagogues want the confines of our country's greatness to contract to the radius of their limited vision.

But the true Americans, the big Americans, the Americans with soul and sense, with intelligence and imagination, the Americans who have made the country the great country that it is, want the Nation to grow ever greater and fulfill to the full its duties and its destinies.

Greatness is a matter of soul, not of census.

To be truly great our people must possess national pride and patriotic purpose—not merely population.

We must have the spirit of our fathers, the energy and ambi-

tion of our ancestors.

We must devote ourselves to our national development, our territorial enlargement, our moral and material improvement.

We must consecrate ourselves to the extension of our civilizing influence, of our beneficial and benign activities, of our uplifting and inspiring ideals.

CENTER OF THE WORLD'S ACTIVITIES.

The United States is located at the focus of the world's attention, at the center of the world's activities.

On the one side is the Atlantic Ocean, the great commercial

highway connecting us with Europe.
On the other side is the Pacific Ocean, the great thorough-

fare of trade uniting us with Asia.

On the south lie the rich and rising Republics of South America.

Such a commanding and controlling location should make our country as it made Venice in former times and under former conditions, the center of the world's commerce, the custodian of the world's wealth.

But something other than mere location, as well as something more than mere population, is needed for true greatness and glory

We must have enterprise and imagination, courage and confidence, the ability to understand, and the energy to exploit the advantages which surround us.

God's work of civilizing the world must be done and will not

lag for lack of willing servants.

NATION MUST DO ITS FULL DUTY.

If we fail to do our full duty, other nations will be found to supplement or supplant us.

We must not be dependent upon the past, content with the

achievements of our ancestors.

We must work out our own salvation, perform our presentday obligations.

A professor of ancient history is not the best leader for a

modern constituency.

He is likely to be so intent upon the incidents of the past that he is indifferent to the occurrences of the present and inaccessible to the opportunities of the future.

A nation is like an individual.

It lives and labors, it plans and performs, it conceives and achieves.

It passes through its successive ages of majority, of maturity, of seniority, of senility.

It grows and develops.

It declines and dies.

In all its course no nation stands still.

It either advances or recedes, progresses or retrogresses. We have not yet reached the point where we must disin-

tegrate and deteriorate.

PATRIOTIC OBLIGATIONS TO BE MET.

The red blood of enthusiasm is still warm in our veins, our minds are still alert to our labors, our hearts are still strong in our faith.

We have set our hand to the plow, let us not turn back until

we have reached the end of the furrow.

We have enlisted for the fight, let us not desert or desist until the victory is won.

We have accepted the responsibility of the Philippines, the duty of their development,

Let us neither repeut nor retract.

Let us perform our complete patriotic obligations and make the Philippines a progressive and potential part of our country and of our civilization, the foremost buttress of our safety, the furthermost bastion of our enlightenment and liberty

WILLIAM RANDOLPH HEARST.

Philippines Bill.

EXTENSION OF REMARKS

HON. MURRAY HULBERT,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, May 10, 1916.

Mr. HULBERT. Mr. Speaker, the entire New York delega tion voted against the Clarke amendment and for the Jones bill. In view of the fact that this action has drawn the criticism of certain Members of the House, and to demonstrate that they do not know and therefore can not appreciate the sentiment in New York, under leave of the House permitting Members to extend their remarks within 10 legislative days, I desire to include the editorial comment of the New York press upon the bill both before and after its final disposition.

EDITORIAL COMMENT BEFORE THE CONSIDERATION OF THE BILL. [From the New York City Evening Sun, Apr. 27, 1916.]

DON'T MEXICANIZE THE PHILIPPINES.

DON'T MEXICANIZE THE PHILIPPINES.

That shocking proposed dispiay of political irresponsibility, the abandonment of the Philippine Islands, would outdo even the irreparable wrong done to Mexico in the bounding of Huerta, costly as that bit of canting presumption has been in suffering to the millions submerged in an era of Mexican butchery and banditry. Mexico should have taught Mr. Wilson not to play at ideals with other people's blood. It has not brought him to his senses. He is fatuously gambling with the destinies of 8,000,000 Filipinos, threatened with miseries exceeding those of Mexico, once they are cast out and marooned, left to their own mercles under a travesty of liberty.

No wonder that the first session of the Democratic caucus on Philippine affairs developed opposition to the administration plans. The reading of the President's letter to the caucus failed to still an opposition grounded on more honest, if less showy, views of the country's duty than those the President holds.

Against the urgency of Mr. Wilson rises the voice of a considerable number of the Philippine inhabitants themselves. The cry in the islands is not all for independence, however much that brilliant catchword may attract a part of the population.

Filipino property owners reputed to hold some \$20,000,000 of the wealth of their islands have sent Representative MILLER a petition against the Jones bill to withdraw United States authority from the Archipelago. Their voice is heard at the time when the House bill for Filipino independence, with its Senate amendments, comes before a

Democratic caucus. There is good ground for hope that the petition may help to drive the wicked folly of independence for the islands out of the heads of some of those now bent on that bit of idealistic double mischief to this country and the Filipinos themselves.

It becomes increasingly evident that 12 years of American rule have raised among the islanders themselves a great class who put their trust in the big American brother and depend upon the pledge, implied in his past beneficent control, that the control will continue; islanders, not to mention American settlers, who have staked their labors, their property, and the prospects of their families on the expectation that the United States would not quit what it had begun.

Is it true that the Filipinos are fit to govern themselves according to American standards of government? They certainly do not themselves all believe so, or none would have signed the petition sent to Mr. MILLER. In the face of this new and added grave evidence of political self-distrust and of aversion to being deprived of American control, the caucus may well show some signs of doubt as to the wisdom of casting the islands off to fall back again into their old misery.

[From the Brooklyn (N. Y.) Eagle, Apr. 27, 1916.] PROJECTING THE PREMATURE.

[From the Brooklyn (N. Y.) Eagle, Apr. 27, 1916.]

PROJECTING THE PREMATURE.

There are honest differences of opinion as to what we should do with the Philippines. To these differences the two great political parties have given expression. At the national convention held in 1912 the Republicans characterized our duty toward the Filipinos as a national obligation, and declared that it should remain entirely free from partisan politics. At several of their national conventions the Democrats have waved the flag of freedom. In 1912 they were especially declamatory. They denounced what they described as an experiment in imperialism as an inexcusable blunder and favored an immediate declaration of the Nation's purpose to "recognize the independence" of the islands.

This purpose was debated at a caucus held in Washington last night, if has the "unqualified indorsement" of the President, who has written a letter hoping that the piedge of the party will be redeemed without a dissenting voice, which hope will not be realized. More than 30 dissenting voices were raised, and the Democrats have only about that number to spare in the House of Representatives. Efforts to coerce the so-called traitors into submission will be made, but as not a few threaten to bolt, there is anything but smooth salling ahead.

For the piedge the party is indebted to William Jennings Bryan. In one of his canvasses for the Presidency imperialism figured as his paramount issue, with the customary consequence. It shared the fate of 16 to 1, though the customary consequence. It shared the fate of 16 to 1, though the customary consequence. It shared the fate of 16 to 1, though the customary consequence. It shared the fate of 16 to 1, though the customary consequence. It shared the fate of 16 to 1, though the customary consequence. It shared the fate of 16 to 1, though the customary consequence. It shared the fate of 16 to 1, though the customary consequence. It shared the fate of 16 to 1, though the reports come from officials who are Democrats. If

[From the New York Times, Apr. 28, 1916.]

KILL THE SCUTTLING BILL.

[From the New York Times, Apr. 28, 1916.]

KILL THE SCUTTLING BILL.

The 30 Democratic Members of the House of Representatives who stood out in Wednesday's caucus against the passage of the Philippines bill under gag rule have rendered a patriotic service to their country. Despite the President's support, the Philippines bill should not be passed. To repeat our promise to grant independence to the inhabitants of the archipelago as soon as they are capable of self-government is quite unnecessary. To promise to give them independence within four years, if the promise were kept, would be a gross betrayal of the trust we assumed when we took the control of the islands away from Spain. Both Brig. Gen. McIntyre, Chief of the Bureau of Insular Affairs, and Mr. W. Morgan Shuster have lately reported that good progress is making in the Philippines, the people are learning, they will be capable of self-government some day, but that day is in the distant future. If they were released from American rule now, all the good work that has been done would be undone. The pretense that peace and prosperity would be continued under a hastily acquired independence by a vast multitude of people of different religions and ideals, many of them still illiterate, is too shallow to deceive anybody.

The only excuse for getting out of the Philippines is that we want to get out. Revolution would follow our withdrawal, a new and worse Mexico would be created in the Far East. It is unnecessary to conjecture what the ultimate result would be. The national honor demands that we fulfill our obligations and devote our energies to the development of the islands in the arts and industries and educate their people. Freedom they already possess. They are not the subjects of a despotic or greedy Government exploiting them for its own purposes. Mr. Shuster's report shows that they are doing well and learning how to administer their own affairs.

The action of the 30 Democratic Members indicates that the obnoxious bill can not pass in its present objec

[From the New York World, Apr. 28, 1916.] LOOKING FOR TROUBLE IN THE PHILIPPINES.

LOOKING FOR TROUBLE IN THE PHILIPPINES.

The Philippine bill, which has encountered such fierce opposition in the House at Washington, embraces legislation of importance to the welfare of the islands. Besides meeting adequately some social and economic problems, it extends the principle of home rule and greatly strengthens existing guaranties of liberty.

As presented to the Senate, the measure in its preamble promised ultimate independence. An elaborate amendment, proposed by Senator Clarke, of Arkansas, provides that in not less than two or more than four years from the enactment of the law, if the President is satisfied that the people are capable of self-government, the United States shall withdraw from the islands and leave them to their own resources.

This is the mischievous proposition which is resisted in the House and threatens the defeat of the entire bill. To press it in times like these, when no man can foresee the results of world-wide war and when the fate of small nations as well as great is in the balance, would seem to be the very limit of rashness. No such action is needed in order to keep faith with our dependency.

Both parties are pledged to Philippine independence, which must come in due season when a Congress then sitting shall be satisfied that all the conditions are favorable. A specific promise now is likely to raise false hopes, and its almost certain cancellation, as provided for, could hardly fail to involve us in serious complications. To get rid of the vicious Clarke amendment it ought not to be necessary to defeat the entire bill.

[From the New York Evening Post, Apr. 28, 1916.]

Refusal of 25 Representatives to be bound by the Democratic caucus on the Philippine bill probably means a medification of a clause which does not vitally affect the principles on which the measure is founded. There is a bare possibility that the measure will pass in its present form. But everything points to an extension of the time within which definite independence is guaranteed, especially as no one is particularly opposed to such extension. Delegate Quezon has stated that he sees no necessity for setting so short a limit on American tenure. Representative Jones, author of the bill, cheerfully admits that the period of 2 to 4 years fixed by the bill may have to be extended to 5 or 10. The essential thing is that we make a categorical promise of independence, and that we set in motion the machinery of greater self-government which will better prepare the islanders for it. As originally drafted, the bill set no definite date whatever. It is already certain that the American people will not wait the 25 years or more that Davender and others are clamoring for. Congress will also doubtless take time to knock out the ridiculous amendment to make the Philippines prohibition territory, a product of the same ignorance of insular conditions that drafted a similar measure for Porto Rico. [From the New York Evening Post, Apr. 28, 1916.]

[From the Brooklyn (N. Y.) Citizen, Apr. 28, 1916.] THE PHILIPPINE BILL.

The philippine bill.

Twenty-eight Democrats who have refused to abide by the judgment of the party caucus on the Philippine bill are entirely within their rights as party men in the position they have taken. The bill as it stands is in no proper sense a party measure and can not be made one by any whipped-up majority. Nor is there any reason for questioning the claim of the minority that they are doing what their constituents desire. This is certainly true of the Members from Brooklyn. There is not the least ground for doubting that Mr. Fitzgerald and his colleagues are correct in saying that the bill as it stands is not and is not likely to be approved by the people to whom they owe their seats.

It would, in the light of all the information obtainable, be unwise for the administration to press the issue in its present form. What good political sense suggests is that some amendments be adopted which will obviate the objections raised by the intelligent and conscientious gentlemen in question. It is so distinctly contrary to good party policy to do the contrary that the President will, we feel confident, decline to sanction it.

When to considerations of sound party policy we add the thought of

the contrary that the President will, we feel confident, decline to sanction it.

When to considerations of sound party policy we add the thought of what the best interests of the islands call for, it is not too much to say that the minority and not the majority ought to prevail. The time may come, perhaps, when it will be practicable for the people of the Philippine Islands to assume the responsibilities of self-government. It may be that this degree of intellectual and moral development will be reached in the course of the next generation. That they are in no such position yet is what only the merest theorists, to whom facts are irrelevant considerations, will deny.

It would, in other words, be rather a crime against the natives of the islands than a benefit to thrust a responsibility upon them which could result only in reducing whatever is orderly to chaos. The hope of the Citizen is that our Brooklyn Democratic Members will stand firm and that the points for which they are contending will be yielded by the caucus leaders.

[From the Brooklyn (N. Y.) Standard Union, Apr. 28, 1916.] TAMMANY'S DEFIANCE OF THE PRESIDENT.

TAMMANY'S DEFIANCE OF THE PRESIDENT.

The bolt of 28 Democratic Congressmen from the caucus on the Philippine scuttle bill, apparently insuring the defeat of that measure in its present form, is a most gratifying evidence of sanity and independence in the House.

This action will be accepted as proof that the Representatives have paid close attention to the sentiment of the country on the proposition to give the Filipinos unconditional independence at the expiration of four years. They have learned that the plan meets with overwhelming disapproval, is considered premature, and fraught with the gravest danger to the islanders themselves.

Of almost equal importance to dealing a death blow to the independence feature of the bill is the political significance of the revolt. It means that White House domination is broken for the present, at least, and indicates that Democratic Representatives will no longer submit to outside dictation.

and indicates that Democratic Representatives will no longer submit to outside dictation.

This bolt seems to be closely related to the refusal of Senator Wagner to accept the postmastership in Manhattan. Fourteen of the 28 bolters were Tammany men. It was a Murphy slap at the President, just as was the Wagner refusal a formal notice that Tammany is not willing to shake hands with Mr. Wilson and forget the past. The President is said to have written a letter urging the Democratic Congressmen to pass the Philippine bill, and the answer was given at last night's caucus.

How far-reaching will be the Tammany hostility, assuming it is to be persisted in, is a fair subject for speculation. It can not, of course, affect the decision at St. Louis in June, but it may cut quite a figure in Congress. If the smoldering resentment of Tammany has really

broken out into a flame, as indicated by the caucus bolt, the President may be seriously embarrassed in carrying out his legislative program. It is a situation which will be watched with interest.

[From the New York Globe, Apr. 28, 1916.]

[From the New York Globe, Apr. 28, 1916.]

NO PHILIPPINE PLEDGE NOW.

The division developed in the House Democratic caucus over the Clarke amendment to the Philippine bill and the passage of a resolution that takes the amendment out of the party measure class make it practically certain that no pledge of Philippine independence will be passed by the present Congress. President Wilson has steadily urged the making of the pledge, but his advice does not promise to be followed. The country, as a whole, will be satisfied with this action. The feeling is common, even among those who believe that it is immoral and impolitic to govern the Filipinos against their will, that the time has not yet arrived to withdraw from the Philippines. It is not yet clear, looking at matters practically, that conditions are such as to warrant decisive action.

The Clarke amendment is objectionable in that it is merely an academic declaration. It is contingent. It provides, in the form it is proposed to press it, that in 10 years, if the Filipinos then want independence and Congress deems it wise to grant their request, for the setting up of a new nation under American protection. It would seem unwise to attempt to bind the future in this way. No one knows what conditions will exist in 1926.

In the 16 years that have elapsed since the acquisition of the Philippines great progress has been made. Slowly but steadily a non-representative military government has been deemed safe to confide authority to them the grant has been made. No one can reproach this country with having sought to exploit the Filipinos and to repress their just aspirations. But this country is properly not willing to turn another Mexico loose on the world. There must be reasonable assurance that separation from this country is properly not willing to turn another Mexico loose on the world. There must be reasonable assurance that separation from this country is properly not willing to turn another Mexico loose on the separation, if it is to come, representing not an a

[From the New York Evening Sun, Apr. 29, 1916.] MORE WORK FOR INSURGENTS

MORE WORK FOR INSURGENTS.

The spirit of independent Americanism in Congress which promises to render a national service by killing the Jones Philippine "scuttle" bill may well be directed against the literacy-test feature of the Burnett immigration bill also.

The Jones bill provides that we shall dodge responsibility in the Philippines simply by running away and leaving the islands for whoever desires to annex them. The Burnett bill, as a sop to the labor vote, would prohibit uneducated allens from entering this country.

One proposition is as un-American as the other. Each would deny to members of the human race the opportunities which our national creed declare to be the common rights of all men. Even with its anti-Japanese feature, which threatened serious trouble for us, eliminated, there is unanswerable objection to the enactment of the Burnett bill in its present form.

[From the New York Herald, Apr. 29, 1916.] WHEN "BOLTING" REPRESENTS AMERICANISM.

WHEN "BOLTING" REPRESENTS AMERICANISM.

Is there no place for the honest, hard-working, peace-loving Filipino behind the regis of humanity? Must this ward of the Nation stand alone and apart, a sacrifice upon the altar of American politics?

Democratic leadership at Washington has decreed that this is to be the Filipino fate, but not all Democrats of the House of Representatives will respond to the party lash. Some—apparently enough to prevent the writing of such a disgraceful chapter in American history as the Democratic Party under Cleveland attempted to write in regard to Hawail—stand squarely against "scuttle."

No American possessing even primary knowledge of the Philippines believes it possible for the people of the islands to maintain and protect independence in the period of "from two to four years" provided by the Jones bill, nor does any Filipino of even primary intelligence believe this possible. Withdrawal of the wholly beneficent American protectorate at this time or within the period contemplated would be abandonment of the Filipino people to become prey of more militant orientals. Incidentally, this would mean placing the only Christian people of the Orient at the mercy of a pulssant paganism.

Democratic Representatives who refuse to support the independence provision of the Jones bill are playing the better part by this Nation, by the Filipino people, by true humanity, and by the political party of their allegiance.

Nothing could be less wise than the effort of the Democratic leadership to make the Philippine question an issue of politics. It is an American question to be eventually solved according to the dictates of the American conscience, and has no place in any party caucus. "From the New York Journal of Commerce, Apr. 29, 1916.]

[From the New York Journal of Commerce, Apr. 29, 1916.]

THE PRESIDENT'S PHILITPINE MISTARE.

The action of the caucus of Democratic Representatives and the revolt of a relatively small minority of them in relation to the Philippine bill indicates that it is likely to be defeated on the final vote in the House. The resolution declaring approval of the bill as it stands and its passage without change was adopted by a vote of 140 to 35, and 28 of the 35 gave notice that they would not be bound by the caucus action. There is hardly a question that some of the 140 voted against their conviction and from party motives and a desire to sustain the President, who has been using his influence to carry the measure through. The Republican vote will be nearly if not quite solid against its passage.

through. The Republican vote will be nearly if not quite solid against its passage.

The fact is that this mistaken measure has owed its support and its chance of success mainly to the fact that it had the administration behind it, with the President desirous of having it passed at this session. It provides for giving the Philippine Islands over to the self-government, for which they are very far from being prepared, in four years from the passage of the bill. There is a serious question whether any promise of independence for the Islands should be made, and certainly provision for making it actual in such a short time is a wrong to their own people and in effect a violation of faith pledged in the

treaty with Spain for taking them over as a possession of the United States.

treaty with Spain for taking them over as a possession of the United States.

A responsibility was then assumed, not only to the natives but more directly to those of Spanish descent, for the maintenance of their rights under authority of the American Government, which would be abandoned by this act. All that has been accomplished would be lost under a delusive idea that the people of the islands are capable of carrying on the work so successfully begun. There is a moral certainty of relapse instead of continued progress, and a serious liability of the loss of that independence which had been so prematurely and unwisely given to them.

If the bill is defeated, the President may be saved from the consequences of the mistake. If it is not, there is a chance that a different control of Congress and of the administration may undo the work before the provision for independence takes effect. Even so, serious trouble will have been caused, and the difficulty of carrying on the process that has been begun will be considerably enhanced. This mistake of the President is akin to that committed with regard to Mexico, but is morally and politically more serious because of the pledge of faith and the responsibility assumed in the treaty by which the islands were acquired.

[From the New York Times, Apr. 29, 1916.]

ABANDON THE BILL.

In regard to the proposed Philippines legislation the World believes that it ought to be possible to get rid of the obnoxious Clarke amendment without defeating the entire bill. But the Clarke amendment is really the essence of the bill, which was originally planned as a scuttling measure. Senator Clarke managed to restore to the bill its original purpose, which was to commit this country to the abandonment of its obligation to develop the Philippines and make its people fit to govern themselves. The whole bill ought to be defeated, if it is brought to a vote. It was conceived in the wrong spirit. There is no evidence that it is a well-considered, constructive measure or that the administrative changes it provides for are needed. The World admits that "a specific promise [of independence] now is likely to raise false hopes, and its almost certain cancellation, as provided for, could hardly fail to involve us in serious complications." But this Clarke amendment, with the specific promise which we all feel would not be kept, is the essential part of the measure. The Filipinos need not be assured again that we intend to grant them independence when our trust is fulfilled. They know that. The congressional fight is for the Clarke amendment, which its advocates still hope to force through.

The whole measure should be discarded. Legislation for the Philippines should be postponed until there is time to spare to consider it seriously in the right spirit. The object of this bill is wholly political. It is designed to undo the good constructive work done in the islands under three Republican administrations. Brig. Gen. McIntyre and Mr. Shuster have shown us that the Filipinos are doing very well under present conditions, and the question of their future development should not be treated from a partisan point of view.

[From the New York World, Apr. 30, 1916.] NO RASHNESS IN THE PHILIPPINES.

The Democratic quarrel over the bill conferring self-government upon the Philippines is likely to be a test of American capacity for self-government. No serious objection is made to the measure except that it contains a vexatious clause fathered by Senator CLARKE, of Arkansas, providing for independence in not less than two or more than four

providing for independence in not less than two or more than four years.

If a great piece of legislation, just to the Filipinos and creditable to ourselves, shall be lost, because Congress proves unable or unwilling to proceed wisely and safely in the matter of extinguishing American sovereignty in the Islamds, a lasting reproach will attach to all responsible for the failure. This bill in various forms has been under consideration for several years. It gives the Philippines a constitution, a bill of rights, and a form of government like that which our own continental Territories enjoyed. It is a fulfillment in all things except independence of every piedge we have made. Independence itself will come in due season.

Our Territorial system has been more widely commended and imtated than any other feature of American Government. As we were the first great Nation to lay the foundation for free States in the wilderness, it would be shameful, indeed, if Congress, confronted by an ill-considered attempt to do too much, should fail short of a glorious duty by doing nothing at all.

[From the New York Tribune, Apr. 29, 1916.] A SAVING REMNANT.

The 28 Democratic Representatives who revolted against the Senate Philippine bill have it in their power to save the people of this country from dishonor. They can prevent a brutal and despicable repudlation of the obligations which the United States Government assumed when it ratified the treaty of Paris.

Two months ago, when the House Committee on Insular Affairs reported the Senate Philippine bill without amendment, it looked as if the only hope of averting this betrayal lay in the President's veto. It was a frail hope, at best; for the President in dealing with the Philippine problem had manifested the same indecision, the same uncertainty and frailty of purpose which had marked his attempts to deal with the problem of preparedness, with Mexico, and with the critical questions arising out of the European war.

The administration was at first committed to a continuance of American control over the Philippines until the Filipinos should demonstrate their capacity for self-government. Independence was to be promised them, but no definite date for the termination of American sovereignty was to be set. Secretary Garrison had strongly indorsed the Hitchcock Philippine bill, and it was universally understood that in doing so he spoke also for the President.

Senator Clarker of Arkansas, the most feared of the Democratic leaders in the Senate, because the most outspoken and independent, was dissatisfied with what he considered the milk-and-water character of the Hitchcock measure and started an agitation for a ruthless compilance with the pledges of Independence for the Filipinos given in various Democratic national platforms. He defied the administration on this issue, as he had previously defied it on the shipping bill. He took the Philippine measure out of Mr. Hitchcock's hands,

amended it so as to turn the Philippines loose unconditionally four or five years hence and passed it without inquiring whether or not it harmonized with the President's ideas or wishes.

Mr. Wilson was undoubtedly annoyed at first by Mr. Clarke's blunt repudiation of all concerned on our part for the future of the Philippines. What his attitude and professions in the past should have led him to say was well said to him (unfortunately not for him) by Secretary Garrison, when the latter wrote: "I consider the principle embodied in the Clarke amendment an abandonment of the duty of this Nation, and a breach of trust with the Filipinos, and, so believing. I can not accept it or acquiesce in its acceptance."

Rut the President was unwilling to antagonize Congress on a small matter like scrapping the treaty of Paris. All he would say in response to Mr. Garrison's courageous words was this: "It is my judgment that the action embodied in the Clarke amendment to the bill extending self-government to the Philippines is unwise at this time, but it would clearly be most inadvisable for me to take the position that I must dissent from that action should both Houses of Congress concur in a bill embodying that amendment."

Mr. Wilson broke with Secretary Garrison on preparedness and accepted the leadership of Mr. Hax. On the Philippine question he broke with himself and accepted the leadership of Senator Clarka and Mr. Jones of Virginia.

Far from preserving the attitude that he must yield unwillingly if both Houses should approve the Clarke amendment, he has been using all his influence to dragoon the House into accepting that amendment. By letter written for the purpose of being read in the recent Democratic House cancus he put himself squarely on record as favoring action in regard to the Philippines which he had only a little while before declared to be "unwise at this time."

The country will therefore owe nothing to Mr. Wilson if it escapes the dishonor of breaking its word, given to the Filiphos, to Spain, and to the

[From the New York World, May 1, 1916.]

SETTING A NATION FREE.

The House of Representatives having decided to dispose of the Philippine Government bill to-day, there ought to be wisdom enough in that body to eliminate the Clarke amendment providing for independence in four years and pass the measure in other respects substantially as it came from the Senate.

To insist upon the independence of the islands in 1920 is to confer self-government upon a population alien and remote with much less preparation than was insisted upon in the case of many of our Territories at home. The pending bill goes to great lengths in making the Philippines a full-fledged Territory of the United States, like Alaska and Hawaii. This is the natural and orderly course to pursue. By doing more Congress will presume to act in advance of events, without knowledge and with a recklessness never before exhibited in its dealings with a dependency.

The region now comprising the States of Ohio, Indiana, Michigan, Illinois, and Wisconsin was created a Territory by the ordinance of 1737. Ohio became a State in 1803. Indiana in 1816. Illinois in 1818, Michigan in 1837, and Wisconsin in 1848. We acquired the Philippines in 1899, since which time they have had military government and limited home rule. If they are to have independence in 1920, they will re-eive, with only four years' experience as a Territory, a privilege for which Michigan waited 50 years and Wisconsin 61 years.

Louisiana was purchased in 1803. Of the various Territories embraced in that region several were on probation for two generations, Nebraska became a State in 1867 and the Dakotas and Montana were not admitted until 1889. Louisians proper was nine years a Territory before it oecame a member of the Union. Florida, purchased in 1819, gained statehood in 1845; Alaska, purchased in 1867, did not acquire Territorial self-government until 1906; and New Mexico and Arizona, ceded in 1848, were not finally receptived in 1867, did not acquire Territorial self-government is richly merited by the Filipinos. That is the final stage for them, as it

[New York Evening Journal, May 1, 1916.]

IS THIS A GOOD TIME TO GIVE UP THE PHILIPPINES?—WITH THE NATIVES UNFIT FOR SEIF-GOVERNMENT—A MAJORITY OF THEM SAVAGE—AND WITH THE POSSIBILITY OF A JAPANESE WAR THAT WOULD MAKE THE PHILIPPINES MOST CONVENIENT TO US.

At a cost of tens of millions this country has established itself in the Philippine Islands. We have more than paid for all that we got there. We gave the unhappy people freedom from Spain's brutality and superstition.

We gave them thousands of public-school teachers and paid the

We gave them thousands of public-school teachers and paid the teachers.

We even paid cash to Spain. And where religious organizations felt that they had suffered financially because the United States came in we paid cash, many millions, to religious organizations.

The United States is in the Philippines by every right—the right of conquest, which we but lowest in the scale; the right of good government, the right of good intention.

We have coaling stations in the Philippines—note that—and harbors for our warships, and when the war with Japan comes, as it will eventually those coaling stations will be convenient.

In the face of these conditions it is proposed by "statesmen" that the United States should retire from the Philippines, abandon all we have done there, relinquish the work of civilization and our tens of millions of expenditure—turn the whole thing over to the natives, which would mean giving the Philippines to Japan.

What idiocy, what feeble-mindedness inspires this course?

Suppose the Japanese had, spent millions upon millions in great possessions, honestly acquired, as close to us as the Philippines are close to Japan.

Suppose the Japanese had, within convenient reach of us, coaling stations, harbors, and forts. Can you imagine any Japanese sufficiently idiotic to advocate giving up those possessions if he knew that when the Japanese went out the Americans would go in?

How can any American be idiotic enough to suggest giving up the Philippines, giving up our whip hand in Asia, giving up the power of making possible reprisals on Japan should Japan attack us—how can any person in this country suggest giving up that power, that advantage, that duty, in the name of maudlin sentimentality?

There should be enough force in public opinion to prevent it.

[From the New York Times, May 1, 1916.] A BILL TO BE KILLED.

The Philippines bill, which, according to the program, will be taken up in the House of Representatives to-day, is not an essential piece of legislation. It does not possess sufficient relative importance to be rushed through the House in a crowded session, when so many other matters of prime importance demand serious attention. Even without the objectionally Clarke amendment, which its advocates will try again to force through, it is a measure of dubious v.lue.

It is associated in the public mind with a deliberate plan of scuttling. That and not to provide an organic law for our far eastern colonies was the uppermost thought in the minds of its projectors. The bill ought to be voted down. The people in the Philippines are making good progress toward self-government now. There is no real demand for new laws to govern them; they need no new privileges at present.

EDITORIAL COMMENTS AFTER THE CONSIDERATION OF THE BILL. [From the New York Evening Sun, May 2, 1916.] NO PHILIPPINE "FREEDOM."

NO PHILIPPINE "FREEDOM."

The blll to put a liberty cap on the head of the Filipino and abandon him has been rejected by a vote in which 30 Democratic Representatives voted against their party and President. These men and the Republican Representatives who united to oppose the measure have performed an important public service. Thanks to their vote, the plan to cancel our obligation to carry out the improvement of the Philippines will not go through this time.

What ill results in these islands may presently come out of recent tampering by the Government with its own authority there remains to be seen. The agitation of the idea of our withdrawl from the islands has received its quietus here, but among the Filipinos and the Japanese the fruits of that agitation may yet ripen. It is a time for caution in Philippine administration.

[From the New York Evening Post, May 2, 1916.]

Since the Philippine bill, fixing a definite time for declaring the independence of the Islands, had been made an administration measure, its defeat in the House yesterday was a defeat for President Wilson. The bill has had unskillful parliamentary handling. The amendment fixing four years as the period after which the Philippines were to go their own way was written into the bill in a rather haphazard way in the Senate. At the time Mr. Wilson was supposed to be against it, but a letter from him indorsing it was read to the House Democratic caucus. Its rejection is thus another blow to his prestige with Congress. The House finally passed the original Jones bill, giving to the Filipinos a larger measure of home rule and reaffirming the purpose of the United States to grant them independence in due time. Whether the Senate will agree to this is as yet uncertain. One would say that administration and party pressure to get through some kind of Philippine legislation, looking to the keeping of Democratic pledges, would be strong. It will not have escaped notice that among the Democratic bolters in the House was a large proportion of gentlemen with Irish names. They would doubtless fight to the death for an Irish republic. A Philippine republic, however, seems to them a fearsome thing.

[From the New York Evening Mail, May 2, 1916.] STICKING TO THE PHILIPPINES.

Evidently no policy of scuttling from the Philippines can be adopted by this country with the consent of the House of Representatives. The lower branch of Congress is closer to the people than the Senate. In many instances in our national history, aside from the Philippine matter, it has proven more responsive to the real sentiments of the country. Our people are not willing to set the Philippines adrift, and the House so records itself. It would be an unworthy course to follow at this time. The best thought among the Filipinos themselves is emphatically against so-called "independence" for their islands. They realize that independence would mean chaos, until some other Government stepped in and took the place the United States had abandoned.

The House vote of 213 to 165 yesterday is practically a defeat of the measure—for this Congress at least. It is an administration bill, and the large adverse vote is, therefore, significant, participantly in view of the fact that the Senate, yielding to White House pressure, had passed the bill.

The time will come when the Filipinos should have absolute independence. No lover of liberty would delay that day a single moment, and this Government, last of all in the world, should resist it. It would be a shame and disgrace to us, however, it we should now establish a Mexico on the Aslatic shore.

[From the New York World, May 2, 1916.]

Shorn of the mischievous Clarke amendment, the Jones Philippine bill as originally sent to the Senate and as finally adopted last night in the House is a good one to enact. It carries as strong assurances of future independence for the Filipinos as if it fixed a date for future independence which is beyond the power of this Congress to fulfill. What this Congress can do with certainty is to enlarge for the islands and their ultimate independence the scope of practical experience in self-government, and this is what the bill now does. What has been lost to the bill as it came from the Senate is only what this Congress could not do with certainty, and it is a wise loss.

[From the New York World, May 3, 1916.]

If the Filipinos get home rule without independence, that may not satisfy them, but it will greatly encourage New York City.

[From the Brooklyn (N. Y.) Citizen, May 2, 1916.] THE PHILIPPINE BILL.

THE PHILIPPINE BILL.

The rejection by the House yesterday of the Philippine bill in its present form is gratifying to nearly every student of the condition of the islands. The 30 Democrats who stood firmly by their objections, despite the action of the caucus, are thus entitled to the thanks both of the country and the Democratic Party, for it is quite certain that neither the party nor the country desired any such measure as the caucus indorsed.

Whatever be thought of the future of the Philippines, it is agreed by all practical observers that they are not yet in a condition for the establishment of popular sovereignty, nor are they likely to be so for a generation to come. This is not the opinion of men who wish to retain them under American control. It is the opinion of men who would be glad to see them intrusted with the complete management of their own affairs, and who are convinced that it would be to the advantage of this country to be rid of them.

That they are a burden to the United States and will always remain so, is as fully recognized by the opponents of the bill in question as by its supporters, but the further question of duty to the world as well as to the islanders can not be escaped from on any merely economic pretext. It was no doubt an error to annex them in the first place. This is not likely to be seriously denied to-day in any well-informed quarter, but being annexed we can not without injustice to the inhabitants turn them over to all the horrors that would overtake them if our troops were withdrawn. It is from this point of view that the proposal of the bill to give them their so-called liberty, a word which they do not understand, within four years, excited the opposition of by far the greater part of thoughtful America, not to mention other parts of the world.

[From the New York Times, May 3, 1916.] DEFEAT OF THE SCUTTLERS.

It is greatly to the credit of the House of Representatives that it has defeated the policy of scuttling in the Philippines. Monday's debate on the Clarke amendment showed conclusively that its supporters desired to pledge the country to the abandonment of the islands within four years, not for any love for the Filipinos or because of any desire of the conglomerate population of the archipelago for early independence, but because abandonment of the trust we assumed in 1898 is a cheap and easy way of getting rid of a large responsibility. Mr. Jones aptly expressed the spirit of the Senate bill in his labored defence of it:

"But it will require more than strong fortifications and large armies successfully to defend the Philippines against foreign invasion. To do so with any hope of success will necessitate the constant presence in the Orient of an American fleet at least equal in strength to that of any other naval power which may attempt to seize the islands. Whatever may be the cost in blood and treasure in defending them, we shall be bound by every consideration of justice, honor, and national pride to undertake to do so if it shall be determined to hold them permanently."

With or without possession of the Philippines we must have in the future a much larger and more effective Pacific Fleet. We are "bound by every consideration of justice and national pride" to defend the islands as long as we hold them, and national honor demands that we shall hold them until we have fulfilled our trust. Our task in the Far East is not easy: It may be more difficult in years to come than it has been in the past, but we must perform it faithfully.

That eminent Filipino patriot Mr. Manuella L. Quezon is reported to have said that the bill finally passed, which is the original Jones bill somewhat modified, will die in the conference. Nothing will be lost in its demise. The vague promise of future independence in its preamble is unnecessary. We have always in the midde of its framers and advocates. Governmental reorganization

[From the New York Sun, May 3, 1916.] A REBUKE WHICH MR. WILSON HAS DESERVED.

Representative MILLER, of Minnesota, who has visited the Philippines several times and is familiar with conditions in the islands, said in the debate on the Clarke amendment to the Jones bill that he was surprised at the "suddenness" with which the administration accepted the "scuttle" policy. It has been a surprise to everybody who remembered the Philippine plank in the Democratic platform, a docu-

ment that Mr. Wilson has invoked time and again as the Democratic gospel of committal and omission. What was in the platform he professed to regard as his sailing chart, and he has made a convenience of what was not in it. Also Mr. Wilson's acceptance of the "scuttle" policy seemed strangely inconsistent with his preachment that America existed to serve humanity either in peace or war and thus be an example to less spiritual nations.

The Democratic Party in its platform in 1912 called for "an immediate declaration of the Nation's purpose to recognize the independence of the Philippine Islands as soon as a stable government can be established." But Mr. Wilson, in spite of this unequivocal statement of policy, accepted a proposal to give the Filipinos independence in two to four years, with this string attached to it, that if the President as the four years were expiring concluded that the natives were not ready to govern themseives he could refer the question of independence to Congress for further consideration.

To set a sliding time limit to the sovereignty of the United States would be to disregard the Democratic platform flagrantly; but, even worse than that, the purpose to fool the Filipino people would be transparent to any but the most simple of them. Altogether the Clarke amendment was as evasive, dishonest, and stupid a device as was ever submitted to Congress in the form of a serious legislative proposal; and yet Woodrew Wilson, preacher of the humanities and keeper of the national conscience, not only jumped at the Clarke amendment but did all in his power to impose it upon Congress.

Thanks to the common sense and courage of some 30 Democrats under the splendid leadership of Representative Fitzgerald, of New York, the House has rejected the hypocritical and vicious Clarke amendment and definitely substituted the original House or Jones bill for the Senate measure. The Jones bill provides a form of government for the islands in which the Filipinos will nave a larger representation and greater respon

[From the New York World, May 3, 1916.]

KEEPING FAITH WITH THE FILIPINOS.

Different bills have been passed by the Senate and House at Washington providing for Territorial self-government in the Philippines. To accomplish this desirable purpose no pledge of independence at a fixed date, as set forth in the Senate bill, is necessary. The refusal of the House to accept the Clarke amendment contemplating our withdrawal from the islands in four years settles that point, for this Congress at least.

With the question of independence postponed until conditions shall warrant a future Congress in taking action to that end, good faith now demands no more than that the Philippines be made a Territory of the United States, in the control of its own people and subject only to the veto of the Washington Government, as is the case with Alaska and Hawaii. We have not promised these Territories statehood at any specified time. So, while keeping Philippine independence always in view, we are not bound to say at once how long the probation must be.

It would be exceedingly unfortunate if the disagreement between

must be.

It would be exceedingly unfortunate if the disagreement between the two Houses as to a measure of independence wholly tentative should result in the abandonment of the long-considered attempt to give the Filipinos home rule. We are committed to that even more emphatically than to independence. We can not much longer deny it without bringing the sincerity of our whole program into question.

Virtual independence will accompany self-government. Any movement in the Senate or elsewhere to block the one measure of progress now practicable will justly be regarded with suspicion.

[From the New York World, May 4, 1916.]

[From the New York World, May 4, 1916.]

RECALLING A SOLEMN PLEDGE.

The Jones bill providing self-government for the Philippines was pigeonholed in the Sixty-third Congress. It ought not to be burked in the present Congress. It will not be burked in the present Congress. It will not be burked in the present Congress if reasonable men of both parties are mindful of our obligations and decline to continue the deadlock engineered by Republican imperialists and Democratic shirkers.

We have been pledged to the principle of the Jones bill for 17 years. The treaty by which we acquired the Philippines was ratified by the Senate on February 6, 1899. Eight days later, to make clear its purpose as to the islands, that body adopted this resolution:

"That by the ratification of the treaty of peace with Spain it is not intended to incorporate the inhabitants of the Philippine Islands into the citizenship of the United States, nor is it intended permanently to annex said islands as an integral part of the territory of the United States. But it is the intention of the United States to establish in said islands a government suitable to the wants and conditions of the inhabitants, to prepare them for local self-government, and in due time to make such disposition of said islands as will best promote the interests of the citizens of the United States and the Inhabitants of said islands."

Republican imperialists who would hold the islands forever as a substance of the citizens who would hold the islands of the property and the present and the property and the property and the property and the property and the

islands."

Republican imperialists who would hold the islands forever as a subject province disregard every line of this pronouncement. Democratic shirkers who would withdraw from the islands in a hurry violate the very essence of the Senate's promise, which is that the Philippines be prepared for local self-government before final disposition is made of them. The Jones bill provides the local self-government. Nobody can say what disposition should be made of the islands "in due time" until their people have met the requirements of the final stage of their probation.

[From the New York American, May 4, 1916.]

THE OBLIGATION AND OPPORTUNITY OF THE UNITED STATES IN THE PHILIPPINES.

WASHINGTON, May 3, 1916.

The Washington Post published the following article this morning: "To the EDITOR OF THE WASHINGTON POST:

"The 28 Democrats who bravely strove to save the Nation from the disgrace of abandoning its dut'es and from the mistake of sacrificing its opportunities in the Philippines are as much national heroes as the

men who fought to save the country from the evils of conquest in the Revolution or of dismemberment in the Rebellion.

"The sacrifice of high purpose and high principle would hardly have been greater had we failed in the Revolution; the sacrifice of territory and essential integrity would hardly have been severer had we lost in the Rebellion than the sacrifice the Nation would suffer to-day in prestige and possessions through a timid and stupid abandonment of its obligations and opportunities in the Philippines.

"These 28 men who refused to be bound by a party caucus to do a traitorous act of national danger and dishonor were patriots before they were partisans, and deserve the grateful recognition and remembrance of patriotic citizens of whatever party.

"They have rendered a great service to their country—a service for which they should receive their reward, not only in the approval of their own conscience but in the universal consideration and esteem of a grateful people.

"Surely these broad-minded, far-seeing statesmen will be remembered and respected when the little, spineless, spiritless followers of a timorous and traitorous administration are forever forgotten.

"These c irageour Democrats, who saved both their country and their party from injury and lenominy, will be denounced as disloyal by party bigots, but there is no disloyalty in refusing to follow disloyal leaders.

"Benedict Arnold was an American general, but those would be pronounced traitors to-day who would have followed him into the camp of the enemy, while those who refused to follow him are esteemed patriots.

"Loyalty to the present and future interests of our beloved country is more important in the minds of sincere citizens than loyalty to any individual or to any party policy.

"The abandonment of the Philippines would mean more than mere

is more important in the minds of sincere citizens than loyalty to any individual or to any party policy.

"The abandonment of the Philippines would mean more than mere loss of wearth and territory and power and prestige to the United States.

"It would mean the betrayai of this island empire to Japan and would make Japan that much more populous and powerful, and bring her frowning forts and formidable fleets that much nearer to our defenseless shores.

fenseless shores.

"What nonsense to say that we would protect the Philippines as our wards, when the island fortifications would be left to the lazy neglect and childish incompetence of the Filipinos, our fleets withdrawn from their harbors, our soldiers recalled from their shores!

"Is it not easier to defend the Philippines as our possessions, fully fortified with our ships and guns, than it would be to defend them as wards without our armament and without authority?

"Yet the same unwise and insincere demagogues who say we would protect the Philippines as our wards advocate the abandonment of the Philippines because we would be unable to protect them as our possessions.

Philippines because we would be unable to protect them as our possessions.

"The abandonment of the Philippines would be the colossal crime of our history, the crowning folly of our career as a Nation.

"It would be an indictment of democracy and impeachment of our republican form of government, a reflection upon the capacity and patriotism of our people, a sur and slight upon the intelligence and efficiency of our citizenship

"It would be a first and fatal step toward the relinquishment of American supremacy in the Pacific. It would mean a final disaster to American supremacy in the Pacific. It would mean a final disaster to America's duties and destinies.

"The abandonment of the Philippines would be moral, political, and economic high treason.

"The party which would commit such an act of moral obloquy, political treachery and economic stupdity should be tried and convicted and forever expelled from the councils of the Nation by the American people.

people.

"The United States stands at the crisis of its career.

"It has become the greatest of modern nations.

"It has grown not merely through natural national development, but through legitimate expansion and immigration.

"It has increased through the extension of its territory and the absorption of other peoples into its population.

"At first our Nation was but a line of liberated colonies strung along the Atlantic coast. Then, after due and dogged opposition from the Tories of the time, the Floridas were added.

"Then, to our glory and Thomas Jefferson's immortal memory, the immense Louisiana territory was acquired. Then, in spite of the trepidation of the timid, our title to the far Northwest was substantiated.

"Then Texas was substantiated and college.

"Then Texas was admitted and California, Arizona, and New Mexico ere absorbed. All of which the reactionaries resented and the petty

"Then Texas was admitted and California, Arizona, and New Mexico were absorbed. All of which the reactionaries resented and the petty Americans opposed—"One statesman went so far as to say that California would never be a fit habitation for anything but borned toads—California, which now could supply gold and grain and flowers and fruit and oil and soil and homes and harvests for the world.

"Then Alaska was bought and pronounced worthless by the stupid and shortsighted until its hills were found to be sheathed with copperand its river beds paved with gold.

"All the time those who lacked imagination to see the possibilities in new lands and larger developments dignified their dullness by the name of conservatism and stood stelid in the path of progress.

"Still our country grew. It was our destiny.

"Still the glowing star of our extending empire took its western way.

"Still the glowing star of our extending empire took its western way.

"We fought the Spanish War and won the Philippines.

"Of course history repeats itself. Of course the reactionaries rise to-day to repudiate our opportunities and obligations there as they did in Florida, in Louisiana, in California, in Alaska.

"Of course the miniature Americans want the Nation to shrink to their small size, and the shortsighted politicians and pedagogues want the confines of our country's greatness to contract to the radius of their limited vision.

"But the true Americans, the big Americans, the Americans with soul and sense, with intelligence and imagination, the Americans who have made the country the great country that it is, want the Nation to grow ever greater and fulfill to the full its duties and its destinles.

"Greatness is a matter of soul, not of census. To be truly great our people must possess national pride and patriotic purpose—not merely population.

"We must have the spirit of our fathers, the energy and ambition of our ancestors.

"We must devote ourselves to our national development, our territorial enlargement our moral and material improvement.

"We must consecrate ourselves to the extension of our civilizing influence, of our beneficial and benign activities, of our uplifting and inspiring ideals.

"The United States is located at the conflux of the world's activities.

"On the one side is the Atlantic Ocean, the great commercial highway connecting us with Europe. On the other side is the Pacific Ocean, the great thoroughfare of trade uniting us with Asia. On the south lie the rich and rising Republics of South America.

"Such a commanding and controlling location should make our country, as it made Venice in former times and under former conditions, the center of the world's commerce, the custodian of the world's wealth. But something other than mere location, as well as something more than mere population, is needed for true greatness and glory.

"We must have enterprise and imagination, courage and confidence, the ability to understand and the energy to exploit the advantages which surround us.

"God's work of civilizing the world must be done and will not lag for lack of willing servants.

"If we fail to do our full duty, other nations will be found to supplement or supplant us.

"We must not be dependent upon the past, content with the achievements of our ancestors. We must work out our own salvation, perform our present-day obligation.

"A professor of ancient history is not the best leader for a modern constituency. He is likely to be so intent upon the incidents of the past that he is oblivious of the occurrences of the present and indifferent to the opportunities of the future.

"A nation is like an individual. It lives and labors, it plans and performs, it conceives and achieves.

"It passes through its successive ages of majority, of maturity, of seniority, of seniity.

"It grows and develops. It declines and dies.

"In all its course no nation stands still. It either advances or recease, progresses or retrogresses.

"We have not yet reached the point where we must disintegrate and deteriorate.

"We have not yet reached the point where we must deteriorate.

"The red blood of enthusiasm is still warm in our veins; our minds are still alert to our labors; our hearts are still strong in our faith.

"We have set our hand to the plow; let us not turn back until we have reached the end of the furrow. We have enlisted for the fight; let us not desert or desist until the victory is won.

"We have accepted the responsibility of the Philippines, the duty of their development.

"Let us neither repent nor retract. Let us perform our complete patriotic obligation and make the Philippines a progressive and potential part of our country and of our civilization, the foremost buttress of our safety, the furthermost bastion of our enlightenment and liberty.

"WILLIAM RANDOLPH HEARST."

Philippine Independence.

EXTENSION OF REMARKS

HON. JAMES A. GALLIVAN,

OF MASSACHUSETTS.

IN THE HOUSE OF REPRESENTATIVES.

Monday, May 1, 1916.

Mr. GALLIVAN. Mr. Speaker, by a singular irony of fate we have before the House to-day, the eighteenth anniversary of the entrance of Admiral Dewey into Manila Bay, a bill with an amendment calling for the giving of independence to the Filipinos within four years. At the very outset I must say that this seems to me a singular proposition. What evidence has been produced by the supporters of this measure that within the time limit set the Filipinos will be fit for handling their own destinies? I have listened carefully to all the speeches of my distinguished colleagues, and I fail to see that any conclumy distinguished colleagues, and I fail to see that any conclusive arguments have been adduced to warrant us in taking what I can not better characterize than a leap in the dark.

No, Mr. Speaker, I can not agree to this mischievous legisla-tion. The national honor is involved, and I am unwilling to jeopardize it for sentimental reasons. This whole problem must be worked out carefully and cautiously. No love of liberty in the abstract should influence us in its solution. We are in the Philippines, and we must face the conditions as they actually are if we hope to come to a wise decision. This is a question not of sentiment but of statesmanship. The nature of the problem confronting us removes it from the domain of partisan politics. It is a national issue; and the best thought of the country, irrespective of party lines, must be brought to bear upon it if we would come to an equitable solution. Especially the men who have lived in the Philippines and have had an opportunity to study conditions should be heard, and their advice heeded, before we come to any final conclusion in the settlement of the Filipino question.

As far as my experience goes, the weight of conservative opinion of those who actually know at first hand the state of affairs in the Philippines is decidedly adverse to the Clarke amendment. They fear, and justly so, that its adoption at this time would be mischievous in the highest degree, and they see nothing but disorder and chaos as the result. These men can not be accused of ulterior motives. They have nothing to gain by their advocacy of prudent delay. Foremost among them stands ex-President Taft, who certainly is well acquainted with

Filipino conditions and whose love of America and her true interests can not be impeached. His judgment is supported by a host of others who view with dismay this proposed legislation.

Such an array of witnesses ought to make us pause and consider well the consequences of hasty action. But what strikes me as a fundamental reason for postponing the boon of independence to the Filipinos is the almost universal verdict of those who have visited the islands that they are children. The most dangerous weapon to put in the hands of children is power. Power is so mighty, and may be either so beneficial or so destructive that it may not be entrusted except to those who either by inheritance or by actual use are accustomed to its exercise.

Should a chaotic condition arise in the Philippine Islands because of a too early concession of absolute independence to these children, America would never be able to absolve itself of the disgrace, and would stand before the world as having accepted a responsibility which it was too weak to carry on, and through mere weariness resigned without a thought of the

frightful consequences involved.

Mr. Speaker, I regard this Clarke amendment as unreasonable, Why four years? Why not one year or one month? If the Filipinos will be able to manage their own affairs within four years, then they are well on the way already, and there is no

need of fixing this time limit.

I am afraid, Mr. Speaker, that this whole movement for early Filipino independence is emotional, without basis in fact. fail to see how any intelligent Filipino should not be content with the promise of America, solemnly delivered, that it is the intention of this country to grant to the islands their independence whenever they are able to establish a stable government. That is a reasonable, sane proposition. For this reason, forgetting party ties for the time, and actuated simply by patriotic motives and jealous of the honor of my country, I can not subscribe to the Clarke amendment, but prefer to stand with those men who have the wider sweep of intellectual vision and see things from the higher altitude of disinterested patriotism.

Tariff Commission.

EXTENSION OF REMARKS

HON. HOMER P. SNYDER.

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, May 10, 1916.

Mr. SNYDER. Mr. Speaker, a nonpartisan tariff commission would be an ideal solution of the much vexed question of tariffs. While I favor a commission of this character, I am free to say that it is doubtful if a strictly nonpartisan commission could be selected by any President or any man or body of men who have been successful before an electorate. Under these conditions partisanship is bound to play a more or less potent part. I do not wish to be understood as impugning the good faith or motives of any official or organization of men who may have to do with this matter; but I am of the opinion, be as caretaking as they may, any commission created under these circumstances, no matter by what party, will partake to a greater or less extent of partisanship.

At the same time, I believe in a board or commission which will study the tariff honestly and sincerely in all its relations to the business and economic conditions of the country; the function of whose members it shall be to become experts on this great subject, and thus be able, without bias as far as it is humanly possible, to recommend to Congress needed changes in duties to foster our industries, protect our labor, and guard our revenues. At the same time they must be able, on the other hand, to demonstrate with fairness and justice, if such instances arise, where too much protection is being granted and that a reduction of that protection will result in the betterment of economic conditions.

In other words, I am opposed to a tariff for revenue only and to a commission formed for that purpose alone. In my opinion such a commission must and should be able to broaden its scope of usefulness and assist with proper discretion and knowledge any new and desirable enterprise struggling for headway in this Nation, lend a helping hand, if possible, to its progenitors, and

guide it along the pathway of prosperity and life.

In the past we have suffered somewhat from tariffs which were too high, but more from tariffs which were too low. question of the tariff is too delicate a matter to be subject to party platforms or individual whims. Having abandoned free trade nearly a century ago, we have builded on the tariff until it has become, in a measure, the keystone of the arch of our commercial and industrial prosperity, which when loosened by indiscriminate and faulty legislation weakens the entire edifice, and its removal would entirely destroy the structure.

Therefore, it is evident that we should approach the subject of a tariff commission with care and forethought. The personnel of such a commission should be of conservative men, with trained minds, capable of reaching logical conclusions by a study and a thorough knowledge of all conditions at home and They must be neither too proud to seek advice nor too bigoted to receive it when given. It seems that the greatest good to the greatest number—which, of course, such a commission would seek—could be obtained from sources which would gladly and willingly place themselves at the command of such a In fact, it might be the part of wisdom to incorporate into this bill a provision that the President, in addition to the persons herein provided for, should invite every national business and labor organization in this country to name one representative each as members of this commission, ex officio or otherwise, to serve without pay and lend their aid, by suggestion and advice, whenever a change in tariffs is thought desirable or necessary. In this way expert testimony could be obtained from those best qualified to judge and from a source which would not be biased or could not be discredited.

At its best the tariff proposition is involved and complex, and its effects are so vital and far-reaching that no party can afford to place it in the hands of inefficient men, but surround those whose duty it will be to study it with means for that study in connection with the best and most mature judgment which the country affords. This done, the charge of partisanship would be dissipated and we would enjoy the fruits of the knowledge of the broadest minds and the results of the experience of the keenest intellects of the Nation. I believe a tariff board of this character would meet the approbation of every business and laboring man and be to our country the foundation for a true, lasting, and unselfish prosperity.

Agricultural Appropriation Bill.

SPEECH

OF

HON. HENRY T. HELGESEN,

OF NORTH DAKOTA.

IN THE HOUSE OF REPRESENTATIVES,

Thursday, April 13, 1916.

The House in Committee of the Whole House on the state of the Union had under consideration the bill (H. R. 12717) making appropriations for the Department of Agriculture for the fiscal year ending June 30, 1917, and for other purposes.

Mr. HELGESEN. Mr. Chairman, as a member of the Committee on Agriculture, which has recently concluded a series of unusually exhaustive and detailed hearings on the Agricultural appropriation bill, I shall discuss a few features of two bills which, although not a part of the Agricultural appropriation measure, are of paramount interest to that preeminently influential portion of our population who are engaged in agricultural pursuits—those people on whom, as on no others, rests the prosperity and welfare of our great Nation. The proposed bills to which I refer are the United States grain-grades act and the United States warehouse act.

During the last two years disconcerting revelations have been made to us as a nation relative to the conservation and utilization of what many of us have proudly believed to be our unlimited national resources. We have learned, to our amazement and discomfiture, that, so far from being self-supporting, we have for years—yes, for generations—been largely dependent on our sister nations for far too many products in common daily use in our country. Our people everywhere have at last awakened to the gravity of the situation that confronts us.

Many of our cotton and woolen mills are running short-handed and on short time because of a scarcity of dyestuffs, which commodities we have in former years imported from Germany. Our stores are filled with goods distinctly less attractive in color than those we are accustomed to buy, owing to this same shortage of dyestuffs. Our daily newspapers and weekly and monthly magazines are taking on an unpleasantly mottled, yellow tinge, because some of the chemicals which

we have used in the production of paper have been cut off from us by the European war. The United States Department of Commerce has raised a warning cry to our people to "save your old papers," for the cloud of a paper famine has appeared on the horizon and is rapidly growing bigger and blacker. We have heretofore obtained our pulp for paper manufacture from Canada, Norway, Sweden, Germany, and Canada, with her characteristic patriotism and loyalty to the interests of the mother country, has placed an embargo on her paper pulp, and for nearly two years we have been unable to import any of this commodity from either France or Germany. Sweden has also placed an embargo on pulp. But our manufacturing people are not the only portion of our population who have been awakened from a lethargic dream of national self-sufficiency and superiority by a severe economic jolt. Our agriculturists feel as keenly as others the bewildering and unexpected effects of a situation which has in reality existed during the past years of the present administration but which was first brought to our attention by the European war.

Our southern farmers were perhaps the first of our agri-culturists to find a "war baby" on their hands in the shape of an unmarketable crop of cotton. With one of the belligerent nations in control of the seas, with practically no merchant marine of our own, and with England determined, as a war measure, to shut off all supplies of cotton from her opponents, our cotton growers were confronted with the seemingly impossible problem of disposing of a bumper crop of cotton to a domestic market. An adequate merchant marine would have partially solved this problem by keeping open the markets of the world to our neutral and peaceful commerce; in fact, with such a merchant marine our southern friends would have had a less serious problem to solve. But with the ships which up to two years ago were busily engaged in bringing our imports to us and carrying our cargoes of exported products to our foreign markets, now engaged in transporting soldiers to the lines of battle and in carrying coal and ammunition for their respective Governments or equipped as scouts and auxiliary cruisers, our means of transportation are greatly curtailed and in some instances effectually eliminated.

Owing to this lack of a merchant marine the present war, which under other conditions would have greatly increased our foreign output, has inflicted a grievous injury to the commercial interests of the United States. Although we have more goods to deliver to the markets of the world than any other nation, we have no means of our own to deliver them.

An independent merchant marine, with freight rates under such Government control as would prohibit an exorbitant or usurious transportation charge, would go far toward solving the problems with which our agriculturists and other producers are grappling to-day. Under existing conditions, however, it is diffi-cult to name a single article of our commerce that is not affected to a greater or less degree by the rise in freight rates, which is the direct result of a war in which we have as yet no part, Consider, for an example, wheat, one of our heaviest exports, which in times of peace has been carried from New York to Liverpool for 4 cents per bushel. Since 1914 the freight rate on this commodity has at times been as high as 40 cents per bushel. As this increase in ocean transportation is paid by the wheat grower in North Dakota and in other States, it is evident that he is receiving 36 cents less per bushel for his wheat than he would receive if the rates were under our own control instead of being at the mercy of shipowning interests over which Uncle Sam has no control. The reason that freight rates have jumped from 4 to 40 cents per bushel on wheat from New York to Liverpool and have remained practically stationary between North Dakota and New York is not, as our Democratic friends would have us believe, solely because of the European war, but because in the one instance the rates are controlled by law and in the other instance by combinations of shipping interests.

The establishment of an adequate merchant marine is one of the unfulfilled party pledges of the present administration, and is unquestionably necessary for the permanent improvement of our foreign commerce. An adequate merchant marine alone, however, can not remedy all of the marketing handicaps with which our farmers now have to contend. Therefore, while it may prove a satisfactory solution of some of our difficulties in the future, the problem of the disposition of our marketable products is one that confronts us to-day, and our present miserably inadequate system—or lack of system—for dealing with this problem is the condition that the Committee on Agriculture, of which I am a member, has sought to remedy, and is a subject to which we have given weeks of earnest and serious consideration, the result of which is the grain-grades act and the Federal warehouse act, both of which are now on the calendar of the House.

Theoretically the proprietary farmer is, or should be, the most independent industrial factor of our population. Unlike the dweller in cities, he has the means for his own subsistence in his own hands. Even though, like many of our great cotton growers, for instance, he may place "all of his eggs in one basket" and devote his acreage to the production of only one commodity, he can, at the expense of but little land, time, and money, raise sufficient foodstuffs for his own family consumption.

But this is not sufficient for the farmer of to-day. He desires, and rightly, more than a bare subsistence wrested from the soil by hard labor. He sees his city neighbor surrounded by luxuries that seem to him desirable but unattainable. He sees his children growing to manhood and womanhood without the socalled advantages of education and society that are the common lot of the city youth. That these apparent advantages oftentimes prove more desirable in anticipation than in realization, and are, after all, only apples of Sodom, has nothing to do with the case. The farmer wishes to do as much for himself and his family as his city neighbor can do, and forthwith he gives up his broad acres and his industrial independence for the modern conveniences-or inconveniences-of a city apartment in order to procure the necessary monetary wherewithal to provide his family with luxuries unattainable on the home farm and to gratify that gregarious instinct inherently planted in man by Mother Nature. From an independent home and land owner and industrial producer he becomes a voluntary tenant and the paid servant of some line of industrial production, while his farm home passes permanently into other hands or is rented by him to tenants, who, in far too many instances, seek only to derive the greatest profits from the land in the shortest possible time and at the least possible expense, and who consequently deplete the farm year by year of its productive

Why does this condition exist? Why is it necessary for that portion of our population on whom the world depends for sustenance in times of peace, and even more, perhaps, for maintenance in times of war, find it necessary to abandon a state of economic and industrial independence for a condition far less desirable from every point of view save that of the sybarite and society lover? Why is it not possible for our agriculturists to have within their reach those accessories of existence which seem to them so desirable as to lead them to give up their rural homes in the struggle to obtain which they have borne the burden and heat of the day?

One great cause, perhaps the principal one, is the farmer's inability to obtain ready money. His crop and his land are his His available cash is seldom sufficient for him to supply his family or surround his home with those so-called conveniences which are viewed as necessities in the most contracted city apartment. A short-time bank loan is difficult to obtain, except at ruinous terms. A farmer may be a pillar of his home church, a highly respected member of the community, honored by all for uprightness in his dealings; his credit may be goodand is-for all usual, normal, expenses, but if he desires a short-time loan to meet some, unusual expense, such as the purchase of blooded stock for breeding purposes, or to send his ambitious son to an agricultural college, the average bank looks askance at the security offered by his valuable acres or their prospective crops, and the desired loan is advanced only at a rate of interest that would ruin any other business in the world. Collateral, to be desirable in a banker's eyes, must not only be of unquestionable intrinsic value, but must be easily convertible into ready money. It is easier for a munitions manufacturer to borrow half a million dollars on the prospective output of a factory for which the ground is not yet broken than for a North Dakota farmer to borrow a thousand dollars on his standing crop of wheat worth in its ultimate disposition many times that

This condition of affairs must be remedied before this country can be in its best state of preparedness for either peace or war. From the day when the embattled farmers of Concord and Lexington left their plows standing in the furrow, shouldered their flintlock muskets, and "fired the shot heard 'round the world," down to the present time, our agricultural interests have formed one of the strongest bulwarks of the Nation's prosperity, and no legislation is complete or effective that does not have for one of its prime objects, not only the protection but the financial encouragement of our agriculturists.

This is the intent and object of the Federal warehouse act. In its original inception it was shaped to meet the exigencles of perhaps the most stringent situation in which our southern cotton growers were ever placed; but by persistent and strenuous efforts on my part, upheld by my firm determination to see

that the farmers of the great Northwest should share in whatever benefits may be derived from the measure, the bill was finally broadened to include grain products in its provisions.

Heretofore our farmers have been in a position where, even with a record crop in their granaries, they were completely at the mercy of speculators, who took advantage of the farmer's necessity to force an unprofitable sale, or if he chose the other horn of his dilemma and held his product for a profitable market he was impaled on the sharp practice of the usurious money lender in order to obtain the necessary funds for running expenses.

During the last 40 years agricultural colleges have been established; agricultural experiment stations are now conducted by the Government; our United States Department of Agriculture provides expert scientists to aid the farmers of the country to determine the best crops for their land and the best methods to produce those crops. By these and similar methods we have placed the profession of agriculture on a plane of dignity and equality with other productive and scientific professions.

Throughout the last decade cooperative societies have done much to assist in the remunerative distribution of farm products, though much remains to be done along this line of endeavor. In fact, the cooperative system is as yet but little more than an experiment—a successful experiment in many instances, I grant, but still one which is hardly developed beyond the germinating period of its inception, in this country at least.

But while we have been of great assistance to our farmers in their productive efforts and have accomplished a little in a more or less desultory manner along the lines of effective distribution of farm products, we have utterly failed to aid the farmer to any appreciable extent in his greatest and most overwhelming problem—the problem of finance. When this problem is satisfactorily solved we shall see and hear less about the decadence of agriculture and shall cease to deplore the tendency of the modern country youth to leave the ancestral acres for the attractions of town and city; our farmers will enjoy the sense of independent security which comes only with unencumbered ownership of their homes and will be surrounded by equal comforts with and greater personal freedom than their city brothers, while the embittering and disabling influence of a constant mortage on the future will be removed.

Criticism of any existing system, in order to be of value, must be not only judicial, but constructive. It is not sufficient to point out the difficulties with which our agriculturists have to struggle; we should also devise a system by which these difficulties can be overcome or at least ameliorated.

What, then, are the great needs of our American farmers to-day?

First, the farmer needs an improved financial system whereby he can obtain an advance of money like other business men, at a rate of interest which other business men can afford to pay, and beyond which no business can go and continue long to exist.

The farmers of our great Northwest need a Federal inspection law, which will control the inspection of their products to an extent that will relieve them of the wholesale robbery that is now practiced on them by the existing systems of private inspection and grading.

The farmer of the Northwest, like the cotton grower of the

The farmer of the Northwest, like the cotton grower of the South, needs a warehouse storage system that will enable him to hold his product until the market necessities demand its sale; and, finally, the crying need of the farmers all over the country is effective cooperation.

To a certain extent the proposed grain-grades act and the warehouse act, if they become laws, will supply some of the remedies just enumerated.

In order to obtain the greatest remunerative value for his farm products the agriculturist must not be forced to market his whole crop at one time, regardless of the fact that there is no demand for his goods, but he must be in a position to hold his imperishable products until such time as the popular de-mand and the tone of the market warrants the distribution of his goods. Our dry goods and clothing merchants have already placed orders for their next winter's stock, but they would not be so insane as to fill their show cases and display windows with heavy clothes, suitable only for zero weather, when the flowers that bloom in the spring are just beginning to open their petals to the sun. Our magazine publishers have the "make-up" of their Christmas numbers all plannel before the Fourth of July, but we do not see their holly and poinsettiadecorated covers on the news stands until the season demands The farmer who attempts to force his prodsuch a display. ucts on a market already overloaded with goods of a like nature, or to sell when there is no demand for his wares, is in a position parallel to the merchant who would offer for sale

fur-lined overcoats with the mercury at 105° in the shade. One important provision of the United States warehouse act is to furnish a practicable method to lengthen the period of time for the dissemination of agricultural products, and thereby prevent or greatly obviate that overstocking of the market which is inevitable under existing methods.

As I said before, the primary object of this bill in its incep-tion was the relief of the Southern cotton growers, cotton being an imperishable product. But since wheat, when properly graded, may also be classified as imperishable, I felt that it would be an unpardonable injustice to the wheat growers of our great northwestern wheat belt if they, too, were not permitted to share in the benefits which it is planned to confer upon the farmers of the South.

The terms of the proposed warehouse bill provide for a system of warehouses, licensed and bonded by the Federal Government, in which certain specified nonperishable agricultural products may be stored. These products, before storage in the warehouse, must be weighed and graded by Government licensed graders and weighers, who do their work in line with regular Government standards. Thus the farmer's product, instead of being forced on an overloaded or unresponsive market, is impartially weighed and graded by competent Government licensed weighers and graders and stored under the watchful eye of bonded and licensed warehousemen, who safeguard the product,

When the farmer's property is thus placed in the care of said bonded warehouseman he receives in return a warehouse receipt or voucher similar to the form of receipt issued under the uniform warehouse receipts act, already familiar to a large proportion of our farmers, since this act is now in force in 31 of our 48 States. These receipts, carrying on their face the Government's certificate of character, weight, and quality of the product stored, will then become negotiable security on which the farmer can borrow money until such time as he can

sell his crop to the best advantage.

As I have already stated, the proposed warehouse act is planned to alleviate to some extent the financial problem that confronts the farmer by supplying him with a negotiable receipt for his product, on which he can borrow money, if necessary, to carry on his farm operations until such time as he can market his crop to advantage. This, although not all that may

be desired, is a step in the right direction.

The inspection and grading of grain in the grain-raising sections of the country, and particularly in the Northwest, has been unsatisfactory for a great many years. Producers have not felt assured that they were given a square deal in the inspection and grading of their grain. The objection has not been to the rules for grading as much as to their application, but from long years of experience the farmers have become firmly convinced that the grading of their grain is subject to a great deal of manipulation in the interests of the big millers and grain dealers of the country.

A great deal of evidence has been taken on this subject by the Minnesota Legislature and also by various congressional committees, where abundant evidence has been produced to demonstrate that the farmers' grain is not always fairly and honestly graded. Accusations have been made that the terminal elevators have shipped out of their elevators millions of bushels more of the higher grades than their records show they have taken in, and have taken in millions of bushels more of the lower grades than their records show they have shipped out, which indicates a manipulation of grades that has made it possible for the terminal elevators to dispose of a vast amount of their low grades at a grade and a price away above the grade and price at which the grain was purchased.

If this fact is true-and the evidence indicates no doubt of its correctness-it proves that either the farmers have been swindled by receiving less than their grain was fairly worth, or the consumers have been swindled by having been compelled to pay more than they should have paid if the grain was properly graded and paid for when it was disposed of by the farmers.

A general, and I think well-founded, opinion exists that grain will never be correctly and fairly graded with any degree of uniformity until we get a system of Federal inspection that will entirely eliminate the various State inspection systems now in existence, as these State systems are controlled entirely too much by politics in the various States under whose laws they are operated.

This is no dream, for it was admitted by Mr. Charles A. Magnuson, of Minneapolis, in his testimony before the House Committee on Agriculture in 1914.

During my questioning of the witness the following statements were elicited:

Mr. Helgesen. But all the power that you have now attributed to be Federal Government is now possessed by the great State of Min-

nesota. They have a right to discharge anyone who is not competent or whom they find to be dishonest. They are supposed to select these men because they are capable, honest, and efficient men; and still we know that now there is not the confidence in that inspection that there ought to be.

Mr. Magnuson. And what is the reason? The reason is that while the inspection department of Minnesota is as well conducted as any State department can be and it has rules and regulations for civil-service examination, there is still a political partonage that is affected by political parties in power who have the appointing power, and that there is a strenuous taking in hand of a proposition when it comes to discharging an inspector; he will bring pressure to bear among his friends on the railroad, on the warehouse commission, and on the chief inspector, and on whoever it may be, to retain him in service. He is a citizen of the State of Minnesota. These men are elected by the citizens of the State of Minnesota. These men are elected by the citizens of the State of Minnesota. These men are elected by the citizens of the Islate of Minnesota object of the State of Minnesota. These men are elected by the citizens of the Islate of Minnesota object of the State of Minnesota. These men are elected by the citizens of the State of Minnesota, and it is not the same as if this man could be removed by the supervisor appointed by the Federal Government, who is under no political obligation to anyone, except to see that the inspector shall be scientific enough, that he shall know enough to get the position, and retain it under the civil service as long as he exercises the duties of his office legitimately.

Mr. Hawler, Wasy I interrupt you, Mr. Helgescn, to ask a question?

Mr. Magnuson, No; it is something that comes under the notice of anyone after an experience covering a sufficient time.

Mr. Magnuson, I would not want to name them.

Mr. Magnuson, I would not want to name them.

Mr. Magnuson, Yes.

Mr. Hawler, I do not want you to nam

It is hardly reasonable to suppose that it will be possible to remove the influence of the powerful grain dealers' associations in State politics to such an extent as to liberate the State inspection systems entirely from political influence, therefore the only really effective remedy is a Federal inspection system, which will be so far removed from local or State politics as to practically eliminate their influence.

The chambers of commerce and boards of trade throughout the country, whose powerful influences have practically con-trolled the inspection systems under which we are now operating, have bitterly opposed the enactment of a Federal inspection law, and have always claimed that the charges made against them of unfair and dishonest manipulation of grades

have been entirely without foundation.

As I said before, abundant evidence has been presented to prove beyond question that unfair manipulation of grades is practiced to an extent that has worked injury both to the farmer and to the ultimate consumer; but no such sweeping indictment against the honesty and efficiency of the inspection systems of our country has ever been made by the farmers as the indictment made by the Boston Chamber of Commerce, copy of whose resolutions has been sent me by the Federal Milling Co., of Lockport, N. Y.

The Boston Chamber of Commerce appointed a committee of three members to draft a report, giving the reasons why the chamber should favor the passage of the United States graingrades act. The committee made a report, which was approved by a vote of the chamber of commerce, and which was in part as follows:

as follows:

The undersigned, having been appointed in accordance with the above vote, respectfully submit the following reasons why the Boston Chamber of Commerce, through its board of directors, should favor the passage of the Rubey Grain Grades Act:

1. The Rubey bill provides for the establishment of uniform standards for the various grades of the different grains, such uniform standards to be maintained throughout the United States.

All grain sold by grade must be inspected and graded in accordance with these standards, but grain may be sold by sample under trade names rdopted by individual sellers, as, for example, "Victory" oats, "Whner" wheaf, etc.

It further provides that all inspection shall be under Federal supervision. There would be no interference with the machinery of existing inspection systems, as, for example, that of the Boston Chamber of Commerce, and competent inspectors recommended by the various exchanges would be appointed by the Secretary of Agriculture. It is understood that these inspectors would be placed under civil-service rules, so that while performing their work honestly and efficiently they could not be disturbed for political reasons.

2. The need for this legislation has for many years been most urgent. Abuses resulting from present conditions have been flagrant, reaching their culmination during the present crop year.

Inward inspection has been elastic at the expense of the shipper. Outward inspected has been elastic at the expense of the buyer.

Grain has at times been inspected out from elevator into cars, these cars run around a belt line back to elevator within a few days, and inspected in a grade or two grades, say, No. 1 Northern spring wheat, meant one thing in one market and another in another, but it has meant several different things in the one market, for example:

In Minneapolis for months during the present crop year there was, day after day, a variation, based on quality, of from 8 to 16 cents per bushel in the selling price of No. 1 Northern Spring wheat; t

In Kansas City during the same period the same grade of oats showed 10.3 per cent of other grain and foreign seeds, an increased adulteration of 7.5 per cent.

In wheat, however, during the summer and early fall of 1915, occurred the most extraordinary abuse of inspection every perpetrated. Grain houses in one of the large central markets of the West prior to harvest sold in foreign markets enormous quantities of "No. 2 Hard" and "No. 2 Red Winter" wheat for shipment from Chicago during July, August, and September, 1915.

Almost incessant rains at harvest and for months afterwards totally destroyed many millions of bushels of wheat and damaged to an unprecedent extent the entire crop. The result was that not over 10 per cent of the receipts of wheat in principal markets during the months named graded "No. 2," comparatively little graded "No. 3," the bulk was "No. 4" or "No grade."

The total receipts of "No. 2" in Chicago during these months were probably considerably less than 1,000,000 bushels. Notwithstanding this, several million bushels of wheat were inspected out and certificates issued as "No. 2 Hard" or "No. 2 Red Winter," and were shipped in fulfilment of the contracts above mentioned.

When some of this wheat reached the seaboard local inspection graded it "No. 4" or "Unmerchantable." However, it had been sold on western certificate and went forward to European buyers.

On arrival across the ocean much of this wheat was hot and caked, and actually had to be chopped out of the holds of vessels at Liverpool and London.

At Italian ports the Government confiscated several cargoes, and they were thrown overboard as unfit for any use.

The reputation of the American grain trade, which had suffered for many years from lesser infractions of the rules of fair trading, was now smirched as never before. For probably the first time in such matters the intervention of the United States ambassadors was sought and the whole matter, involving 30,000,000 bushels and several millions of dollars, is now in the hands of

and the fight over the shipping bill was so prolonged that it was not reached, consequently a new bill had to be introduced at the present session.

There is good prospect of the passage of this bill, but it will require the indorsement of all organizations who favor putting this enormous business upon a reputable and responsible basis.

Among the organizations that have favored this legislation are:

(a) Grain Dealers' National Association of the United States, made up of 3,300 members in practically every State of the Union, 17 States being represented upon its board of directors.

(b) Millers' National Federation, embracing thousands of flour millers in every flour-milling State in the Union.

(c) The principal grain-trade organizations in all the prominent grain-trade cities of the West.

The demand for it is almost universal.

4. Opposition to the Rubey bill, aside from State inspection departments which are under political control and are in a large measure responsible for the abuses herein recited, comes from exporters in Baltimore, Philadelphia, New York, and Boston.

Their reasons for the most part are illogical and easily refuted. In Boston, for example, the principal argument of the exporters who are opposed to uniform inspection is that in the case of corn it would do away with the climatic advantage which Boston, by reason of its cooler temperature, holds over southern ports.

This argument is specious, because it is obvious that if corn containing a high percentage of moisture can safely be exported via Boston, whereas shipment via southern port would be decidedly risky, that corn will be exported via Boston, and the port will receive the full benefit of its natural advantage. There is no sound reason, however, why corn that is in reality "No. 3" or "No grade" should be graded and certificated in any market as "No. 2."

Summary: The Rubey bill and the movement which it represents is designed to safeguard the interests of all concerned in the growth, the milling, and the distribution of grain. It i

This is a terrible indictment against the grain exporters of the country, but from my knowledge of the facts I feel that it is only too true. At the hearings before the House Agricultural Committee in 1914 on the uniform grading of grain, which was then under consideration, the strongest opposition came from the exporters of Baltimore, Philadelphia, New York, and Boston, the same shippers to whom the foregoing resolutions apply.

At that time, in examining the witnesses from these export markets, I brought out some extremely interesting facts, which had never before been officially established, and of which very few people in this country had any knowledge.

As the above resolutions state, the exporters objected to the enactment of any law that would compel them to furnish the European buyers with grain carrying a Federal certificate of inspection, as they claimed that it would rob them of their so-called "climatic" advantage, resulting from their geographical location so far north on the Atlantic coast, as to enable them

to ship their grain to foreign ports at a time when the weather is cold enough so that grain carrying an excessive amount of

moisture will not heat in the holds of the vessels.
"No. 2" grade is the contract grade in the E "No. 2" grade is the contract grade in the European ports, as it is in this country, and the exporters claimed that because of their "climatic" advantage they could ship, for example, a No. 3 or even a No. 4 corn, which, although it was sound corn, was graded No. 3 or No. 4, instead of No. 2 because of its excessive moisture content. They would sell this corn to European purchasers under their private grades, which they called "Export No. 2," or "Seaboard No. 2," and the corn would be accepted as No. 2 grade by the Liverpool purchasers. The exporters claimed that the passage of a Federal inspection bill porters claimed that the passage of a Federal inspection bill would prevent this practice, and deprive them of their oppor-

tunity to sell No. 3 or No. 4 grain as No. 2.

They further admitted in their testimony that the amount of grain exported, whether the quantity is large or small, always tends to establish the price in this country, and generally does actually establish the value of all the grain raised in this country, whether it is consumed here or exported.

This being the case, we can readily understand that if export-

ers are permitted to ship grain abroad on certificates furnished by American exporters, or chambers of commerce, or boards of trade in the interior, and if the so-called No. 2 grade is actually only No. 3 or No. 4, the price paid by the European buyer for such a No. 2 will be only what a genuine No. 3 or No. 4 is worth; and if the price of the standard No. 2 grade in this country is based on the doctored No. 2 grade sold in Liverpool, then the price of our standard No. 2 will be reduced in value from one to two grades; and as the price of the other grades is based on the price of No. 2, all grades will be undervalued in the same proportion. the same proportion.

It is difficult to realize the vital importance of this proposition until we consider that approximately 5,000,000,000 bushels of grain are raised in this country every year; and if this entire crop is undervalued from one to two grades, and the difference between the actual value of No. 2 and No. 3 and No. 4 is 3 cents for each grade, the loss to the farmer by this kind of manipulation amounts to \$150,000,000 per year if the manipulation results in the loss of only one grade, while if the undervaluation covers more than one grade the loss would be proportionately greater.

As this manipulation has evidently been carried on ever since grain was first exported, it may easily be seen that the loss to the farmers through the undergrading of their grain, as the result of manipulation by exporters alone, has amounted to a sum large enough to pay every dollar of mortgage indebtedness now carried by the farmers of the United States.

The proposed United States grain-grading act is far from such a law as I had hoped we might be able to enact, as it simply provides for Federal supervision of the present grain-grading systems; but while it will not accomplish everything desired by the producers and consumers, who are those most interested in the honest and efficient inspection and grading of grain, and which I feel ought to be accomplished, yet we must admit that it is a step in the right direction, and will tend to make more difficult the manipulation of grades for export as well as in the interior. If the law does no more than stop the manipulation of grades by our exporters, it will accomplish more in the interests of both producers and consumers of grain and grain products than any previous law that has ever been enacted by Congress.

At first I was of the opinion that it would be unwise to support any proposed law short of a bill providing for a complete system of Federal inspection, but the more I have studied the situation the more firmly I am convinced that it is impossible to pass a Federal inspection bill through this Congress, and as we need some remedy for the ills that I have described, which remedy this bill will in a measure provide, this seems to be one of the cases where the old saying holds true that "Half a loaf better than no bread.

Some people argue that if a law is enacted providing for Federal supervision of inspection it will be more difficult thereafter to secure the passage of a Federal inspection law. take the position that if we can pass a Federal supervision law, and thereby demonstrate the fact that relief can be secured through Federal legislation, it will then be easier to enact new legislation that will give those interested what they need.

I am inclined to think that the latter argument contains more logic than the former; at all events, it is evident that just now will have to be a Federal supervision law or nothing.

If the United States warehouse act becomes a law it will give us still another check on the loss through grading of our grain caused by the manipulation of our exporters, as already de-

scribed, because the warehouse act contains a clause which provides that wherever warehouses are voluntarily placed under the provisions of this law the Federal Government will inspect and grade the grain, thus giving to the owner of the grain a Government certificate of quality which will be accepted anywhere in the world. If North Dakota, for example, should build elevators at the railroad outlets of the State and operate them under this proposed warehouse act, the growers of that State would have Federal inspection and grading of grain and could ship their grain directly to Europe without the possibility of having the grades manipulated en route; and if a few million bushels of our Northwestern genuine No. 2 grain were shipped to Liverpool, correctly graded, it would immediately establish a price for that quality of grain. As the price of all other grades is based on the value of No. 2, and as the price of all the grades in this country is based on the Liverpool prices, less cost of transportation and handling, it would immediately raise the price of all grades in this country as much as our genuine No. 2 grade would sell for in Liverpool over the fictitious No. 2 that is now being shipped to that market by our exporters.

This would also make it impossible for our exporters to palm off on the European purchaser their manipulated and fictitious No. 2 grade, and the Liverpool quotations for No. 2 grain would thereafter mean the value placed upon the real No. 2 grade in

The two proposed bills which I have discussed, if enacted into law, form an important advance along the line of cooperation between the farmer and the Federal Government and will do much to relieve the economic pressure under which the farmer

of to-day struggles.

But more than this is necessary. Our farmers must use cooperative principles and methods in the distribution of their products in order to derive the maximum return for their labors. The annual production of farm products in the United States reaches a value of about \$10,500,000,000, while a conservative estimate places the amount which the consumer pays for these same products at approximately double these figures. This fact alone is proof that other methods than those now in vogue must be adopted to bridge the gap between producer and consumer.

This question is of importance not only to the agricultural producer, but it vitally concerns every consumer of agricultural products in the country. In no other line of business is the percentage of waste in the distribution of products so great as in agricultural products. If this percentage of waste in distribution could be eliminated, or at least greatly reduced, the consumer would pay less for his necessary commodities and the farmer would at the same time receive a much higher price for his products, for the present difference between the price received by the farmer for his products and the price paid by the consumer is so great that there is ample opportunity to reduce this difference by increasing the price to the farmer and decreasing the price to the consumer and still leave a sufficient margin for the legitimate cost of distribution, thus benefiting both producer and consumer.

Cooperation need not be carried to the extent of forming a trust, but some of the business methods of the trusts might well be adopted by farmers. Efforts have been made in past years to secure cooperation among farmers, but these efforts have been largely of a local nature. Some 20 years ago the New England Milk Producers' Union was one of the pioneers in cooperative work and accomplished good results among the dairy farmers of the New England States by maintaining a profitable price and high standard for dairy products. On the other side of the continent. California, after many abortive attempts, has succeeded in establishing a successful system of cooperative marketing of her fruits and nuts. Denmark, however, has accomplished more along the line of successful cooperation than any other country. In Denmark cooperative societies exist in every line of trade, and the prosperity of Danish farmers is ample witness to the efficiency and good results of the system. Wherever cooperation is successfully practiced it means financial profit to both producer and consumer.

I can not take the time now to discuss the question of rural credits, but I may say in passing that during the last session of Congress I introduced a joint resolution to authorize the Committee on Agriculture of the Senate and the House to investigate and report on a system of personal credit. That resolution cited the fact that nearly every highly civilized country has in successful operation a personal credit system, through which the farmers of those countries obtain credit for productive purposes at low rates of interest and in sufficient amounts to enable them to produce agricultural products more economically than is done in this country, even though our farmers possess many natural advantages not enjoyed by the farmers of other nations; and I also stated that while the

European war is affecting the world's capital and credit markets very materially, the interests of the American farmers will suffer far more than any other interests in the country, since they have no organized credit machinery.

When I introduced that resolution it seemed to me an oppor-

tune time for the Agricultural Committees of Congress authorize a subcommittee to investigate and hold hearings on such personal rural-credit bills as might be presented to them, but no disposition was shown in either House to consider the matter. Legislation along that line is confined wholly to a farm-mortgage loan proposition. The so-called rural-credits bill now before Congress deals wholly with farm mortgages, whereas one of the most important factors in the farmer's business life to-day is a system that will enable him to obtain money for legitimate operating expenses on a short-time loan, without plastering a mortgage on his farm.

To recapitulate, our American farmers require a financial

system whereby they may be placed on an equal basis with other business men, a Federal grading and inspection law, a Federal warehouse storage law, cooperation with the Government and

with each other.

So far as the proposed bills now under discussion meet these requirements, so far will they prove of benefit and value to the farmer; and with that knowledge and belief I have labored successfully to have the original scope of these bills extended to include in their benefits the great agricultural interests of the people of North Dakota, whom I represent and in whose prosperity and welfare I share.

Philippine Independence.

EXTENSION OF REMARKS

HON. AARON S. KREIDER,

OF PENNSYLVANIA.

IN THE HOUSE OF REPRESENTATIVES,

Monday, May 1, 1916.

Mr. KREIDER. Mr. Speaker, I have listened carefully to the arguments made by the gentlemen who are in favor of passing this legislation and those opposed to it, and I am free to admit that there is strength in the arguments presented on both sides of the question. In order to act intelligently, however, let us consider just what the proposition is with which we are confronted and upon which we shall vote to-day. Let it be remembered that this extremely important legislation materially affects not only the future and the happiness of the inhabitants of the Philippine Islands but it will shape the colonial policy of the United States.

THE PASSING OF THE SPANISH REGIME.

It was on the night of the 30th of April, in 1898, that Admiral Dewey entered Manila Harbor and with his six vessels passed over the mines in the harbor and sought an enemy over twice the size of his own fleet in a harbor lined with batteries and mines. It was here, while passing through that dangerous channel into Manila Bay, that the command "Keep cool and steam ahead" was given, and later became famous.

On the following morning parally May 1 Montate's fleet

On the following morning, namely, May 1, Montojo's fleet opened the battle at daylight. Dewey stood on the bridge of his flagship and, after a full half hour from the time the enemy fired the first gun, he signaled to Capt. Gridley, "You may fire when ready, Gridley."

Within two hours from that time the Spanish fleet was destroyed, with 1,600 men killed and wounded, while not a man in the American fleet was killed.

AMERICAN OCCUPATION OF THE ISLANDS.

Within three months from the breaking out of the War with Spain negotiations for peace were opened and, on August 12, 1898, a protocol was drawn up, signed by the Secretary of State and Mr. Gamba, French ambassador, acting for Spain, in which, in article 3, it was agreed that "The United States will occupy and hold the city, bay, and harbor of Manila pending the conclusion of a treaty of peace, which shall determine" the control, disposition, and government of the Philippines." Without going further into details and quoting from the treaty, I wish to say that this was the beginning of the occupation of the Philippine Islands by the United States. It has continued since that time.

It is perhaps well to refer to the fact that in our treaty Spain ceded to the United States all of the islands comprising the Philippine Archipelago; that treaty provided that we should protect the Spanish citizens and their property as well as that of all other foreigners. For a number of years we were compelled to wage active warfare on the islands, in order to subdue the revolution that then had started, in order to establish a permanent civil government. During this war many lives of American soldiers were lost, some in battle and skirmishes with the natives, and others by dread diseases so common to the islands.

It is only proper to say that it was a serious mistake in taking over the islands in the first place and, if we consider the subject from the standpoint of economy, it was most certainly a grievous blunder, but there were higher, better, and purer motives in taking them over than merely a financial proposition; we had acquired them through the fortune or misfortune of war, and the question then and there arose what should we do with them, and it was decided to take the islands and educate the people, lift them to a higher plane of morality and responsibility, and teach them the ways of civilization, and then, when the time came that they were in a position to govern themselves, to grant them their independence.

The argument has been presented by every speaker who advocates the passage of this bill that they have been a liability financially to us, and that we should get rid of them at the earliest possible moment. As to this there can be no dispute, We have spent millions of dollars in the past in their behalf, but, very happily, we are approaching the point now when they are becoming—and, in fact, are—practically self-supporting. And it is because of this fact that some have argued that now is the time to dispose of them. Others have argued that in case we should become involved in a war with some first-class foreign power they were afraid it would be impossible for the United States to hold and defend them. This element of fear does not appeal to me. If it is our duty to continue the work we have commenced—that of education, both morally, religiously, and mentally, and to continue our work of sanitation and general improvement and the establishment of a permanent government—we should by no means think of abandoning the work that has been so well begun because we are afraid that somebody, somehow, may interfere with it.

The Philippine Islands have a population, in round numbers,

The Philippine Islands have a population, in round lambers, of about 8,000,000. These people are divided into many sects and tribes, among which are about 500,000 Moros who had never accepted Spanish rule, but are to-day the very best friends of the Americans in the islands, and, according to the evidence presented here, will never accept the rule of the Filipinos, but earnestly desire and request that the American Government shall be retained.

NOT YET READY FOR INDEPENDENCE.

One of the best evidences of the fact that the Filipinos are not at present in a condition to be given their independence is that they have not yet learned to use the ballot. Only about 16 per cent of the adult male population actually votes; of those voting, upward of 70 per cent are illiterate, it being necessary to have their votes marked for them. The percentage of literate voters in the last election to the whole population was a little less than $1\frac{1}{2}$ per cent, and the result of the voting was of a most fraudulent character, involving candidates, judges, and voters. A very large number of elections are contested, and the evidence submitted in these contests brings to light chicanery, trickery, and double-crossing that occurs at each election. Were it not for the strong arm of America extending over the land, protecting the weak, enforcing the right, and preserving peace, the elections would not be settled by votes, but by might. It is also evident that the Filipino officials have not yet forgotten their Spanish lessons; they have not learned the sacred duty of keeping public funds for public use. They still feel that when funds are appropriated that it is their privilege to use up these funds in salaries rather than to apply them on the work for which they were appropriated and intended, and it seems to me that the time for their independence must of necessity be delayed until they have a different conception of governmental affairs.

PROGRESS AND EDUCATION UNDER AMERICAN RULE,

Along the line of education considerable progress has been made, schoolhouses have been built, and there are now in attendance about 500,000 children; but were we now to abandon these islands educational matters would lapse; in fact, we hear serious complaints that too much money is being expended for schoolhouses and the teaching and training forces.

The same is true with the sanitary problems; it seems that our Government has succeeded in cleaning up and making sanitary the principal cities and towns of the islands, and, as a result, smallpox, bubonic plague, chronic dysentery, yellow fever, and diseases heretofore prevalent have practically dis-

appeared, but here again serious opposition is being met. This is only natural, however, because no such improvements had been made during the 300 years of Spanish rule, and it is only following human nature when the Filipinos object to making these changes in their lives and habits. The truth is that they have not been shown the way of civilization until now, and I ask in all seriousness, Is it not preposterous to suppose that in a few short years these people can be educated in the new and better ways of civilization? Let us not forget we are trying to build a nation, and before we give the Filipino his independence we must be assured of his ability to govern and control his affairs. A withdrawal at this time would result in no permanent good having been accomplished.

WHY SHOULD THE FILIPING DESIRE HIS INDEPENDENCE?

Why should the Filipino desire his independence? The United States Government has not oppressed the people but has spent millions of dollars in an effort to uplift them, instituting many reforms for their benefit at great cost. The United States has never exacted one cent in the way of taxes. We have done them only good and not harm, and this at great expense and inconvenience to ourselves. What, then, can be the motive of the political agitators that desire independence, who are smarting under the control of the United States? It is plainly evident that they would like to exploit for their own personal benefit and go back to the old system of despoliation in vogue not many years ago. They object to the restraining influence and power of the United States. It is the same desire for freedom that is expressed by many young men and women between the ages of 14 and 20 who wish to avoid the control of their parents over their actions.

In our treaty with Spain, we also guaranteed religious freedom, and while the islands are sometimes referred to as a Christian nation, religious freedom never existed until after the American flag was raised on the islands; since that happy event, for the Filipinos, many missionaries have been sent to the islands who have been doing excellent work, and if they are allowed to continue will bring about freedom of religious thought and action which has heretofore been unknown. As an illustration, I am informed that one of our earl, missionaries in the city of Manila gave a Bible to a young man which the young man was supposed to read from time to time, having received a somewhat limited amount of schooling; this missionary, I am told, after having made a trip through certain portions of the island returned and visited the young man and found that he had hid the Bible, and when the missionary questioned him about the Bible he refused to speak of it in the presence of anyone, but later when alone with the missionary he produced the Bible and admitted that he had been reading in it every day, but secretly; when the missionary informed him that he could read the Bible in public and need not be afraid of being disturbed on account of it, it was almost unbelievable to the young man, who then explained that his father had actually been killed for becoming a Protestant Christian and for refusing to give up the reading of the Bible; the missionary then took the young man by his arm and led him to where they were in sight of the government building from the top of which floated the American flag and addressing the young man and pointing to the flag, he said, "As long as you see that flag floating from the top of that building you can take your Bible and go to the roof of your house in the middle of the day and read it at the top of your voice and not a hair of your head shall be harmed." Is it now the purpose of this Government, after having made a start in the civilization of these people, to haul down the American flag simply because we are afraid some one might interfere with us, or because of the few dollars we may yet be called upon to pay in our efforts to continue and complete the work so well begun?

INDEPENDENCE NOW WOULD RETARD PROGRESS.

Should this bill pass and should the provision in the bill be retained that the Filipipos shall be given their independence in not less than two nor more than four years, you will find that internal improvements will come to a standstill. In fact, merely because this bill is being considered here and was passed by the Senate, we are informed that all business activities are already brought to a standstill. Nothing but disaster can and must follow the granting of independence to the Filipinos at this time. They have no stable government; life and property are not secure; capital will leave the islands, and they will be torn with internal dissensions—Mexico being a good example.

Let us, by all means, as long as we have laid our hand to the plow, continue to finish the work we have begun, so that the Filipinos may become civilized, may become educated, may enjoy religious freedom, and eventually be fitted for selfgovernment. Let us continue our present policy, so that the country will be developed, farming may become profitable, industries may thrive, and foreign capital continue to seek an investment in the islands, all of which can only result in increased wealth and increased revenue for the islands themselves.

With all this will come the ability to govern and the islands will continue to prosper and the Filipinos will become one of the

enlightened and civilized peoples of the globe.

It is true it will cost us some money, but the great cost has been in the past, and as they become more nearly self-supporting they will be but very little, if any, further expense to the United States. Whereas, on the other hand, should we abandon them now and send them adrift to be gobbled up by some other nation and they themselves to lapse into their former condition, it will mean the loss of hundreds of millions of dollars which we have already invested in them.

Let us hope that this bill will not pass and that we will

remain true to the Filipinos and ourselves.

An Embargo on Arms and Munitions of War and Other Merchandise—Honest Neutrality—Protection of American Trade and Commerce.

EXTENSION OF REMARKS

01

HON. WILLIAM J. CARY.

OF WISCONSIN.

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, May 9, 1916.

Mr. CARY, Mr. Speaker, ever since the beginning of the present war in Europe, which is already attaining the dimensions of a world catastrophe, the question as to the duty of this country to place an embargo on the export and sale of arms, munitions, and other material to Europe has been a burning question in all parts of this country. A great deal has been said on both sides of this question, much of which would have better been left unsaid. The arguments both for and against the placing of an embargo have at times been marked by a bitterness which is to be very much regretted, and in the remarks that I wish to make on the embargo question I will endeavor to eliminate all prejudices and approach the subject absolutely and entirely from the standpoint of America alone. Several Members of the House and Senate during the last session of Congress introduced various embargo measures. I introduced the first embargo resolution in the last Congress on August 28, 1914, and the only embargo resolution in the House this session on December 6, 1915. The resolution which I have introduced and which I will append to these remarks is, to my mind, fully justified both as to the articles of which it prohibits exportation and the method of placing the embargo. House resolution 25 calls for an embargo, not only on arms and ammunition, but on foodstuffs, clothing, and all other products, and I will endeavor to demonstrate both the justice and feasibility of laying such an embargo as briefly as I can. The reasons for an embargo may be stated as follows:

First. The protection of the fair name of America in the eyes of the world as an honestly and sincerely neutral country, at peace with the world and playing no favorites in the desperate

game that is now devastating the manhood of Europe.

Second. The embargo is justifiable as a sure and definite method of protecting American trade and commerce from the unjust and unwarranted interference of any belligerent.

Third. The protection of the American public from the rapacious schemes of the speculative element in this country, which has used the enormous exportation of foodstuffs as a means to increase the cost of living to the consumer while giving practically no benefit of this increase to the producer.

Let us examine the first reason carefully. Is it neutral for this country to ship arms and ammunition to one belligerent when the other has absolutely no access to such shipments? There may be some difference of opinion as to this, but a careful study of the arguments advanced by the opponents of an embargo is proof sufficient to any fair-minded man that our present course is distinctly unneutral. At the beginning of the war the President of the United States issued a very strong proclamation exhorting the people of this country to strict neutrality. The last sentence of this proclamation reads as follows:

It is inconsistent with the spirit of neutrality for a neutral nation to make loans to a belligerent nation, for money is the worst of contrabands; it commands all other things.

Now, if it is wrong to make loans of money, is it not still worse to ship abroad the things that money will buy? Do you

suppose for one moment that if any of the belligerent nations had their choice they would prefer money to arms and ammunition? Do you suppose for one moment that an army which needs provisions and clothing and foodstuffs would prefer money to the material that it needs for its upkeep and sustenance? An argument made by several opponents of the embargo was that the central powers had been preparing for this war for many years and had accumulated a large stock of arms and ammunition, whereas the other parties to the war have not made such preparations, and, therefore, if we refused to sell to the parties who had not prepared we would be acting in an unneutral manner toward them and in favor of the country that had made such careful preparations. This argument is so absolutely and utterly childish that it seems hardly necessary to answer it.

As a matter of fact every big nation in Europe has been preparing for this death grapple for a quarter of a century. have not prepared in the same manner nor have they taken the same steps, but, to state the matter plainly and squarely, while Germany has admittedly been keeping her army keyed up to the highest stage of perfection, Russia and France have both been doing the same thing, and while England did not make any very great preparations as far as her army was concerned she has in all of these years been consistently developing her navy with the one purpose of being able to keep absolute control of the seas and protect her country from invasion. It is not our business nor is it for us to decide as to which of these two methods of preparation is the best or worst. We are not called upon nor is it our province to decide as to whether a battle fought on water is more legitimate than a battle fought on land; but when we condemn one nation for preparing its land forces and entirely overlook the fact that another nation carefully prepared its sea forces, we are guilty of what, to my mind, is downright sheer hypocrisy. It is admitted, even by the most violent opponents of an embargo on arms and ammunition, that it would be entirely wrong for us to fit out and equip a ship of war to sail from one of our ports and join either belligerent, but the same people who admit that this is wrong, knowing full well probably that this is the one thing that the allied countries do not need, find it perfectly correct to ship all the necessaries to arm, equip, and sustain a formidable land battery. is not the fault of the United States that England was not farseeing enough to prepare herself for battles on land as well as on sea. She had the resources, she had the equipment, she had the trained men and skilled mechanics to do the same thing that Germany has done. She did not do so and is now suffering the penalty, and we are called upon to help her out of a difficulty which is none of our concern whatsoever. I know that since the war started the President's proclamation of neutrality has been thrown to the four winds of heaven in this country. The last sentence of his proclamation, which I quoted a few moments ago, in reference to making loans has certainly been absolutely nullified. The English agents in this country were able publicly to float a large loan here, not so large as they intended, but sufficiently large to make it come well under the ban of the President's proclamation. Their agents were welcomed all over this country, they were wined and dined, and the very men who protest against the embargo on arms as being unneutral to England do not hesitate to indicate that, as the Hon, Joseph H. Choate said at a public dinner, "the allies could get anything they wanted in this country." Lord Northcliffe, the famous English editor, stated in his paper that the United States by sending England arms and ammunition to carry on the war was in fact an ally of theirs. An embargo on arms and ammunition would place us in a position in which we could con-sistently say that we were absolutely and fairly neutral to all belligerent countries, and until such embargo is placed we can neither hold nor maintain our proper neutrality.

Now, just a few words as to one reason the opponents of this measure give against an embargo. It is a base reason and a reason that I do not believe appeals to the great masses of American people, and that is, that it has brought about an era of prosperity and been the means of our country making a lot of money. I do not believe that American character has so far deteriorated that we can complacently look upon any amount of money, no matter how large it is, that is made at the expense of human bloodshed and misery. The gold that fills the coffers of the millionaire ammunition makers is crimson with the blood of Europe's manhood. It is stained with the tears of the widows and orphans it has helped to make; it can never bring any good fortune or good luck to the men who make it or to a people who sacrifice their feelings for humanity to their lust for greed, and, further, a careful investigation of this ammunition-making prosperity will, I think, reveal that it is a very lopsided and short-lived prosperity. Into whose hands does the plunder go? Is the farmer getting his share of it? Is the small

merchant getting his share of it? Is the mechanic getting his share of it? I think that it would not need very much investigation to find that the great mass of this ill-gotten gold goes to those who need it least and use it worst.

While thousands upon thousands of men were lying on the battle fields of Europe, killed by American shells, their families made desolate by the instruments of death manufactured in American factories, the Wall Street vendors of the blood-stained stocks were handing out dividends with a lavish hand, and to whom?

The New York City newspapers on the first day of this year gave graphic accounts of the New Year's Eve revelry, and the bacchanalian orgy in the high-life districts of the metropolis exceeded in extravagance, dissipation, and indecency any previous scene of the same sort even in that lively city. The enormous amounts of money spent were naively accounted for by the big profits made in war-stock speculation, so that it is easily seen who profits by this blood money—the idle, vicious, and degraded class, who are to-day not only the laughing stock of the world, but the shame and disgrace of American manhood and womanhood. A fitting end and a fitting place for such wealth to go to.

And now, Mr. Speaker, one word more as to this unholy traffic before I finish dealing with this phase of the embargo question. A great many Members of Congress and others in high places believe that the people at large are either indifferent or in favor of the traffic. They get their information from the subsidized Tory press and the flamboyant utterances of a few Anglomaniac millionaires and millionaire-owned college professors. These do not and never can represent the great mass of the people who to-day, as always, do their own thinking, and the petition signed by a million American women which was presented to Congress a short time ago is but one proof that millions of our countrymen believe this species of commerce to be morally wrong.

Now, let us consider a second reason for the placing of an embargo, and that is, to use it as an effectual weapon to protect American commerce from unwarranted and illegal interference on the high seas and in neutral countries, and also our trade in recognized noncontraband wares with the central powers.

Let us examine briefly our trade with the belligerent powers of central Europe in wares that are not contraband. study the various authorities on international law we find a preponderance of opinion in favor of the principle that foodstuffs and provisions can not be classed as contraband. In his admirable treatise on international law, Woolsey reviews this subject very carefully, and admits that some of the older writers as Grotius and Vattell, together with several modern English authorities—state that provisions may be at times considered con-traband when there is a prospect of reducing the enemy by This has been done a number of times in history by England, just as it is being done to-day; and in 1793, when England was at war with revolutionary France, she carried out this principle to an extreme of harshness. It is significant to recall that Denmark and the United States protested most emphatically, and that this country even in those young days never acquiesced in this principle, A British order in council in 1807 placing France and her colonies under the same restrictions as though they were in a state of blockade, was met promptly by this country laying a stringent embargo on all commerce, and in 1812 we went to war with England to sustain the principle that no order of council could affect the right of this country to trade where it chose

To-day not even the shadow of a right exists for the interference of England with our trade in certain articles, even if we trade directly with Germany, for the uncertain precedents and opinions as to contraband and neutral trade were crystallized in a declaration of the International Naval Conference, held in London, England, 1908-9, in which contraband, conditional contraband, and noncontraband were clearly defined.

England has violated these articles in so many ways that a simple list would take up more space than I can use, and I will only cite a few of her immoral evasions of these articles, and will cite only those of which there can be no possible question or doubt.

"Chapter 1. Article 2. In accordance with the declaration of Paris of 1856, a blockade in order to be binding must be effective; that is to say, it must be maintained by a force sufficient really to prevent access to the enemy coast line."

Everybody knows that England's so-called blockade of Germany is not effective and therefore not binding, and her order in council is therefore neither a legal document nor a legitimate bar to proper commerce with the central powers.

In article 24, chapter 2, we find a list of 14 classes of wares which may be treated as contraband under certain conditions, to wit, "if it is shown to be destined for the use of the armed forces or of a government department of an enemy State." (Art. 33.)

The first material enumerated in this list is foodstuffs, and we all know to what extent shipments of foodstuffs have been selzed by England on the pretense that they were destined for military use. I will, however, for the present content myself with just one flagrant case, and that is the threat to seize a cargo of milk destined for the babies of Germany. The cruel malignancy of this decision should be enough to condemn it, but it is a violation of her pledged word, a shameless repudiation of a legal contract, and a distinct breach of international law.

In articles 28 and 29, 19 classes of merchandise are mentioned, of which it is distinctly stated that they "may not be declared contraband of war."

I will only mention three of these, namely, cotton and textiles, rubber, and articles serving to aid the sick and wounded.

It is not necessary for me to mention the damage that has been done to our people by England's illegal attitude on cotton, for the able Senator from Georgia [Mr. Smith] and a number of my distinguished colleagues in the House from the South have gone into the cotton question very thoroughly, and we all know that a whole section of our country has been pushed to the verge of bankruptcy and that cotton planters, shippers, and merchants are to-day crying for relief from a situation utterly intolerable and absolutely untenable on the part of England.

Rubber is another article forbidden our commerce, and exporters of this material right here in our own country are arrogantly required to sign papers as to what they are going to do with wares which they buy with their own American dollars, so that in the case of rubber we are not only forbidden to sell but are approaching a status where we will soon be forbidden to buy.

The last case of noncontraband I will cite is supplies for the slck and wounded. It is hard to speak of this calmly, for ever since the organization of the Red Cross hospital supplies have been safe from interference, and it is the saddest phase of this horrible war to see a country professing the Christian faith not only break its plighted word to its fellow nations, but stultify its religion and indirectly revert to the savagery of barbarian times, when the wounded were killed and tortured.

I have stated a few facts as to illegal interference with our legitimate trade with certain belligerents, and I will now briefly review the most heinous phase of England's onslaught on our commerce with neutral nations.

American, Dutch, and Scandinavian ships trading entirely with neutral countries, carrying no absolute contraband, but engaged in delivering goods from this country to customers in neutral countries, have been seized and carried into English ports, their cargoes confiscated, and both owners of ships and merchandise compelled to wait while a dilatory prize court adjudicated their claims for damages, and in the meantime made it impossible for them to carry out their further contracts with old established trade.

United States mails—interference with which in this country would mean a heavy jail sentence—are stopped, opened, censored, and even seized; cablegrams in plain English about purely business matters between American and other neutral countries; reputable business firms have been held up without warrant or excuse; and American business men traveling on business to neutral countries have been harassed and molested in direct defiance of international law and established usage.

England has declared that the war will not end until she has crippled German trade forever. As to this I am not sure that it is any of our business what she does with Germany and apparently Germany can take care of herself, but I am sure of one thing and that is that the people of this country are not going to permit England or any other country to cripple our trade either forever or now. And that is exactly what her program is. It is an open secret among men who know that the very cargoes of cotton and grain that are seized en route to Scandinavian ports and paid for at rates fixed by English prize courts are later sold to those very countries by English agents.

Only recently an English judge indicated in a decision sustaining the seizure of an American cargo that "America should not be permitted to gain trade prestige as a result of war conditions," and I think it a fair assumption that the object of seizing American business mail is largely to acquire a knowledge of American business methods.

This is the reason I have included in my resolution a demand for an embargo on foodstuffs and other merchandise of a peaceful character. Adopt this resolution and it will be an effectual method of insuring our right to trade where we choose.

Enforce this resolution and the men will be out of the trenches in 60 days, and the hot blood that is running riot in the veins of all of Europe's men will cool down.

You will not do much damage to the American producer, for he is not getting the benefit of the high prices caused by the exportation of foodstuffs. The elevator men and the wheat-

pit traders are fattening on the grain profit while the farmer pays the freight. The stockyard millionaires are reaping a golden harvest on the hogs and steers the farmer had to feed, and the poor little American consumer as he totes up his grocery bill on Saturday night and notes that beef and pork, beans and potatoes are hitting the high places still, only a little more so, wonders where the prosperity is that he hears so much about, and then he wonders a little more why he has to pay war prices and war taxes while his country is at peace.

Let us pass this resolution and do three things at the same time, be truly and fairly neutral to the warring nations abroad, protect our trade from unjust aggression abroad, and protect our people from speculative rapacity at home.

House resolution 25.

House resolution 25.

Whereas a terrible war has been and is now going on in Europe; and Whereas thousands of lives have been sacrificed and lands ruined; and Whereas in the wake of this terrible war is left only poverty and devastation; and Whereas these belligerent forces have greatly depended upon goods exported from the United States to carry on this war; and Whereas much has been said pro and con in relation to our neutrality; and Whereas many notes have been exchanged between the powers engaged in war and the Secretary of State of the United States defining and classifying goods and articles that are considered as munitions and contraband of war, and discussing articles of conciliation and terms of treaties; and
Whereas there seems to be no near end to this war; Therefore be it

Resolved, That the President of the United States is bereby authorized, empowered, and directed to place an embargo on all articles and goods which in the strictest sense shall be classed as munitions and contraband of war

contraband of war

Resolved further, That the President of the United States shall remove such embargo as soon as the war is ended.

The purpose of this act is to aid in carrying out our policy of neutrality, and in cutting off the goods and articles which are helping to prolong the war it will in a large measure help in bringing about peace in Europe The purpose of this act is to add in carrying out on poincy of neutrality, and in cutting off the goods and articles which are helping to prolong the war it will in a large measure help in bringing about peace in Europe.

No part or parts of this act shall be construed as a hindrance to the good and meritorious work being done by the American and European Red Cross Society in caring for the sick and wounded in Europe.

The words "munition" and "contraband" shall be defined as including all articles of whatever description and kind as may be used in connection with warfare.

The following articles shall be included within the embargo:
First. Arms of all kinds, including arms for sporting purposes.
Second. Projectiles, charges, textiles, including cotton, cartridges of all kinds, and their distinctive component parts.

Third. Powder and explosives especially prepared for warfare.
Fourth. Gun mountings, limber boxes, limbers, military wagons, field forges, and their distinctive parts.

Fifth. Clothing and equipments of a military character.
Sixth. All kinds of barness of a distinctive military character.
Seventh. Saddle, draft, and pack animals suitable for use in war.
Elghth. Articles of camp equipment.

Ninth. Armor plate.

Tenth. Warships, including boats and their distinctive parts that can only be used in war.

Eleventh. Aeroplanes, balloons, airships, and aircrafts of all kinds, together with their accessories, and all articles recognizable as intended for use in connection with them.

Twelfth. Implements and apparatus designed exclusively for the manufacture of munitions of war or repair of arms or war materials on land or sea.

Thirteenth. All foodstuffs.

Fourteenth. Forage and grain for feeding animals.

Fifteenth. Clothing, fabrics for clothing, and boots and shoes suitable for use in war.

Sixteenth. Gold and silver, bullion, and paper money.

Seventeenth Webicles of all kinds available for use in war.

Fighteenth. Railway material, both fixed and rolling stock.

Nineteenth. Material for telegraphs, wi

phones.
Twentieth. Fuel and lubricants.
Twenty-first. Barbed wire and implements for fixing and cutting same.
Twenty-second. Horseshoes and implements for shoeing, saddlery and barness suitable for use in war.
Twenty-third. Field glasses, chronometers, and all kinds of nautical instruments.
Twenty-fourth. Brass, iron, pig iron, steel, and all kinds of minerals,
Twenty-fifth. Ingredients of explosive and all deadly and poisonous

Indian Appropriation Bill.

EXTENSION OF REMARKS

OF

HON. JOHN M. EVANS.

OF MONTANA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, May 12, 1916.

Mr. EVANS. Mr. Speaker, under leave granted me to extend my remarks in the Record I include the following statement made by me before the Committee on Indian Affairs:

STATEMENT MADE BEFORE HOUSE INDIAN COMMITTEE

Mr. Evans. In answer to that question, may I go ahead consecutively and state our position in this matter?

This reservation was opened by the act of 1904, but the appropriation for the reclamation of it began, I think, in 1908, and !

there has been about \$1,800,000 to \$2,000,000 appropriated. It has always been carried in the Indian bill. Every year there has been an appropriation of from \$100,000 to \$200,000 in every Indian appropriation bill that has gone through.

Two years ago there was a recommendation made by the Indian Office for \$100,000. I had then just come to Congress and was inexperienced in such matters. I did not attend any of the hearings, because I did not know you had such things. learned that the hearings had been held on the Indian appropriation bill and \$100,000 had been recommended. I went before the Indian Bureau and they told me they were perfectly willing to recommend \$250,000 or \$300,000 or some reasonable appropriation. Four hundred thousand dollars had been appropriated the year before, but they desired some change in the legislation, and for that reason they were not inclined to make a recommendation for a reasonable appropriation until they got some change in the legislation which is in the bill now. So they got very little appropriation that year—maybe \$200,000.

Mr. Carter. You are speaking now not of the Flathead Reservation?

Mr. Evans. Yes, sir; primarily. The next year we had practically the same condition of affairs, and we did not get a recommendation from the Indian Bureau for the appropriation for this work, because the Indian Bureau wanted the method of financing the project changed. They were not satisfied with the legislation on the subject and therefore hesitated to make a recommendation for the appropriation to go on with the work. The Montana delegation then went before the Secretary of the Interior, and the Secretary directed that a recommendation for \$500,000 be made, but this recommendation did not reach the Indian Committee until the bill had passed the House. In that interview the Secretary said, "You have expended a million and a half dollars on that project, and by appropriating \$100,000 a year it would take about 40 years to complete it, and out of \$100,000 we will get a benefit of about \$60,000, the rest of it being lost, due to difficulties in assembling and reassembling your outfit." He recommended \$500,000 last year, but after the bill had passed the House and gone to the Senate his recommendation was observed, and the Senate attached the amendment to the bill carrying the sum of \$500,000, but, of course, as you know, the Indian bill falled. Then we came back here again last fall and attempted to get a reasonable recommendation made at the proper time; and it was sent, as Mr. Meritt has told you, not to this committee but to the Appropriations Committee, on the theory that the Appropriations Committee was now handling reclamation projects, and that this was a reclamation project. I paid no special attention to it, because I knew the recommendation was made.

I have failed twice to get a recommendation made at the proper time, and I knew I had gotten a recommendation made at this time, and at the proper time I would take it up with Mr. Fitzgerald, which I did; but he just threw me and the appropriation out of the window, figuratively speaking. He said, "That does not belong here, and we are not going to take jurisdiction of it. It always carried on the Indian bill, and it ought to be on the Indian bill, and we are not going to have anything to do with it." So they would not have anything to do with it; and I myself went to the Senate and reported to the Senators what the situation was. Then the Secretary of the Interior made a recommendation of \$750,000, and therefore it was attached over there. I think it should have come to this committee. I do not think anybody should be particularly censured because it did not, but I think it should have come here; and I think if it had come here a reasonable appropriation would have been made by this committee.

Now, going back to the merits of the appropriation, the same thing applies in a greater or less degree to all of them.

The Flathead Reservation is a big basin more nearly representing a washbowl than anything I could think of, with the river coming in at one end and going out at the lower end. The Government conceived the notion of reclaiming all that land. It ran a large canal around the base of the mountain for a distance of some 30 miles, probably, touching all the streams that came down there.

Mr. Konor. Here is a map of it. I wonder if you could not illustrate by referring to this map [producing map].

Mr. Evans. On the east side of the map of the Flathead Reservation there is a canal, beginning at the south and running toward the north and around to the lake. I think that canal must be 30 miles long.

Mr. Konop. You mean this southern corner [indicating]

Mr. Evans. Yes; and running up there, and it gathers all the waters from there. Now, there are probably 150,000 acresleast 150,000 acres-of irrigable land on that reservation that will be covered by reclamation when completed; but a large portion of your money now expended has been put into what we call a main ditch. It was necessary to build a main ditch before the laterals could be built, therefore you have reclaimed ss land in proportion to the money expended than will be the case in the future. You have now gotten the large ditches built, and they are now building the laterals and putting the water on the ground, and for that reason only about 20 per cent of the land is under cultivation, while we have spent more than 20 per cent of the estimated cost of the project.

As to the reservation itself, I think if there is a reclamation project in America that will be a success it is the Flathead Reservation. It is in a basin, the altitude comparatively low, but it is hemmed in on all sides. They raised at the Flathead Reservation this year at least 1,500,000 bushels of wheat. We had an excessively wet year. I venture to say that 500,000 bushels of that wheat was raised on ground which will be covered by this irrigation system when we get through, but was not planted this year. The ground itself is so dry that it would not raise anything without water, ordinarily. However, it did this year after a dozen years' trial, but they planted those crops the year before. Some of them did not germinate at all. Some of them did not come out of the ground, but the spring rains came on, the grain planted the year before grew up and made a crop of 20 or 25 or 30 bushels to the acre.

Mr. Konop. Do they plant winter wheat?

Mr. Evans. The wheat was planted the spring before. On another lot of that acreage the wheat was planted the spring before. It grew to a height of 5 or 6 inches only, headed out, was scattering, and was not worth cutting. The men abandoned it for the time being. The elements beat the wheat out; it reseeded, and this year they had a fine crop. I mention this simply to show you that they can put water on that ground and raise the finest crops in the land, but without water they can not raise them. I will venture to say that there were 500,000 bushels of volunteer wheat raised there this year, and the men there who had been living in good two-story houses, who had been there three or four or five years, boarded up their houses and went away, and came back in June and July and harvested as good a crop of wheat as they had ever seen. But this was an exceptional year. We never saw in Montana before such a year, so far as water is concerned. We raised that sort of a crop, and it shows that a crop can be raised if we will put water on the

Mr. Norton. That shows what they can do in Montana if you

give them half a show.

Mr. Evans. Yes. Congress has neglected us, and the Montana delegation may be neglected, but God Almighty took care of

The proposition is a meritorious one. The only question now is whether as business men we are going on with it. We have spent practically \$2,000,000, and, as I suggested, if you appropriate \$100,000 or \$200,000 a year it will take 40 years to complete it, with great loss from what you have spent. A number of commissions have gone out there to look over the proposition, and all of them have advised that we go on with the work and complete it with all reasonable dispatch, as expeditiously as any business man would in any sort of business project. There was a commission appointed that made a report in December, 1914, covering only a page. It is by Mr. Ketchum, who was head of the Indian commission, I think; Mr. Abbott, and some others, and I should like, if I might, to incorporate a part of that, showing what the situation was, in my testimony.

and I should like, if I might, to incorporate a part of that, showing what the situation was, in my testimony.

[Excerpt from report upon the conditions on the Flathead Indian Reservation, by Rev. William H. Ketcham, member Board of Indian Commissioners, December, 1914.]

About \$1,374,000 have been expended for irrigation upon the Flathead Reservation Of this sum \$56,065 have been returned to individual Indians for labor on the project and for products purchased from them. Under completed canals there are 48,400 acres. Of this area 36,291 acres are Indian land. A few sales of inherited Indian lands under completed canals have been allotted to Indians 90,000 acres are Irrigable. Approximately one-half of the irrigable Indian land, therefore, is under completed canals. The project engineer of the Reclamation Service estimates that it will require 10 years to complete the Flathead project, with annual appropriations of \$500,000. Until this project is completed the Indians, who own approximately 40,000 acres of remaining Irrigable lands not under ditch, will suffer in common with the white settlers who have made filings on similar lands. Most of this land can not be farmed successfully without water. Approximately \$700,000 have been returned to the Government from the sale of surplus lands and timber on this reservation, which is about on-half the amount invested in completed canals, Approximately 12,000 acres of lands entered by white settlers are under the completed projects. Therefore approximately only \$400,000 out of the sum of \$1,400,000 expended in Irrigation on this reservation has been expended for the benefit of white entries. Since under existing law appropriations for irrigation on this reservation are relimbursable from the sale of water rights under the act of May 29, 1908 (35 Stat. L., 449), as well as from the sale of surplus land and timber on the reservation, it is evident that relimbursement to the Government could not be made from the sale of water rights under the act of May 29, 1908 (35 Stat.

lands. Therefore, under existing law, just in proportion as there is delay in completing the project there will be lacking returns from the sale of water rights, and the proceeds from the sale of surplus Indian lands and timber on the reservation alone will be drawn upon to reimburse the Government for the cost of construction. In other words, delay in completing the irrigation project on this reservation through small appropriations instead of relieving the Indian funds from an improper proportion of the burden of the cost results in increasing that burden.

Now, some questions were asked a moment ago by some of the gentlemen. I do not remember what they were, but I should be pleased if I might, so far as my knowledge and ability permit, answer any questions submitted by any member of the committee.

Mr. Campbell. What I would like to know is what proportion

of this ditch or this project is completed?

Mr. Evans. In 1914 this commission reported that 20.7 per cent of the project was completed, and I think approximately 25 per cent of it is completed now, but I do not think 25 per cent of the land is under irrigation.

Mr. CAMPBELL. How much of the land is under irrigation?

Mr. Evans. My recollection is that there might be irrigated land-just in a general way; I would not be absolutely accurate in these figures-I should say they irrigate from these projects from 15,000 to 20,000 acres of land. But with an expenditure of \$200,000 now you could put an equal amount of land under your irrigation systems, because you could use the big ditches that are built, and the water could be conducted to the laterals.

Mr. CAMPBELL. What is the relative benefit to the Indian and

to the white man?

Mr. Evans. The Indians own about one-half of the irrigable lands on the reservation. There are about 150,000 acres, and approximately 75,000 acres of it is Indian allotments, and an equal amount is owned by white men.

Mr. CAMPBELL. How are the white men required to reimburse the Indians or the Government for the use of this project?

Mr. Evans. At the present time, under present law, the provision was made that the proceeds of the sale of the Indian lands and their timber should be utilized by the Government to reclaim these lands, and that the white man should then pay so much an acre for water on his land and reimburse that fund. Now, there has been taken out of the Indians' funds, as I recall, about \$1,000,000 for the purpose of reclaiming those lands. other words, the white men who own land there now owe the Indians, through the Government, about a million dollars that the Indians have put in out of the assets of that reservation. A large amount of land was sold to begin with; men homesteaded it and paid from \$2 to \$7 an acre for the land initially. Then they sold the timber and some other resources, making about a million dollars or so that has come off from that reservation and that has gone into the Indian funds for this reclamation

Mr. CAMPBELL. Has it been used by the Indian Office without

appropriation by Congress?

Mr. Evans. Oh, no.

Mr. CAMPBELL. Has the Indian any security for this million

Mr. Evans. I rather doubt if he has.

Mr. Campbell. Probably he will always have a claim, then?

Mr. Evans. Well I hardly think so.

Mr. Campbell. Until Congress pays it. Don't you think Congress will ultimately be called upon to pay this money to the Indians?

Mr. Evans. No; I think not. Under the present law it is provided that the Indians shall bear their proportion of the cost of their land, and that the white man shall bear his proportion of the cost.

Mr. CAMPBELL. The white man is now a million dollars behind the Indian.

Mr. Evans. Because no lands have been yet paid for. No lands have yet been paid for because we have not gotten to the point where we could charge them, and they are to be paid in 20 annual installments.

Mr. Meritt. This proposed legislation would correct that evil. Mr. Evans. The legislation that the Indian Bureau is now asking for here in connection with this bill.

Mr. CAMPBELL. How will this bring this money back to the Indian fund?

Mr. Evans. As quick as the white men-as soon as the project completed and the white men pay into the Treasury of the United States the cost of the reclamation, the money will go into the Indian fund.

Mr. Campbell. What is there in the situation there that will bring that money back? The white man who has gone upon that land has probably paid for it, hasn't he?

Mr. Evans. Oh, no; that is where you are wrong. Mr. Campbell. Will it come out of the proceeds?

Mr. Evans. It will come out of the proceeds of the reclamation fund.

Mr. CAMPBELL. Arising from the further payments that will

naturally be made on the land?

Mr. Evans. Yes; he has no title to the land yet. They are waiting for their titles, and they can not get their titles until they pay \$30 or \$40 an acre for the land.

Mr. HAYDEN. Let me read the proposed legislation in here that

cures that. The amendment on page 49 says:

Provided further, That nothing contained in the act of May 29, 1908 (36 Stat. L., p. 444), shall be construed to exempt the purchaser of any Indian allotment purchased prior to the expiration of the trust period thereon from any charge for construction of the irrigation system incurred up to the time of such purchase, except such charges as shall have accrued and become due in accordance with the public notices herein provided for.

That is the security legislation you are putting in here to make it sure that any white man who buys land will have to pay

his share of the cost.

Mr. Evans. Yes; he will have to pay his share of the cost of reclamation. Any man who takes up the land from the Government must pay his share, and when it is all paid back into the Treasury an accounting will be balanced, and the Indian will have his money.

Mr. CAMPBELL. Under what theory is the Indian under obligations to primarily finance those irrigation projects up there,

where the benefit is half for the white people?

Mr. Evans. Of course I was not in Congress at that time. Mr. CAMPBELL. That is a question we will have to meet on the

Mr. Campella. That is a question we will have to heet of the floor of the House, and we might just as well meet it here.

Mr. Evans. As I suggested to you, it is a big basin, suitable only for grazing purposes unless it be reclaimed. The Indian lands as they originally stood were worth probably \$2 or \$2.50 an acre without any reclamation. When the land is reclaimed it is worth \$50 or \$60 an acre. It was the theory of the Government on this basis, if they would take this money and reclaim the land it would sell for two or three or four times as much as it would in its natural state; and it was upon that theory, as I understand it. I find here that the Government estimated that that reservation was worth about \$13,000,000-that is, the land and timber-and they were going to take about \$6,000,000 of it and invest it for the purpose of reclaiming and enhancing the value of the lands. Land that could have been bought for \$2 an acre, you could not buy for \$10 to-day, because the country is settled and they have built farms and little cities, and have started reclamation projects there, and the land still belongs to the Indians. There is a large quantity of that timberland that is much more valuable now than it was 10 years ago when this

Mr. Stout. And it was impossible, Mr. Campbell—that is, it was not at all practical—to irrigate the Indian land only, because the land was scattered all over, and you could not irrigate without irrigating it all.

Mr. Konop. Under the law as it now stands, is there any lien on each individual owner's land there, so that the title to the land will not vest until all the charges are paid?

Mr. Evans. Yes; there is more than a lien on it. the land remains in the Government of the United States. The title was in the Government of the United States, and under the law the settler went on there and paid the appraised value of the land without irrigation—\$2 to \$3 an acre. He paid that money, and the Government then gave him a certificate, "You are entitled to this land when you pay, in addition to what you now pay, the cost of the reclamation of that land." And the Government holds the title to it, and these men can not get And the title until they pay the cost of reclamation, and that is one of the complaints that those people are making, that you will not give them title, and will not reclaim the land so that they can get title, and consequently they say, "You are apparently going to hold this land always. Now, either abandon the proposition and let us get title or complete the project and let us pay our money and get our titles." The Government owns it now. No titles have passed.

Mr. Konop. Isn't the State doing anything in the way of

reclamation work?

Mr. Evans. No: I do not know of the State of Montana carry ing on any reclamation project. We have some that we call Cary projects up there, but not on Indian reservations, of course.

Mr. Norton. You have private irrigation projects, though?

Mr. Evans. Oh, yes; there are a number of private projects.
Mr. Stout. And they are all very successful, I will say.
Mr. Evans. And we have some Cary projects, where the Government has set aside certain bodies of land for the State of

Mr. Norton. Is this Flathead Reservation the region where they grow fruit?

Mr. Evans. Yes, sir; the Flathead Reservation, out of last year's crop produced by them, which was a very unusual thing, took a number of gold medals at the San Francisco fair, and some of those were taken by Indians. And when you mention the fruit proposition, the Flathead country and the Bitter Root country, which is contiguous to it, took all the fruit medals of the world at San Franciso.

Mr. Konor. That dark portion on the map here is irrigable land and irrigated land, both, isn't it?

Mr. Evans. Yes; but no great portion of that has yet gotten water on it.

Mr. Konor. What is this white portion?

Mr. Evans. The white is probably grazing land and timber land, and can not be reclaimed.

Mr. Konop. This white can not be reclaimed?

Mr. Evans. No; this is reclaimed or reclaimable lands.

Now, in addition to what I have suggested, there is in the upper portion of this valley of the Flathead Reservation, Flathead Lake, which is the largest body of fresh water west of the Great Lakes. That is a lake probably 40 miles long and averaging 5 wide. At the mouth of this lake there are some falls, and it is estimated that they can generate there—this is Indian property, also—it is estimated that they can generate there from 100,000 to 200,000 horsepower. They say it is the best water-power proposition outside of Niagara in America. The Government has spent about \$95,000 there on a tunnel for the purpose of starting to generate water power; and that project lies dormant for the lack of funds to go on with that or anything else. There isn't any question about there being ample water there, and there isn't any question about the productivity of the ground. The only question is whether the Government of the United States is going to let it lie idle or take 50 years to do something that a business man would do in 4 or 5 years.

Mr. HAYDEN. The figure stated by Mr. Meritt-\$30 an acre for the total construction cost of the project-is remarkably low. Are you satisfied that the work can be done for \$30 an acre?

Mr. Evans. It is my judgment, although I have not given the matter sufficient attention to say definitely, that that will cost those people about \$40 an acre.

Mr. HAYDEN. The average cost of other reclamation projects in this country is between \$60 and \$70.

Mr. Evans. Well, I have no idea it will cost \$60 or \$70, but I think it will cost \$40.

Mr. HAYDEN. That will still be remarkably low.

Mr. Carter. Does that mean putting water on it or leveling it off?

Mr. Evans. Constructing the reservoirs and doing everything to bring the water onto the land.

Mr. Konop. The water that comes to this canal comes from the mountains east of the Flathead Reservation?

Mr. Evans. A large portion of it.

Mr. Konop. Does the water through the canal flow south or north?

Mr. Evans. It flows north, toward the lake.

Now, they are preparing to put a dam across the lake, which will raise the lake 16 feet, and they will then have water enough to cover the whole State of Maryland to a depth of 4 or 5 feet from the surplus water in that lake.

Mr. Campbell. And that will be used for irrigation purposes?

Mr. Evans. Yes, sir. Mr. Campbell. What will it take to complete it?

Mr. Evans. I think that can be reasonably completed for about four and a half or five million dollars. But, I think, if you go on with your dam at the foot of the lake and build some other storage reservoirs, that they might have to build in the future, that it will cost six or seven million; and of course you will take in some extra land by doing so. But the principal thing that appears to me and to those people is that you have got a lot of water reasonably close to you, but you are not putting it on the land, and we think you should give us some appropriation to do that. The people have lost their crops there for five or six years. They have been there with the tacit understanding that the Government was going to put the water on. They have been waiting for you to do it; and I want to impress upon the committee that this is not a new item, and it belongs to the Indian bill. It appears to you, some of you, now that it was in the nature of an amendment, and so it is in the nature of amendment, but it belongs here and should have been here before; and if it had been here before the probabilities are there would not have been any question about it being a reasonable appropriation. I quite agree with Secretary Lane; if you are going to do anything do not spend \$100,000 and spend half of it buying horses and supplies and then sell them before the year is out because you do not know whether you will get any more appropriation, but appropriate enough to get something done.

Mr. Campbell. Is the water you refer to in this reservoir high enough to furnish water for all this land?

Mr. Evans. I do not think it would be high enough from the lake to cover all of it, but the Government officials were figuring on generating great power there and possibly pumping some of that water into a reservoir that lies 2 or 3 miles from there, already constructed, upon one of these ditches, and then distribute it from there. But there is ample water. They are pumping extensively in Montana, and doing it to a considerable degree of success where they do not have to pump more than 10 or 15 feet with electric power.

Mr. Campbell. They can generate electric power farther up

the lake?

Mr. Evans. You may generate power even below; generate it at the foot of the lake and run a wire up a mile or so above and pump water right out of the lake.

Mr. Konop. Is the Reclamation Bureau under the Secretary of

the Interior?

Mr. Evans. Yes.

Mr. HAYDEN. I want to ask some questions about certain provisions. You have first a provision for the Flathead Reservation for Montana, a little different from the amendment No. 71, which applies to the Fort Peck, and then there is still some difference between that and the Blackfeet Reservation.

Mr. Evans. I think there is some difference in the proposition, and before Mr. Meritt takes up the question I make this suggestion, that I have talked very largely about the Flathead, because I am better acquainted with that project, but the situation appeals to me as different in this, that on the Flathead Reservation the reservation has been opened and we have a lot of white men in there who homesteaded on this land and whose land is also being reclaimed, but on the Blackfeet proposition there are no white men. It is solely an Indian work. The work was done solely for the Indians. The money was expended out of their funds, and when the land is reclaimed it will belong to the Indians.

Agriculture Appropriation Bill.

EXTENSION OF REMARKS

HON. ANDREW J. VOLSTEAD,

OF MINNESOTA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, April 29, 1916.

Mr. VOLSTEAD. Mr. Speaker, not infrequently it is suggested in some quarters that this Government is treating the farmer as a favored class. The appropriations carried in the agricultural appropriation bill has been pointed to as evidence of extreme liberality; so has the large expense paid to maintain the rural-route system. Then, again, in opposing appropriations for agricultural sections attention has frequently been called to the large revenues collected by the Government from cities like New York and Chicago as compared with the smaller revenues received from agricultural States. Let me briefly call your attention to these suggestions. They are unfair and should not go unchallenged. It is true that the Agricultural appropriation bill carries quite a sum, but if you read it you will find that a very large part does not relate to agriculture at all and that many of the appropriations concerns the consumer rather than the producer. Money spent on agriculture does not profit the farmers alone. Every dollar wisely used for its development is spent in the interest of all our people. Agriculture is still the great basic industry upon which our prosperity chiefly depends.

The activities of the Agricultural Department in gathering information as to the best methods in the industry and in disseminating that information is only doing the kind of work done by every enlightened government. It could not be done by the individual farmer, but must be done by some agency, such as the Government. The farmer is not the only class of our citizens for which work of this kind is done. The consular system, upon which we spend millions every year, is engaged in finding for-eign markets for the products of this country, chiefly our manu-factured products. We are testing fuels and all sorts of material for the factory, prescribing all sorts of safety appliances to protect labor. Charting our coasts, maintaining lighthouses, building harbors, and deepening rivers for commerce, and in a thousand other ways striving to better the conditions of our chinch bug, suggesting remedies against smut, or the like. As people. To argue that work done to combat some disease that

threatens to destroy the beef industry is only in the interest of the farmer is about as reasonable as to contend that finding a market for our products is only in the interest of the factory. I have spent considerable time lately on a committee investigating the five great meat packers of this country. It has developed in these hearings that in recent years the business of feeding cattle for the market has been so uncertain in its result that a great many farmers have abandoned the business. threatens a shortage of meat and is of vital concern to the consumer no less than to the farmer. Increased production tends to lessen the price to the consumer often without any increase in profit to the farmer. A tendency to view things from the local and personal standpoint is manifest in the comparisons that have been made between the large receipts of income tax from some of the cities as against the smaller receipts from farm communities. Though it is true that but few farmers are asked to pay an income tax, it must not be imagined that they escape this tax. They pay their share. They pay it in the transportation charges upon the farm products they sell, in the price of the goods they buy, and in the interest upon the money they borrow. The Government may get the money from some person in New York who has collected it in Minnesota. The real burden seldom rests on the one who makes the payment to the Government, but upon the one who digs it from the soil or

earns it by his labor.
Under an industrial system that permits corporations to become national in their operations and whose headquarters must as a consequence be located at the great financial centers, the bulk of this tax will always be paid in a few cities. To com-plain of this as unfair ignores the source of the profits from which the tax is paid. The tax upon the stocks and bonds of railroads and other corporations is paid by the corporations in these cities no matter where their actual owners reside or from what source such owners derived the interest or divi-

dend from which the tax is collected.

Another illustration of this narrow view is found in the constant complaint made against the expense of the rural-route system. It is argued that the system does not pay. strange argument. The rural routes carry mail the same as the city carriers. They serve the convenience of the public, a convenience that modern conditions demand. If our people are not entitled to such conveniences, there is no excuse for having city letter carriers. Let persons in the cities walk a mile or more to the post office as the farmer in many instances has to do in going for his mail on his rural route. It is much behind the times to complain of the expense incident to the rural-route service. It has come to stay. Some years ago while in Europe I found a daily rural-route service in operation in Scotland. The carrier there delivered the mail, not in a tin box a mile off as is often done in this country but called at each farmhouse and delivered the mail in person. Away up in the mountains of Norway I also found a daily rural mail-delivery service. Can not this country afford to do as well. The people of our cities demand as of right to have their mail delivered at their doors, while those in the country have to beg to be grudgingly granted the poor privilege of the present rural-route system. This adthe poor privilege of the present rural-route system. ministration has repeatedly reminded the farmer of the expense, and upon that plea not only denied extension of the service where in all fairness it ought to have been granted, but they have in many places greatly crippled it. The routes should reach more people and afford better accommodations. They should be shortened instead of lengthened as has been done quite generally. Especially is this true because of the added burden imposed upon them by the parcel post. The people in the cities are as much interested in the parcel post as the farmers, and the Post Office Department should treat it liberally by affording rural routes a fair chance to care for it.

Instead of farmers being treated with special favor, the contrary may be urged. The chief appeal for public favor made by the party now in power was based upon its promise to reduce the cost of living. The slogan of its leaders has been free food products, which means free farm products. It set out to carry this policy into effect by passing the Canadian reciprocity treaty act, which offers to Canada a chance to sell all its farm products in our markets without paying any tariff while it retains a tariff upon nearly everything the farmer must buy, and since then it has passed the Underwood Tariff Act, which is based upon the same idea. Throughout these acts discrimi-nate very unfairly in favor of the cities and against the farmers. As prosperity or failure depends upon whether the American farmer can obtain a fair market for his product, it is not necessary to argue that this is a discrimination that can not be offset

or the Underwood tariff, may not seriously affect us, but we all hope that this war will soon end, when the effect of these discriminations will become apparent. We are all interested in building up this country, and it can only be done by working No class should be specially favored or discriminated against. At this time everybody is talking military preparedness. Industrial preparedness is as essential a part of military preparedness as guns. If Germany had not carefully protected her agriculture she might have fallen an easy victim in this war, but her statesmen foresaw the necessity of fostering that industry and this contest has clearly proven their wisdom.

Woman Suffrage.

EXTENSION OF REMARKS

HON. LINDLEY H. HADLEY,

OF WASHINGTON,

IN THE HOUSE OF REPRESENTATIVES,

Friday, May 12, 1916.

Mr. HADLEY. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD, I include a short communication forwarded by a mass meeting of the citizens of the city of Bellingham, Wash.

The communication is as follows:

RESOLUTIONS UNANIMOUSLY PASSED AT A MASS MEETING OF 500 CITIZENS OF BELLINGHAM, WASH.

Be it resolved. That this mass meeting of men and women, citizens of Bellingham, Wash., assembled May 2, 1916, demand that the Judiciary Committee of the House of Representatives give an immediate favorable report to the Susan B. Anthony Federal suffrage amendment, so that our Representatives in Congress may vote upon it during the

so that our Representatives in Congress may vote upon it surely present session.

Be it further resolved, That we make this demand because we hold the administration responsible for the passage of this bill; and we urge our Representatives in the House to vote for it.

Be it fundly resolved, That copies of this resolution be forwarded to the President of the United States, the administration leaders in the Senate and in the House, the members of the House Judiciary Committee, and the members of the Washington congressional delegation, with the request that it be read into the Congressional Record by Senator Jones and Congressman Habley.

CLINTON W. HOWARD, Chairman.

Rural Credit.

EXTENSION OF REMARKS

HON. FRANK PARK. OF GEORGIA,

IN THE HOUSE OF REPRESENTATIVES.

Friday, May 12, 1916.

Mr. PARK. Mr. Speaker, after such time as I have been able to devote to the study of Senate bill No. 2986 and the House substitute I have reached the conclusion that this bill will not accomplish what is earnestly desired by the farmers and especially in the Southern States.

It has been ascertained by expert investigation, through the legislative committee of the Farmers' Educational and Cooperative Union, that a farmer can not borrow money at a greater rate of interest than 5½ per cent on long-time loans and repay the principal and interest and live. If this be true, then the bill providing a rate of not over 6 per cent makes it possible that he will be charged at least one-half of 1 per cent more than he can pay. It is probably true, also, that other incidental expenses, as attorney's and appraiser's fees may increase the rate on small loans to as high as 7 per cent. In addition, the applicant must buy farm-loan bonds with \$5 out of every \$100 he obtains from the land bank.

If my analysis be not at fault, and the rate shall be 7 per cent, and he can not berrow and live on money at a rate higher than 54 per cent, then there can be little hope for the successful operation of the proposed law in the Southern States.

We have to-day the richest country in the world. more currency and funds than any other country. At the same time, all other countries that have enacted a rural-credit system are loaning their farmers money at 5 per cent and less. This bill ought not to be framed for the purpose of making the Government absolutely safe for the amount of money invested in rural-credit associations, for a time at least. There should

be some subsidy for a time to the oppressed-debtor class of farmers and tenant farmers of our country, even though the Government should lose \$5,000,000 yearly by guaranteeing payment of loans when not paid promptly by the borrowers. It appeals to me as nothing but just for the Government to pay it. if necessary, to enable those struggling under heavy burdens to establish agriculture upon a substantial basis and to make the calling of the farmer pleasant as well as profitable to him. What more inviting security is there than security based upon agricultural lands? I fall to see any substantial reason why the Government should lose a dollar by guaranteeing payment of loans and interest based upon 60 per cent valuation of agricultural lands. Should the Government guarantee the bonds based upon mortgages on farm lands, capital would be encouraged to invest in farm-loan bonds, and would tend, by underbidding, to lower the rate of interest to the farmer, and he could obtain his money, as do those in other countries, at from 3½ to 4½ per cent. On this basis he can live and thrive; but he could hardly meet the conditions imposed by a 6 per cent loan and the incidental expenses that go with it.

I shall vote reluctantly for the bill, because I am doubtful of the practical workings of it. I shall vote for it, however, for the reason that it appears to be the best we can get from Congress at this time. It may prove an entering wedge for further legislation, and I apprehend and hope that ultimately another Congress more favorably inclined to assist agriculture may amend and revise this act so that it will really be of great substantial

benefit.

There has been so much false hope in the past by the great farming class; they have been told so many times of enterprises and of legislation that were for their benefit and which proved futile, that a great mass of them view with suspicion efforts to do something for them which the offerer claims will be of benefit.

There is scarcely one person in a hundred who can take this bill, as amended, and after reading it several times, comprehend intelligently the working of the machinery proposed to be put into operation. This fact alone will arouse suspicion, and many will prefer to remain in their present state and risk financial ruin rather than embark upon an enterprise of which they know little, and for which they must depend for its operation upon strangers.

I ask the question, with all courtesy and respect, can not the great Banking and Currency Committee of the House and the Finance Committee of the Senate formulate legislation in a more liberal attitude toward the farming class that will encourage them to renewed activities and lend new hope to the millions now cast down by debt and circumstances which they can not control?

The farmers of the United States are watching with alert interest every move of this Congress for rural-credit legislation. If they fail to get what is justly due, the country will hear from them in November, and the Democratic Party will be held strictly to account for any failure toward them.

The payment by the Government, if such should become necessary, in the way of a subsidy of as much as \$10,000,000 a year to help 12,000,000 farmers to establish agriculture on a paying and profitable basis would be well invested and would return

like bread cast upon the waters.

Above all there is a class that grows poorer and poorer and more dependent every year regardless of their efforts, and that is the tenant-farmer class. Under present conditions landowners are becoming tenants and tenants are becoming sub-We should seek to provide means by which tenants may become landowners and earn a living for themselves and their families and pay their debts like other people and be in fact and deed freemen in the sense which is meant by that term.

It matters not how strong his character and his will, a man can not labor and suffer year after year, failing continuously in the results which he seeks and be contented and hold up his They are our We owe everything to the farming class. dependence in time of peace and they are the bulwark of the Nation in time of war. What the farmers desire and expect is farm loans at a low rate of interest for long periods of time. The form and method of legislation is immaterial to them. What they want and expect is results along this line and anything less will be a disappointment, and they will resent it in

November in the only practical way available.

• Mr. Speaker, there is a feature of the bill that extends hope, to my mind, which is a new departure and may mean much more than appears at first consideration of the measure. This is the establishment of bonds based on land mortgages on a commercial footing with State, municipal, railroad, steel, and other classes of bonds. I have little doubt that in the markets of the country farm-loan bonds will not only hold their own but will sur-

pass the others. If they should sell in the open market at par, or thereabouts, at a rate of interest as low as 3 or 31 per cent, then the farmer will be assured of cheaper money, and the borrowing farmer will come into his own. Investors of capital and those representing them are in favor of a high rate of interest on loans made to farmers. The borrowers—the farming class—want the lowest rate possible, and if this bill shall provide good farm-loan bonds these bonds can certainly take care of themselves in the markets of the country, and, in the end, this will be the crucial test-whether or not these bonds can compete with other commercial bonds. The farm-loan bonds, based upon a stable basis of farm lands of the country, should fluctuate scarcely at all and should and will meet and compete most successfully with all other classes of bonds on the market, which will be to the ultimate benefit and good of the farming class who need money for their farming enterprises.

The Philippines.

EXTENSION OF REMARKS

HON. FINIS J. GARRETT,

OF TENNESSEE,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, May 13, 1916.

Mr. GARRETT. Mr. Speaker, at a meeting of the Industrial Club of Chicago, Ill., held on Saturday evening, February 28, 1914, Hon. Jacob M. Dickinson, Secretary of War during a part of the administration of President Taft, delivered an address upon the subject of the Philippines and the relation of the United States thereto. It was a very illuminating discussion by one of the most able men of our country. During his service as Secretary of War he personally visited the Philippines and made a searching study of conditions there. He has viewed the question from every angle-studied it from every standpoint. I communicated with him recently, asking that he send me a copy of the address with permission to insert it in the Record, and I obtained leave of the House to insert it when received.

Under this leave so granted I include a letter received from Mr. Dickinson and the address referred to:

CHICAGO, May 11, 1916.

Hon. Finis J. Garrett.

House of Representatives, Washington, D. C.

My Dear Mr. Garrett: In compliance with your request received to-day, I take pleasure in inclosing herewith a copy of the address delivered by me on the 28th of February, 1914, upon the Philippines. The lapse of time has not chanced my conviction that we should free ourselves of the Philippines on the following grounds:

First. We have no right to hold them in subjection as a conquered people. Our Nation is not charged with the duty of enforcing by arms a propaganda of republican form of government.

Second. Holding them is a constant source of weakness in our international relations, as they are liable to get us into trouble and are indefensible.

fensible.

Third. They will not be any more ready for independent government in 25 or 50 years than they are new.

Yours, very truly,

J. M. Dickinson.

ADDRESS DELIVERED BY THE HON. JACOB M. DICKINSON AT THE BANQUET OF THE INDUSTRIAL CLUB OF CHICAGO, CONGRESS HOTEL, CHICAGO, SATURDAY EVENING, FEBRUARY 28, 1914.

I, for one, am estopped from criticism of the president's complimentary introduction, however others may feel about it. I hope, however, that it is not an obituary, because I want to live for some time, in order to prove myself a very live and loyal citizen of Chicago, and in that way, to some extent, manifest my appreciation of the distinguished honor which you are conferring upon me.

I have chosen for discussion to-night the question of the Philippines. I have had some misgivings since I took that subject, because so much has been written and so much has been said I fear that to many of you it may seem trite; and I have the more reason to entertain a misgiving, as I understand that Commissioner Worcester is also to speak on this subject next week. He is a man who has been in the Philippines from a time antedating American occupation, who knows probably more about them than any other man, who has been among the wild tribes and knows their manners and customs, and has been identified with the development of the Philippines more than any other one man, having served upon both commissions. Besides, he has written a most illuminating and instructive book, which was recently given to the public. If any are present who have read that book, I shall crave their always been maintained. It is useless in discussing this question

patience in listening to me, because much that I am to say will necessarily travel over the same ground and treat of the same

On the last night of April, 1898, I was a visitor at the house of then Justice, now Chief Justice, White, of the Supreme Court of the United States. Coming in rather late, I found him very much agitated. He said, "You met Gen. Miles as you were coming upstairs?" I said, "I met a gentleman, but did not recognize him on the stairway." "Well," he said, "it was Gen. Miles, and I am very much disturbed. He said that we haven't sufficient smokeless powder for our coast defense, and I am looking with great apprehension for some great catastrophe." I said, "Catastrophe, in what way, Mr. Justice?" "In Manila," he said. I said, "Why in Manila?" He replied, "When Dewey left here I was commiserating him that he was going so far from the seat of war. He said, 'No; you are mistaken; I will fight the first battle of the war, and will take Manila before breakfast." The next morning early I heard a tremendous rapping at my door. I thought perhaps the house was on fire and rose with great alarm. There was the justice with a paper, and he cried: "Read this paper. Dewey has just fought a battle at Manila and has destroyed the Spanish fleet." Neither of us had looked for such a quick fulfillment of that prediction.

That event launched the United States into a new sea of responsibility, weakening our national defense and introducing us into a form of provincial government which was entirely foreign to the nature of our institutions and the principles upon which our Revolution had been inaugurated and our Government had always been conducted, and from that event has sprung our greatest source of national weakness, for the holding of the Philippines will always be a national menace. They are indefensible against any strong oriental power; they have a coast line which is greater than that of our entire North American coast. It is true that we have fortified Corregidor Island, at the mouth of Manila Bay; but if we should be attacked it would be necessary for our soldiers to seek refuge there, and the contest would be fought out on the sea.

If we should there be successful, of course we could reestablish ourselves in the islands; but if we failed, then it would be only a question of time when any garrison in Corregidor would probably be overcome, for just off Corregidor Island are the Merivales Mountains, which are higher than that island, and there are points to which heavy guns could be in time transported, and they would make Corregidor entirely untenable. Their occupancy doubtless had a great influence on our incurring the expense of building the Panama Canal. It has been a potent cause for increasing our naval expenditures, strengthening our Army, and heavily fortifying and garrisoning Hawaii. Government plunged into a war with a foreign power in order to wrest Cuba from a tyrannical grasp, and establish there an independent Government, and at the same time; as a result of that war, undertaken for the purpose of freeing Cuba, we have established and maintained up to this time, against their will, by force of arms, a control over another people larger in population than that of Cuba. The Philippines are not only a purchased but a conquered people.

It has been said, in connection with our purchase of the Philippines, that we bought Louisiana, Florida, and a portion of Texas, but there is no similarity at all between those cases and the Philippines. It would have been intolerable for the people of the United States to permit any foreign power to hold the mouth of the Mississippi River; it would also have been intolerable in time, looking to the future integrity of this country, to permit the maintenance by any foreign power of a foothold in Florida. These Territories, including Texas, were contiguous to our national boundary, and were taken over with the purpose of finally incorporating them as States into our National Government. As to the Philippines, the question is entirely different. The remoteness and the differences in race make their absorption into our national life undesirable; and then we erected a perpetual bar against ourselves by declaring, from the very inception of our occupation, and always maintaining, that the Philippines are to be held for the Filipinos and for the purpose of establishing them in an independent government. We occupy the attitude of a missionary government carrying on a propaganda for establishing a republican form of government in a foreign country, and setting up and maintaing it by force of

I maintain that the American people have no mission for establishing and forcing upon another people a government against their will. It is contrary to the principles of American to inquire whether or not Admiral Dewey or any representative of our Government made a direct or indirect promise to Aguinaldo that independence would be given to that people; it is also foreign to the question whether or not the Filipinos, as has been asserted, were our allies in our contest with the Spanish forces. The fact remains, divesting it of all these considerations, that we have by force of arms set up and maintained, against the will of that people, a government which conforms to our ideas of what we think would be most appropriate for their development.

In their protest they quote from Mr. Webster, who said:

Gently as the yeke of a foreign government may rest, the happiness of a subject people is impossible.

And they say:

The Filipino people are daily more unhappy because of the incompatibility of any colonial government to make and give happiness to a subject people.

They believe that a people have a right to prefer wretchedness self-inflicted to happiness and prosperity forced upon them by a foreign nower.

I only refer to these matters incidentally and by way of historic review, and not as reasons for granting immediate independence to the Filipino people. A wrong may become so inveterate that rights pevertheless may spring up under it and the original question of right may become largely academic and subordinated to new obligations. Rights and conditions have sprung up between us and the Filipino people which obscure the discussion of the fundamental principles upon which we entered into that country. To illustrate, take the question of slavery. We all know how that was introduced into this country, how constitutional rights in respect to it were established, and how, out of it, grew a civil war which inflicted upon us the greatest woe that ever came to our Nation. It may be that, in the development of time, out of the original wrong in respect to the Filipino people, there may be an aftermath which the American people will bitterly regret.

The attitude that we have assumed toward them and the outside world has brought about obligations which must be dealt with in considering the question of independence. We often hear of our treaty obligations in a general and vague way, but, as a matter of fact, the only treaty obligations that we entered into were that Spanish ships and merchandise for a period of 10 years should be admitted into the Philippine ports upon the same conditions as American ships and merchandise, and that there should be protection of life and property. The 10-year feature of the treaty has already elapsed. The question of protection of life and property was merely a declaration of principles of international law universally recognized, and there can not grow out of that feature of the treaty any obligation upon the American people, either in respect to Spain or other nations, to maintain indefinitely their supremacy in those lands. We have encouraged investments by foreigners and our own people in that country; we have encouraged the building of railroads, the expenditure of millions of dollars; and there has been a constant, though not a very rapid, influx of foreign capital, largely based upon the conditions of stability that seemed to be assured by American occupation. In any steps that may be taken in respect to severing our relations with the Philippines we can not be disregardful of these conditions, and there must be a wise and just policy in respect to those investments whenever the time comes that we have to deal with that question. These conditions make immediate in-dependence, as demanded by the Filipinos, impossible.

dependence, as demanded by the Filipinos, impossible.

I was addressed frequently by the Filipinos in public and the cry, constantly and insistently, was that they wanted immediate independence. "Well," I would say to them, "by 'immediate' you mean right now? Do you mean you want the American people to get up and go away at once?" They would say "yes" to that. I would reply, "However insistent you may be, immediate independence is chimerical; there is no possibility of any such thing." To show how little the nature of our Covernment and the functions of its officials are appropriated. Government and the functions of its officials are comprehended, many seemed to think when I came there as Secretary of War that by virtue of that office I held in the hollow of my hand the question of immediate Philippine independence. This view

was voiced by a part of the press.

You are interested in knowing what the American people have accomplished in the Philippines in the development of the country and the preparation of the people along the lines of assuming the obligations of an independent Government, not go into details in all of these matters. The fundamental idea, as expressed by Mr. McKinley in his letter of instructions to the first commission-you will remember that there were two commissions, one appointed for the purpose of looking over the situation and making recommendations, of which Admiral Dewey

and Mr. Worcester were members, and another, headed by Mr. Taft, which organized the civil government. structions to the first commission President McKinley said:

In all the forms of government and administrative provisions which they are authorized to prescribe the commission should bear in mind that the government which they are establishing is designed, not for our satisfaction or for the expressions of our theoretical views, but for the happiness, peace, and prosperity of the people of the Philippine Islands.

From that day to this every declaration made by everyone who was authorized in any way to speak in behalf of the United States has been to the effect that the Philippines were held for the purpose of developing them in self-government and establishing them as an independent people. The present status shows that the American people have been constant, not only in their desire to fulfill, but in the execution of this purpose. trol of all the municipal governments throughout the islands. except in financial affairs, is in the hands of the Filipinos. In the Provinces the majority of the boards is elected by the people. In the insular government the executive officers are The commission, which is composed of nine members, consisted for a long time, and until recently, of four Filipinos and five Americans. I will refer to that later, because that majority has been reversed, and this has given cause for a great deal of question and alarm and criticism of the present administration. The attorney general for years has been a Filipino. The Philippine Assembly, which is the Lower House, is elected by the so-called Christian people. It has no jurisdiction over the wild tribes in the northern part of Luzon nor over the Moro Provinces, which are inhabited, with the exception of about 50.000 Filipinos, by a different race, who follow the Mohammedan faith. The justice of peace courts are filled by Filipinos. One-half of the judges of the first instance are Filipinos, and of the seven supreme court judges three are Filipinos.

The Filipinization of the service has gone steadily on. Of course at the beginning it was necessary, as the Filipinos were untrained for the administration of office, to fill almost entirely all of the offices by Americans. In 1903 there were 2.777 Americans and 2.697 Filipinos; in 1912 there were 2.680 Americans and 6.033 Filipinos, showing that it has been the constant policy, as rapidly as they fitted themselves for discharging these duties, to prefer the Filipinos over the Americans, all other things being

equal.

The effect of the American administration has been shown in the increase of exports and imports. The exports under the Spanish administration in 1894 were \$16,500,000; in 1912 it had increased to \$54.784.738. The total imports in 1899, when the Americans took charge, were \$19,000.000 in round numbers. In 1912 they were, in round numbers, \$61,000,000. The percentage from the United States increased from 7 per cent to 39 per cent. In 1909 there was partial free trade between the United States and the Philippines, and now there is entirely free trade. wrongly suppose that the civil government of the Filipinos is a burden upon the American people. The cost of the civil government is borne by the Filipinos themselves. It costs us more to maintain our Army there than it does here, and our pension rolls are constantly increased on account of disabilities incurred from service in the Tropics, but the only salaries we pay to Filipinos are those of the two resident Delegates of the Filipinos who have seats in Congress and are allowed to speak but not to vote.

When we took possession it was one of the most unhealthy countries in the world. Cholera, bubonic plague, smallpox, leprosy, and amebic diseases flourished unchecked. was spread all over the islands. Those afflicted were concealed in the houses and by their families. During the cholera of 1888 and 1889 in Manila there were 1,000 deaths a day. Now cholera has been practically eliminated, very little of it existing anywhere in the islands, and that being subject to control. smallpox had to its credit 40,000 deaths a year prior to our occupation. Last year there were only a few hundred cases in the entire islands.

In 1907 not a single death was reported from smallpox in seven Provinces, where formerly there had been approximately 6.000 deaths annually. There was no such thing as hospitals, no such thing as boards of health, and no scientific surgery and medical treatment. Now there are 300 boards of health, and in the city of Manila is one of the most advanced hospitals in the world. It is not as large, but in all its equipments and appointments it is equal to any hospital in our first-class cities. In the southern Provinces a hospital equal in character to that in Manila has been established. The bubonic plague has been completely exterminated in Manila. Formerly it was a plague spot for that disease. Not a case originating there has been reported since 1906. Great suffering has been caused by rinderpest, which affected the caribao, recently made famous by a dinner in Wash-

ington. That is the beast of burden in the islands, and the main source of all agricultural activities. The bacillus has been discovered, an effective remedy secured, and the people have been delivered from an intolerable burden. Leprosy has been warred upon to the extent that all the lepers have been assembled in one island, the island of Culion. They have been taken out of their families and secregated and of course reveal and of course reveal. their families and segregated, and of course never expect to return to their families again. The islands have been freed from the constant threat of this most loathsome disease. The condition of the sufferers has been made comfortable, and they are as happy as those condemned to exile and death can be. A great source of death was from the water supply, but under the administration of the American Government artesian wells have been dug all over the islands. In 1912 there were 680, and that has greatly reduced the death roll. There have been established training schools for nurses, who are educated up to the same standard as in this country and are sent over the islands, and are constantly alleviating the sufferings of those people. infant mortality, which was frightful, has been enormously reduced. The weather bureau is another of the practical things introduced by the American people. The constabulary, composed almost entirely of Filipinos, Moros, and some of the wild tribes, is a most efficient body. They are good soldiers and are of invaluable aid to the health department in its administrative work. The cost of maintaining a native soldier is about 10 cents a day, as compared with 50 cents a day for the American soldiers. Under the leadership of American officers, who have control of them, they are a very effective branch of the service and would be reliable in a foreign war.

Roads have been built all over the islands, some as fine as any in this country. The automobile roads there will compare favorably with automobile roads in any other part of the world. In June, 1912, there were 1,780 kilometers of first-class roads, 2,159 second-class, and 3,216 of third-class.

A postal bank has been established, which in 1912 had 35,802 depositors. There are telegraph and telephone systems. The Coast and Geodetic Survey is carrying on elaborate and useful There are telegraph and telephone systems. The work. When we took possession of those islands there were 120 miles of railroads in the island. Now there are two independent companies, and the railroad mileage has been increased so that since the American occupation 774 kilometers have been built, and there are under contract for construction 586 kilo-

Before our occupation of the islands education was poor, being done by private schools. There were no public schools. The first great step in that direction was to send 1,000 teachers there from the United States. Over 3,000,000 of children in the Philippines have had instruction in the English language. The Spanish language was never spoken to any great extent. Probably not over 10 per cent of Filipinos, at the most, spoke the Spanish language. The others spoke dialects, there being some 16 different dialects in the island of Luzon. They had no national language, no national literature, and none of those characteristics which bind people together and make them cooperate with a common purpose and a common thought of national development. Now there are 700 American teachers, 1,000 insular Filipino teachers, and 7,500 Filipino municipal

In 1902-3 there was a monthly enrollment of 150,000 pupils, and in 1911-12 there were 429,000. Thirteen trade schools are maintained. There are 3,000 school gardens and 83 school nurseries. During 1911-12 school children planted 363,183 trees.

Five school farms are operated.

Athletics have been developed in the schools, and baseball and basketball are popular. This has done a great deal for the health of the people, and has brought together in new rivalry the wild tribes which formerly only met in warfare, and is doing very much toward promoting an amicable association. There is one experiment in the Philippines which struck me

as one of the most remarkable manifestations I have ever seen, and that is on the island of Palawan, almost the extreme island in the direction of Borneo. There is a place called Iwahig, where a penal colony has been established. Those prisoners who have attained a certain degree of good conduct in the peni-tentiary in Manila are sent to the penal colony, where they have a government and administration of their own. There is a white superintendent, who guides and directs them, but with that exception the whole administration of this penal colony is under the control of the prisoners themselves. They administer punishment and control their affairs, and it is a wonderful success. You might say it is a manifestation of a capacity for self-government, but, as they got their training in a peni-tentiary, we can hardly make that illustration apply to the islands as an argument for general fitness for independence. The superintendent told me that when he rode over the island

he never carried a weapon and travels by night and day. He had three servants in his house all of whom were convicted murderers. One of them had charge of his children. The engineer of the boat we went up on was a convicted murderer.

Great constructive statesmanship and ability were exhibited by the commission presided over by Mr. Taft in establishing in a country so far from our own, so different in traditions, governmental ideas, and languages, in the midst of the chaos incident to a foreign and civil war, a government which has proceeded so consistently and specestfully along all lines of proceeded so consistently and successfully along all lines of development, and which has responded so well to the needs of that people. The time will come when the publicists will give to them the credit which is their due. In the hurly-burly of affairs and the kaleidoscopic way in which things pass before our vision, we have never stopped long enough to give to these our vision, we have never stopped long enough to give to these men the credit that is due to them for the inestimable services which they rendered. No government that I know anything about has ever been more cleanly conducted or more free from scandal. [Applause.] When I was in the Philippines, of course, it was expected that as long as I would be with the Americans and American officials, the Filipinos would hold themselves clear and that they would investigate that we come themselves aloof, and that they would imagine that my ears would only be open to American talk and American representations. To get the other side, I went to Filipino houses; I became their guest, and no Americans were present. I was at the house of Mr. Osmenya, the speaker of the house, the foremost representative of the Filipinos in their demand for independence. I was a guest, also, at the house of Mr. Legarda, one of the resident delegates. I saw privately all those who wanted to come and talk to me. They made complaints, most of them, however, of a minor character. I was careful to critically question them in regard to the integrity of the Government and the character of the administration, and I never heard a charge brought against our American administration, of any peculation in office, or any graft, or any dishonesty in government. The American people can well be proud of this illustration that they are giving to the world of their ability, at least away from home, to conduct an honest government. [Applause.] I do not think that in any State or any city of this Union there is a cleaner or more effective administration than we have given in the Philippines. We have had a very high class of men there, such men as Taft, Wright, Smith, Forbes, Worcester, Carpenter, and many others, men of great ability and integrity, who were devoted to the cause and who felt that they were consecrating themselves to the maintenance of the justice and honor of the American people. I have given you the barest epitome of what we have done and what we are doing for Philippine progress and training for self-government. There is nothing which appertains to the material, physical, economical, financial, and intellectual welfare of the people which has been neglected. Every legitimate field of governmental activity is exploited.

As to Philippine independence, there are two divergent views and a sharp line of cleavage that we must consider whenever that question is presented. All political parties of the Filipinos, no matter what they may denominate themselves, say that they want immediate independence. That is voiced in the news-papers, in public speeches, and in everything that takes on any public expression. However, if you talk to them alone, many Filipinos who have business and investments, though they will make speeches and clamor for independence, will tell you privately that when the Americans move away they want to go also, because they can foresee what will take place. will not voice those sentiments publicly. There is a great difference in the conditions which are deemed to be essential for

Philippine independence.

Mr. Taft has declared the position, we might say, of the Republican Party in regard to what is considered as necessary as foundation and what conditions precedent must be fulfilled in order that we may give the Philippines independence. In a speech which he made in Manila in 1905, Mr. Taft said:

Referring to the American people-

lieve that they have become the trustees and protectors of the whole Filipino people.

Now, I call your attention here to the distinction between the whole Filipino people and the opposing idea, which deals largely with a governing class. He proceeds:

Not alone of the 8 or 10 per cent who speak Spanish, not alone of the smaller percentage who may be described as the educated part of the people, but of the whole Christian Filipino people and of the whole non-Christian Filipino people and of the whole non-Christian Filipino people and that they can not discharge this trust without a due regard to the rights of all their wards; and that they must be especially careful to observe and protect the rights of the uneducated and the poor of their wards who by reason of circumstances are unable to speak for or protect themselves. Enfoying, as

they do, a government of free institutions, a government of liberty regulated by law, a republican form of government, resting in its last analysis upon an intelligent public opinion, they do not think that their duty to the whole Filipino people would be discharged without preparing that people to maintain a stable, popular government in which shall be secured the civil liberty of all. They do not conceive that they have the right to relieve themselves of the burden of wardship or guardianship of this whole people by attempting to assign the burden of government to a small part thereof, claiming to be the educated part of that people, however confident that educated portion may be of its ability to carry on a government for the Filipino people.

And in the same speech he said:

All that can be asserted is that the policy which has several times been authoritatively stated that this Filipino government shall be carried on solely for the benefit of the Filipino people, that self-government shall be extended to the Filipino people as rapidly as they show themselves fitted to assume and exercise it, must be pursued consistently by the people of the United States, or else they shall forfeit their benefit.

And in another speech of October 16, 1907, he said:

The avowed policy of the national administration under those two Presidents (McKinley and Roosevelt) has been and is to govern the islands, having regard to the interest and welfare of the Filiplino people, and, by the spread of general primary and industrial education and by practice in partial political control, to fit the people themselves to maintain a stable and well-ordered government, affording equality of right and opportunity to all citizens. The policy looks to the improvement of the people, both industrially and in self-governing capacity.

Now, you see that the idea expressed there is that we have imposed upon ourselves the obligation to train and fit these people so that they can have a government, not by a ruling class, but, as expressed by Mr. Lincoln, "of the people, by the people, and for the people." That necessarily means, of course, a government which is democratic, with equal protection of all. Whether we shall continue the policy that has prevailed and sustain by arms a government for training them to maintain a government essentially like ours is, of course, a question upon which the American people may change their minds. When we consider how graft is being exposed in New York and various other parts of the country, we may not be so sure of the excellence of our Government. There have been great changes in recent times.

The ideas of many of our people as to our form of government have been seriously unsettled. Old traditions have lost much of their charm; the old-time respect has faded away; the reverence for our forefathers, the founders of the Constitution, those great men who established and maintained this Government, have almost become a matter of reminiscence. The attacks and innovations that are being made on our form of government, upon the judiciary, which we have hitherto regarded as the most stable bulwark of government, may raise a very serious question as to whether we are so much enamored of our own form of government as to feel it is best to force it upon other people. Some are even beginning to doubt our own capacity for self-government. Views widely divergent from those expressed by Mr. Taft have been attributed to Mr. Bryan, who has always manifested great concern for Philippine independence. Whether or not he maintains the same ideas now I do not know. He has come to public office, and, with the assumption of office, of course, come responsibilities; and when a man has to act, and not merely criticize, he not only has a right, but it is his duty, to reform his point of view if his judgment dictates it. The view credited to Mr. Bryan is as follows:

There is a wide difference, it is true, between the general intelligence of the educated Filipino and the laborer on the street and in the field, but this is not a barrier to self-government. Intelligence controls in every government, except where it is suppressed by military force. Nine-tenths of the Japanese have no part in the law making. In Mexico the gap between the educated classes and the peons is fully as great as, if not greater, than the gap between the extremes of Filipino society. Those who question the capacity of the Filipinos for self-government forget that patriotism raises up persons fitted for the work that needs to be done.

It would be interesting to know what Mr. Bryan now thinks of government by Mexicans.

Now, if that work that needs to be done is to be founded on the governmental conception that there must be a governable class and a class ready and willing to govern, then it is, of course, the very antithesis of the idea expressed by Mr. Taft, and is essentially the Filipino idea upon the subject of independence and self-government.

When the congressional committee went out to the Philippines, in an address delivered to them, a prominent Filipino said:

If the Philippine Archipelago has a governable popular mass called upon to obey and a directing class charged with the duty of governing, it is in condition to govern itself. These factors, not counting incidental ones, are the only two by which to determine the political capacity of a country; an entity that knows how to govern, the directing class, and an entity that knows how to obey, the popular

There you have, at least so far as it seems now manifest, the fundamental difference between the theories as to Filipino independence.

Mr. Jones, chairman of the Insular Committee, a very sincere and earnest man, introduced a bill, as you are aware, in Congress, which provided for establishing the republic in 1913that time has passed-and independence in 1920. Anyone informed as to the Filipino people and the conditions there knows that to carry out any plan such as is involved in the Jones bill is an impossibility if the principles enunciated by Mr. Taft are to be regarded, and that to establish Philippine independence within any period approximating that named by the Jones bill means that it can only be established on the theory that there is an ignorant governable class and that there is a smaller class willing and capable to govern. If those are the essentials that are going to be accepted as the basis of Philippine independence, then we can as well grant it now, because that condition exists and has always existed, and, really, it was more ideal in the beginning than it is now, because the more we educate them the more we diminish that governable class, without enlarging in the same proportion the class capable of governing.

Mr. Wilson, before he became President of the United States when he was writing theoretically on constitutional government, said :

ment, said:

Self-government is not a mere form of institutions, to be had when desired, if only proper ways be taken; it is a form of character. It follows upon long discipline, which gives a people self-possession, self-mastery, the habit of order and peace and common counsel, and a reverence for law which will not fall when they themselves become the makers of law—the steadiness and self-control of political maturity. And these things can not be had without long discipline. The distinction is of vital concern to us in respect of practical choices of policy, which we must make and make very soon. We have dependencies to deal with, and must deal with them in the true split of our own institutions. We can give the Filipho constitutional government, a government which they may count upon to be just, a government, a government which they may count upon to be just, a government based upon some clear and equitable understanding, intended for their good and not for our aggrandizement; but we must ourselves for the present supply that government. * * * But we can not give them self-government. Self-government is not a thing that can be "given" to any people, because it is a form of character and not a form of constitution. No people can be "given" the self-control of maturity. Only a long apprenticeship of obedience can secure them the precious possession, a thing no more to be bought than given. They can not be presented with the character of a community; but it may confidently be hoped that they will become a community under the wholesome and salutary influences of just laws and a sympathetic administration; that they will after a while understand and master themselves, if in the meantime they are understood and served in good conscience by those set over them in authority. We, of all people in the world, should know those things and should act upon them, if only to illustrate the mastery in politics which belongs to us of hereditary right. To ignore them would be not only to fall, and fail miserably, but to fall r

The principles here expounded are more in harmony with

The Principles here expounded are more in harmony with the Taft than with the Bryan theory.

The Nationalist Party, the party in power, the party which has control of the legislation, in every sense the dominant party there, in a memorial to our Government on September 1, 1910, based its demand for immediate independence upon the claim that the Filipino people are endowed with those conditions necessary to establish and maintain a stable government—law and order. To prove their case they said that they had a government under Aguinaldo, which demonstrated their power and ability to administer affairs. Well, to deal with that, it is only necessary to say that there never was within the same period of time a government which showed a greater disposition to despotism, tyranny, and bloodshed that administered by Aguinaldo, and so far as demonstrating in any sense their fitness for self-government, it all points in the opposite direction. They cited as their next proof for their claim that they had shown within recent years their ability to administer government. Of course, everything that they have shown in recent years has been under the direction and control of able American executives and under the close touch which has been held upon every movement by our representatives there. So there has been no demonstration and no opportunity, I might say, for them to demonstrate within that period their ability for self-government.

If the fitness of the Filipinos be tested by the principles laid down by Mr. Wilson, or by the doctrine enunciated by the Republican Party, under which possession was taken and by which they have been controlled up to a year ago, there is absolutely no question that there can be no consent to their demand for

immediate independence or independence in the near future.

There is no homogeneity among them. The leading people in control in business and politics are of a mixed race and are called "Mestizos"—that is, a result of mingling of another race with Filipinos. The most aggressive, assertive, and able men in the Philippines are the Chinese mestizos, a people who have no national feeling and no national character. There is no general

adhesiveness among the people and no common language. There is general illiteracy. In 1912 about 70 per cent of the voters in the Provinces were illiterate. Only a small per cent speak Spanish. Now more speak English than ever spoke Spanish, but the dialects still prevail. Gov. Gilbert stated that in one case it was necessary to have interpreters for seven languages. In one indictment against seven men the indictment had to be read in four different languages in order that the case might be proceeded with. Of course, the basis of any national life is a common language, and in nothing have we taken a greater step toward laying the foundation for Filipino independence than in establishing the English schools all over the islands and in giving them the opportunity to acquire this necessary prerequisite, It is very probable that in 20 or 30 years English will be generally spoken. They have no common literature, no common poetry, none of those essential characteristics which bind people together in one national life, one national purpose, and one national aspiration.

I was talking to a distinguished Filipino and discussing the question of independence, and I said:

question of independence, and I said:

The essential difference between your people and the people of the United States is this: You have been brought up under an oligarchy; your people have been accustomed to despotic rule; the masses of the people have had no thought of and no training in self-government. In America, if you were to annihilate in any State of the Union, through some catastrophe, or in some other way, every officeholder in that State, that State government would go on the next day, or in a few days, essentially the same, without any fundamental change. There might be some places better filled and some not so well filled, but the thought of government which is ingrained in the Angle-Saxon people will find expression in that way. And if they were shipwrecked on an island it would not be 24 hours, if they expected to stay there long, before there would be a government based on equal pretection of all and self-denial of the individual for the public good.

In my report to the President after my rejurn from the

In my report to the President, after my return from the Philippines, I said:

In my report to the President, after my return from the Philippines, I said:

There are very many highly educated Filipinos, many men of talent, ability, and brilliancy, but the percentage, in comparison with those who are wholly untrained in an understanding of and the exercise of political rights under a republican form of government, is so smali, and under the best and most rapid development possible under existing conditions will for a long period continue so smali, that it is a delusion, if the present policy of control of the islands by the American people shall continue, to encourage the Filipino people in the hope that the administration of the islands will be turned over to them within the time of the present generation. The only inhabitants of the islands that are making any marked progress in preparation for self-government are the Filipinos proper, and, as stated, but a small percentage of these are sufficiently educated to understand and administre republican institutions. The masses of them have no knowledge or conception of self-government, take no real interest in, and have no knowledge of general administration, and are under the control of leaders whose will is practically their law.

Caciquism, that is, local "bossism," is just as potential now as ever. A keen interest is manifested in education, and the people cheerfully submit to the burden of taxation imposed, both for general education and for manual training. It can not, however, be accepted that mere education in schools will give that training to a people which is necessary for sustaining the fabric of a constitutional government. The Filipino people proper present the most encouraging phase of the question. They constitute about 91 per cent of the entire population of the islands. Of the remaining population, about 40 per cent are wild tribes who inhabit northern Luzon. These people have absolutely no conception of government except that of force, to which, if justly administered, they cheerfully submit. Until recently many of them we

the administration of self-government. Certainly no such transformation can be expected, under the most favorable conditions, within a century.

If the withdrawal by the United States from the administration of political affairs of the Filipinos shall be postponed until these people are fit for participation in self-government, then the time therefor will necessarily be in the very remote future, if it shall ever arrive.

My judgment is that, if the masses of the Filipino people shall attain to that degree of fitness that will warrant the turning over to them of political autonomy, they can be intrusted to take over the control of these wild tribes, and that the realization of their own political independence should not be substantially retarded by having their political fate linked with people so backward and comparatively so small in number, inhabiting the same island with them.

The More Province presents greater difficulty. There are about 500,000 Moros and pagans living in the area confined geographically to the Sulu Group, the Lake Lanao Basin, the Rio Grande Valley, and inhabiting numerous points near the mouths of small rivers and in protected bays along the coast line of the Zamboanga Peninsula and the southern coast of Mindanao, reaching to the Gulf of Davao. In this area, principally in the vicinity of Zamboanga and Dapitan, with small villages at Higan, Jolo, Cotabsto, Davao, Caraga, Baganga, and Cateel, there are about 50,000 Christian Filipinos, many of whom have gone there in recent years. The Moros are Mohammedans, and are firmly fixed in their religious belief. They are warlike, manly, independent, and have a strong hostility for the Filipinos. They have no conception of a republican form of government. The only government which they know is autocratic. They are peaceful now, because they have been subjected to military power and are controlled with firmness and justice, which they appreciate.

The main province of our Army among the Moros is merely to keep the peace among them. They would have

erected, it is certain that it would be but a short time before they would be taken by some other nation, unless the United States should extend its protectorate over them.

I have had no reason to modify these views.

Absolute and immediate independence would mean the subjection of the great mass to a rule of the few, or it would mean anarchy or civil war; perhaps an intermingling of all three. In any event, they would fall an easy prey, if independence were established and we withdrew all connection, to some oriental

There is no use of the American people entertaining the idea that is being promulgated of the fitness of the Filipinos for selfgovernment now, or at any time within a generation. If absolute independence shall be given within any period approximating that contemplated by the Jones bill, then the American people need not delude themselves, but might as well look the question squarely in the face and expect the consequences, which will be anarchy, civil war, oppression, retrogression, and falling into the hands of some foreign power. [Applause.]

There are four ways to treat this question. One is to set them up in independence in the near future, and cut ourselves loose from them and from all responsibility to them and to the outside world. This, if done, must be with the full knowledge that what I have just stated will inevitably take place. Another is independence in the near future under our protectorate. That would mean that we would withdraw the controlling hand and turn them loose to experimenting in government. That would be the height of folly. If we are going to be responsible for the Filipino, let us have no protectorate, but let us continue in the surest and most economical way and hold the control until we are ready to part with them, and then part with them for good, without any responsibility to or for them. Our present experiences with Mexico are a sufficient lesson in international responsibility without effective control. Another is, that we should invite foreign powers to guarantee the autonomy of that people, and then we should set them up in government and withdraw. What basis have we on which to appeal to foreign powers, to ask them to help us let the bear loose that we took and are holding? It is our problem, not theirs; it is not their affair. What reason is there why they should come and help us to guarantee the autonomy of these people in a governmental experiment? They guarantee the autonomy of Switzerland, Belgium, and other countries where there are questions involved which affect their international relations, or national life, but they have no interest in the Philippines which would lead them to come and take the burden off of our shoulders

The fourth way is to continue complete control indefinitely until the Filipinos shall satisfy the conditions as contemplated under the Taft theory. In my judgment, that would continue for half a century, and probably very much longer. I favor parting with them absolutely at the earliest time that it can

be done consistently with our national dignity.

A great deal of alarm has been expressed about recent changes that have been made in the Philippines. These changes have not been so radical as some think, and the policy declared is in nowise different from that which has been generally declared hitherto. In his address, when he went there recently, Gov. Gen. Harrison, who said he spoke by the instruction of the President, said:

We regard ourselves as trustees, acting not for the advantage of e United States but for the benefit of the people of the Philippine

That is in exact accord with everything that has been said and with every idea expressed by the American people up to the present time. He continued:

Every step we take will be taken with a view to the ultimate inde-pendence of the islands and as a preparation for their independence.

There is nothing new in that at all. It is in no sense a departure from the uniform and constant declarations that have always been made. He further said:

And we hope to move toward that end as rapidly as the safety and the permanent interests of the islands will permit.

That is entirely consistent with all that has hitherto been said. He also said:

After each step taken, experience will guide us to the next. The administration will take one step at once.

The administration did take a step which, in my judgment, would seem to be unwise. At the same time, those who hold a different view in regard to the government of the Philippines and who have the responsibility are justified in making experiments. They have changed the majority of the commission, which formerly consisted of five Americans and four Filipinos, so as to make it five Filipinos and four Americans. With one exception the old commission was entirely superseded. Men who had been there for years, who were familiar with all the

details of administration there, have been changed for men of less experience. Mr. Worcester, who, as I stated before, was there long before our occupancy, has given way to Mr. Dennison, who is entirely unacquainted with the Philippines and inexperienced in matters there. He is a man of character and ability and in time, no doubt, will prove a good administrator. It is a risk, as we all know, to make many changes at one time, but we have the same thing in our changes of administration, and there is no reason why we should shrink from an experiment of that sort with another people, when we go through it constantly with the changes of our political parties in this

The Moro Provinces that were formerly under a military governor have been turned over to a civil governor, Frank W. Carpenter. He is a man of high character and great experience in the Philippines. He was attacked by Mr. Martin of Colorado in regard to the Friar lands, but Congress examined into the matter and became convinced that the charges were groundless. This change from a military to a civil governor

was recommended by Gov. Forbes and Gen. Pershing.

The leading thought to be borne in mind is that the Filipino people are constantly insistent in their demands for immediate independence. There has been a large following in this country of that idea. One of the chief exponents of that idea has been Mr. Jones, who is chairman of the Committee on Insular Affairs. If the Filipinos vindicate by this experiment their claim to progress, we ought all to hall it with great delight. If, on the other hand, it shall be demonstrated that the step was taken unwisely, it is not beyond recall, and we still have the same control and mastery there and can retrace our steps. Therefore I do not view, as some do, with alarm these recent changes. The party in power ought to have the courage of their convictions. If they believe that the Filipinos have been developed to a point that justifies this experiment, they ought to make the experiment. There is a difference of conviction of the courage of the course of the cour make the experiment. There is a difference of opinions as to that, just as there is on the question of the tariff. There has been a controversy in this country going on for a long time as to the tariff and the effect of the tariff. When Mr. Wilson became President he put into effect at once his views in regard to the tariff, and demonstration will probably be given within his administration as to whether it is wise or unwise, and then it will be for the American people to say whether or not the experiment has been justified.

There can be no great hazard in so testing the situation, and while, as I have stated, I think that the experiment is unwise, yet I do not view with the least alarm the changes that have been made, especially in view of the fact that there has been no essential change upon the question of policy as announced

by the President.

Now, gentlemen, I know I have been making a rather desultory speech on a good many topics, and I throw myself upon your kind consideration if I have taxed your patience too long. [Applause.]

EXTENSION OF REMARKS

HON. WILLIAM B. McKINLEY, OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, May 13, 1916.

Mr. McKINLEY. Mr. Speaker, in 1915 four Southern States paid into the United States Treasury less than \$1,000,000 income taxes. At the same time the State of Illinois and three other Northern States paid into the Treasury over \$42,000,000 of income tax, or about fifty times as much as the amount paid by four Southern States.

The Democratic tariff bill is framed upon the same principle of taxing the North for the benefit of the South. Corn is permitted to come into the country free of duty and rice and bacco are protected. The bill now under discussion should be called "a bill to collect money from the farmers and business men of Illinois and Northern States to loan, through the Government, to cotton planters of the South." This is the exact effect of the bill if it becomes a law. The Illinois farmer now borrows money at 5 per cent and a small commission, therefore this bill, with its provision to loan at 6 per cent, will be of no benefit to the Illinois farmer.

This bill provides that 12 loan banks shall be distributed over the United States, the capital of each to be not less than three-

fourths of a million dollars, this money to be provided by the Government without interest in case private capital is not subscribed. The board to select the location for these banks is to be named by President Wilson, if this bill now becomes a law. Does anyone doubt that he will name two Democrats out of the three members of this board? The members serve for three years, six years, and nine years, respectively. Does anyone doubt that the six-year and nine-year terms will be given to Democrats, and by the terms of their service they will have control of the management of the land banks over the next four years of Republican administration? We all know what that means. The chairmanship of every important committee of the House of Representatives is now held by a southerner, with the exception of one-all worthy men with the interests of the South at

When the locations for the 12 loan banks are selected, does

any one doubt the South will be liberally supplied?

Many of our southern friends on this floor, during the discussion of this bill, have told us that the private capital of the South is loaned at from 8 per cent to 20 per cent per year. That makes it plain that southern money will not be subscribed for stock in the loan banks located in the South and that the United States Government will be compelled to provide the cash to loan to southern farmers.

This means that the farmers and business men of Illinois and the North must pay in this money in the shape of taxes, as they now do under the present income tax and tariff laws.

Another appropriate title for this bill is to call it a bill to provide \$10,000,000 in salaries per year to be paid out of the United States Treasury to deserving Democrats.

The bill expressly provides that the appointments under this law shall not be under the civil service. It permits the board appointed by President Wilson to appoint an unlimited number of examiners over the United States at an unlimited salary. This money to be paid out of the Treasury of the United States

and not charged up to the borrower.

There are in Illinois 101 counties. It would not be unreasonable to appoint one examiner for each county, and a salary of \$2,500 per years would seem about right to the deserving Democrat seeking same. There are 48 States in the Union. What an elegant political machine. No wonder, Mr. Speaker, that the Democratic majority in the House promptly voted down an amendment offered by the Republicans to put under civil service these men and thousands of other positions provided for in this bill.

I repeat that it is a bill to build up a huge army of Democratic officeholders and a sectional bill to furnish money to the

South at the expense of the North,

Agriculture Appropriation Bill.

SPEECH

HON. EDWARD W. SAUNDERS, OF VIRGINIA.

IN THE HOUSE OF REPRESENTATIVES,

Friday, April 21, 1916.

The House in Committee of the Whole House on the state of the Union had under consideration the bill (H. R. 12717) making appropriations for the Department of Agriculture for the fiscal year ending June 30, 1917, and for other purposes.

Mr. SAUNDERS. Mr. Chairman, this matter of securing an adequate supply of potash and nitrates is one of such interest to the farmers, that so far from objecting to the sum proposed to be expended, we ought to be willing to expend a far greater

amount in order to secure the results contemplated.

The present war has exemplified in the most striking fashion, the dependence of American agriculture upon foreign countries for two essential fertilizers. Nitrates come almost entirely from Chile, while Germany supplies the world with potash. value of our importations of these fertilizing materials, prior to 1914, amounted to over \$30,000,000 a year. As a result of war conditions, the prices of fertilizers containing these elements have materially advanced, thereby placing new burdens upon the American farmers. Potash is a necessary constituent of every wheat, corn, oats, potato, and tobacco fertilizer, particularly of the latter. Over 55,000,000 sacks of fertilizer are sold each year in the United States, and each sack must carry a printed guaranty of the percentage of potash which it contains. Having in mind that for the present it holds a practical monopoly of the world's supply of potash, the German Government, with a view te the conservation of this great national asset, regulates and controls the production and sale of the products of the mines from which potash is derived. It is estimated that the potash content of the German deposits are sufficient for the world's consumption, at the present rate of use, for over 500,000 years. These mines were accidentally discovered in an effort to increase the output of salt in the Strassfurt region. In the pursuit of this effort to reach the main body of rock salt, it was ascertained that this deposit was overlaid by a stratum containing large quantities of potassium, and magnesium salts, regarded at the time as worthless.

About 1870, the value of potash salts as a fertilizer, was discovered, and from that time forward, these salts have been the most valuable product of the Strassfurt mines. potash is imperative wherever the use of fertilizers, and of intensive agricultural methods, are in vogue. It is an interesting and striking fact that one-fifth of the entire potash output of the German mines, and more than one-half of the amount heretofore exported, has come to this country. The deposits of Alsace alone are estimated to contain in terms of pure potash, three hundred millions of tons, a veritable treasure house for the German Empire. At the prices of a few years ago, this deposit was worth over thirteen billions of dollars. Of course, based upon the present prices, this value would be much greater. While there are other salt mines in the world, containing workable amounts of potash, they do not appreciably affect the world's supply, or furnish any potash to the United States.

Under present conditions, the dependence of this country upon a foreign source of supply for an essential fertilizer ingredient is absolute, and for the time being, unescapable. This situation is highly unsatisfactory, and while we are engaged in activities in many directions of little interest to the American farmers, we should seriously undertake, in the manner proposed by the Lever amendment, the task of ascertaining and providing, if possible, a source of domestic supply of an element so essential to the successful, and profitable prosecution of American agriculture. This will materially increase our capacities for self-support, and tend to establish our ultimate agricultural

independence.

The following figures will furnish an interesting exhibit of the value of our importations from Germany of kainit, and potash in various forms. During the year ending June 30, 1913, this country imported over 900,000 tons of these materials, valued at something like \$13,000,000. These imports have been increasing from year to year, as an inevitable feature of the development of intensive agriculture in the United States. cessation of potash supplies from the German source, due to the outbreak and progress of the present European war, has caused a material advance in the prices of all fertilizers containing this element, and imposed a serious burden upon our farmers, due to the fact that it has been found impossible to secure from any other source, to a measureable extent, an equivalent of these salts. While it has long been patent that this country should not be dependent upon another nation for its supply of a necessity, it required the outbreak of the war to render the situation acute, and to emphasize the necessity of ascertaining without further delay, whether the United States can secure from domestic sources a sufficient supply of cheap potash for our present and prospective agricultural necessities. Altogether apart from the disadvantages and inconveniences arising from the fact that the potash mines of Germany are the property of an alien nation, there is another distinct feature of danger in the present situation. These mines are subject to invasion by water, and from time to time, considerable areas have been flooded, thereby destroying the potash contents of the sections thus overflowed. It is altogether possible that these flooded areas may in time become so extensive, that the value of the mines would be substantially impaired. Hence this country, for the present, is not only dependent upon a foreign country for an essential element of modern agriculture, but it is dependent upon a source of supply that may at any time largely

disappear, to the great distress and loss of our farmers.

Having this situation in mind, prudence would suggest that the experiments heretofore conducted to ascertain American sources of supply of potash salts, should be prosecuted more diligently than ever, and that the Agricultural Department and the Geological Bureau of the United States be supplied with whatever means may be necessary to carry these investigations, if possible, to a successful conclusion. A number of potential sources of potash have heretofore been investigated, and various salines of the United States have been analyzed, to ascertain the presence of potassium salts to a commercial extent. Enough has been done to afford a reasonable hope that the commercial production of potash salts from American sources is in sight.

The most immediately available and extensive source of supply, appears to be the giant kelps, a form of seaweed that abounds on the Pacific coast. Three varieties of these kelps not only show a high potash content, but grow in the most luxuriant fashion in open water where they can be easily harvested. Careful investigations have been made of the extent of these kelp fields, of the waters in which they grow, of the facilities with which they may be harvested, and of the number of cuttings that may be made in the course of a year. The results obtained on this line have been highly satisfactory, the investigations establishing a large area and tonnage of available kelp on the Pacific coast, from Cedros Island to and including western Alaska. This area contains about 390 square miles, capable of producing two cuttings a year that will yield at least 59,000,000 tons of fresh kelp, equivalent to over 2,000,000 tons of potassium chloride.

A year or two ago the total imports of potash salts of all kinds, amounted to about 1,000,000 tons, equivalent to about 400,000 tons of pure potash chloride. Hence it will be seen that the "kelps of our Pacific coast are capable perennially of an annual output of potassium chloride, about six times the equivalent of the potassium salts now imported into the United States." There is no question either of the existence, and extent of these kelp beds, or of the facility with which the growth may be harvested, or of the existence, and value of their potash content. In addition to the inquiry to ascertain the potential potash in these kelp fields, much actual experimental work has been in progress during the last 12 months in California, Utah, and other States, looking to the recovery of potash from alunite, and other minerals, and as a by-product in the manufacture of Portland cement.

Various silicate rocks, such as feldspar, lucite, green sand, and mica sericite, have been investigated for the recovery of potash, with encouraging results. The value of the potash salts produced from domestic sources in the year 1915, amounted to something like \$350,000. Our importations of refined potash salts for 1915 were about 25 per cent of those for 1913, the last year of normal importation, showing the great decline in the use of potash in this country due to the rigorous blockade of the Ger-

man ports.

What then is the plain duty of Congress, confronted with the foregoing facts? The question answers itself. Successful agriculture is the foundation of national prosperity, and successful agriculture is dependent upon adequate supplies of nitrates, and potash. Confronted with a crisis in respect to potash, and an acute situation in the production of the crops peculiarly dependent upon potash, Congress should direct every energy, backed by whatever sums that may be needed, toward the development of the domestic production of this material. But the production of potash from kelps has not progressed to a sufficient extent to put it upon an ascertained commercial basis. In the discharge of its duty to our farmers this Government should establish all needed plants, and conduct operations on a sufficiently extensive scale, to place this industry on an established footing of industrial production.

We can not afford to wait upon the venture of private capital into this field, for private capital will naturally turn to investments where profit is assured, and be a little wary of enterprises which, until the details of operation and commercial exploitation are satisfactorily worked out, may fall far short, for the time being, of being profitable. But once sufficient investigation, and experimentation by the Federal Government shall have ascertained all the essential commercial and other factors in the recovery of potash from kelp, and illustrated in actual operations, both the most approved methods of extraction, and the profits possible in the venture, private capital will be forthcoming in abundant measure, to maintain this enterprise on an enlarged scale of permanent utility. Whatever may be reasonably needed to enable the Agricultural and other departments to conduct the necessary inquiries in this field, should be afforded by this House in generous and unstinted measure.

But the Government activities have not been restricted to the investigation of the Pacific kelp fields, in their pursuit of potash. For some little while past, the Geological Survey has conducted interesting explorations for potash-salt deposits in the desert regions of the West. Having in mind the manner in which the German potash deposits were formed, the Geological Survey should be afforded ample means to enlarge and continue these explorations, and discover the domestic beds that in reason are known to exist. Geologists advise us that thousands of years ago the German deposits were formed through the gradual evaporation of vast areas of sea water which had become landlocked. Of course this process required untold ages. But finally the potash in these segregated sea

waters was deposited in a vast stratum which later was overlaid by strata of clay, and other sediments. The same geologists tell us that ages ago vast areas in the western portion of the United States were covered by the ocean. In time, as the land rose, immense salt-water lakes were formed, and with the evaporation of the water in these lakes, potash beds must have been formed in the same manner that they were formed in Germany. Like conditions cause like results. Hence it is a matter beyond controversy that somewhere within the desert regions of continental United States, there are vast deposits of potash. It should be our task to locate these deposits, and through deep borings ascertain their whereabouts. A mere fraction, a negligible fragment, one might say, of the money that is expended in directions of questionable value, would suffice in the hands of scientific investigators to locate this immense potential wealth.

Under the stimulus of present necessity it is to be hoped that this important work will be pressed with the same vigor with which the Government built the Panama Canal, and is now engaged in the construction of railways in Alaska. Whatever may be said of the possible returns from these enterprises, they will be definitely short of the benefits that would be secured for the present needs of the farmers of the United States, and for the development of agriculture in ages to come in this country, by the discovery of these beds of long-hidden wealth. In the hands of the Geological Survey this investigation would be conducted with the precision of a scientific inquiry, and with practical certainty of success. Once unlock the doors of this subterranean treasure vault, and German supremacy in the potash fields will be effectually challenged. An appropriation of half a million dollars, sufficient to put in the field a half dozen deep drilling outfits, would be a wise investment. Who can doubt, in view of the conditions which have been ascertained with scientific accuracy, that the success of this inquiry, rich as it is in the promise of benefits for the farmers, will be assured, provided Congress affords the money required for the successful prosecution of the enterprise. We have been content to appropriate niggardly sums for the farmers, while talking in terms of millions on the subject of battleships, and armies. Five hundred thousand dollars is one-fortieth of the cost of a modern superdreadnaught. Is this an extravagant sum to appropriate in aid of better farming along a line in which our farmers are so vitally concerned? A judicious expenditure in this direction a few years ago, would have averted the present burdens upon agriculture, due to the advancing prices of every brand of fertilizer of which potash is an essential ingredient. The present condition should not be allowed to recur, when the remedy is within our own hands.

Our dependence upon Chili for nitrates, is no less complete than our dependence upon Germany for potash. Scientific investigators have pointed out that agricultural bankruptcy is threatening the United States on account of the failure on the part of the Government, and of business capital, to provide the necessary elements for refertilizing the soil. These elements are fixed nitrogen, potash, and phosphates. I have discussed in detail the conditions as to potash and suggested the methods to be pursued to provide a domestic supply of this material on an increasing scale. The domestic supply of phosphates is abundant, and available, while free nitrogen by appropriate processes may be drawn from the atmosphere to an unlimited extent. The computation has been made that there is enough nitrogen in 1 cubic mile of air, to furnish the raw material to satisfy our demands for 50 years to come, at our present rate of con-sumption. Right at hand then is an inexhaustible source of supply, provided that the fixation of nitrogen is commercially possible. At this time the militarists are concerned with the fixation of atmospheric nitrogen in a commercial form, use as a source of nitric acid, an indispensable element in the manufacture of military explosives. But the demands of agriculture are far more imperative, and worthy of our attention, than the efforts to make this enterprise a purely military proposition. The necessity for this development in aid of our farming interests should excite our greatest concern. Only one thing appears to be essential for the fixation of atmospheric nitrogen, and that is an abundant supply of cheap hydroelectric

Abroad there are many plants, particularly in Norway, that furnish daily evidence in their successful operation that nitrogen may be secured from the atmosphere at commercial rates. So far as I am aware, there is only one plant of this character on this continent, the American Cyanamid Co., on the Canadian side of Niagara Falls. Last year this plant turned out 64,000 tons of lime nitrogen.

"This process consists of bringing pure nitrogen gas from the air into contact with calcium carbide, heated to a great heat in the electric furnace. At this temperature the nitrogen enters

into combination with the calcium, forming lime nitrogen, or cyanamid. The product contains from 16 to 18 per cent of available nitrogen, and in its first form is a very valuable fertilizer."

The paragraph just cited describes the process developed by scientific investigation for the artificial production of nitrogenous fertilizer. The one essential thing for the industrial production of nitrate, that is, nitrate that can be sold in competition with the nitrate from Chile, is cheap and abundant water power, and if there is any one form of power in which this country abounds, it is water power, ready and waiting to be harnessed. There are many available sites that may be segregated from the public domain, removed from public entry, and designated as power sites for the express purpose of producing nitrogen from the air, both for military, and agricultural purposes.

The advocates of military preparedness seem to think that It is good business to establish these plants for the sole purpose of making war material, but oppose strenuous objections to the use of the same plants to supply a great agricultural need. I have no objection whatever to a Government plant, to secure nitric acid for use in making the high explosives required by modern war. I have no more objection to the establishment of a plant to this end, than I have to a Government cannon factory, or powder mill, or armor plant. The needs of Government in this direction, should be supplied by Government enterprise, in order that the country may be freed from the exactions of private greed, but I can not agree that the Government operation of our water powers should be limited to the exclusive production of materials for military use. Public funds may be applied to advantage in many other directions than in this eternal preparation for problematic, unlikely and chimerical wars. There are other and greater interests to be conserved, and other considerations of public welfare to be regarded, in the construction of Government plants designed to make available the resources of nature, and to draw therefrom the rich treasures which belong to the man, or the nation which has the key to her secrets. Why should a great power plant that is capable of supplying our military needs on half-time service, remain idle for the other half of its time, simply because some one suggests that it is a form of socialism for a Government plant to use its surplus power in aid of our farmers, by producing an essential ingredient of modern agriculture?

We should develop our natural resources to the limit, and the Government should aid in that development, in order to put our lands in that condition which will afford the largest return of good to the people of the United States. That is a form of preparedness that appeals to me. If it is insisted that we must have soldiers, and sailors, then these soldiers and sailors must be fed, and whatever increases the productivity of our lands, will increase our resources for the maintenance of these prospective armies. This will be preparedness in its highest and most beneficial form. To-day millions are being expended in the way of irrigation, that is putting water upon dry lands, and making those otherwise barren areas yield a rich return of foodstuffs. This use of a national resource is considered fully justified, and well within the proper functions of Government. Why not harness another portion of the public waters, and produce at reasonable cost a fertilizer which is selling to-day at \$70 or \$80 a ton, every dollar of this increase over normal prices, constituting a charge upon an industry which is the least profitable, and the most important of all the great industries of our country? The men who object to this enterprise insist that a Government power plant for the purpose of making nitric acid for high explosives may be justified, but that the use of a portion of this power for the extraction of fertilizer from the air, will create unfair competition between the Government, and private enterprise. What is the proper test to determine whether this Government should enter upon a constitutional enterprise designed for the public good? The answer is obvious, namely, the greatest good for the greatest number.

vious, namely, the greatest good for the greatest number.

If greedy combinations of capitalists take advantage of the Government for the production of the materials that the Government requires, it seems to be agreed that Government enterprises may be justly set on foot to break the thrall of these combinations. This has been effectually done in the matter of powder. A few years ago powder was selling at a dollar a pound. The United States went into the powder business on an extensive scale, through its own plants. To-day the selling price of powder is 50 cents a pound. I do not care what may be the critical epithets that will be showered upon the proposition that the Government should use the public waters on our public lands, or available sites elsewhere, to increase the riches of our country by enabling our farmers to develop their farms, and raise more abundant crops. Such attacks should not hinder us from doing our plain duty. This is our opportunity to aid the farmers of our

country in a material way; to aid agriculture in every section of the United States, at a moderate expense; to do something worth while for the development of our farm lands, and to do it in the exercise of our constitutional powers. Why should we build a power plant, merely to make high explosives, and to that end operate the plant for a portion of the year, when it may be run for every minute, of every day of the year, deriving from the atmosphere an element which is required for the full development of our farms, and fields? If the farmers of the country may be protected through the proper utilization of Government property against oppressive prices, why is not this a rational, and satisfactory form of preparedness?

If this great work can be done successfully in Germany, or in Norway, shall we concede the inferiority of our scientists to the scientists of other countries, and admit that with the greatest natural resources in the world, we are unable to turn those

resources to the fullest account?

I believe that our people can do whatever they have a mind to do, that this country can achieve results fully equal to those secured in any quarter of the globe. I believe that if we resolve to strike a blow for independence of foreign domination, and determine that with our own agencies, and within our own domain, we will secure for our people the things of essential interest, success will be ours. If Norway and Germany can turn air and water to account, why not the United States? Is there a country in the world that is richer in water power than the United States, and if this be so, is it not a prodigal waste of our resources, to allow our great rivers to rush unharnessed to the sea, when in the proper exercise of our duty to the public, we may make this potential wealth actual, and by adequate appropriations set in motion the wheels that will continually pour rich treasures into the lap of waiting agriculture.

This is no time to quibble over finespun distinctions, or to stop with halfway measures. I am willing to take one leaf at least, out of the book of the militarists, and to go forward in a path that they appear to be unwilling to tread. They are ready and anxious to spend untold millions for purely military purposes, and to establish great plants to be run on part time for the production of material for prospective military use. desire to establish even greater plants than apparently they have in contemplation, and to maintain those plants in continuous operation for the production of materials of such essential value to the farmers of this country that they will extend the fullest measure of their approval to the men who set these great enterprises in motion. This is the day, and this is the opportunity to be of service to a class of our citizens who have not fared too well at the hands of our legislators. Afford the needful agencies to produce the nitrate that will free us from the bondage of an alien monopoly, and we will rise to the height of a great opportunity. At the same time, we will do an act of tardy justice to the farmers of the United

It may not be amiss in this connection to give the figures that show not only our need for nitrate, but our present dependence upon a foreign country, thereby emphasizing the necessity for immediate action to establish a domestic source of supply. "Intelligent cultivation goes hand in hand with rational fertilization." Of course in this connection, I do not overlook the very great work of the agricultural departments of the States, and of the Federal Government, in extending the use of legumes. These have added, and on an increasing scale of use, will continue to add greatly to the fertility and consequent productivity of our soils; but the nitrate-producing legumes are rather slower in action, than nitrate of soda. It is interesting to note that the use of this fertilizer in the United States, has trebled within a decade, though still far short of what it should be. The greater use of Chilean nitrate in Europe, was due to the application of science to European agriculture, and to the establishment and liberal maintenance of agricultural experiment stations in that portion of the world, long in advance of like stations in this country. A paper by Dr. Myers gives some interesting comparisons between the yield per acre in the United States, and in Europe, of three great staple crops.

Countries.	Average yield per acre.		
	Cotton.	Wheat.	Oats.
United States Egypt Germany	Pounds. 185 400	Bushels.	Bushels.
England		28	48 45

Keeping in mind the comparatively virgin soils of this country, these figures ought to shake the complacency of the average citizen who believes that the United States, not only can, but does lead the world in everything. What is the explanation of this wonderful difference between the production per acre of this country, and of Europe? The answer is easy. Europe appears to have solved the problem of soil exhaustion through the use of legumes and nitrates. Omitting Russia, continental Europe and England, for use upon a much smaller area of land than is under cultivation in this country, import over a million tons of Chilean nitrate, whereas for agricultural purposes, this country takes only about 300,000 tons. In addition to the use of nitrogenous fertilizer secured from Chile, Europe on an increasing scale is deriving nitrogen from the air, and as a by-product of the coke industry. Both processes should be developed to their utmost extent in the United States, since the market for the product is unlimited. Over 400,000,000 acres of tillable lands in this country, could profitably use 20,000,000 tons of nitrate per annum, whether derived from Chile, or other sources. It has been estimated that as a result of this use our present farms would yield as follows, without additional cultivation, or labor.

 Bales of cotton
 10,000,000

 Bushels of wheat
 300,000,000

 Bushels of corn
 600,000,000

 Bushels of oats
 300,000,000

The annual production of other staples would also be vastly increased. This anticipation of what will follow from the fructification of cur lands, is not the idle fabric of a vagrant fancy, but are the words of truth and soberness. The farmers know what potash will do, what phosphates will do, what nitrates will do. Many millions of fertile acres attest the utility of their application. It should be our task through abundant appropriations, and appropriate legislation, to unlock every domestic source from which these materials may be drawn, and thereby scatter peace and plenty over a smiling land.

Rural Credits.

EXTENSION OF REMARKS

OF.

HON. RILEY J. WILSON,

IN THE HOUSE OF REPRESENTATIVES,

Monday, May 15, 1916.

Mr. WILSON of Louisiana. Mr. Speaker, I am glad to see, and there are millions of our people who rejoice to know, that this Congress is about to pass a rural-credits bill, and that this Government is about to enter upon the organization of a comprehensive system of rural credits, and that one of the most important pledges in the Democratic platform of 1912 is about to be redeemed.

The Democratic Party has always kept faith with the people when given a fair opportunity to do so. No administration has ever been able to make every platform pledge into law, but when this Congress adjourns it can truthfully be said that the present national Democratic administration has more nearly redeemed every platform pledge than any other administration

inaugurated within recent years.

Legislation looking toward financial relief, and the emancipation of the commercial and agricultural interests of the country was promised at the Baltimore convention. In fact, this has been promised by both parties for a number of years, but the Republican Party when in power, made no attempt at any legislation that would disturb the fixed monopoly and control held by the money centers over the currency and credit of the country. While the Federal reserve act, at the time of its passage, had many critics, and while many men in sympathy with the Money Trust predicted dire calamity to follow it, this law is to-day acknowledged on all sides to be the greatest piece of constructive legislation enacted in this country in the past 50 years. It will not exceed in value the rural-credits bill which we are about to enact, but it is of equal importance, as it forms the foundations for, and makes possible the successful operation of the farm-loan act, which we have every reason to expect will go to the President within a few days for his signature.

Amid all the stress and conflict of the past two years the Federal Reserve System has enabled the business man as well as the manufacturer to feel secure in his prosperity from the shocks and disorganization of the panic that was generally expected to occur in this country on the outbreak of the European war, and which, no doubt, would have occurred had the control of the credit of the Nation remained in the hands of the few money magnates who had dominated our finances for so many years. The financial system of any country should be under the control of the Government, because it touches and affects all the people of the Nation, in whatever calling, pursuit, or occupation they may be engaged. The safety of our present commercial banking system is due to its soundness and ease of practical operation, and to the further fact that it is so organized that it can be operated to give relief in all sections of the country. No class of our people are more in need of a safe and sound banking system than those engaged in agricultural pursuits. A disturbance in the money market has its first effect upon the price of agricultural products, and this class of products is the very last to feel the effect of a readjustment of our financial system.

The banker and the business man are in a position to foresee the oncoming of a financial panic and may often protect themselves against its evil effects; but this is not true with the farmer, and it is for him more important and more necessary that the Government be in a position at all times to reach out its strong arm and lend its all-powerful aid to secure him against a disaster for which he is not responsible and which may affect

him without any warning whatever.

That a commercial banking system does not and can not meet and supply the needs of those engaged in agriculture has been found to be true in all other countries, and is admitted to be true in this country. It is also acknowledged that the Government owes the same obligation to establish and maintain a comprehensive system of banking for the benefit of those engaged in agriculture as it does to provide a banking system for commercial and manufacturing interests; in other words, that the farmer, in this respect, should be placed on the same footing as the business man.

The continued prosperity of our country depends upon its development along agricultural lines, and to secure this development we have now reached the point where our people, and especially the farmer, must make a study of agricultural problems; and for this purpose the Department of Agriculture is offering every possible assistance. The farmer must make his knowledge, efficiency, and equipment along the lines of the most progressive methods a part of his capital. We must, through good roads, good schools, and by community organization and cooperation, bring to farm life and to the rural districts the opportunities, advantages, and conveniences that will make life upon the farm attractive and happy as well as prosperous. must bring about conditions that will check the flow of population from the country to the towns and cities.

But in order to make this study of agriculture effective, in order to make the efficiency and equipment of the farmer useful, in order to bring to the rural districts and farm life the advantages, conveniences, and opportunities that will make this life attractive and profitable, so that it will hold the young men of talent and enterprise where their energies and abilities are most needed, it has been universally conceded that we must have a comprehensive system of rural finance, or rural credits.

A rural-credit system has been defined to include all means by which capital is extended and made available to farmers for the operation, equipment, and development of farms or for the purchase of farms. If capital is brought to the farmer in such a way that he may profitably avail himself of its use, it must come to him under the following conditions:

At minimum expense. At a low rate of interest. For a long period.

To be returned in small payments.

In my humble judgment no system of rural finance will secure to the farmers of this country the credit and assistance they are entitled to, except one organized by and under the supervision and control of and backed by the aid of the Federal Government. This has been the experience of other countries. We often hear the statement that what Europe has done for her farmers America must do for hers. Investigation has shown that in every country in Europe where the rural-credits system is successful it has been organized, supervised, and aided by the Government. Germany has the most successful system. There the organization is called the "landschaft." In its earlier days the landschaft had Government aid. After being well established. lished that was found to be no longer required, but it has always been and is now under the direct and close supervision of the German Government. We are told by the highest authorities that during 150 years' operation under this system in Germany, and to which is attributed the wonderful agricultural development of that country, there has not been a single

failure among the farm-mortgage banks. And there has never been any loss under the bonds issued upon the farm mortgages. Prof. Brodnitz, of Halle University, recently said:

The landschaft system is standing the test of the war, as it has at all other times. It is the only plan under which the bonds are of equal value with Government bonds in the open market and in the time of panic or war hold their value above Government bonds.

It is only natural that this should be true. The farmer has the best and safest security in the world—that is, agricultural lands-being constantly improved and with a continually en-

hancing value.

The present bill proposes such a banking system as I have suggested-that is, one under the control, supervision, and aid of the Federal Government. And while not just such a bill as many of us would be glad to write, it carries the central idea and purpose of a rural-credit system and commits the Government to a system of finance that should result in the rapid development of agriculture in every section of the United States. It may take a number of years to make it perfect, because it is a new system of banking for this country and the same conditions do not obtain here as in Europe, but I have confidence in the ability and common sense of American farmers and believe they will welcome this law as the most advanced step ever taken in their interests by Congress and that they will give it their earnest thought and cooperation, that the entire system may be worked out successfully.

The bill provides for a farm-loan board, which is given supervision and control of the entire system and at the expense of

the National Government.

It provides for 12 land banks, distributed throughout the country, each with a capital stock of \$750,000, to be, if neces sary, provided by the National Government, making in all \$9,000,000.

It provides for local associations of farmers, through which loans may be made, and whose duty it will be to pass upon the character of the loans and the good faith and integrity of the

Next it provides for a rate of interest not exceeding 6 per cent. This to cover all expenses of administration.

It provides for loans from \$100 to \$10,000. This will meet the needs of the farmer with 40 acres as well as those of the farmer who owns a plantation.

The loans are to be made extending over periods of from 5 to 36 years. This will give time for returns upon the invest-

It also provides for the assistance of the homeless man who desires to purchase and equip a farm.

The mortgages and bonds issued upon the mortgages, as well as the capital stock and surplus of the farm-land banks, are exempt from taxation.

It is confidently believed that this law, when once in operation, will meet the needs of every industrious farmer who in good faith desires sufficient credit to enable him to equip, derelop, and operate his farm, and this is all that has been asked for or expected in such legislation.

Democratic Promise Versus Performance on the Merit System.

EXTENSION OF REMARKS

HON. S. D. FESS, OF OHIO.

IN THE HOUSE OF REPRESENTATIVES,

Thursday, May 11, 1916.

Mr. FESS. Mr. Speaker, the inefficiency of the Democratic Party to conduct the public business is displayed in more than one way. Their lack of experience in responsible legislation may be offered as an excuse, but that would invite the hope that in time, under responsibility, the party would become efficient. This hope is without foundation.

Democracy as now run proceeds upon a vicious policy as well as practice. It is dominated by the populistic craze of the South, the paternalistic theory which stands in sharp contrast with the former States rights dogma of the cotton States. This socialistic dominance expresses itself in the constant demands upon the Federal Treasury to finance every conceivable scheme. Note the appropriation measures of this administration. Note the special legislation already passed in the House in the interest of cotton. Note the sums voted to streams of the South in the rivers and harbors bill. Note the \$20,000,000 for the Government nitrate plant to be developed in the South. Note the \$45,000,000 project for the lower Mississippi River. These—some of them—have become laws. The others will become laws. Note the wild-eyed populistic clamor for greenback issues which have been attempted in the rural-credits bill. Note the obligation of the Government not only to supply the initial capital but to guarantee the interest and principal of the land-bank bonds. Note the demand for favorable Federal discrimination toward the southern farmers as proposed in almost every day's legislation.

This type of legislation shows the incapacity of the party in power to conduct the business of this Government in a business way. It proceeds upon the basis that the Government is a treasury of inexhaustible wealth which can draw the wand and abundant wealth will flow. These Democratic leaders speak of Government as a gift to the people of something the Government possesses that the people do not possess and have a right to demand. Any party led by men who are dominated by such populistic and paternalistic theories must fail the moment it attempts to put in practice such fallacies.

Another conclusive proof of continued blunders in management is the evident belief that office exists for the individual and is his because the spoils are the price of victory. The studied, determined, and persistent assaults upon the merit system of this administration, headed by a former vice president of the National Civil Service Reform Association, show inevitable inefficiency. For years the one trend in public administration has been toward efficiency, away from the corrupt spoils system of political prostitution of public business.

Beginning back in 1883, the policy of efficiency in service was viciously attacked by the spoilsmen. But in spite of this abuse 13,289 positions were placed in the classified service. In two years 2,000 more were included. Even Cleveland nearly doubled the number by 1889. Harrison added over 45 per cent with 42,741 positions in the classified service. Cleveland in his sec-

42,741 positions in the classified service. Cleveland in his second term doubled this with 87,108 positions. McKinley increased this by 1901 to 108,967, and Roosevelt by 1905 to 171,807, and by 1909 to 234,940, which was increased by Taft to 282,507 by 1918.

1909 to 234,940, which was increased by Taft to 282,597 by 1913. The significant item in this growth is the constant increase with no interruptions. True, now and then in the life of all the Executives cases arose where personal appointments were made, During these 30 years, 1883 to 1913, the Civil Service Commission gained a real place as one of the Government's bureaus. It was the one commission that stood for efficiency rather than partisan administration. The commission itself in its personnel was so created. Roosevelt, to avoid partisanship, made it Democratic, and Taft continued it so—two Democratic members and one Republican. There can be no suspicion that such a commission, so constituted, with purpose in creation to avoid partisan politics, could be prostituted for party purposes.

The advance of the merit system was not limited to Executive activity. It was constantly supported by the party in power by legislative enactment. Every law within the 30 years was intended to advance it. It was loudly proclaimed in the Democratic platforms every 4 years within the 30 years, including that of 1912. The latest as well as most desirable advance relates to the fourth-class postmasters. In 1908 Roosevelt placed 13,986 such offices within the classified service, being those offices in the States north of the Ohio and east of the Mississippi River. October, 1912, Taft placed 36,236 offices, being the remainder of this class of offices not yet covered into the classified service. This was in consonance with the effort to extend the merit system. To a believer in the merit system this was a welcome step.

If there is a field of public service where fitness must be considered, the Army and Navy would be among the first on the list. On December 7, 1912, President Taft placed all artisan and supervisory artisan positions at the navy yard and other establishments under the Navy Department in the classified service. This will include at least 16,000 skilled men. The law of August, 1912, creating the Quartermaster Corps authorized the replacement of employees not to exceed 4,000 by enlisted men. In January, 1913, field regulations were revised to give the Civil Service Commission more direct supervision over the Lighthouse Service.

Another step for better service was the effort to reach greater efficiency by empowering the Civil Service Commission to investigate, to report upon the condition of administration, and to recommend such changes as the investigations would warrant. In fact, one of the dominant facts of the last two administrations was a better civil service. This was the status when the former vice president of the National Civil Service League became the President of the United States March 4, 1913. What has been done since that day?

The first act on this question displayed the hand of the spoilsman. It was on May 7, 1913, four days over two months after

inauguration and just one month after the meeting of the special session of Congress. This act nullified in greater part President Taft's extension of the civil-service rules to fourth-class postmasters.

One month and two days later the President reconstituted the Civil Service Commission, which had been two Democrats and one Republican since Roosevelt's day, by appointing two Democrats, one from Louisiana and the other from South Carolina, and one Progressive from the State of Washington. It should be said that the Democrat from Louisiana had been appointed by Roosevelt in 1906. While the Republican policy avoided the charge of partisan control by making the commission in its personnel adverse to the party in power, the Democratic policy reciprocated by removing the only Republican to make room for a man who at the time of his appointment was not a Republican, whatever he may now call himself since his party is no more, and he can not be a Democrat and remain on a commission that by law must not be all of one party.

This administration must be judged by the record it makes. Up to date its record on the civil service is as follows:

First. Numerous party declarations demanding an adherence

to the principle of civil service.

Second. The head of the party pledged to it in his many references in his books and his official connection with an association devoted to the cause nation-wide in its influence.

These were prior to March 4, 1913.

ACTS OF THE DEMOCRATIC CONGRESS.

June 23, 1913: Technical services in the office of the Supervising Architect in connection with plans, specifications, and construction of the central heating plant exempted from the classified service. This was a rider on an appropriation bill.

October 3, 1913: Agents, deputy collectors, inspectors, and

October 3, 1913: Agents, deputy collectors, inspectors, and other employees in connection with the income tax are exempted from civil-service rules.

October 22, 1913: Deputy collectors of internal revenue and deputy United States marshals are exempted from the civil-service rules. This was a rider upon an appropriation bill.

December 23, 1913: Employees under the Federal reserve act not included in the civil-service regulations.

July 16, 1914: Commercial attachés, Department of Commerce, exempted from regulations of the merit system. This was a rider to an appropriation bill.

August 1, 1914: Commissioner of immigration, New Orleans, by a rider upon an appropriation bill was exempted from the operation of the merit system.

August 1, 1914: Commissioner to Five Civilized Tribes taken out of the civil-service regulations by a rider to an appropriation

September 26, 1914: Federal interstate trade act exempted secretary, clerks to each commissioner, attorneys, special experts, and examiners from the merit-system regulations.

January 28, 1915: Life-Saving Service made a part of the military force by including in the Coast Guard. This was not an objectionable change.

Just last week we saw forced through this House another vicious assault upon the merit system, the boldest step yet taken, when the majority of this House placed the entire list of officers created by the rural-credits act now before us under the spoils system. The leader of the micerity [Mr. Mann] offered an amendment striking out the spoils provision and substituting the merit system; it was voted down by a strict party vote, every Republican voting for the merit system. The progression toward the spoilsman is best noted here. All the other exemptions mentioned in the earlier acts left the matter to the discretion of the President. But this last expressly forbids the President's respect for the civil service, and commands him to ignore it. Note the wording:

All such attorneys, experts, assistants, clerks, laborers, and other employees, and all registrars, examiners, and appraisers, shall be appointed without regard to the provisions of the act of January 16, 1883, and amendments thereto or any rule or regulations made in pursuance thereof: Provided, That nothing herein shall prevent the President from placing said employees in the classified service.

This is not a mere exemption. It is a positive order excluding the operation of the civil-service act; a purpose to use the spoils system for the first appointment and then cover such appointments later by the protection of the rules forbidding their removal.

The shipping bill which you intend to bring into the House by rule to follow the rural-credits act is in keeping with this consistent record in breaking down the merit system. Note the provision. Section 4 on page 5 reads as follows:

With the exception of the secretary, a clerk to each commissioner, the attorneys naval architects, and such special experts and examiners as the board may from time to time find necessary to employ for the conduct of its work, all employees of the board shall be a part of the classified civil service.

The secretary of the National Civil Service League declares: This is a bad provision, because Congress should not classify positions. A general rule, i. e., the civil-service law, can control all of these places, and the President and the commission are given full authority to except any particular positions. Experts and examiners in the Pension Office are in the classified service, and there is no reason why Congress should make any exceptions by statute.

This legislative record has some meaning when examined in the light of President Wilson's freedom with Executive orders. The commission gives its annual reports covering Executive orders. Congressman GILLETT, on the 13th of last month, gave an illuminating comparison of Wilson with Taft in this realm, to a hurtful disadvantage of the former. It showed clearly that the President had little more regard for the merit system

than this Democratic Congress.

The real animus of a party can not always be guaged by what it really does. It is necessary to examine what it tries to do. Almost every week from some Democratic quarter comes an assault upon the merit system. To-day it is a Democratic chairman of a committee in charge of some bill. Yesterday it was the President's appointment. The day before it was a department in an attempt to reorganize some service. The legislative onslaughts, many of them open, as in the cases of riders upon appropriation bills, are so bald that their purposes are at once detected. But not infrequently the sharp practice of the spoilsman legislator will slip into some needful legislation a word or phrase or omit some necessary clause to open an entire bureau to the spoils hunter. The attempted reorganization of the Patent Office last year is in point. The proponents in the Senate put into the bill the phraseology of the law of 1870, which provided that all subordinate positions should be filled by appointment by the Secretary of the Interior on nomination of the Commissioner of Patents, and left it there. Left in that way the effect would have been to take the whole force out of the civil service, because the civil-service law was passed a dozen years later. Senator Lodge held the bill up on this account and, with the help of Senator CUMMINS, forced the Democratic Senate to in-sert, after the word "nominate," "in accordance with existing which means that appointments must be made in accord-

ance with the civil-service law, as at present.

This administration goes before the country with a program in glaring headlines—Underwood bill, Federal reserve act, Interstate Trade Commission, rural credits. These are legislative acts, everyone of which repudiates the merit system by legislative decree; this in spite of the quadrennial plank demanding it.

It is in keeping with another plank denouncing Republicans for extravagance, and yet in the very first Congress which was under the control of Democracy the running expenses were over \$100,000,000 higher than the highest of any Republican Congress.

The Democrats denounced the Republicans for the creation of unnecessary offices. In the face of that plank this administration failed to reduce any of what it declared unnecessary places, but on the other hand, according to the illuminating remarks of the gentleman from Iowa [Mr. Good], a reliable Member of the House Appropriation Committee, they have created at least 30,000 new places, at an annual cost of over

These facts will assist to interpret the interest of the Fourth Assistant of the Postmaster General in displacing 47,000 rural carriers by a system of reorganization to make places for the hungry spoilsmen outside of the reservation. One of the best and most recent illustrations of the activity of a Government department against the merit system is the attempt to motorize the rural routes which I denominated before the House Committee of Post Offices as "motorizing the rural carriers," for that was the real purpose. The new scheme was under the pretense of extending the service, to inaugurate the motor service to displace the horse. To do this they would lengthen the route to 50 miles, thus making one route out of two. That would reduce the 47,000 carriers to one-half the number, when fully installed. The sensible inference would be that those of the old carriers needed to do the work would be made eligible for transfer, but not so. Why? Because, by an interesting fiction, the new route was a higher salary than the old, and transfers can not be made from lower to higher, said the reorganizers. A new examination must be taken. Two routes were made into That does not only vacate two by uniting them, but it was declared that the one was a vacancy. Here was a scheme to place 47,000 carriers out, and by technical construction make vacancies, not for those tried servants but for favored Democrats who filled the requirements of Bryan's instructions regarding vacancies. If the plans of the Post Office Department had been carried out the Democratic office seekers would have at last found a way to pry open the Rural Mail Service; and have burgled their way into the Rural Service. They were then to

be eligible, after one year, for transfer into the clerk or carrier service of post offices, or into the Railway Mail Service. The establishment of this scheme was to come just in time to reward the deserving Democrats just prior to the presidential campaign.

The rural carriers of the country have been for some years

covered under the protection of the civil-service rules which provide that "no person in the classified civil service of the United States shall be removed therefrom except for such cause as will promote the efficiency of the service, and for reasons given in writing," and it is provided that the accused is to be furnished with a copy of the charges and given opportunity to reply; but the ingenious officials charged with the duty of rewarding deserving Democrats have found a way. have motorized the rural service, and the faithful and effi-cient civil servants glide out of their jobs with that smooth and imperceptible motion of which only a motor vehicle of a certain description is capable. When the Ohio Republican delegation after several meetings decided to baldly expose this procedure, a halt was called. In my own county, which the department had picked for a test, it had back of it the Ohio senior Senator, who argued that the proposed change would add to the service. Not until we carried the fight before the House Post Office Committee, and to the House itself, did we compel a final rescinding of the orders for this assault upon the Rural Mail Service.

The most vicious practice as now in vogue is the system of promotion and demotion, whereby a trained servant is demoted in rank and salary to make place for a "deserving" Democrat below him in rank and salary. In this shifting in the interest of partisan politics the one demoted not infrequently continues to do the same work he did before, but at the lower salary. have not been able to secure definite figures telling the story of this prostitution of the public service on the altar of the spoilsmen. The proffering of such information means danger to the informant. This pernicious practice ought to be made a subject of investigation, but of course will not be, so long as the party of spoils controls the Congress, which will not be long,

from present indications.

In the light of this record of legislation actually accomplished, of attempted legislation that failed, of Executive orders, beginning with May 7, 1913, and continuing up to the present hour, can there be any possible surprise over the perfectly apparent incompetency for efficient administration of the country's public business? The prevalent paternalism which looks to the Government to make the ignorant learned, the indolent industrious, the unhappy happy, the poor rich was never so noticeable as in this Congress. That peculiar political philosophy so voluble in the dominant section of our country under this administration that holds the Government responsible for our woes, our aches, and all our troubles, and demands that our many wants be supplied, since, by governmental action, the making of a hundred million is but the scratch of a pencil, striking out \$100,000,000 and writing in \$200,000,000, such philosophy when further interpreted in the light of the spoils philosophy when further interpreted in the light of the spoils system, as witnessed in the past three years, leaves no further reason for surprise over the Democratic promise in 1912 and its record of 1913–1916. Verily, it is a far cry from Cleveland's "Public office is a public trust" to Wilson's "Get all you can and can all you get."

The Military Establishment.

EXTENSION OF REMARKS

OF

HON. KENNETH D. McKELLAR,

OF TENNESSEE,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, May 13, 1916.

Mr. McKELLAR, Mr. Speaker, recently I have received a number of telegrams and letters urging me to support the Chamberlain preparedness bill rather than the Hay bill. I have also received letters and telegrams urging me to vote against the Chamberlain bill, two of which communications I am going to append as a part of my remarks.

When the Army bill was reported back by the conferees for further instructions I voted against the provision raising the standing army to 250,000 men, and I voted against section 56 of the Chamberlain bill providing for what is best known as the continental-army scheme. Under these circumstances I wish to give my reasons for these votes.

When the Hay bill was up for discussion and hearings before the Committee on Military Affairs of the House, of which I am a member, our committee—Democrats and Republicans—unanimously agreed for the sake of getting what we believed to be abetter preparedness measure that we would stand by and vote for the federalizing of the National Guard, and that we would not incorporate the continental-army scheme in our bill. Under these circumstances the Hay bill was unanimously reported out from the committee and overwhelmingly passed in the House. I was exceedingly active in bringing about the agreement, and, of course, I am bound by such agreement.

But outside of this question I am constrained to believe that many of those who are urging the Chamberlain bill for a standing army of 250,000 men and a continental army of 261,000 men do not understand the conditions as they are. To officer an additional 150,000 men in the Regular Army-for our Army is now composed of 100,000 men-and to officer the 261,000 men in the so-called continental army would require, in round numbers, 20,000 additional officers. We have not got these officers trained. If those measures passed, the officers would have to be appointed at once, and we would have an untrained army with 20,000 officers who would be just about as green as the men. This would not be preparedness. It would be cruel injustive to the officers and men, and would be no real defense to our country. greatest effect of the passage of the two measures would be to give many officers now in the Regular Army very large increases in pay and rank, and of course these Army officers are naturally interested in getting such bills passed. It is claimed that Army officers prepared these measures in a large part for the Senate committee. As to the truth of this I can not personally speak. It would not give us a better defense to graft into our present Army 20,000 additional green officers having no training. It might be entirely satisfactory to the officers if we did not have a war, because we pay them well, but it would be a very small step toward real preparedness if our country should happen to get into war. It would be misleading to the American people in that we would then have on paper an army of about 500,000 men with about 27,000 officers, costing over \$500,000,000 a year, when, indeed and in truth, only about 20 per cent of the men and about 30 per cent of the officers would be really serviceable as a first line of defense.

Now, the Hay bill provides for only 140,000 men, and in conference this will be increased to about 280,000 men, which number can be expanded in times of war to about 220,000 men. The plan of this bill is to train the National Guard in every State, and to increase the National Guard in every State. We have about 129,000 well-trained men in the National Guard now. Under this bill these men will be better trained, and in three years we believe that their number will be increased to some 400,000 men. The 129,000 men already in the National Guard are fairly well trained now. They have been drilled in camp and in the field; they have been taught to shoot in target practice. They have been taught to take care of themselves in the field, and I take it that no one can deny that these 129,000 men would be of greater service in times of war than a like body, or even a larger body of untrained men.

or even a larger body, of untrained men.

In this bill we provide that the men in the National Guard shall have the same qualifications that the men in the Regular Army shall have. We provide that the reserve shall be built up in exactly the same way the reserve is being built up in the Regular Army. Every man that enlists in the Regular Army or in the National Guard will enlist for three years with the colors—that is, on active duty—and for three years more in the reserve. So that in six years we will have a standing army of 180,000 men on regular duty, and nearly an equal number on the reserve list. And, in the National Guard we will have 400,000 men on the active list, and almost that number on the reserve list. This will mean that we will continue training our men and our officers in the Regular Army and in the National Guard all at the same time. We will not have a large number of untrained men officered by untrained officers. We will use the units and organizations that we now have. The country for a number of years has spent many millions of dollars upon its National Guard. Why throw that away and attempt to build up an entirely new organization of untrained men, as provided in the continental-army scheme?

The Hay bill will mean an increase in our Regular Army of nearly 100 per cent and over 200 per cent in the National Guard. It will be by far the cheapest and best way of defending our country, and it will be utilizing units and organizations that already exist. It will not be an untried scheme. The Chamberlain bill is a long step toward militarism. The Hay bill is a democratic measure, and one strictly in accord with our Constitution, our history, the genius of our institutions, and democratic policies.

The Regular Army officers, who it is claimed are behind the Chamberlain bill, as I noticed from the debate in the Senate, printed in the RECORD, naturally do not want the National Guard used in our system, because it does not, in the first place, mean rapid promotions for them, and in the second place, they naturally want to build up as large a standing army as possible. Of course, I do not blame them. They are to be commended for wanting to make the Army effective. quite sure that the continental army can not be recruited, and if not recruited then it is hoped to come back before another Congress and have some sort of compulsory-military-service bill passed. Of course, I am opposed to universal compulsory military service, and I am opposed to a large standing army in times of peace. I do not blame these Army officers. natural that they should want to make larger the Regular Establishment. But the duty of Congress is to consider only the best interests of the country.

The increases that we will make in our Regular Military Establishment, and the preparations we are making along other lines, are such as are reasonable and necessary. They mean that our country is going to make proper preparation for our defense and at the same time not resort to militarism. As soon as the disturbance now going on among the nations ceases, then we can reduce our Military Establishment. In order to keep up this establishment Congress has to appropriate money every year. If it does not appropriate the money, the establishment has to be reduced, and I have no doubt that when the necessity for this larger standing army and greater preparation for our national defense has passed away, that the establishment will be reduced unless we make it so large that it would become a political pawn, in which event our Republic would soon be gone. I do not think any antimilitarist need feel that we are not doing the right thing in taking the precautions that we have. These precautions are reasonable and should be taken.

Of course, we must continue to build up a great Navy. After all, a Navy is our principal reliance as a defense. Our coast defenses are in better condition than those of any other nation in the world. We are adding to and strengthening our defensive forces in a calm and proper way. We are not losing our heads. Our friends at home must not get excited. None of us need get scared. They should bear with us and work with us, and all will come out right.

I have not the slightest idea of our becoming involved in war with any European country. I have absolute confidence in the President and his ability to keep us out of this European war, and keep us out with honor. Certainly, I see no reason why we should go to war. We can not go to war without Congress declaring it, and I do not know of a man in Congress who would be willing to vote for a resolution declaring war on any European country. We have the greatest prosperity in this country, taken as a whole, and it would be silly and ridiculous for us to disturb it by getting into this European imbroglio. If we were to build up a great standing army like that provided for in the Chamberlain bill, an excitable President could get us into war without declaring it. Of course, President Wilson would not do this, but some other President more easily excited might do so.

But some may say that we ought to create a large standing army because of the likelihood of our becoming involved in further trouble in Mexico. This furnishes no reason why we should have a standing army of more than 500,000. With the 50,000 mobile Regular troops now on the border, or in Mexico, with our marines, and with our National Guard of 129,000 men to draw from, it would seem that we have ample forces to pacify Mexico, but if these are insufficient, then, we have a law on the statute books now by which the President can call for volunteers, and we could train a volunteer army just as quickly as we could train the addition to our regular standing army, as provided in the Chamberlain bill, and this would be far better, because, when the war was over the volunteers could return to their peaceful avocations, whereas if we once built up a tremendous standing army we would have it on our hands at an enormous cost for all time to come. I think the time has arrived when the conditions in Mexico have become so intolerable that they may force us to intervene. It is a bad job, but if it is necessary we must perform it. I hereto append the communications:

MEMPHIS, TENN., May 8, 1916.

Hon. K. D. McKellar, House of Representatives, Washington, D. C.:

Hope sincerely you will support section 56 of Chamberlain bill. This section provides for a national organization along lines contemplated by President and Secretary Garrison, and is a step in the direction of real preparedness which in no way conflicts with militia provisions. I believe as a matter of political policy it would be much in your interests.

Luke E. Weight.

MEMPHIS, TENN., April 20, 1916.

Hon. K. D. McKellar, Washington, D. C.

Hon. K. D. McKellar,

Washington, D. C.

Dear Sir: We, the undersigned citizens of Shelby County, are opposed to the passage of the Chamberlain bill or any other Army measure before Congress pertaining to the establishing of militarism in this country under the guise of preparedness.

The voice of the people cries aloud in opposition to the mad jingoist folly of trying to convert this country into a military camp and the placing of oppressive taxes on the people to support and maintain a arge standing army to suppress them.

We are bitterly opposed to the substitution of militarism for democracy. The two can not exist at the same time, but let democracy prevail. And democracy must predominate, or our boasted freedom will be trampled under foot of arbitrary power.

The true Americans are determined that their will must predominate in the present crisis to prevent their freedom from being taken away.

We must work to preserve this Government, as our forefathers fought to establish the greatest democratic government ever known to mankind. Are we ready as a nation to retrograde and deteriorate into militarism and monarchy and despotism? We say no, and the echo is reverberating from one end of the country to the other. These Army bills, designed to foist militarism on the people of this country, must be defeated, and we demand of you to work against and vote against the Chamberlain bill, and help to defeat any other military measure from becoming a law.

Yours, very truly,

33 Pontotoc Avenue, Memphis, Tenn.

and we demand of you to work against and vote against the in bill, and help to defeat any other military measure from a law.

II. B. Terrell.

33 Pontotoc Avenue, Mcmphis, Tenn.

Industrial Peace in Colorado.

EXTENSION OF REMARKS

HON. EDWARD KEATING. OF COLORADO,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, May 16, 1916.

Mr. KEATING. Mr. Speaker, Colorado's industrial difficul-ties have in times past occupied much space in the newspapers and magazines of this country and have furnished material for debate in this House.

I am glad to be in a position to report to this distinguished body that industrial conditions in Colorado have undergone a most important change. Arbitration and mutual accommodation are being more and more widely recognized as the proper methods of adjusting differences of opinion concerning wages, hours of labor, and working conditions.

Much has been accomplished and much remains to be done. Our workers are employed, the industries of our Commonwealth were never more prosperous, and peace and happiness prevail

throughout the Centennial State.

I trust it will never again become necessary to parade Colorado's industrial difficulties across the first pages of the newspapers of this country. I trust that never again will a Colorado employer refuse to grant his employees the right to organize for the purpose of bettering their conditions, and I trust we will never again hear of a Colorado employer who will refuse to sit at the council table with the representatives of his men for the purpose of adjusting their differences

This much by way of introduction, Mr. Speaker. I now want to submit to the House two interesting documents in relation to industrial conditions in Colorado. The first is an editorial from the Denver Labor Bulletin, one of the best-edited labor papers in the United States. It calls attention to a speech delivered by Hon. Wayne C. Williams, of the Colorado Indus-

trial Commission, before the National Convention of Industrial and Labor Commissioners of the United States in Columbus, Ohio, on April 26, 1916. The second document is a stenographic report of Mr. Williams's remarks.

Mr. Williams is one of the forward-looking young men of the West, and as a member of the Colorado Commission on Industrial Relations he has done much to bring employer and employed into a close and harmonious fellowship.

employed into a close and harmonious fellowship.

The editorial from the Bulletin is as follows:

OPERATION OF NEW COLORADO INDUSTRIAL LAW.

Attention of the Bulletin's large family of readers is directed to the able speech, published elsewhere in this issue, delivered Wednesday at Columbus, Ohio, by Wayne C. Williams, of the Colorado Industrial Commission, before the National Convention of Industrial and Labor Commissioners of the United States. Do not permit its length to deter you from reading every line of it. Mr. Williams gives, in his usual intelligent way, a comprehensive review of the Colorado law as it has operated in this State since August 1, 1915. Organized labor people, and all those concerned or interested in industrial development of States and Nation, will learn much of benefit by a careful reading of this address. Many who have hitherto had a faulty or indefinite knowledge of the Colorado law will gain a better understanding of its merits through Mr. Williams's address.

He tells how "compulsory investigation," as distinguished from "compulsory arbitration" of industrial disputes, has served to bring a large measure of peace among employers and employees, how strikes and lockouts are averted, and how the law of collective bargaining is actually made effective under the Colorado law.

This is the most comprehensive and intellectual explanation of what has become known as "the Colorado industrial plan" yet given to the public, and we are sure every reader of the Bulletin, as well as others interested in this great problem, will feel under obligations to Mr. Williams for this enlightenment.

A splendid tribute is paid the organized workers of Colorado, which and indirectly applies to trade-unionists throughout the Nation, when Mr. Williams, speaking for the commission, declares they have compiled unfailingly with both the spirit and letter of the law. He has found the organizations of labor, officers, and members ready and willing to cooperate with the commission in bringing about industrial peace and establishment of industrial justice in Colorado.

A very interesting as well as instructive feature of the address will be found where t

Mr. Williams's speech, as delivered before the National Convention of Industrial and Labor Commissioners at Columbus, Ohio, is as follows:

Ohio, is as follows:

The one overshadowing internal problem confronting the Federal Government and the 48 States is presented by the disputes between employers and employees. It involves the reconciliation of the hitherto conflicting interests of capital and labor. It is the most important, the most fundamental, and the most vexing problem that has ever confronted public officials and the citizenship of a State. It is closely analogous to the one overshadowing international problem, which is reconciliation of the conflicting interests of sovereign nations, the establishment of world peace, the institution of an international tribunal of justice to do away with war.

To the former problem, the one involving industrial peace in this Nation, the State of Colorado offers a new solution, and invites her 47 sister States and the Federal Government to consider the law and the methods and recommendations that are being worked out under that law as offering a new solution for this difficult problem, and we invite the attention of the Nation and the patient, sympathetic consideration of all thoughtful American citizens to the operation of this law as developments are made under it.

FUNCTIONS OF THE STATE.

The bitter industrial strife in Colorado caused thinking men to see that the State, representing society in its organized form, was—

1. A necessary party in all industrial disputes.

2. That the State must, by some constructive method, enter into and handle the disputes before they spread beyond legal restraint into the arena of warfare.

To those who say that the State has no right to participate in industrial troubles and that it is too large an extension of the functions of government, I answer that question is foreclosed; that it is too late to discuss academically the functions of the State; that the State always has been a party and always has interfered with industrial disputes, but usually too late to accomplish anything. Every American citizen is familiar with the usual course of a strike. It begins with the walkout; it lingers through the early stages; it assumes an angry mood when nonunion workers are brought in; and then, too often, it results in violence and disorder, when the passions of men are aroused and bitter hatred has taken the place of calm reasoning.

The State stands idly by with folded hands awaiting the gathering storm clouds, until warfare is actually threatened or breaks out. Then the State gets into the controversy; troops are called out; guns are brought into use; there is bloodshed, death, more bitterness, charges and countercharges, suspicions, and the seeds are sown for future industrial discontent. Now, if the State is going to get into the controversy at all, why not get in earlier? Why not enter the dispute at which the lawmakers of Colorado faced.

Colorado is the first State in the Union to follow the Canadian law

which the lawmakers of Colorado faced.

COLORADO BLAZES THE WAY.

Colorado is the first State in the Union to follow the Canadian law and to provide for compulsory investigation of industrial disputes and to prohibit both sides from participating in either a strike or lockout until that investigation has been finished. It is interesting to note that this principle is the same one that has been embodied in the peace treaties prepared by William J. Bryan, while Secretary of State, and adopted by the United States and 30 other nations of the world. These treaties provide for a compulsory public investigation of the points in dispute between the nations and for a waiting period during

that investigation in which neither nation shall prepare for war, or

that investigation in which neither nation shall prepare for war, orengage in war.

Thus we see a further analogy between capital and labor and the disputes between nations. The plan and principle involved in this Colorado act is working so wel: that I predict the same principle will work
when applied under the Bryan peace treaties. This method may not
always work, it may break down here and there, but in the main it
will work well; it is based upon sound psychology and good common
sense and upon a practical realization of the facts of life and the way
in which men do things.

This law embodies certain fundamental principles which it will be
well to state. These principles make clear the working theory of the
law and have furnished the motive for its enactment and the administration of the law itself brings out in clear light the actual operation of
these principles.

these principles.

HOW THE LAW OPERATES.

In brief, the law operates in the following manner: The employees of a manufacturing plant desire a raise in wages or shorter hours. Under the old system they could or would not give a notice to their employer as they might desire. They could go on a strike without a warning and they could be locked out without any warning. There was no cential body to appeal to, no one to investigate the dispute or find out the actual merits; there were charges and countercharges, rumors and accusation, and more or less chaos and anarchy generally; the plant tied up, the men idle, and their families suffering, bitterness increasing every hour; importation of strike breakers, disorder, and often terrible consequences. This is not the history of every strike, but of many strikes

ness increasing eyery hour; major attinuous strike breakers, disorder, and often terrible consequences. This is not the history of every strike, but of many strikes

Under the operation of the Colorado law the first step is for the employees to notify the employer of any change of wages or hours which they desire. This is made in writing and a copy goes to the employer and to the commission. The notice is for 30 days under the statute, during which period the commission may permit the two sides to privately negotiate with each other, or, if they do not want to do so, the commission will get them together and endeavor informally to adjust the dispute. If these informal efforts fail, the commission may, upon its own motion or upon request of either side, or both sides, start a formal investigation.

The investigation is held, witnesses are subpensed and put under oath, complete and exhaustive testimony is taken as of all matters in dispute. When the investigation is complete the commission makes its findings. These findings, or the award, as it is called, are not binding upon either side, although either or both sides may accept the findings, either before the investigation begins or at its conclusion, in which event the award is binding.

BOTH SIDES ARE RESTRAINED.

The only restraint upon the two sides is that prior to and during the investigation the employer can not lock his men out and the men can not go on a strike. The status quo is preserved; the men must remain at work at the usual scale of hours and wages until the commission makes its findings. After the findings have been made either side is free to do as it chooses.

The old weapons of industrial warfare may be resorted to; there may be strikes and lockouts, or any other legal act along lines of force and coercion.

Thus we see how the law operates, and we begin to understand the significance of a restraining period of this character. The first object and result of such a law is that it provides a cooling-off period, in which both sides have an opportunity to avoid hasty and precipitous action and to think over calmly the responsibility and grave possibilities of the situation.

Hasty and thoughtless action has never helped any cause; it has never moved America or her institutions forward one inch; it will never aid the cause of industrial peace.

COMPELS COLLECTIVE BARGAINING.

COMPELS COLLECTIVE BARGAINING.

The second object and result of the operation of this law is to compel collective bargaining. Nearly every modern thinker on industrial and social topics indorses the theory and principle of collective bargaining. It is a practical, wise, and efficient measure of promoting industrial peace and justice. It is urged by newspapers, magazines, and thinkers generally as being the ultimate hope of all those who long for industrial peace, as being fair and just as between employer and employee.

for industrial peace, as being fair and just as between employed.

This law compels the very thing that is declared to be so desirable; it brings the parties together, compels them to sit down face to face, to look each other in the eye and talk over their differences. The result of this is to cool both sides down and to climinate a large number of the points of dispute and misunderstanding. I am prone to believe that one-half of all disputes between men could be amicably settled if both sides met face to face and talked things over. I have been interested and amazed to see the number of misunderstandings that exist between employer and employee when there exists no way of compelling them to talk things over together. It is collective bargaining, too, in the sense that the employer or employers in a group meet either the employees of a single plant grouped together or the employees in an entire craft to be dealt with together.

POWER TO ASCERTAIN FACTS.

POWER TO ASCERTAIN FACTS.

POWER TO ASCERTAIN FACTS.

The third object and valuable result of this law is that it provides for a public body with power to ascertain the facts of any industrial controversy. This lack of some authoritative body to ascertain the exact facts of a controversy has been admitted on all sides to be a serious handicap to a clear understanding of the issues in any industrial dispute. Each side has usually contented itself by issuing bulletins and charges, stating its own side of the controversy.

The public has not known what the facts were, and every man has read those facts which suited his own prejudices and has shut his eyes to the other side. The commission has power to subpæna witnesses and put them under oath, and it exercises this power; it has power to go into the accounts and books of the employer and the employee; to inquire into the cost of living, cost of production, state of the market, the effect of freight rates, and every other factor which enters into the question of wages and hours. There are no limits to the commission's power to get at the real facts.

The fourth and final valuable result from this law is that the facts when once gathered by an authoritative and impartial public body are given to the public, and there results the widest publicity of all the facts bearing upon the controversy. The public is informed as to the terms of the dispute and the conclusions of an impartial body as to the merits of that dispute. Publicity is given to the findings of the commission, and it remains then for public opinion to do its work and to

compel both sides to adjust themselves to the award which the commission found to be just.

NO TECHNICALITIES ALLOWED.

In the operation of the law certain rules of procedure have been developed which reflect certain angles of the whole labor question, and which it would be well to stats here. These rules are, in brief, as

which it would be well to state here. These rules are, in orier, as follows:

1. No technical rules of procedure are ever followed or permitted. The statute provides for a liberal construction and operation of its terms and the commission firmly insists upon this.

2. No technical form of notice is ever required. It is sufficient if there be actual notice to each side that the commission is about to investigate.

3. The commission may not wait for one of the warring parties to

investigate.

3. The commission may not wait for one of the warring parties to invoke its powers of investigation, but may voluntarily, upon its own motion, investigate and invoke its own powers.

4. Employees may appear and bargain through a union if they so desire, and the union may appear before the commission as the representatives of the employees. Employers may appear by agent or attorney or through an employers' association, if they so desire. Both kinds of organizations have appeared before the commission. While the law speaks of employer and employee and seems to contemplate a dispute between a single plant and its employees, and while in the last analysis each finding of the commission is a finding as to each plant or company, yet employees may appear through a union and the employer through his association. It sometimes happens, too, as a matter of practical cooperation, that the employees in a dozen plants are all in a union, and that the heads of the dozen plants are all in an association of employers, and the operation of collective bargaining is widened in such a case.

THIRTY-DAY NOTICE EXPLAINED.

THIRTY-DAY NOTICE EXPLAINED.

5. The law limits the 30 days' notice exclusively to wages and hours, and if the dispute is over some craft or trade question and does not involve wages or hours, it has been ruled that the 30 days' notice need not be given; therefore employees could strike on any question except that of wages or hours and not give 30 days' notice, with this one exception and qualification: That in case of any industrial dispute involving any sort of a question, if the commission starts an investigation (even if no 30 days' notice is required), there can be no strike or lock-out during that investigation. This rule is a wise one and prevents many disputes from reaching a serious stage.

6. Some informal pleadings are permitted, such as a motion to strike, or in relation to special appearances for the purpose of quashing the proceedings. Any such motion as may challenge the jurisdiction of the commission will be entertained, and the commission will in every case first consider and decide the question of its jurisdiction and of its right to proceed. If it determines that it has no jurisdiction, the case ends there; if jurisdiction is taken, the investigation proceeds. But while informal pleadings are permitted, they are never allowed to control the commission, in the sense that mere pleadings can determine the status of the parties before the commission of determine the result of the commission's hearings. If the pleadings assist in the preliminary and informal questions which first arise, they are permitted, otherwise the commission does not specially regard them. In other words, the adjective law, as lawyers call it, which is the law which relates to procedure, never controls the fundamental rights of the parties before the commission.

EACH DISPUTE CONSIDERED SEPARATE.

EACH DISPUTE CONSIDERED SEPARATE.

EACH DISPUTE CONSIDERED SEPARATE.

7. The commission has no one set mode of procedure which is followed in every case. While the general lines of the procedure are very much the same, and while some general modes of operation are apparent in various disputes the commission has adjusted, yet the commission finds that each dispute must stand on its own basis and be determined by the particular conditions which arise in that particular dispute. The commission does not begin its intercession in a dispute by a firm show of authority if it can be avoided. It intercedes with each side as a friend and a well-wisher; it stands for the best interest of society as a whole; it commences informally; and throughout all its proceedings it acts on the theory that its policy should be of two-thirds diplomacy and one-third authority. When a notice is received by the commission the first step is to get in touch with both sides and find out what has been done or is being done toward negotiations. If the two sides are in touch with each other and are negotiating, the commission stands aloof and watches negotiations. If the two sides are not negotiating, the commission calls them into conference and endeavors to start negotiations. It is sometimes the best policy to call both sides in at the same time before the commission; in other cases it is the best policy to call in each side separately. Often more can be accomplished by working with the opposing sides in private conference than can be accomplished with them together. If there is any past history or ancient bitterness, it is sometimes better to allow these differences to be thoroughly talked out before the two sides settle down to the actual consideration of the terms of a constructive agreement.

ONLY ONE STRIKE UNDER LAW.

ONLY ONE STRIKE UNDER LAW.

A summary of the industrial disputes before the commission shows the following:

The total number of complaints formally presented to the commission from August, 1915, to May, 1916, was 44; the total number of these cases settled was 37; total number still pending before the commission, 7; total number of impending strikes definitely prevented, 6; estimated number of informal complaints of industrial matters, 25. From one viewpoint it may be said that the whole 37 industrial matters settled by the commission or presented to it might have resulted in strikes, but, of course, some of them would undoubtedly have been settled without strikes. In the 6 cases specifically mentioned, strikes were actually averted, and the situation had become so acute that the intercession of the commission became absolutely necessary. There has been but one actual strike since the new law went into effect, and this occurred after the commission had concluded its formal investigation and the men had a right to strike under the law. This strike lasted about one week, was not marked by any violence whatever, and was settled on substantially the terms defined by the commission in its award.

Among the crafts represented in these disputes before the commission were cracker makers, tailors, barbers, machinists, painters, malsters, bill posters, smeltermen, dry goods clerks, brewers, street-carmen, carpenters, sheet-metal workers, railroad men, sign painters, coal miners, granite cutters, cigar makers, horseshoers, garment makers, and bricklayers.

A review of the work of the commission would be inadequate if I did not mention the part prohibition has played in aiding industrial peace. Prohibition is proving a great success in Colorado and the absence of the saloons is an important factor in preventing violence at the time of a strike, This is particularly marked where foreigners, such as the Leadville smeltermen, are involved.

I believe profoundly that this law will work to the advantage of labor and of capital, and that it will bring a larger measure of industrial peace than our State or any other State has hitherto enjoyed. It may not solve the whole problem of industrial disputes or eliminate all strikes, but it will tend to solve the problem, it will lesson the number of strikes, and it is at the very least a step in the right direction.

LABOR UNIONS OBEY THE LAW.

The labor unions of Colorado generally have obeyed the law without question. Their painstaking care to comply with every provision has been a source of gratification to the commission and has been a fine example of the best type of American citizenship in its obedience to law. No one could have witnessed the general conformity of the trade-unions in Colorado to this new industrial law, and say that labor unions do not obey the law. The State Federation of Labor has sent out a letter of instructions to every union affiliated with that organization, notifying them of the steps necessary to conform to the law, and urging them to keep within the law in all disputes.

I believe that the great majority of laboring men in Colorado have come to see clearly the great advantage this law brings. There are some individual labor icaders who have not yet indorsed the law nor the principles behind it; some of them are in a mood to be convinced, but have not accepted it, fearing that it is some new and strange contrivance designed by the selfish power of capitalists to destroy labor.

Of course, the law is nothing of the sort, and its actual operation is rapidly dissipating this idea. The objections offered to the law are these:

these:
That the law abridges and restrains the right to strike and that any such form of compulsion so called, is un-American and is a form of slavery.

The law does not restrain the right to strike. Considered from one viewpoint, it does restrain this right in a limited and temporary manner, and by this means it prevents sudden violence and promotes peaceful negotiations: it also restrains the right to lock out workingmen. It prevents the employer from cutting wages and lengthening hours and discharging bis men while the dispute is in progress.

From another viewpoint, the law does not restrain strikes. Suppose a group of men on April 26, who work for a common employer, meet to discuss and formulate demands for higher wages, and suppose it is urged that they go on a strike May 1. Some one suggests that it would be better to postpone the strike one month, or until June 1, and that this date complies with a law requiring 30 days' notice. Suppose the employees actually agreed to comply with this law, and did so by giving the 30 days' notice. This is a concrete example of how the law operates. Can it be said that such action and such continuance of work amount to slavery? The employees have simply advanced the time at which they will put their demands into effect. They have merely postponed the resort to force in the hope that force will not be necessary. The employer knows that their right to strike has not been taken away from them and that back of their demands is this potential right which may be exercised.

NO ELEMENT OF SLAVERY.

Often the knowledge of this potential right to strike is of more value to workingmen than the actual resort to the strike itself. The public has an interest in the matter and has a right to demand that all peaceful means be exhausted before the strike or lockout is resorted to. If this be slavery, then we must find a new meaning for that term. It does not comprehend a single element of slavery.

Very often trade agreements provide for a 30 days' notice before going on a strike, which would bring about compulsory work just as truly and effectively as this law brings about compulsory work. The only compulsory labor the American nation recognizes or ever will recognize is a compulsory labor imposed upon every man, based upon the Divine law that man shall earn his bread in the sweat of his brow.

It is not surprising that some employers or employees chafe under the restraint of compulsion. The two forces of capital and labor have been almost sovereign in their power. Public officials have been afraid to deal with them. They have been allowed to work out their own industrial disputes, but both of these powerful and valuable forces in American life must be brought under complete restraint of law.

DEPRIVED OF NO RIGHTS.

DEPRIVED OF NO RIGHTS.

Another objection has been that the law interferes with the power of the union to collectively bargain and make its own terms. There are three answers to this objection:

(a) The commission never uses its own power to compel the two sides to bargain together if they themselves will voluntarily get together and

(a) The commission here was tas any power to compete the two safes to bargain together if they themselves will voluntarily get together and bargain.

(b) The right to independent bargaining collectively is not absolutely taken away from either employer or employee; it is only temporarily withheld while the commission investigates.

(c) The one thing the commission does is to actually compel both sides to bargain collectively; it enforces and compels the exercise of the very right that some labor leaders say has been taken away by the law. Thus their objection is refuted by the very terms of the law itself. When we reflect that in so many instances employers have refused to treat with their employees or with labor unions and have said, "there is nothing to arbitrate," we must certainly admit that if there was anything labor needed it was this law, which compels employers to arbitrate, at least to the extent of bargaining collectively before the commission if the law provided for compulsory arbitration, then, indeed, could men say that it provided a form of compulsion, which took away the right of independent bargaining, but the law does not do this, the findings of the commission are not binding unless both sides choose to accept them and make them so. The findings of the commission are merely persuasive.

AS TO IMPORTING STRIKE BREAKERS.

AS TO IMPORTING STRIKE BREAKERS.

The other objection made to the law is that it will operate in favor of the employer by enabling him to bring in strike breakers during the waiting period and hold them in readiness for an anticipated strike. The best answer to this objection is that the law has not worked that way. On the contrary, it has worked the very opposite. It has done more to keep working men in their jobs than anything else could have done. The conferences before the commission tend to draw the parties

together, not apart, and in all of the disputes which have occurred not one employer has sought to offend the commission or disregard the spirit of the law by oringing in strike breakers. But there is, in my opinion, a better answer to this objection, which is that there was nothing which prevented an employer from bringing in strike breakers before the law was passed. The situation of the laboring man who has a job is no worse now than it was before; on the contrary, it is better. It is felle to say that an employer might bring in strike breakers during the 30-day waiting period provided by the law, when, as a matter of fact, he could bring them in at any time preceding the 30-day period under the law.

RIGHT TO EXAMINE BOOKS.

Some Colorado employers have urged objections against the law. Their chief objection has come from the fact that the law gives the commission the right to examine their books to determine in any given dispute whether they are making such a reasonable profit as affords just grounds for an increase in wages. But without such power the commission could never pass upon a wage dispute.

The question of whether or not the Colorado commission will be a fair commission is an individual and personal question with that commission, dependent upon their own personal prejudices, sense of fair dealing, and of obligation to their State. If any man be disposed to criticize, we ask that judgment be withheld while we do our utmost to work out this great problem.

Speaking as I know I do for my colleagues and myself, I declare that we are an impartial commission, and that we stand squarely between the opposing sides in every dispute; that we have a high sense of obligation and duty to the State of Colorado; that we seek to deal only with fairness and justice, and we have a high and honorable ideal which inspires in us the ambition to promote industrial peace.

MAKES FOR INDUSTRIAL PEACE.

MAKES FOR INDUSTRIAL PEACE.

MAKES FOR INDUSTRIAL PEACE.

There can be no higher ideal for any man than that he desire peace. Peace with justice. And it must be forever true that what is right and what is fair can better be determined by the peaceful processes of friendly, calm, and reasonable negrtiations than by the bitter processes of hate, strife, and industrial warfare.

Workingmen and employers have lost more by the bitter clash of warfare than they have gained. Both sides will gain far more in the future by reasonable mediation and friendly conciliation through an industrial commission than they can ever gain by the strike or by the lockout. In any individual dispute one side or the other may feel that they have not secured by bargaining as much as they would have secured by force and coercion. They are probably mistaken, but even if they be right, in the long run they will secure more by bargaining than they will by force.

Is it too much to expect that we are entering upon a new industrial era, both in my beloved Sinte of Colorado and in every State of this Union? I think all signs point toward a new, a better, a fairer condition in industry. I believe that all hopes and aspirations of men are toward peace; not a peace of mere weakness and negative, but a constructive peace, a peace of mere weakness and negative, but a constructive peace, a peace of mere weakness and negative, but a constructive peace; not a peace of mere weakness and negative, but a constructive peace, a peace of mere weakness and negative, but a constructive peace, a peace of mere weakness and negative, but a constructive peace, a peace of mere weakness and negative, but a constructive peace, a peace of mere weakness and negative, but a constructive peace, a peace of mere weakness and negative, but a constructive peace, a peace of mere weakness and negative, but a constructive peace, a peace of mere weakness and negative, but a constructive peace, a peace of mere weakness and negative, but a constructive peace, a peace of mere weakness and negative, but a constr

DAWN OF A BRIGHTER DAY.

I look to a future day when all opposing parties in industrial disputes in all of the States of this Union and in the Nation will come with their grievances into a common council chamber to adjust and settle every controversy by the process of peaceful negotiation, and I look to see the nations of the world arise from this horrible nightmare of war and turn toward each other in a new spirit of friendliness, self-respect, and fairness and form and meet in a common council in a league of world nations to enforce peace, where there will be compulsory investigation of every international dispute, and public opinion behind the findings of the court will compel the opposing nations to accept the award made by this parliament of man. Can we ask for any higher ideal or seek any nobler ambition than to do our part in hastening the arrival of such a day. May God grant that such a day will speedily come.

A Lesson for Socialists.

EXTENSION OF REMARKS OF

HON. ALBERT JOHNSON,

OF WASHINGTON.

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, May 16, 1916.

Mr. JOHNSON of Washington. Mr. Speaker, on this, the anniversary of the birth of Robert Owen, I insert in the Con-GRESSIONAL RECORD, under leave granted to me, an account of Owen's effort to found a cooperative commonwealth at New Harmony, Ind., with the lesson to be learned from that experi-

Writing some time since in the London Daily Telegraph, a

granddaughter of Owen said:

"Strenuous as our efforts have been-efforts extending over four generations—the experiment at New Harmony was a dead failure, although no more favorable circumstances could be secured than those which obtained in our community. My grandfather had an income of £40,000 a year, and he spent the whole of his fortune on his experiments, dying without a pound in his pocket. Thus the village was entirely free from debt, and money stress could be avoided. My grandfather was a noted administrator, the spot was exceedingly well chosen, for the village had been well built and planted by its former German owners. The surrounding lands were vast and exceptionally

fertile. There was water power and an exit via the Wabash, Ohio, and Mississippi Rivers. Nevertheless, an experiment begun under these favorable auspices failed in three short years. As the father of cooperation Robert Owen succeeded well; when he shared his fortune equally with his neighbors both he and many of his neighbors came to grief, because only the noblest among them were willing to work efficiently when the pressure

of daily need was removed.

"This is instructive; but it is well to bear in mind that the experiment was not a socialistic one, except in the earlier sense of the word Socialism, in which it is not opposed to individualism. Robert Owen's adventure was one of voluntary cooperation, and it failed because the character of his colleagues was below the standard necessary for the work. When the stress of competition in its most urgent form was removed they ceased of competition in its most urgent form was removed they ceased to labor effectively. This defect of character, which stands in the way of all cooperative effort, is one which the progress of mankind will tend to cure. It is just the opposite with Socialism, i. e., politically compelled cooperation. As men advance in character they will be less and less disposed to yield to this. Working in State harness, with the bureaucrat holding the reins and the whip, will be felt to be more intolerable the higher the level of character attained by men and women. Devotion to one's follows, which is the spontaneous outcome of sympathetic one's fellows, which is the spontaneous outcome of sympathetic feeling, is one thing. The forced reduction of the individual to the rôle of a cell in the so-called 'social organism' is another and a very different one. The former means freedom and virtue; the latter slavery and ejection from the moral sphere.

"It is necessary to insist on this, as some of our statesmen, while ostensibly opposing Socialism, are confusing the issue on this point, probably because they know no better. In an address on 'Labor and Socialism,' at South Shields, Sir William Robson, K. C., M. P., the solicitor general, said:

Robson, K. C., M. P., the solicitor general, said:

"He did not wish to say a word against the motives of the Socialists, for these motives were pure and noble, but they had to look also at the methods by which the motive was to be realized. The aims of Socialism were very high; it promised nothing less than the abolition of poverty and of inequality. That was a fine program; he was all for it, if they could carry it out. There had been nothing better in point of aim and motive put before the working classes than the introduction of Christianity itself, because Christianity came before them with a promise of a great social reconstruction. But there was a rather awkward obstacle in the way of social reconstruction on a Christian basis, and it was that Christian reconstruction of society must be preceded and founded on a great moral reconstruction of our own nature. Now, Socialism did not recognize that obstacle; Szzialism was prepared to put in force a scheme of social reconstruction just as difficult as any scheme of reconstruction based on the Sermon on the Mount. It did not tell us to wait till we were fit for it.

"Now, this it expects to us in besed on a positive miscon."

"Now this, it appears to us, is based on an entire misconception. The regimentation of socialism does not presuppose any such moral qualities in those who are submitted to it as Sir William Robson imagines. On the contrary, it is individ-ualistic cooperation for which those qualities are required; and the possibilities of individualism at any given time are limited by the then existing limitation of those qualities. With moral progress, and the consequent decline of invasive conduct and the growth of the spirit of justice, the amount of government permitted by individualism would grow less and less to the point of evanescence."

In an article on "New harmony," J. B. Barnhill, editor of

the American Anti-Socialist, of Washington, D. C., says:

In an article on "New harmony," J. B. Barnhill, editor of the American Anti-Socialist, of Washington, D. C., says:

Arthur Young was well inspired when he said: "Give a man the secure possession of a rock and he will turn it into a garden." But Young did not tell the whole truth. All experience proves that the surest way to turn a garden into a desert is to make possession insecure, to substitute community interest for private interest, community property for private property, community profits for private profits, community enterprise for private enterprise.

Socialism has over and over again taken some of the finest garden spots in the world and turned them into deserts. Ruskin Colony in Tennessee, New Australia in Paraguay, Topolobampo, and a score of other such pathetic failures will occur to every student of this subject. But the greatest and most instructive of such failures was at New Harmony, Ind. Here Robert Owen, father of ex-Congressman Robert Dale Owen, sank a princely fortune, amounting to an annual income of \$200,000, in a vain effort to supplant the competitive system with the "cooperative commonwealth." Dying penniless, he left a priceless legacy in the record of that great social experiment at New Harmony, which teaches us that the doctrine that you can found a society where competition does not exist is a delusion, and that the effort to realize such a society must necessarily result in failure.

Individualism makes the desert blossom as the rose. Socialism would turn every garden into a desert.

Hon. A. J. Balfour, late Prime Minister of England, recently said:

"I say that a community based upon the perfectly impossible scheme proposed by the Socialists—the scheme, I mean, which substitutes, for the individual enterprise, energy, and self-sacrifice, which are the very man's life and every man's life and every man's life and every man's industry and every man's earnings—I say that that ideal is one which not only will bring disaster upon the existing generation, but which will absolutely ruin

"It is upon the productive capacity, the inventiveness, the enterprise, the knowledge, the readiness to run risks, and to bear the result of risks when they go wrong; it is on this that a great community depends, and on this alone for the wealth it can use."

Tribute to a Post Office Key.

EXTENSION OF REMARKS

HON. WILLIAM A. OLDFIELD,

OF ARKANSAS,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, May 16, 1916.

Mr. OLDFIELD. Mr. Speaker, I ask unanimous consent to extend my remarks in the Record by inserting two letters from my constituent and friend, Hon. John H. Caldwell, of Mammoth Spring, Ark., both of which are published in the Lyceum World of February, 1916.

One letter is a tribute to a post-office key. The other letter is written to the Lyceum World in explanation of the first. This tribute to the post-office key is a splendid composition, full of the high sentiment of loyalty, and I believe will be of interest to the membership of the House and the country.

The SPEAKER. Is there objection to the request of the

gentleman from Arkansas? There was no objection.

The letters are as follows:

A TRIBUTE TO A POST-OFFICE KEY.

A TRIBUTE TO A POST-OFFICE KEY.

To MY DEAR KEY: Thou hast been a true, tried, and trusted companion. Yea, thou hast been more than this. Thou hast been a contidant and custodian of the richest treasures of my every secret. Therefore, as I part with thee my soul aches at the grave of our associations. To surrender thee after these many years of continued contidential and friendly intercourse is like tearing the heartstrings from the breast of a defenseless infant.

Friends I have had and friends I have lost. Enemies have knifed me with double-edged weadons and stung the very fabric of my tenderest sensitiveness without remorse. My frame has shaken before their assaults of cyclonic fury while the cunning darts from the merchless arrows of the scornful have plerced me through. But, amid tears of sorrow and of joy thou hast remained unflinchingly and loyally by my side. Through the storms of rage and the quietude of peacefulness alike, thou hast recognized no superior, made no distinction, nor shown any preference against me, but stood wherever I stood and moved wherever I moved, and without a murmur calmly lay down upon my pillow, whether soft or stone, never forsaking, never complaining. Although other companions velned with red blood beating to the tune of living heart throbs have passed me by unnoticed in the busy stress of life, although excitement has surrounded thee and at times fairly paralyzed thee, yet through it all thou hast steadfastly clung to me with a fidelity surpassing all human understanding.

Thou hast went with me and laughed in my joy.

Thou hast went with me and laughed in my joy. Secrets denied the gods thou dost possess. Within thy circle no Judas ever trespassed. No betrayal is charged against thee.

For near 14 mileposts of life thou hast traveled with me and lived a life thoroughly in keeping with mine. If thou hast accomplished nothing else, thou hast proven beyond question one important overshadowing all others in this world of artificiality and make-believe, and that is this: That there is such a thing as loyalty, true friendship, and unselfishness. This alone is inestimable, and the knowledge thereof indeed assuring and refreshing beyond exaggeration to despondent souls.

indeed assuring and refreshing beyond exaggeration to despondent souls.

Hence thou hast wrought a good work!

May thy ashes rest in peace.

To say less of thee would be ingratifude.

To say more would be useless

Then hast pursued the ordinary channels of life without ambition. When contentment found me thou wert satisfied. Then, when ambition selzed my soul and fired its very existence to greater attempts thou hast always been near and encouraged me with thy presence. I assure the that in this lonely world this of itself was more than comforting.

Dangers have beset me.

Dangers have beset me. Flowers have budded for me.

Flowers have budded for me.

The sun has shone for me and then the horizon has suddenly darkened against me. But, through sunshine and cloud, through beds of thorns and strata of atmosphere perfumed with the odor of roses blown then hast remained unforsaking, unshaken, and unaffected.

The demand that I give thee up now sounds to me like an evocation from the tomb. I dislike it. But such it must be. Arise! Congratulations to thy new owner! He need fear no trouble with thee, for thy sweet and offenseless spirit bears no acquaintance with rebellion in its mildest form.

Thou wouldst be as trusting and confiding in treachery as a child, so innocent art thou of such.

Thou clingest like a leech to whomsoever adopts thee, and that, too, without requiring anything in return for that rare loyalty. So unhuman.

human.

human.

Thou art a creditor to none, a debtor to all. So unhuman! Collins evidently was thinking of thee when he said:

By fairy hands their knell is rung,
By forms unseen their dirge is sung.

But I will make myself an exception to this rule and offer herein a few words of heartfelt praise during thy life and before our required separation. I heartily recommend thee to thy new possessor, and can say without the least equivocation, that he will find thee a master in loyalty and purity.

For after these many years of placid and uninterrupted associations through joy and grief, through health and illness, through meekness and stubbornness, through pain and pleasure, fear and daring, thou hast certainly exemplified the noble character the poet described when

Shall I ask the brave soldier who fights by my side, In the cause of mankind, if our creeds agree? Shall I give the friend I have valued and tried, If he kneel not at the same altar with me?

Moore's melodies sound sweeter and more comprehensive now to me since we met. And now, as I bid thee farewell, remember, "Within this wall of flesh there is a soul counts thee her creditor."

JOHN H. CALDWELL.

MAMMOTH SPRING, ARK., January 26, 1916.

THE LYCEUM WORLD, Indianapolis, Ind.

Gentlemen: More than 14 years ago I rented a small lock box in the post office in this small village and carried the key to same until recently when I had to obtain a larger box to accommodate my mall. In doing so, the necessity arose wherein I had to give up and part with that small piece of metal, which had been constantly by my side in this city of the dead, the joy houses of the country, the gardens of pleasure around whose fountains all drink who may, and also with me in trials of criminals and which had never, never forsaken me, nor betrayed me, nor complained. Sickness had selzed me, and though frail and at times weak from the ravages of disease, I remembered that it had been a companion through it all and the strangeness of the matter dawned on me with considerable force, as I had to confess, that with all our faith in mankind, no human being had ever been, nor ever would be, as loyal and trustworthy. Although a metal, and feelingless, these thoughts arose in my mind, and for the peace and satisfaction it gave me, I prepared a few lines, between which you can see living a sentiment yet unworded, an appreciation and comprehension of mankind's infirmities yet unspoken. Regardless of the article's merit, I think well et it, and if you deem it fit to print, the honor is mine, and whatever pleasure such might afford you, you are more than welcome to it. I beg your pardon for this trespass, and remain.

Yours, very truly, remain, Yours, very truly, JOHN H. CALDWELL.

Speech Delivered by Hon. Wm. Elza Williams at the Democratic State Convention in Illinois, April 21, 1916.

EXTENSION OF REMARKS

HON. MARTIN D. FOSTER, OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, May 16, 1916.

Mr. FOSTER. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD, I include a speech delivered by Hon. WM. ELZA WILLIAMS at the Democratic State convention in Illinois on the 21st day of April, this year.

The speech is as follows:

SPRECH OF HON. WM. ELZA WILLIAMS AT THE DEMOCRATIC STATE CON-VENTION IN ILLINOIS.

Gentlemen of the convention, a committee representing the State organization called on me at 12 o'clock to-day and kindly invited me to address this convention. Before that time I had not anticipated making a formal speech. I thank the committee and the convention for this opportunity to address the assem-bled representatives of the Democracy of the great State of Illinois, and to acknowledge a debt of gratitude which I owe my party. Four years ago I was nominated for Congressman at Large on the Democratic State ticket, when salling was easy. Two years later I was again honored with the nomination, and elected in the face of an adverse Republican majority, when the rest of my ticket went down to defeat. Yes; I am under obligation to the Democratic Party, and feel it my duty, though others may falter, to stand for my party under adverse as well as under favorable conditions. I am not a fair-weather Democrat, I have not waited to see what the prospects for election are before determining to become a candidate for governor. am going in swimming, water warm or cold. [Applause.]

In what I say I shall confine my remarks to national issues, along which lines I am familiar, and in which you are more interested. I know some expect me to discuss State politics and say something sensational about the State administration. In this they will be disappointed. I do not know whether I will be in the attitude of a private citizen in the ranks or at the head of your State ticket, but in whatever capacity I may be found in the approaching campaign, I intend to so conduct my campaign for the nomination that I can without embarrassment to myself or my party defend the administration of Gov, Dunne. [Applause.] I do not believe in fighting Democrats. I believe in reserving your ammunition for the enemy, and not expending defamer of the Democratic Party, who, availing himself of the prestige given him by Democratic votes, is now seeking the Republican nomination for President, we would be represented by a sterling Democrat in the person of Roger C. Sullivan. [Applause.

Except for the very able address of the distinguished chairman of this convention, Mr. Lucey, who has so thoroughly dis-cussed national issues, I would go into these questions in detail. As it is, I will confine myself to a resume of conditions and issues as they confront us at the threshold of a national campaign. The Democratic Party has been in power three years, and in that period has enacted more constructive legislation than had gone on the statute books in a period of 50 years under Republican rule. These various reforms have been discussed already and need not be elaborated by me. Briefly stated, they are: A radical revision of the tariff, currency reform, antitrust laws, parcels post, the income tax, popular election of United States Senators, conservation of natural resources, and preparedness, to which may be added pending legislation, almost sure of enactment, including flood control, rural credits, the ship-purchase bill, and a nonpartisan tariff commission. There is no occasion to amplify argements in

vindication of these various measures at this time.

The Democratic slogan this year will be "peace and pros-We are enjoying an era of prosperity unsurpassed in the history of the country. Labor is uniformly employed at remunerative wages. Penury and want are driven from the American home, and prosperity and plenty abound upon every hand. This is due to the wise legislation which we have en-acted, to administrative duties well performed, and to peace, which, thank God, abides with us [applause], while the rest of the civilized world is being consumed in a saturnalia of slaughter and carnage and death. It is an easy matter to get into trouble; it is sometimes most difficult to keep out. trouble during the last two years has not been to get into war, but to keep out of war. We could have been in war easily enough, either in Mexico or in Europe, and would have been except for the splendid statesmanship and wise diplomacy of Woodrow Wilson. [Applause.] It has been my proud distinction to be in touch with this administration and to be in a position to see and observe and participate in all that has been done. I have seen the President in action. I know the motive that prompts his heart, his unfaltering devotion to his country. and his resolute determination to maintain peace at all hazards and at every sacrifice save that of national honor. No man can know the burdens that have weighed upon his soul, the load that he has carried, the sacrifices he has made, the torture of mind he has endured, except those who have been in daily contact with him. By his devotion and by these sacrifices he has endeared himself to the people of this country, and in the gratitude of their hearts they will reelect him in the coming November election. [Applause.]

I know that Republican politicians and partisan newspapers have criticized our Mexican policy. This, in the very nature of politics, was to be expected. I submit to you that there has been but one alternative, and that alternative—peace or war. Had the President pursued a different course we would have been long ago involved in war with Mexico, and the plains and mountain fastnesses of that desolate country would be strewn with the bleaching bones of the youth and bloom of American manhood. Those who have interests in Mexico and selfish purposes at heart would have forced the hand of the President and compelled intervention before this had it not been for his indomitable will and the determined policy of the administration to maintain peace.

The pressure has been great, but we have refrained from interfering in Mexican affairs, from assuming responsibility for the troubles that have wasted that country, until invasion of American soil and the destruction of American life and property by a hostile band with whom the Mexican Government is unable to cope, and it was not until our soil was invaded, our flag assailed, and American blood spilled that orders were issued to our troops to advance; and now that our Army is camped on Mexican soil and our flag floats there in triumph, I for one am opposed to the hauling down of that flag and the withdrawal of American troops until peace and order are restored throughout that distracted country. [Applause.]

For pearly two years conflagration has raged around the All Europe has been engulfed in a cruel, a merciless, a monstrous war. Complications have daily arisen involving the rights of American citizens and threatening the peace of our country. A greater task never devolved on man or fell to the lot it on your friends. Had this policy been pursued in the past, of a human being than the responsibility which has devolved on instead of being represented in the United States Senate by a Mr. Wilson, and no duty was ever discharged with greater fidelity or more unerring certainty than has he discharged the manifold duties and responsibilities growing out of this war. It has been charged that he has not exercised strict neutrality. This charge has no foundation in fact, and arises from a misconception of our relations to the warring nations of Europe. The administration has not favored nor discriminated against any of the belligerent powers, but has exercised a strict neutrality as to all in so far as unequal conditions have permitted. Our people have supplied food, clothing, and war munitions, as is our right under international law, to all nations accessible to our ports, and have denied none who are in a position to avail themselves of our markets. The President has not courted war and does not want war. He has not intentionally offended Germany, and I do not believe there will be war between this country and Germany. I believe that every question in dispute will be wisely adjusted through the channels of diplomacy. Germany is fighting for national existence, and in her desperation may violate international law and create causes of friction and dispute, but she does not do so with any intention or desire to provoke war with this country, and I do not believe that war will come. [Applause.]

Animosities have been engendered, national feeling aroused among many citizens of our country of foreign birth and extraction. Many have believed that some of our citizens of foreign birth are not truly American, and that they have entertained an affection for the country of their nativity in derogation of their duty to their adopted land. I hope and believe this is not true. I accord every American citizen of whatever origin or extraction the right to exercise his natural sympathies and entertain a choice between the warring nations according to natal proclivities, so long as that choice pertains only to other countries, and does not involve the exercise of a choice between this and any other country. The Anglo-American has a right to sympathize with his mother country and the German-American has a right to pray for the success of the fatherland, and as between England and Germany I accord the right of each citizen, either English or German, to weld his sympathies according to his proclivities, so long as in the exercise of his sympathics he does not impugn the motives, embarrass the foreign relations, and violate the neutrality of our own country. believe the citizen of German birth or extraction un-American, or that he would violate his duty to our flag. Germany and England he may be pro-German, but let war come, which God forbid, between Germany and the United States, and I confidently believe you will find the German-American as faithful and loyal and patriotic as any class of citizens enjoying the protection of our flag. [Applause.]

When I say the administration does not want war and has exercised every means to avert war, I would impress you that it is not because the administration is not American nor because the President would not defend American rights at all times and under all circumstances. The President stands for peace, but not for peace at any price. He is for peace, but for peace

with honor. [Applause.]

power.

We are inadequately prepared for war. We have pursued a peace policy for a half century, conscious of our own inherent strength and the inaccessibility of our shores to foreign approach, with a feeling of security against foreign attack, but we have been rudely awakened to the fact that while we have been enjoying the fruits of peace and feeding out of the hand of plenty other nations have been preparing for war. We now realize what unpreparedness means and how helpless we would be if involved in actual hostilities with any one or more firstclass powers. Cooperation is the order of the day in war as well as in business. Nations combine, confederate, and cooperate both for offense and defense. If we should at any time be so unfortunate as to become involved in war, it will not be with a single nation, and in all probability we will be attacked from two different sources—the east and the west. We are not immune from war, and the administration, while devoutly laboring to maintain peace, has taken a wise and courageous stand in favor of national preparedness. On this issue, among others, we will go to the people in the coming November election. [Applause.]

Our party is united as never before. Every Democrat throughout this wide land is for the renomination and reelection of Woodrow Wilson. There is no division in sentiment among Our platform will be replete with the accomplishments of a great administration and ring true Americanism in every United, we confront a divided enemy. Discordant and distracted notes emanate from its camp. The standpatter and the progressive, the pacifist and the militant form a motley group of unmalleable and irreconcilable elements without uniformity of purpose or cohesion of thought except for pelf and

I will not take your time further. I hope to have the opportunity during the coming campaign to discuss national issues in detail and at length throughout the State of Illinois. Whether I shall lead or follow will be determined by the voters at the primary in September; but in whatever capacity I appear, whether as an individual or as your candidate for governor, I promise you now that I will be found in the thick of the fray, upholding, supporting, and sustaining the hands of the President and promoting the cause and principles of the Democratic Party. [Applause.] Let me, in conclusion, express my confidence in the judgment, the wisdom, and the integrity of the American people and in the hope and expectation and belief that Democracy will again be triumphant and that Woodrow Wilson will be reelected President of the United States. [Applause.1

Congress and Flood Control.

EXTENSION OF REMARKS OF

HON. H. GARLAND DUPRÉ

OF LOUISIANA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, May 16, 1916.

Mr. DUPRÉ. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD by incorporating an editorial from the New Orleans Times-Picayune of May 13, 1916, entitled Congress and flood control."

The SPEAKER. The gentleman from Louisiana [Mr. Durké] asks unanimous consent to insert in the Record as a part of his remarks an article from the New Orleans Times-Picayune

on flood control. Is there objection?

Mr. MANN. Reserving the right to object, I would like to ask the gentleman if we printed all the editorials written on the subject would the Congressional Record ever be finished?

Mr. DUPRÉ. I think not; but this has a bearing directly on the subject that comes up to-morrow and is very closely related to it. It voices the sentiment of the section most nearly affected by the pending legislation.
The SPEAKER. Is there objection?

There was no objection.

Mr. DUPRÉ. A paliamentary inquiry, Mr. Speaker. Is it in order to submit a further request for unanimous consent to ask all Members of the House to read this editorial before the matter comes up to-morrow?

The SPEAKER. It is not. The article is as follows:

[New Orleans Times-Picayune, May 13, 1916.] " CONGRESS AND FLOOD CONTROL.

"Sixty-five Members of the House-less than one-sixth of that body's total membership-contrived the other day to force an amendment of the pending flood-control bill. That amendment, if finally adopted, would place an undue and unjust proportion of the expense of the approved flood-control measures in the Mississippi Valley upon the people of the lower valley, who have taxed themselves heavily for years and paid out many millions upon a task which all of the great political parties solemnly accepted and pronounced a 'national obligation.' The people of Louisiana alone have spent much more in this work than Congress is now asked to appropriate for its completion. If we reckon their past burdens and sacrifices they will pay more than their just proportion if the plan drafted by the Flood Committee into its bill is carried. But they have cheerfully consented to carry that load and are as nearly united in support of the floodcontrol bill as reported by the House's Flood Committee as any people have ever been upon any proposition.

There appears to be an element in Congress which, not content with the unjust amendment, seeks defeat of the bill entire. The Congressional Record of Monday carries in full the speech delivered on May 3 by Representative Frear, of Wisconsin. This gentleman charges that the bill represents a mere private 'land-reclamation' scheme, and asserts by implication that the people of the lower valley do not favor it. Nothing could be much farther from the truth. Mr. Frear's argument, as nearly as we can follow it through 20 pages of the Recond-interrupted by clippings and quotations more or less ancient and having no bearing upon the bill before the House-seems to be that nothing can be done about the floods; that they are visitations by nature, and 'nature will not be governed by the puny works of Army engineers.' He is apparently determined to block all efforts at flood protection, though he dissembles by talking of

further 'investigation.'

"The answer is that the river problem has been studied for generations and that practically all those students whose words are entitled to weight agree upon the provision of an adequate levee system as an essential feature of flood prevention in the Mississippi Valley. The southern newspapers which Mr. Frear quotes are agreed to this, we believe. Mr. Maxwell, of whom Mr. Frear makes convenient use in his attack, is supporting a project that provides also for levees. Mr. FREAR evidently opposes them, though declaring that he 'makes no pretense of expert knowledge on the subject.' Analyzed, his opposition seems to be directed against the expenditure of Federal money upon any project for improvement of the lower Mississippi and protection of the people of the lower valley against preventable flood disaster, though his own people, by deforestation, drainage, reclamation, and good roads movements, unwittingly contribute to that peril, and the legislature of his own State indorses the pending bill.

Before the House again takes up the flood-control bill next Wednesday we hope that every Member thereof will study Mr. FREAR's attack, and others like it, in the light of the platform expressions of his own party. No matter upon which side of the House he sits nor under whose leadership he votes he will find that his party pledges him to recognize flood control in the Mississippi Valley as a national obligation, as Mr. Frear evidently does not. Whether the flood-control bill presents a solution of the entire problem is a matter of opinion. It does, however, provide for work which, by the agreement of experts, is essential to any plan of flood control. As originally drawn, it obligated the Government to bear an acceptable proportion of the cost. The original provision with respect to division of cost ought, in common fairness and justice, to be restored.

"As for the insinuation that the people of the lower valley do not want the bill or are seriously divided in their opinions regarding it, that contention of Mr. Freak has been easily and utterly refuted. The charge that this movement toward prevention of floods which—to quote from the party platforms—are 'national in scope,' produce disasters that 'seriously affect the general welfare,' result in 'the interruption of interstate commerce,' 'disorganization of the mail service,' and 'enormous loss of life and property' is a mere private 'land reclamation scheme,' is a slander so silly and groundless we find it hard to believe Mr. FREAR himself believes it.

"Congress is asked to discharge a national obligation admitted by all parties to redeem a promise given by all parties, nearly four years ago. Will the majority suffer Mr. FREAR and the few other leaders of his type to mislead them to repudiation of the Nation's obligation and betrayal of the faith and pledge of all the

parties?"

Farmers' Loan Association.

EXTENSION OF REMARKS

HON. HOMER P. SNYDER, OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, May 16, 1916.

Mr. SNYDER. Mr. Speaker, I am not in any way opposed to this measure, except that I confess I can not see wherein it will benefit any farming community where the legal interest rate is 6 per cent, as it is in New York, for instance. If I desired to take a selfish view of the bill I would be against it because of the expense to which it puts the Government and the restrictions thrown about those who desire to take advantage of it, were it enacted, in States where the legal rates of interest are more than 6 per cent.

The stockholder, under this law, would pay the association 5 per cent of his loan for stock, and become responsible for an additional 5 per cent in case a loan is forfeited to the assoclation. He puts up all his property for 60 per cent of its value and he puts up, also, 20 per cent of the proposed improvement, agreeing that the amount he thus borrows shall be spent under the direction of the secretary of the association, at a cost to the borrower of about 4½ per cent, to which must be added the expense of the loan and of joining the association, which approximates 1 per cent additional.

What I desire to show is that in the sections of the country, where the farmer is now getting his loans at 6 per cent; the disadvantages surrounding this proposition are not compen-

sated for by the one-half of 1 per cent, which he apparently gains. They are more than offset by his retention of his connection with the banks in his section with whom he is now doing business. My argument is that the farmer, after he has made his primary loan in the loan association, and before doing it, must pay his loan at his local bank, and after he has secured the association loan, with its varied restrictions, his credit in that community is exhausted.

No one will attempt to say that he will lose money, but, in the end, after his improvements as agreed upon, have been made, the farmer, like many another man in business, will find that he has use for further quantities of money, and, it is my belief, that, after his security has been negotiated in making loans through the farm bank, he will have great difficulty in getting further assistance from local banks, or in securing additional credit because of his lack of necessary security.

While I believe this bill will be of great advantage in many States where the interest rates are above 6 per cent, I can not see where it will in any way advantage the farmers in the great State of New York, a district of which I have the honor

to represent.

Equal Suffrage.

EXTENSION OF REMARKS

HON. CARL HAYDEN. OF ARIZONA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, May 16, 1916.

Mr. HAYDEN. Mr. Speaker, the National American Woman Suffrage Association is opposed to any plan for a woman's political party. For nearly 50 years this association has been laboring along nonpartisan lines in behalf of the Susan B. Anthony amendment, and its officers are now more than ever convinced that nothing can be gained by either partisan or militant methods. The attitude of the National American Woman Suffrage Association is clearly set forth in a recent statement by Mrs. Frank M. Roessing, vice president of the association, which is as follows:

"Those whe regard the movement to oppose the party in power and to set up a 'suffrage party' as representing the ma-jority opinion of the suffragists throughout the country have an erroneous conception of the situation. From the very first, in 1869, the national association has been nonpartisan. attitude remains fixed to-day, despite the efforts of an offshoot

of the organization to change it.

"The group which believes the best results can be obtained for suffrage by fighting the party in power when the suffrage amendment failed to secure a two-thirds vote, forms a comparatively new organization which may be growing at present because of its peculiar appeal to some opponents of the party in power but which does not represent either the original or ma-

jority view of the suffrage workers,

"The leaders in Congress recognize, as do we, that not since 1869 has any party had two-thirds of all the votes in both branches of Congress. One party is necessarily always in the majority, but it can not be held responsible for a two-thirds vote when it does not possess it. As it is not likely that any party will soon again have two-thirds of the vote in Congress, and be able alone to put through Congress the Federal amendment, it behooves all suffragists to secure the support of all parties in order that we may gather from each the necessary strength and votes to secure the passage of our resolution.

"Now, the national association believes it is decidedly unwise to oppose the party in power by stumping against all its congressional candidates for several reasons. One is that it lays the suffrage workers open to injuring the chances of men who have been favorable to their cause in the several States. Senator Thomas, a man who for years has favored our cause, was opposed by this minority element simply because he was a Democrat. He was returned to the Senate notwithstanding this opposition. We can not work in that way, for that method does not make for cooperation. We want all the help we can get from every party, and any attitude which lines us up as a body in direct opposition to any party is fallacious and destructive to the suffrage interests.

"It is sometimes forgotten that advocates of votes for women are not asking for anything but their rights and that they do not desire any privileges not common to franchised men.

do not want a party of our own; we simply ask for our right to recognition by and inclusion in all the parties. In many States it would be both unwise and impolitic for us to take action against the Democratic Party merely because our Federal amendment has not been passed, when in those same States the Democratic platform contains a plank dealing with woman suffrage. How could the National Woman Suffrage Association, for instance, ask the suffrage associations in Pennsylvania to fight the Democrats when the Democratic Party in Pennsylvania gives the active support of its leaders to woman suffrage and has a plank indorsing woman suffrage in the Democratic State platform? The system of government in this country is not like that in England, where what we may call the platform of the Liberal Party is accepted throughout the country as the pronouncement of all adherents to it, and where the subdivisions of the country do not have their separate platforms.

Nonpartisanship is the original platform of the movement, and it has been in nowise changed by the flanking movement of a certain group of fighters. The main battle line fights under the original method. We recognize the fact that the flanking movement gains a certain temporary adherence, because it appeals to some opponents of the party that happens to be in power. When we take up the weapons of opposition we lay ourselves open to the possibility of being used as a weapon ourselves. And suffrage should not be made the tool of any po-

litical party.

'We should remember that only through cooperation of all interested in the movement can we gain success. This means cooperation not only between those of varying opinions in our own ranks, but between the suffrage workers as a whole and their friends in any and all parties at any and all times. need to put up no candidates of our own. Our friends among the legislators are growing in numbers daily. If appreciation of woman's preception is closely followed by respect for her judgment, all those who care to know the truth of the situation will heed what the judgment of the national association is in this matter.

"Frightening Congressmen into joining our ranks by the threat that otherwise they will lose their election is not as effective a method of promoting votes for women as converting those same Congressmen into the conviction that it is a matter of right and justice that women should be given the franchise. A great many of the enfranchised women of the West object to being urged to vote against the Democratic men who have helped them to win the vote in their several States. The salvation of the woman-suffrage movement lies in keeping it abso-

lutely nonpartisan.'

The Irish Revolution.

EXTENSION OF REMARKS

HON. JEFF: MCLEMORE, OF TEXAS,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, May 16, 1916.

Mr. McLEMORE. Mr. Speaker, with terrible and splendid light and as sudden as the lightning's flash, the black firmament of Europe recently blazed forth in the Irish revolution. Here was a stroke for liberty, a deed done in the memory of Washington, of Jefferson, of Andrew Jackson, of Patrick Henry, and other glorious American patriots, and of our own immortal Declaration of Independence. Yet some few Americans, Mr. Speaker, have condemned the Irish patriots. Republics are proverbially ungrateful, but more dangerous than ingratitude is that gross contentment with prosperity and power which makes the citizens of a democracy forget the stern, perilous deeds by which their ancestors won the rights of nationhood from a foreign tyrant.

Mr. Speaker, the Irish people have a claim to national independence based in the noblest traditions of mankind. Conquered after a civilized history of a thousand years, they have been for seven centuries subjected to English rule, and for seven centuries they have not ceased to hate and resist it. English rule of Ireland has not been a mere whim of obstinate tyranny; it has been a grim economic policy. This should be understood, for it is the key to the Irish problem.

During the Middle Ages Ireland progressed in arts, manufac-

other object than to crush this legitimate rival. Eventually laws were passed which prohibited the leading Irish industries and closed the seas to Irish ships. When the Irish Volunteers of 1782 compelled the English Parliament to publicly renounce all right to legislate for Ireland that country experienced the most rapid development which any nation has achieved in a similar period. Industries sprang up, commerce was renewed, plenty and contentment filled the Green Isle. Whereupon the English Government, by organized lawlessness, by burning homes, ravishing women, slaughtering children, torturing men, and devastating churches, goaded the people to the rebellion of 1798, and then, under the pretense of restoring order, passed the infamous "act of union" through a Parliament stuffed with new-made lords. During the past 116 years Irishmen have seen their country die of uninterrupted decay, without parallel in modern times. The people have been decimated by famine, while the land abounded with food. Industries have ceased, factories fallen to dust, artisans forgot their cunning, harbors forgot the ripple of busy keels.

Mr. Speaker, when individuals or corporations resort to unfair methods to assassinate a business rival we condemn them as criminals. But England in her destruction of Ireland committed the greatest economic crime of history. The more dramatic and obviously horrible incidents of Anglo-Irish historythe massacres, murders, widespread devastation, and brutal penal laws—were mere incidents in the steady strangulation of Irish economic independence,

Looking upon an impoverished country, the only one in the world which has lost half its population in the last 70 years, and remembering the terrible atrocities which have stained the centuries, what wonder that the Irish race throughout the world cherishes undying hostility to the tyrant? And are not those men who have aspired to redeem their land, to restore it to wealth and independence, worthy of the commendation of all freemen? When they resort to revolution, have they not an undeniable claim on the sympathy of America? For a century Irish representatives in the English Parliament have pleaded for a modicum of national rights, and the few successes they have had have been due to English fear of Irish rebellion. Two years ago the present Irish Party, which has been degenerated by life in London, social flattery, and the bribery of salaries and offices, accepted for Ireland a so-called home-rule bill, which compels the recognition of England's supremacy and grants Ireland no single power which characterizes nationhood. And to further make this measure a curse to the country the English parties connived to permit Sir Edward Carson to organize and arm a body of Orangemen sworn to fight against home rule. The situation thus created permitted the English Government to give the final blow, as they hoped, to Irish nationalism, by promising to cut off all of Ulster, or at least a part of that Province, from the rect of Ireland.

No people, Mr. Speaker, have ever placed themselves in so unfortunate a position as the good people of the North of Ire-land, who, in contradiction of all modern tendency, put religious intolerance above national integrity, falling victims to English politicians who frightened them with absurd specters. Ireland is the natural home of religious tolerance. Throughout the land Catholics and Protestants live peacefully side by side.

The ancestors of the Orangemen organized the volunteers of 1782 and the united Irishmen of 1798, yet to-day they would resist the liberties of their own land because the majority of their fellow countrymen are Catholics. This situation caused the formation, three years ago, of the new Irish volunteers, led by both Catholics and Protestants, and sworn to resist any attempt to deprive them of their national rights or to partition their country. Then a typically Irish thing happened: Orange volunteers and Irish volunteers began to grow friendly toward each other, and both were opposed to the English Government. But the war came, and with the most dastardly attempt at betraya! ever made by a national leader, John Redmond assumed to pledge the manhood of his country to the tyrant of seven From that day the Irish volunteers stood to their arms. They determined that if they died to defend a "small nationality" that that "small nationality" would be Ireland. They served notice that any attempt to conscript them would be met by a fight to the death. The Government tried to lure thoughtless young men, loafers, and ne'er-do-wells into the army; but in a year and a half only 49,000 Irishmen from the three southern Provinces enlisted and 39,000 Orangemen; the former were sent to France and Gallipoli; the latter were kept in Ireland to overawe their fellow countrymen. When the Government found that recruiting had failed in Ireland it planned to tures, trade, and commerce. Irish products competed with English; Irish ships carried them to the Mediterranean, the Baltic, and the Rhine. The relentless English policy had no ernment began to arrest the leaders of the volunteers and to attempt the seizure of arms. Soon a concerted effort would have been made to disarm all Irishmen. That is why the volun-

teers struck on Easter Monday.

Mr. Speaker, nothing could be more foolish than to suppose that their courageous act injured the cause of Ireland. Had they not struck they would have been disarmed; had they been disarmed, they and all their fellows would have been conscripted; they would have died in a foreign land in a cause not their own. Their country, already burdened by intolerable taxes which they had no say in imposing or spending, would never have got even the shadow of home rule, as the Liberals— even if they intended to keep their pledge—are no longer in power. By striking they have not rulned, they have saved their country. They gave their lives and fortunes to do it, and they are among the heroes of mankind. And it surely must be allowed by Americans an additional glory that they trod the brave way of revolution and proclaimed an Irish republic. Let it be remembered that these men were an organized body of soldiery, a national militia, officered and disciplined.

Under the rules of international law and the customs of civilization they should have been treated as soldiers; when they surrendered, they should have been held as prisoners of war. But England—England has lined their leaders against a wall and murdered them in cold blood! How will an English historian of the future, a man of honor like Lecky or Greene, come to this passage of English history without feeling that all chivalry departed his land that day? And these men who were shot, who were they? They were men of brilliant intellect and pure character; they were educators, scholars, poets, historians, and labor leaders! The whole civilized world stands shocked and shamed at this English deed. The revolution, while it lasted, was skillfully carried out, and with the last degree of courage. Previous to the invention of modern field artillery it would have succeeded. The patriots kept their flag ilying for seven days, while homes and public buildings, shat-tered by 6-inch shells, fell about them, crushed and mangled

Mr. Speaker, the alliance which the Irish rebels made with Germany is justified by every historic precedent. No small nation has ever freed itself from a larger tyrant except by alliance with that tyrant's enemy, and in 1798 France even went so far as to land an army in Ireland to help Ireland in her struggle for freedom from English tyranny, just as she lent help to America at an earlier date by a few years: The Germans had promised Sir Roger Casement, the great diplomat and patriot who sacrificed wealth and honors to serve his people, that if they came to Ireland they would come as friends. In a free Ireland, foreign capital and science would develop Ireland's great water power, mineral wealth, and labor power, while other nations would lease naval bases in Irish harbors from which to admonish England to observe the freedom of the seas. Perhaps the war will yet free Ireland; perhaps Germany will say at the peace conference: "We will free Belgium if you free Ireland." That will be the vindication of the patriots. England is now shooting Irishmen as once she would have shot Washington and his fellow patriots. Shall we as free and liberty-loving Americans continue to view these atrocities of England against struggling, bleeding Ireland without offering even a protest? Mr. Speaker, I trust not; and I sincerely hope that Americans will rise as one man and utter a protest in humanity's name that will be heard around the world.

EXTENSION OF REMARKS

HON. WYATT AIKEN.

OF SOUTH CAROLINA,

In the House of Representatives, Monday, May 15, 1916.

Mr. AIKEN. Mr. Speaker, having followed closely the discussion of this air-nitrogen proposition, I must say I can not understand the opposition to it, or, rather, to those amendments offered in the Senate that would permit the Government to dispose of its surplus nitrogen.

Only danger of being involved in the world war, with prac-

enterprise, why not meet the requirements fully and prepare so that in extremity we can maintain an extensive and pro-longed war from our own resources?

I want to say right here and now that I favor the bill preferably with the original amendment to lease the plant in times of peace for the purpose of manufacturing nitrogen for fertilizer. If this amendment can not be renewed here in the House, then I most assuredly favor the amended bill as offered by its author, to allow the Government, in times of peace, to dispose of its surplus for the manufacture of fertilizer.

To be perfectly frank, I welcome the necessity that will force this Government to manufacture nitrogen for defense purposes as a most plausible pretext for furnishing the farmers with nitrogen. Before I have finished I think I will have shown that to furnish domestic nitrogen to our farmers is as much an act of preparedness as to furnish it to our munition plants.

Any person who has taken the trouble to inform himself of the composition of fertilizer, knows that it is made up of three components-nitrogen, potash, and phosphoric acid. two elements likewise enter largely into the composition of gunpowder. It is a well-known fact that Germany produces practically the world's entire output of potash. Our dependence on the German product is seen in the fact that potash has advanced from \$35 per ton before the war to \$500 now. It can not be had at all, and last year's short cotton crop was the sequel.

It is not a well-known fact, but none the less true, that practically the nitrogen supply of the world is in the hands of England. Chile and some other South American Republics supply the nitrate of soda of the world. England has concessupply the nitrate of soda of the world. sions in Chile that give her agents exclusive control of the nitrate of soda output. Every pound of nitrate of soda that is sold in the United States is sold through one general agency, and that agency makes its agreement with an English agent. And so it is, that in our present state of unpreparedness, we are absolutely dependent on two foreign powers for two of our main ingredients, both of powder and fertilizer.

Now, I contend that next to the actual weapons of war are the sinews of war; and I contend further that the sinews of war, in an agricultural country, are large or small, in direct proportion to the condition of agriculture. Nitrogen is an essential of agriculture, and nitrate of soda is the base and standard of the nitrogens of fertilizer, as gold is the standard of value in money. As it goes up or down all other sources of nitrogen, such as cottonseed meal, blood, tankage, and fish

scrap go up or down.

It would perhaps be a surprise to some to know that the nitrate of soda that was sold in our market this year, in some instances as high as \$85 per ton, and that brought \$45 per ton even before the war, can be mined in Chile, shipped to this country, and retailed profitably at \$9 per ton in normal times. But this is not possible as long as a foreign monopoly fixes the price.

While our country is endangered by reason of England and Germany controlling two of the main ingredients of gunpowder, our farmers are being robbed by the same agencies. Provisions and clothes are as essential to the successful conduct of a war as men and munitions. Germany's plight is illustrative of this assertion. And yet while we have come to realize the necessity for armed preparedness, some of us have democratic spasms because it is proposed to prepare in the broader sense of providing the sinews of war. Not in our insignificant Army, nor in our more formidable Navy, lies the secret of peace with Japan and Germany, but in our pocketbook, our storehouse. And what is the source of our wealth? Why, primarily, it is agriculture, and as our urban population increases far in excess of our rural population, the drain on this source will tend to impoverish us. We will need all the agencies within our reach to feed and clothe our own people, and if our wealth is to continue to be a bulwark against the military aggressions of other nations, it is imperative that we become independent of those nations in those ingredients that have such a direct bearing on that wealth.

We have heard much of the Underwood and Smith amendments being undemocratic. How, if Thomas Jefferson knew of such a proposition as coming from those high up in Democratic ranks, "he would turn over in his grave," and the like. Merest rot! Give Jefferson credit for having had some sense. If he were living to-day and were a member of this body, does anyone seriously believe that he would vote against a measure proposing to make this country independent of foreign powers in the matter of munitions simply because it proposed by an amend-Give Jefferson credit for having had some sense. ticulty no domestic supply of nitrogen, has made it possible to the matter of munitions simply because it proposed by an amend-pass any act looking to the Government manufacture of air nitrogen. But now that it is evident we must embark in this "sinews of war"? Jefferson was not a hidebound partisan; he was a statesman; and the efforts of latter-day politicians to bolster their own narrow views by misinterpreting, if not mis-

quoting him, has come to be a joke.

The question was asked in the Senate, "What is the difference between making and selling nitric acid or fertilizer to the farmer and making and selling shoes or boots or bread to the laboring man?" The answer is not far to seek. Cheapened fertilizer means increased production. Increased production means cheapened products to domestic consumers. The immediate effect, then, of cheapened production is to give the city man, if you will, or the laboring man everywhere, his living at a lower cost. The farmer must produce for all, and he is entitled to every facility and aid within the reach of the Government for this purpose.

Cotton is bringing 12 cents per pound here and 18 cents per pound in England to-day, as a result of the narrowness of some of our Representatives who refused to support the President's plans for the establishment of a merchant marine. Here, too, Jefferson was called in to justify opposition to what was termed

a Democratic measure.

What is the use of abusing England as an oppressor when we have the means with which to circumvent her in both the making and the transportation of our products? If we are not willing to use our great resources to meet competition either from Germany or England, we should at least have the manliness not to abuse those nations for the advantage they take of us.

I am in favor of preparedness in the broadest sense, that would provide not only munitions of war but the sinews of war as well; but I freely confess that if I felt no concern for this Nation's future as a fighting unit, I would vote for this measure, with one of the proposed amendments, as contributing to the

surest means of averting war.

There can be no sane reason for the Government constructing a nitrogen plant short of our needs, even in a world war, and there is less reason to let that plant be idle in times of peace, especially when the product sold would not be in competition with any manufactured or produced in the United States.

Rural Credits.

EXTENSION OF REMARKS

HON. C. BASCOM SLEMP. OF VIRGINIA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, May 15, 1916.

Mr. SLEMP. Mr. Speaker. There has been no legislation before this or any other Congress, in my judgment, that is more important or fraught with greater good to the people of this country than the legislation involving rural credits. The population of the United States is approximately 90,000,000 people. Nearly one-half of this great body of people are dependent for a living one way or another on agricultural pursuits. There are about 6,000,000 people owning American farms and about that number, in addition, living on farms as tenants. This Congress has passed a good-roads bill that is directly and specifically in the interest of this portion of our population. This roads legislation was supported by both political parties—Republicans and Democrats alike. While the appropriation by this Congress in Democrats alike. While the appropriation by this Congress in the interest of good roads is small yet, it will be increased as the condition of the Treasury will warrant and to the great good of the whole people. We are now considering another subject of equal importance to the farmers of the country, and that is the subject of how farmers can borrow money at low rates of interest, have the loans run for a long period, and repay these loans by small annual payments.

The bill before the House, the rural-credits bill, is a start in the right direction, and I am glad to vote for it. It is limited in its scope; it does not do all that the most ardent rural-credit advocate desires, but it is a beginning. The administrative features of the bill may appear to be tedious and cumbersome, but in time farmers will understand it and, I hope, will avail themselves of its provisions. This bill offers only limited opportunities to farmers in securing loans. A man who has no property or no additional credit can not borrow money as a result of this legislation. If a man has a farm worth \$2,000 and wants to buy an adjoining place worth \$3,000, he can borrow through these land associations this \$3,000 by placing a mortgage to that amount on both places, and pay the loan off in, say, 20 years by paying a small amount each year. For example, if the borby President Wilson to members of the National Press Club,

rower desired to pay this loan off in 16 years and the rate was 6 per cent, he could do it by paying \$800 each year. Any man who is neither reckless nor a spendthrift can make \$300 clear on a \$5,000 farm without serious trouble. This offers facilities that the farmer does not now have and which it is highly important he should have.

Under the bill the farmer can only borrow to the extent of 60 per cent of the value of his property. The Government does not guarantee the loan, and therefore the Government takes no risk. The function of the Government, through officials and appraisers well and carefully selected, in a sense is to pass upon values, so that the bonds of the mortgage can more easily be sold to the investing public. A man working at the mines and having accumulated, say, \$1,000, and desiring to buy a small farm, can put in this \$1,000 and then borrow through these land associations \$1,500, to be repaid in annual installments running, say, 20 years if he desires, and thus own a place worth \$2,500, where he can raise his family and make an income in addition to what he receives at the mine. If a farmer needs additional money with which to stock his farm, he can utilize these farm-loan asso-

ciations and get the needed money.

Every civilized and highly organized nation of the world has a rural-credit system. Some of the best minds of this country have been at work toward adapting such a system to the needs and to the genius of the American people. The bill before the House is reported by the Committee on Banking and Currency, by Republican and Democratic members, after months of hearings, discussions, and consideration of various plans. expected that through the provisions of this bill all the loans desired by farmers can be met, but many of them can be; and in years to come the facilities can be made ever to increase.

The bill is a direct encouragement to people to own farms. Every young man in a store, in a factory, on a farm, in a mine, by saving his earnings a few years up to 40 per cent of the value of the farm he wants to buy can secure the remainder through this governmental agency and own his own home. this makes for saving among our people there is no doubt. That this makes for more people owning their own homes, and therefore for better citizenship, there can be no doubt. As this plan is tried out and adapted to the needs of the American farmer, it can be extended so that the farmer can have the same extent of credit, in proportion to his needs, that the manufacturer, merchant, coal, or other operator, now has.

Mr. Speaker, I have the honor to represent on the floor of this House one of the best, most interesting, most independent, most diversified districts in the United States. sections of this country are so favored as the ninth congressional district of Virginia. It lies at the headwaters of the Tennessee, Big Sandy, and New Rivers.

The farmers need no irrigation for their farms. Streams of pure mountain water intersect every portion of the District, in fact almost every farm. The climate is temperate, the altitude such as to make it a perpetual health resort. At great expense the sturdy citizens have built macadam roads so that the farmer can haul his produce to the station or visit his neighbor Coal operations bringing out over 8,000,000 tons of coal annually, iron furnaces, extract plants, pulp mills, and numerous other industries employ thousands of laborers that are fed from the products of the southwest Virginia farms. these farmers need, and have needed for years, is credit facilities, some place at which they can borrow money at a reasonable rate of interest and on easy payments. This bill is a beginning, a start in the right direction, by which they can be Future Congresses can extend or amend the bill as the needs of the farmers are shown. I congratulate the House on passing the bill, and I am glad to vote for it.

Speech delivered by President Wilson to the National Press Club, Monday Night, May 15, 1916.

EXTENSION OF REMARKS

HON. C. C. DILL, OF WASHINGTON,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, May 17, 1916.

Monday night, May 15, 1916. The President delivered the speech with the understanding he would not be quoted. Later at the urgent request of the club, he consented that the speech

be made public. The speech is as follows:

Mr. President and Gentlemen of the Press Club, I am both glad and sorry to be here; glad because I am always happy to be with you, and know and like so many of you, and sorry because I have to make a speech. One of the leading faults of you gentlemen of the press is your inordinate desire to hear other men talk, to draw them out upon all occasions, whether tney wish to be drawn out or not. I remember being in this Press Club once before, making many unpremeditated disclosures of myself, and then having you with your singular instinct for publicity insist that I should give it away to everybody else.

I was thinking as I was looking forward to coming here this evening of that other occasion when I stood very nearly at the threshold of the duties that I have since been called upon to perform, and I was going over in my mind the impressions that I then had by way of forecast of the duties of President and comparing them with the experiences that have followed. I must say that the forecast has been very largely verified, and that the impressions I had then have been deepened rather than weakened.

You may recall that I said then that I felt constantly a personal detachment from the Presidency; that one thing that I resented when I was not performing the duties of the office was being reminded that I was the President of the United States. I felt toward it as a man feels toward a great function which, in working hours, he is obliged to perform, but which, out of working hours, he is glad to get away from and almost forget and resume the quiet course of his own thoughts. I am constantly reminded as I go about, as I do sometimes at the week end, of the personal inconvenience of being President of the United States. If I want to know how many people live in a small town all I have to do is to go there and they at once line up to be counted. I might, in a census-taking year, save the census takers a great deal of trouble by asking them to accompany me and count the people on the spot. Sometimes, when I am most beset, I seriously think of renting a pair of whiskers or of doing something else that will furnish me with an adequate disguise, because I am sorry to find that the cut of my jib is unmistakable and that I must sail under false colors if I am going to sail incognito.

Yet as I have matched my experiences with my anticipations, I, of course, have been aware that I was taken by surprise because of the prominence of many things to which I had not looked forward. When we are dealing with domestic affairs, gentlemen, we are dealing with things that to us as Americans are more or less calculable. There is a singular variety among our citizenship, it is true, a greater variety even than I had anticipated; but, after all, we are all steeped in the same atmosphere, we are all surrounded by the same environment, we are all more or less affected by the same traditions, and, moreover, we are working out something that has to be worked out among ourselves, and the elements are there to be dealt with at first hand. But when the fortunes of your own country are, so to say, subject to the incalculable winds of passion that are blowing through other parts of the world, then the strain is of a singular and unprecedented kind, because you do not know by what turn of the wheel of fortune the control of things is going to be taken out of your hand; it makes no difference how deep the passion of the Nation lies, that passion may be so overborne by the rush of fortune in circumstances like those which now exist that you feel the sort of—I had almost said resentment that a man feels when his own affairs are not within his own hands. You can imagine the strain upon the feeling of any man who is trying to interpret the spirit of his country when he feels that that spirit can not have its own way beyond a certain point. And one of the greatest points of strain upon me, if I may be permitted to point it out, was this:

There are two reasons why the chief wish of America is for peace. One is that they love peace and have nothing to do with the present quarrel; and the other is that they believe the present quarrel has carried those engaged in it so far that they can not be held to ordinary standards of responsibility, and that, therefore, as some men have expressed it to me, since the rest of the world is mad, why should we not simply refuse to have anything to do with the rest of the world in the ordinary channels of action? Why not let the storm pass, and then, when it is all over, have the reckonings? Knowing that from both these two points of view the passion of America was for peace, I was, nevertheless, aware that America is one of the

Nations of the world, not only, but one of the chief Nations of the world-a Nation that grows more and more powerful almost in spite of herself; that grows morally more and more influential even when she is not aware of it; and that if she is to play the part which she most covets, it is necessary that she should act more or less from the point of view of the rest of the world. If I can not retain my moral influence over a man except by occasionally knocking him down, if that is the only basis upon which he will respect me, then for the sake of his soul I have got occasionally to knock him down. how we have read in-is not it in Ralph Connor's stories of western life in Canada?—that all his sky pilots are ready for a fracas at any time, and how the ultimate salvation of the souls of their parishioners depends upon their using their fists occasionally. If a man will not listen to you quietly in a seat, sit on his neck and make him listen; just as I have always maintained, particularly in view of certain experiences of mine, that the shortest road to a boy's moral sense is through his cuticle. There is a direct and, if I may be permitted the pun, a fundamental connection between the surface of his skin and his moral consciousness. You arrest his attention first in that way, and then get the moral lesson conveyed to him in milder ways that, if he were grown up, would be the only ways you

So I say that I have been aware that in order to do the very thing that we are proudest of the ability to do, there might come a time when we would have to do it in a way that we would prefer not to do it; and the great burden on my spirits, gentlemen, has been that it has been up to me to choose when that time came. Can you imagine a thing more calculated to keep a man awake nights than that? Because, just because I did not feet that I was the whole thing and was aware that my duty was a duty of interpretation, how could I be sure that I had the right elements of information by which to interpret truly?

What we are now talking about is largely spiritual. You say, "All the people out my way think so and so." Now, I know perfectly well that you have not talked with all the people out your way. I find that out again and again. And so you are The people of the United States are not taken by surprise. asking anybody's leave to do their own thinking, and are not asking anybody to tip them off what they ought to think. are thinking for themselves, every man for himself; and you do not know, and the worst of it is, since the responsibility is mine, I do not know what they are thinking about. I have the most imperfect means of finding out, and yet I have got to act as if I knew. That is the burden of it, and I tell you, gentlemen, it is a pretty serious burden, particularly if you look upon the office as I do-that I am not put here to do what I please. If I vere, it would have been very much more interesting than it has been. I am put here to interpret, to register, to suggest, and, more than that, and much greater than that, to

be suggested to.

Now, that is where the experience that I forecast has differed from the experience that I have had. In domestic matters I think I can in most cases come pretty near a guess where the thought of America is going, but in foreign affairs the chief element is where action is going on in other quarters of the world and not where thought is going in the United States. Therefore, I have several times taken the liberty of urging upon you gentlemen not yourselves to know more than the State Department knows about foreign affairs. Some of you have shown a singular range of omniscience, and certain things have been reported as understood in administrative circles which I never heard of until I read the newspapers. I am constantly taken by surprise in regard to decisions which are said to be my own, and this gives me an uncomfortable feeling that some providence is at work with which I have had no communication at all. Now, that is pretty dangerous, gentlemen, because it happens that remarks start fires. There is tinder lying every where, not only on the other side of the water, but on this side of the water, and a man that spreads sparks may be responsible for something a great deal worse than burning a town on the Mexican border. Thoughts may be bandits. Thoughts may be Thoughts may be invaders. Thoughts may be disturbers of international peace; and when you reflect upon the importance of this country keeping out of the present war, you will know what tremendous elements we are all dealing with. We are all in the same boat. If somebody does not keep the processes of peace going, if somebody does not keep their passions disengaged, by what impartial judgment and suggestion is the world to be aided to a solution when the whole thing is over? If you are in a conference in which you know nobody is disinterested, how are you going to make a plan? I tell you this, gentlemen, the only thing that saves the world is the little

handful of disinterested men that are in it.

Now, I have found a few disinterested men. I wish I had I can name two or three men with whom I have conferred again and again, and I have never caught them by an inadvertance thinking about themselves for their own interests, and I tie to those men as you would tie to an anchor. I tie to them as you would tie to the voices of conscience if you could be sure that you always heard them. Men who have no axes to grind. Men who love America so that they would give their lives for it and never care whether anybody heard that they had given their lives for it; willing to die in obscurity if only they might serve. Those are the men, and nations like those men are the nations that are going to serve the world and save it. There never was a time in the history of the world when character, just sheer character all by itself, told more than it does now. A friend of mine says that every man who takes office in Washington either grows or swells, and when I give a man an office I watch him carefully to see whether he is swelling or growing. The mischief of it is that when they swell they do not swell enough to burst. If they would only swell to the point where you might insert a pin and let the gases out, it would be a great delight. I do not know any pastime that would be more diverting, except that the gases are probably poisonous so that we would have to stand from under. But the men who grow, the men who think better a year after they are put in office than they thought when they were put in office, are the balance wheel of the whole thing. They are the ballast that enables the craft to carry sail and to make port in the long run, no matter what the weather is.

So I have come willing to make this narrative of experience to you. I have come through the fire since I talked to you last. Whether the metal is purer than it was, God only knows; but the fire has been there, the fire has penetrated every part of it, and if I may believe my own thoughts I have less partisan feeling, more impatience of party maneuver, more enthusiasm for the right thing, no matter whom it hurts, than I ever had before in my life. And I have something that it is no doubt dangerous to have, but that I can not help having. I have a profound intellectual contempt for men who can not see the signs of the times. I have to deal with some men who know no more of the modern processes of politics than if they were living in the eighteenth century, and for them I have a profound and comprehensive intellectual contempt. They are blind. They are hopelessly blind; and the worst of it is I have to spend hours of my time talking to them when I know before I start as much as after I have finished that it is absolutely useless to

talk to them. I am talking in vacuo.

The business of every one of us, gentlemen, is to realize that if we are correspondents of papers who have not yet heard of modern times we ought to send them as many intimations of There is a modern movements as they are willing to print. simile that was used by a very interesting English writer that has been much in my mind. Like myself, he had often been urged not to try to change so many things. I remember when I was president of a university a man said to me, "Good heavens, man, why don't you leave something alone and let it stay the way it is?" And I said, "If you will guarantee to me that it will stay the way it is I will let it alone; but if you knew anywill stay the way it is I will let it alone; but if you knew anything you would know that if you leave a live thing alone it will not stay where it is. It will develop and will either go in the wrong direction or decay." I reminded him of this thing that the English writer said, that if you want to keep a white post white you can not let it alone. It will get black. You have to keep doing something to it. In that instance you have got to keep painting it white, and you have got to paint it white very frequently in order to keep it white, because there are forces at work that will get the better of you. Not only will it turn black, but the forces of moisture and the other forces of patters will penetrate the white paint and get at the fiber of the nature will penetrate the white paint and get at the fiber of the wood, and decay will set in, and the next time you try to paint it you will find that there is nothing but punk to paint. Then you will remember the Red Queen in "Alice in Wonderland," or "Alice Through the Looking Glass"—I forget which, it has been so long since I read them-who takes Alice by the hand and they rush along at a great pace, and then when they stop Alice looks around and says, "But we are just where we were when we started." "Yes," said the Red Queen, "you have to run twice as fast as that to get anywhere else.'

That is also true, gentlemen, of the world and of affairs. You have got to run fast merely to stay where you are, and in order to get anywhere you have got to run twice as fast as that. That is what people do not realize. That is the mischief of these hopeless dams against the stream, known as reactionaries

and standpatters, and other words of obloquy. That is what is the matter with them-they are not even staying where they were; they are sinking further and further back in what will some time comfortably close over their heads as the black waters of oblivion. I sometimes imagine that I see their heads going down, and I am not inclined even to throw them a life preserver. The sooner they disappear the better. We need their places for people who are awake, and we particularly need now, gentlemen, men who will divest themselves of party passion and of personal preference and will try to think in the terms of America. If a man describes himself to me now in any other terms than those terms, I am not sure of him; and I love the fellows that come into my office sometimes and say, "Mr. President, I am an American." Their hearts are right, their instinct true; they are going in the right direction, and will take the leadership if they believe that the leader is also a man who thinks first of America.

You will see, gentlemen, that I did not premeditate these remarks, or they would have had some connection with each other. They would have had some plan. I have merely given myself the pleasure of telling you what has really been in my heart, and not only has been in my heart but is in my heart every day of the week. If I did not go off at week ends occasionally and throw off, as much as it is possible to throw off, this burden, I could not stand it. This week I went down the Potomac and up the James, and substituted history for politics; and there was an infinite, sweet calm in some of those old places that reminded me of the records that were made in the days that are past; and I comforted myself with the recollection that the men we remember are the disinterested men who gave us the deeds that have covered the name of America all over with the luster of imperishable glory.

Farm Loans.

EXTENSION OF REMARKS

OE

HON. JOHN R. CONNELLY.

OF KANSAS,

IN THE HOUSE OF REPRESENTATIVES,

Monday, May 15, 1916.

Mr. CONNELLY. Mr. Speaker, the matter of farm loans or rural credits has been one that has engaged the attention of Members of Congress, as well as others, for some time, and it is a matter of vital importance to the great farming sections of the country. There has been much discussion here in regard to which is the better way to extend this help to the farmers, and I presume that each proposition advanced expresses the honest conviction of those who have spoken. I have lived all of my life either on a farm or where farming was the principal interest of the community, and I know a good deal about the test that the average farmer will place on any bill that goes to the country from this Congress.

The average farmer will not care so much whether you have one farm-loan bank or twelve; he will not seriously consider many of the features of purely administrative concern that have taken up much time of the committee, but he will want to know whether the bill will permit him to hire money on his farm at a low rate of interest for a long time, with options to pay the debt at any time after a reasonable period. He will like to have the debt so made that he can pay installments yearly, and when the lean years come—as they come to farmers of every section—that he may be allowed some options as to carrying payments over occasionally. He will want but little red tape. He is interested largely in results and does not care much about theories. Farmers are not entirely free from selfishness, but I believe that you will find more men on the farm who are fair and who only demand a fair show with no favors than you will find almost anywhere else. The farmer is willing to pay his debts, and he is willing to pay his interest, but he feels that in the matter of being allowed to borrow money and hire capital to help him in conducting his business he has been called upon in many cases to pay a higher rate of interest than he should have had to pay, taking into consideration the fact that his farm is as good security as can be found outside of a Government bond and the further fact that he borrows money usually for a term of years instead of a term of months, as is the case in many other lines of business.

I am for this bill for more than one reason. I believe that it is a workable bill; that it will reduce the rates of interest where now they are unreasonably high. I believe that it will teach the farmers how to cooperate with one another. that it will be a total saving of many thousands of dollars in interest each year to the farmers of the district that I have the honor to represent, and that means much to them. I believe that in the end it will cost the Government but little, and that every man who votes for the passage of this act will soon see that it was wise legislation.

Mr. Speaker, I regret that, regardless of the value of legisla-tion proposed, we always find those who will criticize without suggesting a better plan. I have read in some of the papers a very severe criticism of the bill under consideration, and I have received some letters from farmers who have been misled by these newspaper articles, saying that the bill proposed was a makeshift and was being put out to hoodwink the farmer. Now, what reason could any party have to enact a bill that would be a failure and would not bring results? Will not every bill passed by Congress have to meet the test of the country, and will not those who pass the legislation be held responsible for its defects? Such criticism and comment can have but one purpose, and that is to mislead the farmers and make them believe that they are being wronged. I have observed that much of the criticism comes from those who have never made any legitimate effort to give to the farmers of the country a farm-loan system and who fear that if the farmers really find that they have had some legislation in their favor the party in power will receive some benefit in a political way. I can see no other reason why men who profess to be the friend of the farmer and who express a desire to be helpful to them in solving some of the questions that are vital to their welfare should criticize this measure while offering nothing to take its place.

I confess that the plan here in the United States is a new one, but many of the older countries of the world have laws along this line, and they have found them to be of value to the farmer, whose work year by year becomes better understood and better appreciated by those who do not live on the farm. It may be that there will be some weak places found in this bill when it is placed in operation, but no party will dare to remove it from the statute books when once there without placing a better one in its stead. The weak places can be remedied as they appear. Many who are now criticizing this measure were just as sure that the regional-reserve bank act would not work and made many prophecies of disaster that would come after that law was enacted. Those calamities have not come, and the chances are that in a few years from now men who are now criticizing this measure will be claiming much credit for its passage, because it will prove to be a good law and serve the purpose that it was intended to serve by those who have been instrumental in framing it and bringing it to a final passage on the floor of this House.

Some who have made criticisms on the bill have done so because it excluded certain people from the benefits of its pro-visions. The farmer who borrows money under the provisions of this bill must be an actual bona fide farmer and the fellow who would speculate in farm lands can not secure money under this law. It is not the purpose of the framers of the law to make speculation in farm lands more profitable. There is no good reason why the speculator should be encouraged. There are many people who believe that speculation in farm lands should be discouraged rather than encouraged. If this law helps the farmer to secure the money that he finds it necessary to hire at a lower rate of interest, if it gives him loans without paying commissions to secure them, if it permits him to have long time to repay, with a plan of amortization that will at the end of a reasonable time repay the whole debt, it will, in my opinion, be a blessing to that great class of men and women who have done much toward making the country great in developing its natural resources and who actually add to the wealth of the Nation by living on the farm and taking from the soil that which feeds the Nation. In the short time that I have been permitted to take a part in the affairs on the floor of this House, I have never cast a vote with more satisfaction than when I have been permitted to vote for this great bill known as the farm-loan bill.

It is intended to fix a meeting place for the person with money to loan and the person who desires to borrow that money. proposes to help both of these people and the class to which each belongs. It can not harm people of other classes, because the success and prosperity of the whole Nation, with its varied interests, hinges largely upon the success and prosperity of the farmer. Make him prosperous and he will carry prosperity like a benediction to the fireside of every citizen, rich and poor, Philippine Islands.

EXTENSION OF REMARKS

HON. RICHARD W. AUSTIN.

OF TENNESSEE.

IN THE HOUSE OF REPRESENTATIVES.

Wednesday, May 17, 1916.

Mr. AUSTIN. Mr. Speaker, I desire to submit for the serious consideration of this House, especially the Members representing the Southern States, the following petition, which I have received from Mr. Laurus Loomis, of 345 Broadway, New York City, who was present at the recent annual meeting of the American Cotton Manufacturers' Association, held in the city of Atlanta. Mr. Loomis was requested to present this petition to Congress:

RETENTION OF THE PHILIPPINE ISLANDS BY THE UNITED STATES. To the Congress of the United States:

Recognizing the fact that the retention of the Philippine Islands is a matter of great interest to the cotton manufacturers of the Southern States.

In the first year of the American occupation, 1899, there was practically no imports of cotton goods from the United States. In 1915 there were \$6,900,000 worth of cotton goods exported from this country to the islands.

It may be surprising, but nevertheless true, in the same year, 1915, this exceeded the total value of cotton goods shipped to the following countries: China, Arabia, Colombia, Chile, and Brazil, a total value of \$5,400,000. In other words, there was exported to the Philippine Islands 112,000,000 yards compared with 95,700,000 yards to China, Arabia Colombia, Chile, and Brazil.

A large proportion was manufactured by the southern cotton mills, shipped not only in the grey or unbleached states but also bleached and printed for the use of the natives. This does not include over \$1,000,000 in thread, hosiery, blankets, and other articles of cotton manufacture.

The gain made by the United States in export trade with the Philip-

A first proportion was manufactured by the southern cotton mills, shipped not only in the grey or unbleached states but also bleached and printed for the use of the natives. This does not include over \$1,000,000 in thread, hostery, blankets, and other articles of cotton manufacture.

The gain made by the United States in export trade with the Philippine Islands, from \$16,000,000 in 1913 to \$24,000,000,000 in 1914, was at the expense of the full states in 1914 was \$48,000,000, one-half of which was from the United States. The exports to this country were about the same proportion, or \$49,000,000.

The manufacturers of the South can not but view with grave concern the interference or destruction of this trade, which not only affects seriously the cotton manufacturers of the South but also thousands of employees who work in the mills and the cotton planters who supply the cotton.

After the great victory of the United States fleet under Admiral Dewey in Manila Bay, which made this country a world power, the merchants of the city of New York presented a testimonial to the line will have been controlled in the interest of civilization of the United States, to retail beamen. The undersigned, irrespective of party, would respectfully request for a decisive vote against the Senate bill now under consideration in the House of Representatives.

Rural Credits.

EXTENSION OF REMARKS

HON. HENRY I. EMERSON, OF OHIO.

IN THE HOUSE OF REPRESENTATIVES.

Monday, May 15, 1916.

Mr. EMERSON. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD, I include the following letter:

CLEVELAND, OHIO, May 13, 1916.

CLEVELAND, OHIO, May 18, 1916.

Hon. Henry I. Emerson.

House of Representatives, Washington, D. C.

My Dear Mr. Emerson: The House of Representatives has, I believe, under consideration, or will soon have, the rural-credits bill, which has been passed by the Senate.

I desire to call your attention to the rider exempting all of the employees of the Federal farm-loan board, including ordinary clerks, from the civil-service law. This is about as indefensible a patronage grab as has been presented to the House this year. It is absolutely inexcusable, If we are to adopt a rural-credit system tainted from the outset with partisan politics, then it will be worse than no system at all.

I hope you will see the wisdom of voting against this vicious rider

I hope you will see the wisdom of voting against this vicious rider when the bill comes up for passage.

Very truly, yours,

MAYO FESLER, Secretary.

Flood Control.

EXTENSION OF REMARKS

HON. EDWIN D. RICKETTS. OF OHIO.

IN THE HOUSE OF REPRESENTATIVES.

Wednesday, May 17, 1916.

Mr. RICKETTS. Mr. Speaker and gentlemen of the House. it is proposed by this bill to appropriate \$45,000,000 for the control of the floods and the general improvement of the Mississippi River, and the bill authorizes the Secretary of War to carry on continuously for that purpose the plans of the Mississippi River Commission.

Section 2 of the bill provides for the control of floods, removal of débris, and the general improvement of the Sacramento River in Calffornia, and the Secretary of War for this purpose is authorized to carry on continuously the plans of the California Débris Commission, the expenditure not to exceed in the aggre-

gate \$5,600,000.

Section 3 of the bill provides machinery, under the Secretary of War, by which any flood problem other than the Mississippi and Sacramento may be examined and reported upon by the engineers of the Army when authorized hereafter by Congress.

I notice that the first paragraph of section 1 provides not only for controlling the floods of the Mississippi River, but also for continuing its improvement from the Head of the Passes to the mouth of the Ohio River. It should be borne in mind that this bill has been reported by the Flood Control Committee. This seems to be a misnomer when you take into consideration the jurisdiction and authority which the committee has assumed in reporting the bill. It strikes me that this entire appropriation might have been provided for in the rivers and harbors bill as additional pork. However, it seems that the Rivers and Harbors Committee and the Flood Control Committee are working in harmony and cooperating with reference to the improvement of rivers. There seems to be an ingenuous effort on the part of both committees to have appropriated \$51,000,000 for the improvement of the Mississippi River, \$45,000,000 of which is proposed by the Flood Control Committee and \$6,000,000 by the Rivers and Harbors Committee, and both committees frankly admit in their respective reports that the appropriation is for the purpose of continuing the improvement of this par-

For years appropriations have been made in lump sums for the improvement and protection of this great river. Congress has already appropriated for this purpose the enormous sum of \$189,619,617,30.

It is now proposed to protect this river by the erection of levees. Prior to the rivers and harbors act of 1890 no money was appropriated by Congress for the construction of levees in

the interest of flood control, but since that date \$29,000,000 has been appropriated and expended by the Mississippi River Commission in the construction and repair of levees, the main pur-

pose of which was to control floods.

The control of the Mississippi River is no new problem. This problem is almost as old as the Government Itself. As early as 1822 Congress was induced to send a commission of engineers of the Army to examine this river and to report some plan for its improvement. This was followed in time by other engineering commissions appointed for the same purpose. Notable among these are the examinations which are set out in what is commonly known as the Ellet report in 1850, the report of Humphreys and Abbott in 1861, the report of Gen. A. A. Humphreys in 1866, the Warren Commission in 1875, and the annual reports of the Mississippi River Commission from 1879 to date. No river, perhaps, in the world's history has ever been more thoroughly studied than the Mississippi, so that there are no data desirable or necessary to a complete understanding of its problems or for a formulation of plans for their solution which are not now available. Yet it is proposed in subdivision A, on page 2 of this bill, to make an additional survey from the Head of the Passes to the headwaters of the river and a survey of the Atchafalaya Outlet, so far as may be necessary to determine the cost of protecting its basin from the flood waters of the Mississippi River, either by its divorcement from the Mississippi River or by other means, and for the salaries, clerical, traveling, and miscellaneous expenses of the Mississippi River

The committee in its report to this House, on page 7 thereof, after reviewing the history of surveys and examinations made of the Mississippi River since 1822, uses this language:

So that it can be said with some assurance that there are no data desirable or necessary to a complete understanding of its problems or for a formulation of plans for their solution which are not available.

Yet, in the face of this statement, it is proposed by the Committee on Flood Control to make additional surveys, make these additional surveys at an additional cost to this Government when we have been having numerous surveys made of the premises since 1822? Report after report has been made touching the feasibility of improving this particular river, Several adverse reports have been made touching the impracticability of controlling the floods in the flood districts along this river.

Congress for the last 35 years has appropriated many millions of dollars for the purpose of improving this river, and it is now proposed to put an additional drain upon the Treasury of the United States to the extent of more than \$51,000,000. It is said that all three of the political parties of the House are represented upon the committee, and upon the examination of the platforms adopted by these parties in 1912 it is found that all three have definitely declared that the floods of the Mississippi River constitute a national problem and that each had declared it to be the duty of Congress to provide adequate means for This is probably true, but it is also true that no political party had in mind at the time of the adoption of these platforms to expend the sum of more than \$51,000,000 to support levee system as a protection to this river.

No one would oppose reasonable Federal aid for the purpose of harnessing and controlling the flood waters of this river, but the plan suggested, to my mind, is not feasible. It is proposed to erect levees along the banks of the lower course of this river, near its mouth, and in this way prevent the waters, during flood time, from extending out over the adjacent lands. In my judgment, this plan would simply tend to aggravate the situation. Common sense teaches us that in order to control the waters of this great river some definite plan, from its source to its mouth, must be devised whereby the waters can be controlled. The great difficulty is that the channel is neither wide enough nor deep enough to carry off the great volume of water during the You can not control the water of the tributaries of this river and its upper and middle course by harnessing its mouth. I am not a surveyor, neither do I attempt to speak as such, but common sense teaches me, and should teach any man, that the theory of improvement and control proposed is unten-

The whole theory of Congress in making appropriations year after year for the improvement of this river has been purely experimental, and no permanent benefit has been derived as yet, The money expended has afforded only temporary improvement that bears no comparison to the money expended. Congress has appropriated for the improvement of the Mississippi River and tributaries the enormous sum of \$189.619.617.30, as shown by the report of the Secretary of War dated January 15, 1915, and for the Mississippi River alone Congress has appropriated \$166,498,996.99. To this may be added the present appropriation provided for in this bill, amounting to about \$45,000,000, and \$6,000,000 provided for in the rivers and harbors bill, mak-

ing a total of \$240.619.617.30.

The great fertile valley of the Mississippi is very largely owned by land syndicates. These syndicates have farms adjacent to this river and situated in this great fertile valley ranging from 500 acres to thousands of acres of land. This land is now worth from \$30 to \$50 per acre, and should Congress make this appropriation, and should these levees be constructed, as is proposed, this fact alone would make these lands worth anywhere from \$200 to \$250 per acre, so that it is plain to be seen that it is not the inhabitants of this land, who are mostly renters, who are clamoring for this enormous expenditure of public money. A great many of these residents are merely serfs performing the toil demanded by their syndicate landlords. It is the land syndicates scattered all over this country that are behind this appropriation and that are urging Congress to make this improvement at the particular location suggested at this time. It means to enhance the value of their lands 400 to 500 per cent without the expenditure of a dollar upon their part. Some method should be devised by which these lands adjacent to this river could be assessed and require these syndicates to pay their just proportionate share for the protection of these flooded districts. This land is possibly among the most fertile land in the United States. It produces great crops in all lines of agriculture.

The small amount of taxes paid by these syndicates for improvement or for flood protection, under appropriations that have been made or may hereafter be made by any of the States through which this valley extends, has been and will be merely nominal. This Government has spent millions of dollars for the improvement and protection of this river, and apparently all this money has been wasted. How long is this drain upon the Public Treasury to be continued? When shall it end? It is perfectly plain that it is the purpose and intention of these land syndicates and those interested with them to continue his drain upon the Public Treasury indefinitely. Thousands of dollars have already been expended by this Government in procuring surveys and maps with reference to the improvement of this river and

the protection of these flooded districts.

I have given this subject considerable study, and have reached the conclusion that before any more public money should be expended for the purpose of building levees in order to protect the lands in the flooded districts some definite plan should be devised and considered by Congress as to its feasibility. Cerdevised and considered by Congress as to its feasibility. Certainly some plan can be agreed upon by taking up the consideration of the various surveys which have been made through the direction of those in charge of this river, and who have had charge of this work sluce 1822, that would result in some lasting improvement and be a valuable protection to the districts which are submerged during flood times.

Why should Congress be proceeding in the dark, when it is just as easy and much more reasonable to be enlightened with reference to the proposed project.

The principle claim of this administration, as incorporated in its platform at Baltimore in 1912, was the subject of economy.

its platform at Baltimore in 1912, was the subject of economy. The profligate and reckless waste of the Republican Party for previous years was publicly denounced and condemned, and it was suggested that an economic plan of administering the affairs of this Government would greatly relieve the taxpayers of this country and put an end to the profligate waste of the people's money. This Congress will be distinguished for its extrava-gance. The appropriations at the conclusion of this session will have reached the limit and will go down in political history as the largest of any administration since the organization of this Government.

At this time, when the Public Treasury is suffering from a deficit, when this Government has not sufficient money with which to meet and liquidate its current expenses, and when other interests vital to the Nation are demanding the immediate attention of Congress, it seems to me to be the height of folly

to make this unworthy appropriation.

As I said before, no Member of this House would oppose a reasonable appropriation for the purpose of preventing the over-flow of the Mississippi River during flood time, but the amount proposed at this time is entirely out of reason.

It is clear to me that if this appropriation is made it simply places in the hands of the Mississippi River Commission and the Committee on Flood Control the power to lay plans which will involve and necessitate the expenditure of hundreds of millions of dollars in the future; and for these brief reasons, and numerous others which I could enumerate had I the time to do so, I shall be compelled to vote against this bill. No Member of this House who is true to himself or to those whom he represents can vote upon the taxpayers of this country this enormous and unnecessary expenditure. We are here to protect the interests of the people generally and not here for the sole and express purpose of appropriating public money recklessly and unjustly for the purpose of enhancing and increasing the value of the lands of the great land syndicates, which will make them They must think Congress is easy. I have immensely wealthy. no doubt in my mind that these men forming these syndicates are amazed to think that Congress has been so easy as to jump at a chance to help them in their scheme to get rich quick.

have at heart the interests of the whole people of this Nation, and my sense of duty constrains me to raise my voice against this lavish and reckless expenditure of public money.

Rural Credits.

EXTENSION OF REMARKS

HON. S. D. FESS, OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, May 17, 1916.

Mr. FESS. Mr. Speaker, I vote for the rural-credit bill with some reluctance. Not because I oppose the principle involved. because I am in favor of any workable plan of amortization that would help the tenant; but there are features in this measure that I do not like, I dislike that phase that in a quasi fashion puts the National Government in the banking business. It is true not all the institutions provided for are so organized. Section 16 provides for the joint-stock bank that stands upon its own bottom. I am sure that section 5 should limit the number of Federal land banks to one in a district. The committee insists that end is stipulated, but I do not think the language assures it.

assures it.

I also very much disapprove of the provision requiring the Government to pay interest and principal of bonds up to a certain point. This is a vicious feature, in my mind. I also think the minimum loan should be greater than \$100. If a very great number were small, the overhead charges would be so out of proportion to amount loaned that the system must inevitably break down.

I seriously question the wisdom of tax exemption of the It is an open issue as to the effect of these proposed institutions in competition with the savings banks, loan associations, and insurance companies, all of which represent a vast amount of the savings of the poorer classes of our people. No one wishes by Government edict to destroy or even needlessly

to cripple such institutions.

The avowed purpose of this legislation is to enable the land-less to become owners of a home. This naturally appeals to all alike as a most worthy purpose of legislation. It is based upon the provision of amortization, by which a borrower may secure a loan of 60 per cent of the value of the purchased laud and pay it off in annual installments in from 5 to 36 years, when he cancels his mortgage. If this bill will make possible that consummation, it merits everyone's support. It is a question whether it will accomplish it. The machinery is so cumbersome that it raises a doubt. The interest, maximum 6 per cent, is such that it will not be of any consequence in any of the older States. It will not be resorted to by people in Ohio. Throughout my State good loans are made upon first mortgages for the rate provided in this bill, and even less,

While I have no hope that this measure will serve my people to any advantage, I am constrained to vote for it upon the representation of Members who have declared that interest in their sections is from 10 to 20 per cent. It is difficult for me to realize such conditions. If they really exist, and this legislation will cure them, I would most willingly vote the remedy, even though there are features in it I dislike, and even though I am convinced it will be of no advantage to my own people.

The danger in such legislation arises in the possibility of writing some wild populistic soft-money scheme in it. Proposed amendments were offered by various Members as wild as the famous John Law ever conceived, and would have had the South Sea Bubble effect had they been adopted. While the bill as it stands is not wholly free of this element, I am hopeful that not enough of it is in it to effect the workings of it.

Mr. Speaker, in view of the position all political parties have taken on this subject, in view of the wise purpose of such legislation, in view of the great study of those responsible for the measure, and in view of the action of the committee in rejecting all the various wild schemes proposed, save one, which I wish were omitted, I shall vote for the measure, however, with a full realization that it will not be of any substantial advantage to my own people, and with some trepidation from fear that its machinery may prevent the relief in those sections where relief is imperative. The future will afford opportunity for amendment to correct the errors which time will reveal.

Rural Credits.

EXTENSION OF REMARKS

OF

HON. JAMES V. McCLINTIC,

OF OKLAHOMA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, May 15, 1916.

Mr. McCLINTIC. Mr. Speaker, the one hope of the American people to-day is rural credits—the brand of rural credits that will really lower interest rates to American borrowers. None other will satisfy them; none other with approval will they accept. There have been presented to Congress many bills dealing with this subject. Some of them are weird, fantastical, and could never come true. Some of them advocate that the Federal Government shall furnish money to the American farmers without adequate security, and some of them with practically no security at all. On the other hand, bills are pending and have been introduced by men who do not in truth and in fact believe in a rural-credits system at all. These bills are usually found to be mere makeshifts, that look good upon their faces, but which in truth and in reality would render no positive relief to the farmer whatever.

The President of the United States during the consideration of the Owen-Glass currency bill promised in words loud, clear, distinct, and emphatic that he would stand for and aid in the passage of a rural-credits bill.

Ex-Secretary of State William J. Bryan, at that time Secretary of State, promised to aid in securing the passage of such a

bill.

Again, during this present session of Congress, the President of the United States, in terms loud, clear, and easily understood, asserted to the House and Senate in joint session assembled that he would join hands in securing a rural-credits system that would have for its purpose a reduction of interest rates and be of material aid to the great American producers of the country. Listen to what he said on this occasion:

We should put into early operation some provision for rural credits which will aid to the extensive borrowing facilities already afforded the farmer by the reserve-bank act, adequate instrumentalities by which long credits may be obtained on land mortgages; and that we should study more carefully than they have hitherto been studied the right adoption of our economic arrangements in changing conditions.

Still again, only a few days ago, the President sent over to Congress a program of legislation that he very much hoped Congress would enact. This program contained a plea for the speedy enactment of rural-credits legislation. Thus it will be observed that the President, though burdened with the extraordinary and abnormal cares incident to his office, has found time and has taken occasion to specifically single out rural-credits legislation and express the hope that it would receive the positive attention of Congress at this session.

In asking favor as a candidate for Congress at the hands of the people of the seventh congressional district of the bright, new State of Oklahoma, I promised them with such earnestness as I had at my command that I would work for, vote for, and insist upon an adequate rural-credits system. I meant every word I said, and the words I then spoke and the pledges I then made shall not go unnoticed now that I have asked and received honor at their hands. I would be recreant of the great trust conferred upon me by the generosity of a great constituency if I did not now ask for, plead for, insist upon that this rural credits relief be granted.

I tell you, sirs, in a new State like mine, going through the formative period, interest rates ranging from 10 to 50 per cent per annum are exorbitant, abnormal, unbearable—and almost unbelievable. I make this utterance with no hostility toward the bankers who charge it, but I speak in earnestness and with firmness in behalf of a system that will correct it. Business men who make profits quickly can not afford to pay such great rates of interest; then how, pray tell me, can the American farmer, who asks but little in time of peace, and offers himself

as a sacrifice in times of war for purposes of defense, pay any such rates?

Gentlemen, I hope I do not speak alone to those of us from the sparsely settled States of the West. I hope you of the East, where rates are lower, may recognize the solemn fact that we of the West are a part of this great Republic. Our broad acres await willing and industrious hands to cultivate them, and only by your cooperation in beating down interest rates can we accomplish the good that a system of rural credits will do for the whole country.

The bill under consideration does not meet the wishes of some; in fact, I would prefer that some provisions be changed, so that the plan could be simplified, yet it is far better than no bill at all, and for this reason I am glad to give the same my

hearty support.

I have introduced a bill providing for a Federal rural-credits system, which also provides aid to tenant farmers who desire to purchase a home. In making an investigation of the conditions that exist in Ireland, Germany, New Zealand, and Australia I find that these countries are far ahead of our Nation in giving certain financial relief to the agricultural class, and more especially to the homeless. There has been a great deal of agitation on this subject and many have introduced bills to give the proper relief, yet the majority of those who would legislate on this subject have not considered the needs of the tenant farmer, who is handicapped because of no capital to make a start in life. I believe that our Government should take care of every condition and should render some ald to every individual, and I have included in my bill introduced on this subject a provision that would give relief to the tenant farmer by allowing him to borrow money to be used in purchasing a home.

The most feasible plan I can figure out, after giving this matter a great deal of study, is to provide a bureau of farm credits in connection with the Treasury of the United States, conditioned that the Secretary of the Treasury, by and with the consent of the President of the United States, shall appoint a commissioner of farm credits, with sufficient power to appoint such clerical help as will be necessary to maintain this department. This bureau should have the power in its discretion to establish subbureaus throughout the country or at the capital of any State, in order that those who reside in any section may have a capable branch where it will be convenient to make application

for the benefits accruing under the act.

I have provided for the appointment of competent land appraisers and such examiners as will be necessary to inspect the subbureaus, and by throwing the proper safeguards around this bill I am sure that a law can be passed so that in its infancy it will not be disturbed by irregularities, and thus prevent those needing aid from receiving the much-needed benefits. With this and a severe penalty for the violations of any of its provisions, I can see no reason why this measure should not be one of the best laws ever enacted.

Much has been said as to the method to be used in securing capital. I am of the opinion that rural-credit bonds could be issued and when sold would furnish an amount of money sufficient for all purposes, and that with the proper business management it would not be necessary to call on Congress in the future for additional appropriations. There are some who are not willing for our Government to furnish aid for rural credits, yet we have a Federal Reserve System that is backed by our Nation, and I can see no reason why every Member of Congress should not support a measure that aids the farmer—the class of people that is most in need—and I am hoping that this session of Congress will pass a bill that will put our Government right square behind this law.

Master minds have given to this Nation a series of laws, rules, and regulations which have caused our country to make the most wonderful strides. Yet to keep pace with the times we must not stand still, but, on the other hand, must exert our best efforts to legislate in a way that will give the proper relief and encouragement to every class, to every occupation, and to every section of our country. I find that the matter of finance has been a prominent issue in every nation, and I dare say as long as government is administered by the people this will be one subject that will never be handled in a manner absolutely satisfactory to all.

Historians have piled in the archives countless volumes that tell a wonderful story of the advancement of civilization, and yet we have facing this Nation problems that have never been touched upon in our efforts to bring man to the highest state of efficiency, and the subject of rural credits, in my opinion, is the most important legislation that could be considered.

A little over a hundred years ago, when Prussia was in the threes of a great financial distress, there was a little, insignifi-

cant merchant who began to preach a new doctrine of progression by stating that—

The true capital of any country consists of cash and real estate. That the value of the latter is more than ten times in excess of the former, and if only a small part of it could be made current it would be abundantly sufficient to accrue credit and welfare for the entire community.

This little merchant was an agitator. He believed if this plan was put into operation it would enable a sufficient amount of capital to be raised to properly maintain the industries of that country; and while his plan was severely criticized and he was called a crank, yet when this information reached the ears of Frederick the Great he at once became interested, sent for this little merchant, and after making a careful investigation he ordered that the plan be given a trial, and it was adopted in that country. That can truly be said to have been the beginning of rural credits, and after a test of more than 100 years statistics show that money can be loaned to the people at a cheaper rate when plans under the supervision and control of the Government are provided and enacted into law. In many of the foreign countries rural cooperation has reached remarkable proportions.

History tells us that the first rural association was founded in Italy 1,300 years ago, which was an association bound together for the purpose of reclaiming and irrigating lands. These associations, under the supervision of the Government, proved not only successful but of the greatest assistance to the development They were the foundation of all cooperative of this nation. associations, and have been developed to such an extent that the Government is now assisting in this movement by making direct appropriations of capital to loaning institutions and providing such rules and regulations as are necessary to protect the same. The principal plan in operation in the European countries is a form of associations chartered for the purpose of making loans to minor cooperative associations. The minor cooperative associations form themselves together for mutual protection, thereby guaranteeing that the obligations made by any member will be carried out by the association.

Much can be said about this plan, and the United States commission made a special report in regard to conditions in European countries, and in speaking of the banks which make the loans to these cooperative associations uses the following language:

The use of credit in agriculture may be compared to the use of water. If water is brought into a field at the right time and in the right way in proper quantities, it will be valuable, but if the field is flooded or if the water is applied at the wrong time it will be destructive. In the same way if credit be applied to a good productive purpose it becomes a blessing to the country.

Therefore the committee of the rural banks is required to see that the loans are applied to the purposes for which they were granted. There is yet another psychological factor which goes to insure the safety of these loaning banks, and that is public sentiment. It is a well-known fact that public opinion is nearly always inclined to side with the weak as against the strong, and that right or wrong the debtor is generally considered the weaker party. He usually has public opinion on his side, but in the case of the rural bank the situation is reversed. The heads of the families in the village constitute the members of the rural bank, and as they are all interested in seeing that the loans for which they are severally and collectively responsible are paid, public opinion in this case is on the side of the the institution that loans the money-and not with the debtor—the person that borrows. Thus it can be seen in these countries where a system of rural credits has been operating for a hundred years or more it has brought about a wonderful change among all classes, which has resulted in the people form-ing themselves together into associations for mutual benefits. thereby causing the money lenders to make loans at a low uniform rate of interest, realizing that the association to which a member belongs will guarantee his paper, and that there is practically no chance for any loss. A splendid deduction can be made from the reports made by the commission that inspected this system, and that is, the forming of these mutual benefit associations if put into effect in this country would do much to discourage idleness, but, on the other hand, would promote thrift, as no association would be willing to have a member belonging to the same who was not responsible or who would not make the proper effort to meet his obligations. It is said this might work a hardship on some; yet in the long run it would result in teaching the people that good results could be obtained only by honest cooperation.

Supply and demand have always been ruling factors in the consideration of any commodity. The lack of organization and the proper laws have made it possible in the past for a few men to control the wealth of this Nation, but with the Federal reserve act and the enactment of a proper rural-credits law the interests

of the people will be forever safeguarded, and this is the time for every Member of Congress to put forth his best efforts in supporting this kind of legislation. We all know that the absence of mutual associations to assist one another in acquiring commodities has caused the money lender in the past to charge high rates of interest and to require all of the security he could get before he would place a loan, realizing that in some instances the security taken was of a doubtful character. If a condition might be brought about whereby capital under the control of the Government could be distributed with the full realization that there would be no loss, then uniform low rates of interest could be maintained and conditions would be much improved in this country. Making a comparison, in Sicily, before there were any Government-controlled cooperative societies which were willing to guarantee the payment of their members' obligations, interest rates ran as high as 60 per cent, and when this system was put into effect, the same were reduced to a uniform rate of 6 per cent, and, to my mind, this same condition will be brought about in this country if this Congress will pass a rural-credits bill containing provisions for such relief as should be given to the people, and more especially those who till the soil.

The Government can legislate until its lawmakers are blue in the face, yet the individual seeking to be benefited must be willing to cooperate in the proper manner to make this system a success. Legislation, to be successful, must be evenly constructed, and for every dollar loaned there must be one replaced. Every loan that is lost makes the general fund smaller and the rates of interest higher, and consequently, after all, a great deal depends on the individual putting forth a certain amount of energy and being willing to share his proportion of the responsibilities of life or he can not be classed with those who are entitled to receive this aid. Biblical history tells us of the parable of the talents, proving that the man who exerted himself the greatest and made the best showing received the greatest reward, and while we may continue to legislate, no country will ever be able to provide laws equalizing conditions so that every person will share alike and have the same advantages, yet we can legislate in a way that will give additional advantages to those who are meritorious, and the passage of this act will extend the helping hand to millions of deserving citizens.

The cooperative plan of rural credits, where it has been in effect, has caused the people to be more energetic, thrifty, and more saving, which in the end has caused the banks to have larger deposits and surpluses, and in many instances these have been used by different communities, townships, and counties as capital for the construction of different kinds of public works.

I am of the opinion there is plenty of room for the local banks and a system of rural credits. These two kinds of organizations should be both under the control of the Government and should work hand in hand for the upbuilding of this Nation. I find that when rural credits was first started in some of the foreign countries that the banks left no stones unturned in their endeavor to prevent the establishment of the same, as they felt that their existence was threatened. This belief proved later to be manifestly erroneous, and while this kind of legislation has received a great deal of publicity and has been discussed by many on the floor of Congress, I have never heard anyone state that the banks in countries where rural credits have been adopted are making any complaints. On the other hand, they are working hand in hand successfully.

I do not believe that any legislation should be passed that would be detrimental to any honest occupation, nor do I believe this bill will work a hardship on any institution; on the contrary, I am thoroughly of the opinion that when we provide by law such rules and regulations that will furnish a sufficient amount of capital or allow others to provide the same, it will be the best and foremost step ever taken by this Nation. I am confident that our farmers will become better business men and will be better able to solve the economic problems that confront them. I believe that the cost of production will be reduced and consumers as a result will be greatly benefited and lenders of money will find a better and safer market, as practically all of the risks will be eliminated.

During the Civil War and other struggles this Nation has witnessed, it seemed at times that our hopes would be blasted and the principles that had become so dear to us would not be maintained, yet by perseverance we have gradually solved many of the perplexing riddles, and to-day stand in a better position than ever before to promote the kind of legislation that will fill a long-felt want, and at the same time give to the agricultural class, and more especially the tenant farmer, the kind of relief which will result in making his burdens lighter. I, like many of you, realize that new legislation is often difficult to enact, yet when we realize that money was

loaned to our Government during the Civil War at a cheaper rate of interest than is now being charged the farmers to-day; that the security was not better—we all must admit that the time has come for the Government to extend its support by the enacting of such legislation as will bring about better conditions throughout the country—and I am hoping that every Member of Congress who has the interest of the people at heart will be willing to join me in rendering such assistance as he can by working to join me in rendering such assistance as he can by working for the passage of a rural-credits bill, which will give us a law that will throw down the bars that have proven to be an impediment to the farmer for over a hundred years, thereby stripping bare the irregularities of favoritism, which will result in giving to the tiller of the soil, the bone and sinew of the earth, the rights and benefits they are justly entitled to Some will encourage the projection of the soil. tled to. Some will oppose any movement or legislation in which the Government is asked to lend assistance in the establishment of a rural-credit system, yet I can see no reason why our Nation should not furnish capital to be loaned to the people, taking land as security, as the history of practically every country proves that land values have a tendency to increase rather than decrease, and I believe, with the proper system of handling the funds, the greatest help that ever has been given to this Nation can be provided in a way that will not cost any expenditures after the system has been properly established.

The Shipping Bill.

EXTENSION OF REMARKS

HON. ISAAC SIEGEL.

OF NEW YORK.

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, May 16, 1916.

Mr. SIEGEL. Mr. Speaker, I shall vote against this bill because the sole argument in its favor is that it is necessary to create at the expense of the taxpayers of this country a great merchant fleet to sail under the American flag and to be run as a Government trading venture. Its chief purpose appears to be to purchase ships, whether they can be bought here or abroad, and to build them either in this country or in Europe. The answer to this proposition is that at the present time all the shipbullders throughout the world are running their plants to the fullest extent and have orders on hand for three years to come. No one seems to know where there is a ship to be purchased at the present time at a fair and reasonable price.

Fifty millions of dollars are to be taken from the Treasury of the United States in order to give some individual an opportunity to receive profits aggregating four or five hundred per

cent on vessels heretofore bought by them.

It is not disputed that all the carriers of freight by water, whether coastwise or ocean, are at the present time reaping a harvest caused mainly by the great war and by the fact that the German and Austrian vessels are everywhere interned.

The profits being so very large, private capital is undoubtedly exerting every effort to build ships as quickly as possible, in

order to reap the immense harvest that is at hand.

No one has as yet seen the Government building a ship at a lesser figure than what the private individual has done.

Surely it is not claimed that with the Government going into the shipowning venture that it proposes to carry freight at a

lesser rate than what the present or future market price may be. Do the proponents of this measure believe that the Government of the United States should enter into competition with private carriers and in making a charge for carrying freight leave out and not take into account all the necessary overcharges that must be incurred and are usually met by those who have no United States Treasury to draw upon in order to make up a deficiency?

If Government ownership of these vessels is a desirable thing, why should these vessels which are to be purchased or built be sold five years after the war in Europe is over? No logical reason has been advanced by any of the proponents in the debate for either the temporary or permanent ownership of ships by the United States Government for the carrying of

No reason has been advanced why we should permanently or temporarily go into the business of carrying freight in competition with shipowners. The press of the country appears to be and is against this proposition. The Philadelphia Inquirer on May 9, 1916, says in an editorial, part of which I quote:

in an editorial, part of which I quote:

It provides for the creation of a shipping commission, whose membership shall comprise the Secretaries of Commerce and the Navy and five presidential appointees, not more than three of whom shall belong to one political party, and it invests this body with powers and charges it with duties of a far-reaching and momentous character.

It is to buy or build ships suitable for use as naval auxiliaries or transports, and for that purpose it is empowered to organize one or more corporations whose aggregate capital shall not exceed \$50,000,000, to be derived from the sale of Panama Canal bonds; but—and this is the concession which the opposition to Government ownership has exacted—five years after the President shall by proclamation have announced the conclusion of the war these corporations are to be automatically dissolved. Within that interval they are authorized to equip, lease, charter, maintain, and operate the merchant vessels they shall acquire.

lease, charter, maintain, and operate the merchant vessels they shall acquire.

Why it should be thought necessary or desirable that the business of furnishing facilities for ocean transportation should be undertaken by the Government with public funds is not apparent, nor is it clear what more could be done in that way than is already being accomplished by private enterprise, now actively engaged in endeavoring to meet the demand for more merchant vessels resulting from the abnormal conditions actually prevailing. Every shipyard in the country has at this moment more orders than it can fill, and it is difficult to understand how the appearance of the Government as a purchaser would help the situation.

The New York Times on the 9th of May, 1916, also contained the following editorial, which I read at length:

THE SHIPPING BILL.

Washington believes that the prospects of the passage of the shipping bill have been improved by the limitation of the Government-operation feature to five years after peace. What was considered the strongest feature of the bill proved to be its weakest, and the judgment of its promoters suffers with the bill itself, since they appear to have made a bad matter worse; that is, worse for the Government. The effect of the limitation is to put the Government into the shipping business under the worst conditions. The enormous profits reported in the industry are made on old ships, not on new. The old ships can survive economically under the normal conditions of the trade to be expected within the time when the Government must retire from the operation of its costly fleet. The Government undertaking, then, would be left to be liquidated at a loss, and without having meanwhile benefited trade. The Government can not put any ships into operation within two years, for there are no idle ships, and every yard's capacity of construction is exhausted.

The Government can not put any ships into operation within two years, for there are no idle ships, and every yard's capacity of construction is exhausted.

In that respect the conditions are no longer those which excused or justified, perhaps, the introduction of the bill. The reaction from the collapse due to the outbreak of the war had not then come and was not foreseen. The Government scheme was introduced because it was thought that private capital was unequal to the emergency or unwilling to undertake the provision of shipping. The present condition is that yards, and that there is no possibility of more being constructed until the means of production are enlarged. The prosperity of the shipbulding industry is unprecedented, and is made so by the very stimulus which the Government is proposing to replace by its own deadening intervention. The "extortionate" rates have the cause of the profits which have awakened the shipyards, and the voormment is proposing to reduce the rates as a burden and a check to commerce. If the Government could wave a wand and start ships for other routes it would be necessary to divert the labor from the production of other goods for which there is the greatest demand. There is no surplus of goods awaiting empty ships.

There is no surplus of empty ships, as there was of empty railway cars. There is no surplus of idle labor or of idle plants. The situation is not enthat will yield to heroic methods of the month of the provides are into the than the steamship trade by those who ought to pay themethal new departures in methods of treatment. Great subsidies are being paid in the steamship trade by those who ought to pay themethal new departures in methods of treatment. Great subsidies are being paid in the steamship trade by those who ought to pay themethal new departures in methods of treatment. Great subsidies are being paid in the steamship trade by those who ought to pay themethal new departures in methods of treatment. Great subsidies are being paid in the steamship trade by th

To the same effect an editorial which appeared in the Springfield Union on May 16, 1916, which is as follows:

TRYING TO FORCE THE SHIPPING BILL THROUGH CONGRESS.

A desperate effort is being made by Democratic legislative leaders to ree through the ship bill, with its Government ownership provision,

but with a strong prospect that Republican opposition will be augmented by a minority on the other side. Whether the bolters will be numerous enough to defeat the bill remains to be seen, but the defection in both Houses is sufficient to occasion Secretary McAdoo and the other champions of the bill considerable anxiety. An amendment that is said to have brought part of the Democratic objectors into line is the provision that corporations organized under the financial control of the Government to operate merchant ships shall be dissolved within five years after the close of the European war. But while this would mark the close of private operation, it would not mark an end of governmental ownership in this field. The shipping board would be enabled, apparently, to retain the shipping properties indefinitely under the general provisions of the act, which says that the shipping board may sell Panama Canal bonds and use the proceeds to acquire ships, and that such ships may be chartered, leased, or sold to citizens of the Daited States, including corporations under the control of Americans. In other words, the Government operation feature is an incident to the bill which has a much broader groundwork of Government ownership to rest upon.

In other words, the Government operation feature is an incident to the bill which has a much broader groundwork of Government ownership to rest upon.

Instead of winning adherents to the measure the tacking on of the five-year limit to Government operation should invite its defeat. If the plan of Government operation is a genuine measure in the interest of our merchant marine its virtue would not be limited to five years. So far from making private shipping interests strong enough to meet the requirements at the end of that brief period. Government operation would in reality discourage private initiative and render our shipping more dependent upon the Government than before. The situation would thus be worse off, so far as concerns the ability of private shipping corporations to deal independently with our shipping problems. Attaching a five-year limit merely lends absurdity to the proposed of Government operation from the standpoint of efficiency and public need. It is quite possible that a few private capitalists would reap profit from the proposed partnership with the Government and the traffic the shipping board would be in a position to conduct apart from the Government operation feature. But there is no evidence that general business would be benefited by this wild excursion into socialism. Just now American shipping is active and our shippards have more than they can do. This condition will continue during the remainder of the war at least. Granted that the shipping bill were a genuine instead of a sham remedy, it is being applied at a time when shipping is much less in need of assistance than it was before the war started or is likely to be after the conflict is ended. The plan deserves to be defeated, and it will be defeated if Congress is not utterly blind to the facts of the case.

Again on the 17th day of May, 1916, the New York Times expressed itself editorially, as follows:

THE SHIPPING BILL

pressed itself editorially, as follows:

THE SHIPPING BILL.

Five hours are to be allowed for general debate upon the administration shipping bill, a measure of such doubtful character that it is thought best not to submit it to a Democratic caucus; it can be carried, if at all, only with the aid of opposition votes. Even the Democratic committeemen did not sign the report in favor of the bill, and it is said that they reserve liberty of action. As it stands, the bill is the embodiment of the financial maxim which never won wide approval ontitle of those bilsper circles of finance into which few enter.

"Vote first and talk afterwards" is a sufficient epitome of the policy behind the bill. It establishes a shipping board upon the analogy of the Interstate Commerce Commission, and instructs it to inquire and report what legislation is necessary to reestablish the merchant marine, But the action to be taken is not dependent upon such recommendation. Forthwith Government operation is authorized, and \$50,000,000 is provided, the need for action being the station of the mergeneral provided and any Government action will operate to check the much provided. The need for action being the station of the character relief already being provided by private initiative. The fate of the bill in its earlier form proves that it was too strong medicine for the patient. Some little betterment of its provisions shows the wisdom on more leisurely procedure.

This is particularly true of the more permanent portion of it. There is a limit to the Government-operation feature, and \$50,000,000 will come to an end some time. Those features are adapted to do more harm than good, but there are greater possibilities of evil in the powers that may be exercised by the shipping board, which are not limited in time. Concurrently with the proposal of this new board there is ponding a resolution of inquiry into the efficiency and results of the existing method of regulating common carriers by land.

After a generation of experience, the operation

operating and those proposed, but it will require more than five hours' debate to convince those best informed on the subject, and without whose active cooperation there can be no important growth of the American merchant marine. The way to get American shipping is to allow it to make a profit.

I personally believe that we would do far better at the present time to give immediate attention to the question of our passing legislation in the shape of a protective tariff to prevent the flood-ing of this country by merchandise from Europe as soon as peace comes and which must result in creating trouble not only for our workingmen but also for our manufacturers, wholesalers, and retailers. In general it is bound to seriously affect the business conditions of the United States. I called attention to this fact at length in December last, as shown by my remarks at pages 535 and 536 of the Congressional Record of this session.

It appears that we are now receiving larger imports than ever before, even though the war is going on and our exports, if we deduct the war material, are constantly growing less. The matter is tersely and accurately expressed in an editorial which appeared in the Washington Times on May 16, 1916:

NORMAL EXPORTS DRYING UP WHILE IMPORTS GROW.

Our foreign trade is getting to the point where its future aspects are revealed in clear and startling colors. Our general exports, comparatively speaking, are drying up. We are making our prodigious foreign sales, and gathering therefrom our fabulous profits, chiefly in war supplies.

This truth is as plain as a pikestaff when you examine the details of our foreign commerce as recently as the belated Government reports

This truth is as plain as a pikestaff when you examine the details of our foreign commerce as recently as the belated Government reports permit.

In March our exports of crude materials for use in manufacturing fell some \$20,000,000 from the corresponding month of the previous year. Foodstuffs in crude condition and food animals went off nearly another \$13,000,000, and foodstuffs partly or wholly manufactured more than \$3,000,000.

But when it came to the things that smacked of war we had an increase of nearly \$31,000,000 in manufactures for further use in manufacturing. Then in manufactures ready for consumption—powder all ready to explode, shells and shrappel all ready to be shot out of the guns, other tools, implements, and equipment for battle all ready to be used upon receipt—there was a gain of some \$121,000,000, from \$80,708.513 in March, 1915, to \$201,978.378 in March, 1916.

There is nobody who imagines that this war business is going to last one bit longer than the war itself lasts. There is nobody who ought not be able to realize that our war exports can and will collapse before the war itself ends; for the belligerents are now buying many weeks and even mouths ahead of their needs. When they see the final end, even in the far distance, they will know that it is safe to slow down with their war buying in our markets, winding up the business with the supplies of their own markets and of their stores in reserve.

But take the other side of the story—our imports—and see what that spells. Look again into the details of the March figures.

Of crude materials for use in manufacturing our imports increased from \$59,033.078 in March, 1915, to \$98,266,668 in March, 1916. We lost a trifle of some two and a half millions in imports of foodstuffs in crude condition and food animals—something we could well afford to take if it came our way. But imports of manufactures for further use in manufacturing increased more than \$15,000,000, with a total galn in imports—despite no increase in manufactured foodstuffs and t

the war!
Think of all that coming on top of what we are taking now, taking it in such volume as we never took before the war or at any other time!

Then ask yourself whether this country needs to prepare against the industrial and commercial invasion which must come hot upon the heels of peace.

Our markets are going to be flooded by merchandise which does not have to pay a tariff duty. The sellers of such imported merchandise can and will underbid the American manufacturers here, because of the low wages that are being paid and will continue to be paid in certain parts of Europe.

Instead of being engaged constantly in determining how to spend increased sums of money taken from the pockets of the people of the United States, we should give serious consideration toward the enactment of measures that will tend in every manner possible to produce a sufficient sum to pay the running expenses of the Government, and at the same time protect American labor and American manufacturers from unjust discrimination and unfair foreign competition.

I yield to no man my desire to see a real American mer-chant marine built up carrying our flag all over the four cor-ners of the earth, but I can not convince myself for a single moment that the enactment into law of this proposed shipping bill will add a single vessel flying our flag or reduce in the slightest degree the ocean or coast freight charges, although I have listened very attentively to the proponents of this measure, giving them my undivided attention, and have been compelled to reach the conclusion that the best interests of our country require that I shall cast my vote against it.

Pensions.

EXTENSION OF REMARKS

W. FRANK JAMES. HON. OF MICHIGAN.

IN THE HOUSE OF REPRESENTATIVES.

Wednesday, May 17, 1916.

Mr. JAMES. Mr. Speaker, under the leave granted me to extend my remarks in the RECORD, I include the following letter: MAY 17, 1916.

Mr. George A. Dick,

Department Commander, Detroit, Mich.

Dear Sir: One of my comrades of Camp George Miller, United Spanish War Veterans, of Houghton, Mich., has sent me a copy of General Order No. 5, series 1915-16, issued from the Headquarters Department of Michigan, United Spanish War Veterans, at Lansing, Mich., on April 20, 1916, in which you state in part as follows:

"Our thanks and appreciation are due the Michigan Congressmen, who were a unit (but one exception. Congressman W. Frank James, twelfth district) in voting for this bill. In view of the fact Representative James asserts that he rendered service in the Spanish-American War, his antagonistic attitude is unexplainable. Some appropriate action will be taken at the next encampment.

"George A. Dick,

"GEORGE A. DICK, "Department Commander.

"Official:
"F. H. PRESLEY,
"Department Adjutant."
"Department Adjutant."

"Official:
"P. H. Presert.
"Department Adjutant."

I presume pot are the George A. Dick mentioned in General Order No. 5. From this you make it appear that I am opposed to all pensions. But this is not the fact. I am in favor of pensions to the worthy and deserving, but I am against pensions to the undeserving, to deserters, and to the wealthy.

As a member of the Committee on Pensions, and on the floor of Congress, I have opposed many applications for pensions which I regarded as unworthy and also general pension bills which seemed to me to be sunworthy and also general pension bills which seemed to me to be an unworthy and also general pension bills which seemed to me to be an unworthy and also general pension bills which seemed to me to be an unworthy would-be pensioners.

Among other bills rejected by the Committee on Pensions, I find one which, if approved, would have granted you back pay from August 19, 1903, to March 21, 1913.

I could not better dustrate the sort of pensions I am opposed to that to clie the history of your case, which is as follows:

Office of the history of your case, which is as follows:

Office of the history of your case, which is as follows:

Office of the history of your case, which is as follows:

Office of the history of your case, which is as follows:

Office of the history of your case, which i

that it is entirely wasted, as I wish to state that so long as I am in Congress I shall always oppose pensions to the undeserving, the kind of which yours is one of the most flagrant.

It is with a good deal of satisfaction that I wish to state, however, that during the past three weeks I have visited my entire district and met most of the Spanish War Veterans in my district, all of whom saw service in Cuba in '98. Everyone of them stated that I was absolutely right in my attitude on pensions. I am convinced that every Spanish War Veteran who enlisted from patriotism in '98 feels absolutely the same as I do on this matter of pensions to grafters or the undeserving.

The society of Spanish War Veterans is a magnificent organization and will continue to be such unless some of its members try to make a political organization of it.

In my speech on the Key bill on February 16, 1916, I pay my respects to some of the politicians among the Spanish War Veterans in the following words: "I realize it is hard to vote against some of the politicians among the Spanish War Veterans. They do not deny that they have a political pull—they not only admit it, they boast of it. I read an article sometime ago where some of these politicians took credit for defeating for the supreme bench of the State of New York one of the most respected Members of this House, Mr. Firzgerald, because he had dared to vote against the Key bill. They did it all with their little hatchet. If any man here is going to vote for this bill contrary to his own better judgment, I want to say to him that I believe the Spanish War Veterans are the same in his district as they are in mine, they are not in politics—as Spanish War Veterans.

I wish further to state that if you or any of your friends, who hold similar views as you on pensions, believe that you have any political influence I cordally invite you to come up in the twelfth district of Michigan next fall and campaign against me on the matter, I am, Yours, very truly,

W. Frank James,

Congressman Twelf

W. FRANK JAMES, Congressman Twelfth District of Michigan.

Mississippi River Flood Control.

EXTENSION OF REMARKS

HON. BERTRAND H. SNELL.

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, May 17, 1916.

Mr. SNELL. Mr. Speaker, my own State of New York is very much interested and has given a great deal of careful consideration to the question of conservation, and especially as applied to the flood control of its streams and its water supply. personally interested in this line of work in my own section. I have listened very intently to everything that has been said on the floor of this House both for and against this present bill. I have read with a fair degree of care all the hearings that were held before this committee and the reports on the same, and while I am not opposed to the general proposition of Federal aid for the relief of the flood sufferers of the Mississippi Valley, I am absolutely opposed to the form of relief suggested under the present bill. I admit the Mississippi River is in a class by itself; but when you analyze the system, separate its main tributaries and likewise the large streams that flow into the main tributaries, you get right back to a good-sized river in one of our States, such as anyone of us who has made a study of streams is fairly familiar with. The general principle as regards most of these individual rivers is the same. So, also, are the main principles of control the same when applied to the Mississippi River system, only you must apply the remedy in larger dose

The claim is made by some of the advocates of this bill that the ditch from Cairo to the Gulf is entitled to Federal aid because it is the flood waters of 31 different States combined that cause the serious floods on the lower Mississippi, and for that reason local authorities should not be asked to pay for the improvements necessary to protect their property. The next advocate of this bill comes along and says that it is the local rainfall in a restricted area that causes the floods and the conditions of the streams above this area has nothing to do with it. Now, it is absolutely impossible for both of these statements to be true. Personally, I believe it is a combination of both, and that you will never have a very destructive flood unless both occur at the same time; but if you get heavy rainfalls in this restricted area when the streams are already full banks carrying off the flood waters of the upper country, then you will have trouble, and this is practically what Mr. Marvin, Chief of the Weather Bureau, testified before your committee. He said that the months of January, February, and March are months when procipitation causes most flood troubles on eastern tributaries, and that was the time when the streams were running full banks. So, gentlemen, you will notice that the first argument is intended to get the appropriation, and the second to combat the reservoir

idea and get all the present appropriation spent on the lower Mississippi River, and when that is gone-no relief, come back to Congress and get more. I want this committee to adopt some definite premise to start with, and stand by it. Another claim made by Members on the floor of this House that I do not take much stock in is that the people who own these lands along the lower Mississippi and other places that need protection are too poor to pay the assessments that would be levied against them for their own protection and improvement. Every rural Member of this House has poor farmers in his district, and it is nothing against the district; but what I want some one to tell me is, what excuse am I going to give to the poor people in my own district when I tell them I voted to relieve the poor farmers of the Mississippi Valley of a forty-five-million-dollar assessment which would make their farms more valuable and agreed to place a part of it on the poor farmers of my district who are already paying all the taxes they can stand. been an advocate of this bill, I never would have presented this argument on the floor of the House. This bill provides that the money shall be spent on the Mississippi River from the Head of the Passes to the mouth of the Ohio under plans of the Mississippi River Commission that have heretofore been or may hereafter be adopted, and everyone knows what that plan isis the levee plan and never will be changed. They adopted that plan at first and have held rigidly to it, and I believe they have done this because their activities have been confined to the lower river; and if they have never gone fairly into any other proposition, but simply are going to spend all of their spare time and money on the lower river, there is nothing else to do but to build levees.

But as I understood the objects and purposes of this Flood Committee, it was to investigate and report on the plans for the relief of the floods for the entire Mississippi watershed or system, and they have not done that, but simply offer a bill for the questionable, temporary relief of a favored community, which I do not believe is the desire of or will be acceptable to the Members of this House. Col. Townsend, one of the most important witnesses before this committee and the man whose advice has been followed as much as any other man's before the committee, says the present plan does not take care of the tributaries, and that would be necessary in order to entirely take care of the Mississippi, and it must ultimately be done. Many references have been made to the report of Humphreys and Abbott and their conclusions that the levee system was the only proper way to control the floods. This investigation was made and printed just before and after the Civil War, and there is not a single condition the same on the Mississippi River to-day as it was 60 years ago, except that the water flows to the sea; and these same advocates of this bill are claiming extra relief on account of these changed conditions of the last half century, but to back up their argument for levees they bring up this decision and report, which was made before these changed conditions existed,

The chairman of this committee states in one of his questions to Mr. Maxwell, who favored impounding of waters:

I think this committee would besitate, with its limited information on the subject, to undertake to tell the commission what they should do to control the floods on the Mississippi River.

The chairman of this committee, and everyone else, knows that the Mississippi River Commission has always been an advocate of the levee system, and if this flood commission had also made up its mind, as this question would indicate, what was the sense of spending all the time and money to have these hearings? In my own mind it was just to fool the people, and that the dominant influences on this committee had made up their minds before they began what they would report. Practically all the men who came before this committee were interested in some levee district or the Mississippi River Commission, and, of course, all except a few men favored the levee system, and when the men from New Orleans suggested the impounding system they were met with a question like this:

Would you rather hazard the passage of a bill for our immediate relief by providing a section in it that calls for the expenditure of either millions or billions in the future? If you are willing to take a chance on a bill of that sort passing, I believe you have better sporting blood in you than the people of the rest of the Delta.

Generally a question of this kind would have its effect, but Mr. Parker, of New Orleans, answered:

Mr. Chairman, if I spoke for myself, and everything in the world I have got is there, I would take the chance.

Mr. Speaker, if you will go right through all these hearings, you will find from the character of the witnesses called, from the questions asked, it all tended from the first to the levee and revetment system, and practically nothing has been done toward bringing out the advisability or feasibility of the impounding system, and the committee has utterly failed on the bigger and broader propositions of general control of flood regu-

lation and has simply come back to the old river and harbor proposition of asking Congress for \$45,000,000 for further work and improvements on the lower Mississippi River, when hundreds of honest, pressing river and harbor improvements must go neglected.

Now, Mr. Speaker, let us look at the cost of the work the committee proposes to do. They say they must have \$60,000,000 worth of dirt banks, and in addition it will take at least \$100,-000,000 for proper revetments and a period of 25 or 30 years to do the work. This is all on the main river alone and has nothing to do with the tributaries or the Atchafalava outlet. only that this system of levees will send double the amount of water down this Atchafalaya outlet and make the conditions for the people in that section just twice as bad as they are at the present time. When you have spent this one hundred and sixty millions, you will only have just commenced; then you will have to spend millions upon millions to protect the Atchafalaya district; and after that, what about the Arkansas, the Red, the White, St. Francis, the Missouri, the Ohio, and a dozen other rivers now seriously affected by floods? men, when you have done what you propose by this bill you will have just commenced the work and just begun to spend the money, and the people in these other districts have just as much right to demand protection of their life and property as the favored ones who live on the immediate banks of the lower Mississippi. If you continue raising the levees, you will eventually be carrying the Mississippi River in an artificial conduct to the sea, and here also comes in the question of foundation. Practical men and competent engineers say it is very doubtful if it will hold with an increased pressure from raised levees, and, while the levee itself might hold, the foundation might give away, and that would be even worse trouble than if the levee itself broke. And what practical man would ever think of building a dam 30 to 50 feet high on a dirt foundation and not even examine that? Do you suppose for a minute any private individual would risk his own life and property on such a proposition as this? In fact, the whole proposition is absolutely absurd from a practical, common-sense, business standpoint, and the men before the committee, when pressed to it, admitted that, for a final, complete control, the plan they were advocating was only a makeshift, and eventually they would have to do something else to accomplish the desired result. Mr. Parker, of New Orleans, testified before this committee that about a year ago Col. Townsend told him privately:

I am about convinced, or am about to announce my belief, that we must have source stream control.

There is not a man in this room that has given any careful thought and consideration but what knows that the only way to control the flood water of the stream is to start upstream and work down. Do you suppose any individual or corporation that was spending his own money and must get a dollar's worth of return for every dollar spent would ever start at the mouth of a river and work up it, if they wanted to economically and effectually control the flood waters of that stream? This proposed proposition is just as foolish from a practical business standpoint as it would be to build the roof of a house first and try to suspend it with sky hooks while you are building the foundation and intermediate stories.

If you believe this proposition is a worthy one, if you honestly believe the Federal Government should give these people the relief they ask for, let us go at it in real man fashion. a broad, comprehensive plan of the whole watershed and work it out so you will furnish relief not only to a few on the lower Mississippi River but to every flood sufferer in the whole Mississippi system. Let us go straight at the cause and not spend our money fussing around with the effect. Every man knows that the relief plan proposed under this bill deals only with the effect and does not touch the real causes of all the trouble. A local application to a general disease was never known to bring any results. You must make arrangements to impound these surplus waters in the upper streams and their tributaries, and then you will be producing practical results and creating an asset instead of a liability. For every follar you spend on higher levees you are creating a liability that will last as long as the Government stands. When you build these retaining walls higher and restrain this water between them you create a swifter and stronger current to wear out the dirt levees you have built, and thereby you create the very force that will eventually destroy the effect you are working for. Now, Mr. Speaker, let us consider for a few minutes the results to be obtained from the reservoir or impounding system, and then I am through. principal objection to this scheme in the minds of the committee eems to be the expected enormous expense. When this committee was authorized by this House, were they instructed to bring in a finding that would not cost to exceed fifty or one hundred million dollars, or were they told to bring in a solution for the whole problem? I certainly understood the latter. The levee system is as old as the river itself, and if this committee had presented to this House a complete, systematic, positive plan to control these floods regardless of cost, they would have completed their work when they presented this plan to Congress, and then this House could have acted on it as they saw fit under the circumstances. They also brought up the cost of a survey of every square mile in this whole watershed, and every practical man knows with all the surveys in existence it is absolutely unnecessary to have an Army engineer do all this work. Of course, I know there would have to be a great deal of surveying, but not on any large scale as presented by this committee, unless you are spending some one else's money and do not care about the

It will take some 25 or 30 years to complete the levee system, according to the evidence before this committee, and I know the impounding system could be worked out in much less time than that. You divide the whole Mississippi River system into an Ohio system, an upper Mississippi system, and a Missouri system and put some practical, experienced business men with your engineers and tell them to go ahead, and they will work you out a system of flood control—a system that will do what you want done, for all time and for all people, and not one that simply answers for a short time and for only a part of the people. It may cost somewhat more, but not as much more as they would lead you to believe; but when you have finally completed this work you have created an asset for all future generations. Now, let us see what more we will have accomplished when we have completed an impounding system. Besides relieving the people from flood destruction you will have impounded waters that may be used to assist your navigation during the low-water period; also it will be of inestimable value to your water powers along down the stream, to say nothing of the value of the powers you would create at the impounding reservoirs; and it has been stated on the floor of this House within a few weeks that our water powers are the most valuable natural asset we have left. In addition, in certain districts you will have aided the irrigation proposition, which has also attracted much attention in this House. It is worth the cost of the whole proposition for the water powers and navigation, to say nothing of the relief from flood destruction. In my own country the water-power owners and municipalities would build these reservoirs for stream control at their own expense if you would grant them the right of eminent domain, and there is no doubt in my mind but what a great deal of this could be handled in the same way if you go at this proposition with this end in view. On the one hand you have a proposition that will absolutely accomplish flood control for all the people for all time, will improve your navigation, develop, maintain, and improve your most valuable asset—your water supply and your sources of irrigation—while on the other you have nothing but a makeshift, temporary, questionable relief for only a part of your citizens. One proposition creates a fixed asset, the other a lasting liability. Which will you have? I appeal to you in the name of practical common sense and justice to meet this proposition in real man fashion and make it a piece of constructive legislation that will do honor to yourself and all future generations.

Woman Suffrage.

EXTENSION OF REMARKS

HON, ROBERT M. MCCRACKEN. OF IDAHO,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, May 18, 1916.

Mr. McCRACKEN. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD I include resolutions unanimously passed at a mass meeting of citizens of Boise, Idaho, at the Pinney Theater, May 9, 1916.

The resolutions are as follows:

RESOLUTIONS UNANIMOUSLY PASSED AT A MASS MEETING OF CITIZENS OF BOISE, IDAHO, AT THE FINNEY THEATER, MAY 9, 1916.

OF BOISE, IDARO. AT THE FINNET THEATER, MAY 9, 1916.

Whereas we, citizens of Boise, Idaho, May 9, 1916, realizing that never in history has it been possible to build a contented nation half free and half disfranchised; and

Whereas the present inter-State discrimination against the political rights of women can be ended only by the passage through Congress of a Federal suffrage amendment; and

Whereas our Representatives in the lower House of Congress have been denied the opportunity of voting upon this amendment; Be it

Resolved, That we protest against the action of the House Judiciary Committee in unfairly blocking the passage of the Susan B. Anthony Federal suffrage amendment and demand of it an immediate favorable report that it may be voted upon during this session of Congress;

able report that it may be voted upon during this second to be it further

Resolved, That we call upon Senator Borah to work and vote for the passage of the amendment in the Senate; be it finally

Resolved, That a copy of these resolutions be sent to the leaders of the administration, the members of the Judiciary Committee, and to the Members of the Idaho congressional delegation with the request that it be read into the Congressional Recomb in the Senate by Senator Borah and in the House by Congressman McCracken.

Alice Pittenger, Chairman.

Philippine Islands.

SPEECH

OF

HON. JAMES S. DAVENPORT,

OF OKLAHOMA,

IN THE HOUSE OF REPRESENTATIVES.

Monday, May 1, 1916.

The House in Committee of the Whole House on the state of the Union had under consideration the bill (S. 381) to declare the purpose of the people of the United States as to the future political status of the people of the Philippine Islands, and to provide a more autonomous government for those islands.

Mr. DAVENPORT. Mr. Chairman, it is clear from the arguments presented here to-day that many of the Members of the House favor the passage of the pending bill with the Clarke amendment, which will fix a definite time for complete independence for the Philippines. I am one of those who believe the time has come when this Government of ours should take a definite stand and give to the Philippine Islands independence. There are others on the floor of this House who disagree with me as to the character of legislation and to what extent Congress should go at this time. The Republican members of the Insular Affairs Committee oppose legislation that fixes a definite date for independence, but indicate that they would support the Jones bill, giving to the Philippine people additional legislative powers, but postpone fixing a date for complete independence, on the grounds that the Philippine people are not sufficiently qualified to manage and maintain an independent government. also insist that it would be unwise, unpatriotic, and disastrous to the Philippine people to give them independence at this time. At the outset let me say that this should not be a partisan bill, but from some of the statements made by the gentlemen opposing it, it would seem that a great effort is being made to make it partisan. No one will deny that impliedly, if not explicitly, the Republicans have been advocating a gradual extension of self-government for the people of those islands, and it also includes definite and positive assurances given to them in the past that under proper conditions they would be permitted to become an independent nation.

The Republican adherence to this policy is evidenced by the repeated official statements of Presidents of the United States, Secretaries of War who had the Philippines in charge, and Governors General, speaking to the Philippine people in the name of the American Government. Those utterances, which in part I shall quote, indicate conclusively, to my mind, that those high officials have given public and official assurances to the Philippine people: First, that there is gradually to be extended to them an increasing degree of self-government; and, second, that ultimately some day, under proper conditions, the people of the United States were to acknowledge the independ-ence of the Philippine people. So much for the Republican

The Democratic Party, in its platform in 1912, set forth its attitude as follows:

attitude as follows:

We reaffirm the position thrice announced by the Democracy in national convention assembled against a policy of imperialism and colonial exploitation in the Philippines or elsewhere. We condemn the experiment in imperialism as an inexcusable blunder, which has involved us in enormous expenses, brought us weakness instead of strength, and laid our Nation open to the charge of abandonment of the fundamental doctrine of self-government. We favor an immediate declaration of the Nation's purpose to recognize the independence of the Philippine Islands as soon as a stable government can be established, such independence to be guaranteed by us until the neutralization of the islands can be secured by treaty with other powers.

To recognizing the independence of the Philippines our Government should refain such land as may be necessary for coaling stations and naval bases.

This bill now before the House is here not as a partisan measure, but that the Philippines should be given increased legislation and expressing the settled purpose of the two parties and expressing the settled policy of the American people. I state that, in view of the past utterances of the two political parties,

the Democratic and Republican Parties, this should not be a partisan question, but should be supported by both sides of this All agree that the Philippines have made wonderful progress in the past 18 years, and that the 8,000,000 or more of people in the islands should be given increased legislative power. This bill, it is true, with the amendment known as the Clarke amendment, fixes a definite date for independence; and it would seem that those who in the past have been advocating independence for the Philippines in the future without fixing a date now realize that they must make a fight and defeat any legislation tending to fix a date.

Let me briefly call your attention to the American Philippine history from the date of our victory in Manila Bay up to the

1898, occurred the battle of Manila Bay, On May 1, which Admiral Dewey commanded the American forces. During the summer of that year American troops were brought over and the town of Manila was besieged. On August 13 of that year the town of Manila surrendered to Gen. Merritt, head of the American Army. On December 21 of that year, 1898, the President issued his proclamation taking over those islands in the name of the American people—islands 8,000 miles away from the American coast; islands inhabited by 8,000,000 people, of whom nine-tenths were Christians; islands which for 300 years had been in the possession and under the control of the old Spanish monarchs; islands which contain almost as large an area as the British Isles in Europe; islands which lay upon the bosom

of the Pacific Ocean in the very shadow of Asia.

On February 22 of the following year, 1899, began the Philippine Insurrection. The Filipino soldiers had assisted the American Army in the conquest of Manila, but in a short time they became restive under the conditions and decided to continue against the Americans, who were taking the sovereign power of the islands, the same insurrection which they had been carrying on against the Spanish Government since 1896. On March 4 the first Philippine Commission appointed by the President of the United States arrived in the islands. President Schurman was the chairman of that commission. It was largely, in fact almost wholly, an advisory body, for the real power rested in the military authorities in the islands.

I want to quote briefly from the language used by President McKinley in giving his instructions to that commission, because it illuminates the real purpose of the American people and it vindicates that purpose. He instructed them that they were so to conduct themselves toward the Philippine people as to prove to them that the United States was to be a liberating rather than a conquering Nation.

On April 11, 1899, the treaty with Spain was concluded, by which Spain relinquished forever her claims in those islands. On April 7, 1900, the second commission, with Mr. Taft as chairman, arrived in the islands. To this commission the President of the United States gave for the first time legislative

dent of the United States gave for the first time legislative powers, powers which to some extent had been previously exercised by the military authorities. Those powers were now vested in the commission headed by Mr. Taft.

On June 1 of the following year, 1901, the President extended to this commission executive powers to accompany the legislative powers which they possessed. These executive powers were developed by the creation in September, 1901, of executive departments, the heads of which are analogous to our Cabinet officers

in the United States.

In October, 1901, the office of vice governor was created by Executive order. Up to this time all powers to be exercised in the name of the United States in the Philippine Islands had been bestowed by the President of the United States under his constitutional war powers. Now, however, in July, 1902, Congress passed what has been known as "the organic act of the Philippine Islands."

The chief purpose of this act was to make the first start in creating a legislative authority in the Philippine Islands in which the Philippine people should have some share and part. This act as I have said was passed in 1902, and under its au-This act as I have said was passed in 1902, and under its authority occurred the census of the Philippine Islands from 1903 to 1905. After that census and after a lapse of two years, which the organic act required, the new Philippine Legislature was organized, a legislature consisting of two houses—an upper house, called "the commission," having 9 members and being appointed by the President of the United States; and a lower house, called "the assembly," consisting of 81 members, and being elected for the first time in the history of the Philippine Islands by the Philippine people. pine Islands by the Philippine people.

Thus matters stood in the Philippine Islands until the advent of the present administration. The commission, which was the upper house of the Philippine Legislature, was not only apmade to the Philippine people. It is one of many statements

pointed by the President of the United States but he had always placed upon that commission a majority of American citizens. When President Wilson came into power, however, he proceeded to carry out in spirit the policy of the Democratic Party, as well as the policy of the American people, as I think, by appointing a majority of Filipinos upon the commission; so that for the last two years the upper house of the Philippine Legislature as well as the lower house has been in the control of the Philippine people.

The effect of that change, the effect of giving to the Philippine people a majority of the upper house as well as of the lower house, was at once to do away with a great cause of friction, irritation, and disagreement which had existed for some time. For five years no appropriation bill had been passed, because the two houses were unable to agree upon one. For all that time the old appropriations had been continued automatically, but as soon as the Philippine people came into possession of their upper house the appropriation bills passed; and it is to the credit of the Philippine people, it is to the everlasting credit of the present Governor General of the Philippine Islands that the legislation of the Philippine Legislature during the last two years has been legislation in the direction of economy and progress.

That it has always been the intent of our Government to give to the Philippines independence is made plain by the statement of President McKinley, who expressed himself on different oc-casions on this subject. He said:

The Philippines are ours, not to exploit, but to develop, to civilize, to educate, to train in the science of self-government. This is the path of duty which we must follow or be recreant to a mightly trust committed to us.

In his instructions sent to one of the commissions created by him he said:

That in all cases the municipal officers who administer the local affairs of the people are to be selected by the people, and that wherever officers of more extended jurisdiction are to be selected in any way natives of the islands are to be preferred; and if they can be found competent and willing to perform the duties they are to receive the offices in preference to any others. It will be necessary to fill some offices for the present with Americans, which after a time may well be filled by natives of the islands.

Gov. Gen. Harrison has been carrying out that purpose and that policy. It has caused some friction there to relieve Americans who were upon the pay roll and give their positions to Filipinos, but it is carrying out the solemn promise made to the Philippine people by President McKinley.

President Taft, while civil governor of the Philippine Islands,

said, in 1903:

From the beginning to the end of the State papers which were circulated in these islands as authoritative expressions of the Executive, the motto that "the Philippines are for the Filipinos," and that the Government of the United States is here for the purpose of preserving the "Philippines for the Filipinos," for their benefit, for their cievation, for their civilization, again and again and again appear.

A little later on Gov. Gen. Taft was attacked by American papers published in Manila, just as Gov. Gen. Harrison has been attacked, because, in the opinion of those editors, he was proceeding too far to extend self-government to the Filipino people. Here is his reply:

Some of our young lions of the local press have spoken of the "childish slogan," "The Philippines for the Filipinos." It is unnecessary to comment on the adjective used, but it is sufficient to say that, whether childish or not, the principle makes up the web and the woof of the policy of the United States with respect to these islands, as it has been authoritatively declared by two Presidents of the United States—for President Roosevelt has followed sedulously the policy of President McKinley—and by the interpretation of the supreme popular will, the Congress of the United States.

He referred to the feet that the Congress of the United States.

He referred to the fact that the Congress of the United States, in passing the organic act, had indicated the same purpose, and had declared that that act was only for the temporary government of the Filipino people.

Mr. Taft, then Governor General-or civil governor, as it was then called—is quoted partly as follows:

The doctrine-

That is, "The Philippines for the Filipinos"-

does not include, necessarily, the independence of the Filipinos nor any particular degree of autonomy. It is entirely consistent with the principle to object to an immediate extension of popular government on the ground that we are going too fast for the political digestion of the people, and that it is not, therefore for their good. Whether an autonomy or independence or quasi independence shall ultimately follow in these islands ought to depend solely on the question—

Now, what? What question is that to depend on? Is it to depend upon the will of politicians in the United States? Is it to depend even upon the welfare of the United States? No. Mr. Taft declared that-

whether an autonomy or independence or quasi independence shall ultimately follow in these islands ought to depend solely on the question, Is it best for the Filipino people and their welfare?

made to the people of the Philippine Islands officially by the representatives of the United States, and they have accepted it as the pledge of the American people.

He goes on, in the same statement, to say:

I think I have demonstrated by what I have quoted and the instances I have cited that the doctrine, "The Philippines for the Filipinos," is one which the honor of the United States requires it to enforce throughout those islands. Not only was it promised to the Filipinos when the Americans came, after they have been here, during the insurrection and at its close, but I do not think it too much to say that the reiteration of the promises as shown in legislation carrying out these principles had much to do with bringing about the present tranquillity in these islands.

No one will deny that the act of Congress establishing a civil government in the Philippines, known as the organic act, was designed and intended as a temporary measure, and that by the provisions of the organic act approved July 1, 1902, it was intended to give to the Philippine people their independence as soon as it was ascertained that they were competent, and it did not contemplate that all of the people of the Philippine Islands should be competent, but that, as in all governments, a sufficient number should be competent and qualified to handle the affairs of the Government. This bill is not the first one that has been before this House providing for Independence. During the second session of the Sixty-second Congress the Committee on Insular Affairs reported a bill to establish a qualified independent government for the Philippines and to fix the date when such qualified independence shall become absolute and complete, and for other purposes. The general purpose of that bill was to establish for the Filipinos a provisional government more liberal and autonomous in character than that created under the act of Congress of July 1, 1902, that government to begin on the 4th day of July, 1913, and to continue for the period of eight years, after which they were to be given complete independence. In fine, the Filipinos were given in that bill a much larger measure of popular self-government than had therefore been exercised by them, together with the definite promise and assurance that on and after the 4th day of July, 1921, they would be granted full and complete independence. The bill (H. R. 18459) which declared it to be the purpose of the people of the United States to withdraw their sovereignty over the Philippine Islands and to recognize their independence as soon as stable government could be established therein, and which passed the House of Representatives on the 14th day of October, 1914, was never considered in the Senate. Whilst that bill did not fix a precise date for the alienation of the Philippine Islands, it did give to the Filipinos distinct assurance that at a time, the date whereof was capable of being made definite and certain, they would be given their independence. Had that bill been enacted into law it is not thought that Philippine independence would have been delayed for so long a period as six years, since it is contrary to the teachings of recent Philippine history and not in accordance with the political, social, and other conditions in the islands to believe that the Filipinos are incapable of establishing a stable government. Their ability to maintain such a government, once it has been established, against foreign aggression is quite a different proposition. The bill to which the committee now gives its sanction, if it shall become a law, will not, it is believed, result in earlier independence than would that to which it gave its approval in the Sixty-third Congress had it been enacted

The bill under consideration is intended to carry out the policy of our Government toward the Philippines and to fulfill our many promises made the people of the islands and to show to them that our stay in the islands has not been for exploiting their territory but for the purpose of assisting them to establish a stable government and thus secure for themselves the liberty of which we are all so proud and which is the pride and boast of all good American citizens.

The bill now under consideration by this House has a two-fold purpose. It gives the Filipino people a more liberal and autonomous government, thus conferring upon them larger control of their public and political affairs than they are now permitted to exercise. The life of this government, however, is to expire so soon as American sovereignty shall cease to exist over the islands, which, the bill declares, shall occur in not less than two nor more than four years after its passage, provided that the President, by proclamation, may extend the time to the date of the final adjournment of the session of Congress which shall convene next after the date of the expiration of the said period of four years, in the event that the condition in respect to the stability or efficiency of the external or internal affairs of the Philippines shall warrant him in so doing.

The necessity for the enactment by Congress of a new organic law for the Philippines is not questioned by anybody.

It is stated in the views of the minority members of the Committee on Insular Affairs that—

The minority entirely agree with the majority that the Philippines should be given a new fundamental law, granting to the people a larger measure of self-government.

And the fact that the only section of this bill to which any reference is made by the minority is that which relates to the independence of the islands amply justifies the conclusion that the provisional government provided for is not unsatisfactory to them.

The justice for the demand that the Filipino people be immediately given a larger measure of self-government being conceded, and no objection having been raised to the governmental features of the bill, it would be a waste of the time of this House to enter upon any detailed discussion of the changes which it effects in the present organic law. I shall therefore only direct the attention of the House to one or two of the more important changes. The most important of these is that which establishes a Philippine Legislature, to be composed of two houses, one the senate and the other the house of representatives.

The senate is designed to take the place of the present Philippine Commission, an appointive body composed of nine members. As is well known, this commission now constitutes the upper branch of the Philippine Legislature and also exercises exclusive legislative and other jurisdiction over all the non-Christian and noncivilized peoples of the islands. The archipelago is divided into 12 senatorial districts, each of which is to be represented by two senators. One of these districts embraces the territory inhabited by the non-Christian and noncivilized tribes, and its two senators are to be appointed by the Governor General. The representatives of the other 11 senatorial districts are to be elected by the qualified voters of those districts.

The house of representatives is to be composed of 90 members, 81 of whom shall be elected in the districts now provided by law; the remaining 9 are to be appointed by the Governor General, and they will represent the noncivilized and non-Christianized territory.

The President of the United States is authorized to appoint a Governor General, a vice governor, an auditor and a deputy auditor, a director of civil service, and the chief justice and associate justices of the supreme court. All other officers are to be appointed by the Governor General with the approval of the Philippine senate. The Governor General is given a qualified veto power.

One other important change which this bill makes in the present organic law is that which relates to the suffrage. The present educational qualification requires that all voters must be able to read and write either Spanish or English. This bill provides that they must be able to read and write either Spanish, English, or a native language. This will necessarily greatly enlarge the present electorate. Its justice is so obvious as to leave no room for discussion. There are many thousand literate Filipinos who speak neither English nor Spanish. Many of these are at least as well qualified to exercise the right of suffrage as the nonnative inhabitants who only speak a foreign language.

The section known as the Clarke amendment seems to be the only one over which there has been much controversy, the only that has disturbed those who have so long preached to the Philippine people independence which they did not intend to give them, and which it would seem by their actions now they had hoped the Philippine people would never ask for. The opponents of Philippine independence claim the Clarke amendment does not protect American and other foreign interests. The amendment is broad and comprehensive enough to protect all interests. It specifically clothes the President of the United States with the power and authority to make such orders and to enter into such negotiations with the authorities of the Philippines as may be necessary to finally settle and adjust all property rights and other relations as between the United States and the Philippines, to cause to be acknowledged, respected, and safeguarded all of the personal and property rights of citizens or corporations of the United States and of other countries resident or engaged in business in the islands or having property interests therein.

The President is thus invested with full power to take every step that is possible to protect and safeguard every American or other foreign interest in the islands; and, to my mind, it would be difficult to make the language which is employed in the bill more binding upon the Chief Executive of the United States or more comprehensive in its scope.

But our friends of the minority insist that the authority thus conferred upon the President to settle and adjust personal and property rights between citizens of the United States and the Philippines is not broad enough to cover certain Philippine bonds

issued under authority of Congress. They argue that any promise or guaranty given by the Philippine government either as to property rights or the rights of the holders of Philippine bonds, which they distinguish from property rights, would be worthless. My reply to this is that no President of the United States would ever draw so nice a distinction as this, thus discriminating between different classes of American investors in the Philippines. I have no doubt that if this bill becomes a law that all property rights in the islands will be safeguarded and protected.

Great stress is laid upon the fact by some of the opponents of this bill that we paid \$20,000,000 for the Philippine Islands, and that we have incurred a great deal of expense in fortifications in the islands, and that we owe it as a debt of gratitude to continue our control over the islands for the purpose of protecting the Philippine people against the aggression of other nations. It is true that we paid \$20,000,000 for the Philippine Islands and that we have incurred a great deal of expense in the last few years fortifying the same; and it is further true that we went into the islands to assist a downtrodden and oppressed people to throw off the yoke of Spain and to assume liberty, for which they had been fighting for centuries. We did not go in there for the purpose of exploiting the islands, nor do I believe it was the intention when we went into the islands that we were going there for the purpose of giving the capitalists an opportunity of speculating off of the products of the islands and the Philippine people. If you could remove from this discussion the interest of the people who have invested their money in the islands and could drive from the Capitol and the House Office Building the lobby that have been canvassing the Members of the House, urging them to vote against this measure, I believe that this question would be viewed by the opponents of the bill in a different light to what it is now being viewed, and I do not believe that the criticism of those of us who favor the bill would be so severe and vitriolic as it is. Some of the opponents of the bill have gone so far as to say it would be a crime to pass a bill containing a provision similar to the Clarke amendment, fixing a definite day for Philippine independence, but they assign no good reason therefor. The only reason they attempt to give is that the Philippine people are not ready, are incompetent, to govern themselves. But my contention is, from what I have seen and heard in this discussion, that it is not the interest of the Philippine people that causes the Republicans to shed crocodile tears, but it is the interest of the capitalists who are appealing to them and urging them not to permit the bill to pass fixing a definite date for independence.

In the minority report upon this bill they used the following language:

The minority entirely agrees with the majority that the Philippines should be given a new fundamental law granting to the people a larger measure of self-government. The minority would gladly support the passage of the Jones bill without the preamble. They would even support the Jones bill with the preamble as a substitute for the Senate bill with the Clarke amendment, but they are united in opposition to the Clarke amendment.

This quotation is taken from the minority report, which is signed by all of the Republican members of the Insular Affairs Committee. I want to call your attention to this fact: Will they carry out the statements contained in this report? If the Clarke amendment is defeated and the Jones bill is brought before the House with the preamble, will they support it? I answer you now, no, they will not. They do not want any legislation that will definitely declare to the Philippine people that they are entitled to or should have in the near future Philippine independence. They do not intend to vote for or support any bill carrying a similar provision. Oh, yes; the Republicans are in favor of giving them additional legislative powers as long as it does not tend to fix a definite date for independence. The Republicans ought to be fair with the American people, and they ought to say to them that their reasons for opposing this bill are not because they believe that the Philippine people are incompetent of self-government, but because they believe we should continue control over the Philippine Islands in order that those who have invested their money in the islands may continue to speculate and make money at the expense of the Philippine people, and receive the protection of the American Government in so doing.

Several of the old-time Republicans in their remarks upon this bill and the minority report used the word "scuttle" and the words "scuttle policy" of the administration. God only knows where you can find a class of citizens more competent to know what scuttle or scuttle policy, from the English definition, means than the old-line, standpat, hard-hearted, uncompromising Republicans upon the floor of this House. The word "scuttle seems to be their chief stock in trade in their arguments against this bill. It seems that it has run through their heads so long

when they were assisting in scuttling the laboring classes of the United States that they still desire to use it, and continue to assist the financial interests of the United States in scuttling the poor, downtrodden, unprotected, and oppressed Philippine people.

Mr. Chairman, if I had any doubt as to what the action of this House should be to-day upon the bill and other provisions contained therein, and as to whether or not the Philippine people were competent, and whether or not there were a sufficient number of competent, educated, and honest Philippine people in the Philippine Islands, that doubt would have been removed at once when I heard one of the commissioners of those islands make his speech upon the floor of this House a few hours ago. opponents of this bill urge with a great deal of noise and with some statements of fact that the Philippine people are not competent to organize and maintain a self-government. From what I have seen to-day of the Philippine representatives, it seems to me that they are fully competent to maintain self-government, and I believe that they have a sufficient number of citizens who are competent to maintain a self-government.

In the presentation of this question, as to whether or not the Filipino is sufficiently trained in state affairs and whether the island has enough or a sufficient number of people to maintain self-government, we should take into consideration the question that it is not contemplated that all of the people of any government should be competent before the government should be intrusted to them. It never has been true, and never will be true, that all of the people of any government are competent and qualified, but the sole question that we should consider, and as has been considered, is whether there are a sufficient number of the people competent to control and maintain selfgovernment. It would not be, as stated by some of our opponents, a cowardly act to haul down the American flag in the Philippine Islands and withdraw our Government from those islands and give to the Philippine people independence, but it would be, in my judgment, a moral, upright, and righteous act to do so and would show to the world that this Government of ours is not in favor of oppression, but is in favor of and would extend to any liberty-loving nation in the world the opportunity of so conducting themselves and preparing for an independent government, and that when our Government had been convinced that there were a sufficient number of competent, honest, and upright citizens in the islands that we would withdraw and permit it to establish an independent republic of its own.

Taking the Philippine legislative body to-day as it stands, it has a commission composed of nine members, five of whom are Filipinos. The assembly is composed of 81 members, all of whom are elected by the Philippine people, and as evidence of their intelligence and qualifications that legislative body elected Mr. QUEZON, as a Resident Commissioner and a Member of this House. I challenge any gentlemen opposing this bill to show where a better selection could have been made, or whether or not these people could have more wisely, in these United States, chosen their representative than did the Filipino people when selecting Mr. Quezon as one of the Resident Commissioners. Yes, you gentlemen opposing this bill say we went into the Philippine Islands 18 years ago. I ask you gentlemen to be fair with yourselves and with this Nation of ours. Did we go into the islands for the purpose of exploiting the islands or did we go into the islands for humanitarian purposes and to assist the Filipinos in establishing their independence and self-government? Answer me this question upon your honor as true, libertyloving American citizens and Members of this House. [Applause on the Democratic side.]

If our Government went into the islands, as I would infer from some of the gentlemen who have spoken upon this subject, for the purpose of exploiting those islands and enriching our citizens who went there for speculative purposes, then you gentlemen have assumed the proper attitude and are acting wisely in this matter, and you ought to stand for your belief, as you will be carrying out the purposes for which you went into the islands. [Applause.] We went into Cuba to aid the Cubans. We went into the Philippines to aid them to establish a government, and we ought to carry out the purpose of our intentions. This is the first opportunity, the first time, we have reached the point where we can, if we wil., assist them in establishing self-government. It is our duty to leave the islands and turn them over to the Filipino people at the earliest possible moment.

Mr. MEEKER. Will the gentleman yield?

Mr. DAVENPORT, Yes.

Mr. MEEKER. How long has it been since the gentleman was in favor of getting out of there in two years?

Mr. DAVENPORT. My recollection is that I was a private citizen in the year 1890 in a country that you and some of the Representatives from Missouri would not permit to come

into the Union and vote, because you said we were incompetent. I was then in the Indian Territory, which was then situated like the Philippine Islands are to-day, under the supervision of the United States, but having no right to vote or exercise local self-government; and for many years prior to Oklahoma being admitted into the Union that part of Oklahoma that was then Indian Territory was besieged and controlled by the capitalists, who were speculating and who were ready and willing at any time legislation was proposed in Congress to extend aid and expend their money in sending delegations to Washington to show that the people of Indian Territory were not competent for local self-government and to prevent them from securing the same. The same tactics by the lobbyists and by the financial interests that were put forth in the attempt to prevent Indian Territory from having local self-government have been employed and are now being employed in preventing inde-pendence to the Philippine people. We remained for 15 years in that part of Oklahoma which was formerly Indian Territory, and a great many Representatives, including some of my distinguished friends from Missouri, thought that the people in the Indian Territory were not competent for local self-government the same as a great many of the Members who are opposing this bill argue that the Filipinos are not competent, which assertions are augmented by the interests of the financiers. From the day I entered the Sixtieth Congress I said that if I could have my way I would give to the Philippine people their liberty, just as we did the American Indian on the 16th day of November, 1907, in Oklahoma. [Applause on the Democratic side. 1

And I say to the gentleman from Missouri [Mr. Meeker], who interrogated me, that if I had my way I would say to the American capitalists in the Philippines, "You went into the islands and invested your money, knowing at the time the exact conditions existing, just as any American capitalist would go into any other foreign country knowing the conditions there, and while I have no disposition to cause you to lose any money, you shall not delay these good people any longer by preventing them from having self-government, because you believe it is to the interest of the speculators and capitalists and because you believe you can continue to exploit and get possession of their property better under the control of the American Government and American protection than when they have their independence."

I do not want to destroy a man's property, but when a man goes into a country knowing the conditions and for what purposes he enters, he ought to be willing to take his chances and should not try to retard these people who are located in the islands and prevent them from having a local self-government, which he himself enjoys in the country of his residence and nativity. I ask you gentlemen who are opposing this bill to answer me and the American people this question: How much capital from the United States went into the Philippine Islands for charity purposes and how much went in there for any other purpose than speculative purposes, and how many dollars have been expended by capitalists from the United States or other countries in the Philippine Islands where they did not expect a return upon their investments? And also, if it is not true that when they invested their money in the islands, did they not know and understand the conditions that existed in the islands at the time, and that their investments were made for the purpose of trying to make money, and if it was invested under such knowledge, then I contend that they have no right to complain and need not complain. [Applause from Democratic

A few days ago I received from a banking institution of the city of New York a coupon photographic copy of some bonds that had been issued by a Philippine railway company, and the institution from which I received the photographic copy of the bond presented the argument to me that it was guaranteed by the United States and that the bond of the Philippine railway company was protected, but the copy of the bond failed to sustain such argument of the institution sending the copy of the bond to me. Only the government of the Philippine Islands whatever that government may be—is obligated to protect them, and that is all, and the United States Government has no obligation whatever to protect the payment of these bonds. The bill under consideration is so drawn that it amply protects capitalists who have invested their money in the islands. A few of the opponents of this bill, who are pretending that they would like to have legislation giving increased jurisdiction to the islands, take the position that this bill does not protect the interests of all of the bondholders; but it is only a few who take this position, and the greater number of eminent lawyers who have investigated this matter say that the bill does prop-

orly protect all interests in the islands. But, gentlemen, let me tell you this: Let us be fair with each other and not try to deceive or mislead anyone; let us tell the truth and the whole truth; and let us see if those who are opposing legislation fixing a definite time for Philippine independence are doing so because, from their viewpoint, certain interests, organizations, and associations in the islands will be injured financially, and that they believe financial interests will be better conserved and protected by the American Government continuing the control than by Philippine independence. My friend from Tennessee [Mr. Austin] made a splendid speech, and he is a splendid, lovable gentleman. He has visited the Philippine Islands and has had an opportunity to see some of the local conditions, and in recent months has broken into the magazines and has written articles upon the conditions in the islands. While he in his speech takes the position that the Filipinos are not competent of self-government, yet in these articles he goes into details and gives figures showing that nearly 80 per cent of the offices in the Philippine Islands are held by Filipinos either appointed or elected by the people. If the Filipino people can run the local government under those conditions and without friction, why can they not do it in an independent government as well, with proper laws and governmental regulations?

Again, in conclusion, I must refer to my friends, the minority members of the Insular Affairs Committee. It is amusing to refer to the quotation in their report in which they say that they would prefer the Jones bill to the bill with the Clarke amendment. I do not propose to mention the names of any of the minority members, as they are good fellows to serve with on the committee and all lovable gentlemen to associate with, yet they know as well as I do that they do not want the Jones bill or any other bill that even contemplates that we are at some future date to give to the Filipino people independence. They use this as a subterfuge in order to try to deceive and mislead those favoring the passage of the bill with the Clarke amendment. My Republican friends know they do not want any bill for the Philippine Islands that will take away any of the powers of the United States Government or a bill that will relinquish any of those powers.

It is not long until the election, and let us be candid with each other and not present an argument that we know at heart we do not believe in.

Now, to my Democratic friends who are opposing this bill, I want to speak to you a minute. I was glad that Mr. QUEZON spoke the truth and expressed himself as he did at the conclusion of his speech, because I want to forcibly present to you now that this question is not a religious question at all in the Philippine Islands, but it is purely a political and financial question, and ever will remain so as long as there are two parties in the United States. If I read the record correctly, several years ago, in the hearings before the Insular Affairs Committee, when my good friend Mr. Cannon was a member of that committee, some one said the Philippine question was not a political question. I do not undertake to quote him correctly, but in substance. My recollection is that his reply was that they could do as they damn pleased, but it was a political question and would always remain one. I agree with him; he was right, and it will always remain and be a political question. My friend Mr. Austin, from Tennessee, eloquently and dramatically patted some of the Democrats on the back and lauded the Tammany boys for going out of the caucus the other night and refusing to agree to stand by the caucus and support the bill with the provisions in it as it is now being considered. Not to use his exact expression, but he gloried in their independence and the assertion of their power to stand for Americans, as he viewed it. While you know, gentlemen, there is sometimes rejoicing in the camp of the enemy, and especially true when you have deserted your own army and gone over to the enemy.

You gentlemen who oppose this bill, and who are Democrats, have a perfect right to do so and to do as you please, but remember what I am saying now, that you who are Democrats and can not support this bill, and who have to-day received the applause of the Republican Members of this House, who have disagreed with your political party, will some day see the effect of what you are doing to-day. Some day you will have a proposition that you want enacted into law, and when some one of those stand-pat Republicans will rise up and hit you squarely between the eyes, you will then fail to see your friend from Tennessee, who to-day so eloquently lauded you, rise up in your behalf and support your proposition and carry your banner to the front; he will not be hallooing for Tammany or any of the Democratic boys who want legislation enacted, but he will stand solidly with the stand-pat organization and laugh in your

face, and say, "Well, boys, we don't need you to-day." It is a precedent to be established, and I want to say to you that Mr. AUSTIN does not love you for your action in this matter, but some day, when you have met the condition that I have just described, he will go out and talk about how they misled you

into voting against the Clarke amendment.

Remember, I am not criticizing your actions. I concede you the right to do as you please, but I have called your attention to the fact that the Democratic organization and party is maintained only by teamwork and cooperation, and the differences of opinion as to what should be done is usually worked out in the organization of your own party. I am for the bill as reported, and believe, if we expect to get any legislation at this session of Congress, we must pass the bill with the Clarke amendment, or we must content ourselves with knowing that the lobbyists and capitalists have succeeded in doing their work and defeating the measure, as one of them said to me several days ago that he could and would do.

The CHAIRMAN. The time of the gentleman from Oklahoma

has expired. [Applause.]

Statement by the National Foreign Trade Council.

EXTENSION OF REMARKS

HON. S. D. FESS,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, May 18, 1916.

Mr. FESS. Mr. Speaker, under leave to extend my remarks I submit a statement of the National Foreign Trade Council on an American merchant marine.

The first national foreign trade convention, at Washington, May 27-28, 1914, recognized the need of an organization which should "endeavor to coordinate the foreign trade activities of the Nation," and authorized the creation of the National Foreign Trade Council for that purpose.

The Council has an authorized maximum membership of 50 merchants, manufacturers, farmers, miners, railroad and steamship men, and bankers, representing all sections of the United States, and collectively standing for the general interest of all

elements engaged in foreign trade.

Nonpolitical and nonpartisan, its function is investigatory and advisory, and it seeks effectively to cooperate with other organizations in the encouragement of sound national foreign trade policy. Through its committees the Council is constantly investigating and from time to time publicly reports upon problems arising in over-sea commerce.

The membership of the council is as follows:

Chairman, James A. Farrell, president United States Steel Corporation, New York City; treasurer, Walter L. Clark, New York City; secretary, Robert H. Patchin, New York City; John J. Arnold, vice president First National Bank, Chicago, Ill.; Willis H. Booth, vice president Security Trust & Savings Bank, Los Angeles, Cal.; J. A. G. Carson, president Carson Naval Stores Co., Savannah, Ga.; E. A. S. Clarke, president Lackawanna Steel Co., New York City; Samuel P. Colt, president United States Rubber Co., New York City; Maurice Coster, managing director Westinghouse Electric Exp. Co., New York City; John Crosby, Washburn-Crosby Co., Minneapolis, Minn.; F. G. Crowell, vice president Hall-Baker Grain Co., Kansas City, Mo.; Robert Dollar, president the Robert Dollar Co., San Francisco, Robert Dollar, president the Robert Dollar Co., San Francisco, Cal.; J. J. Donovan, vice president Bloedel-Donovan Lumber Mills, Bellingham, Wash.; John F. Fitzgerald, Boston, Mass.; J. Rogers Flannery, chairman Pittsburgh Foreign Trade Commission, Pittsburgh, Pa.; P. A. S. Franklin, vice president International Mercantile Marine, New York City; L. S. Goldstein, New Orleans Association of Commerce, New Orleans, La.; Lloyd C. Griscom, New York City; B. F. Harris, farmer, Champaign, III.; Fairfax Harrison, president Southern Railway Co., Washington, D. C.; H. G. Herget, Pekin Wagon Co., Pekin, III.; James J. Hill, chairman Great Northern Railway Co., St. Paul, Minn.; Henry Howard, vice president Merrimac Chemical Co., Boston, Mass.; Charles E. Jennings, president C. E. Jennings Co., New York City; Alba B. Johnson, president Baldwin Locomotive Works, Philadelphia, Pa.; D. W. Kempner, Galveston Cotton Exchange, Galveston, Tex.; Cyrus H. McCormick, president International Harvester Corporation, Chicago, Ill.; J. R. McWane, president American Cast Iron Pipe Co., Birmingham, Ala.; Charles H. Muchnic, vice president American Locomotive

Sales Corporation, New York City; Barton Myers, president Chamber of Commerce, Norfolk, Va.; M. A. Oudin, foreign manager General Electric Co., Schenectady, N. Y.; William Pigott, president Seattle Car & Foundry Co., Seattle, Wash.; Welding Ring, Mailler & Quereau, New York City; John D. Ryan, president Anaconda Copper Mining Co., New York City; William H. Russe, president Russe & Burgess (Inc.), Memphis, Tenn.; W. L. Saunders, chairman of board, Ingersoll-Rand Co., New York City; Charles A. Schieren, president Charles A. Schieren Co., New York City; Wallace D. Simmons, president Simmons Hardware Co., St. Louis, Mo.; Willard Straight, vice president American International Corporation, 55 Wall Street, New York City: G. F. Sulzberger, Sulzberger & Sons Co., Chicago, Ill.; Stewart K. Taylor, president the S. K. Taylor Lumber Co., Mobile, Ala.; Eugene P. Thomas, president United States Steel Products Co., New York City; F. A. Vanderlip, president National City Bank, New York City; F. A. Vanderlip, president National City Bank, New York City; Daniel Warren, vice president American Trading Co., New York City; J. H. Wheelwright, president Consolidation Coal Co., Baltimore, Md.; Theo. B. Wilcox, Portland Flouring Mills Co., Portland, Oreg.

Office of council, India House, Hanover Square, New York

STATEMENT BY THE NATIONAL FOREIGN TRADE COUNCIL TO THE MER-CHANT MARINE COMMITTEE OF THE HOUSE OF REPRESENTATIVES ON THE "ADMINISTRATION SHIPPING BILL," H. R. 10500, IN THE FORM INTRODUCED JANUARY 31, 1916.*

* The reader will do well in connection with this report to study not only H. R. 10500, but also H. R. 15455, presented by a majority of the House Merchant Marine Committee as a substitute and passed May 20.

Note.—This report was formulated after a careful inquiry and by the merchant marine committee of the National Foreign Trade Connell submitted to the membership of the council and approved in May, 1916.

RECOMMENDATIONS.

1. That Congress establish a permanent shipping board, composed of five members, who shall be men experienced in shipping and foreign trade. This board shall recommend to Congress such revision and modernization of all United States laws relating to shipping as it deems necessary, and shall permanently discharge all the functions of the Federal Government relating thereto. This board shall constitute a permanent advisory body empowered to recommend to Congress the measures necessary for the maintenance of United States shipping upon an equitable competitive basis with other nations, always having due regard for the maintenance of American standards of living and compensation, and keeping in view the needs of the national defense and the necessities of the foreign trade. To this end the board should be directed to ascertain the cost of construction and operation, rates of interest on shipping mortgages, insurance rates, etc., of American shipping as compared with that of other nations, and it should be its duty to determine what line of ocean-carrying trade shall be permanently developed under the American flag for the benefit of the foreign commerce of the United States, and to recommend methods whereby such lines may be rendered possible in the event of the cost of their operation preventing effective competition with foreign services in the same zone.

2. That the hoard bring to the attention of Congress the necessity

such lines may be rendered possible in the event of the cost of their operation preventing effective competition with foreign services in the same zone.

2. That the board bring to the attention of Congress the necessity for modifications of the speed requirements of the mail act of 1891 in special cases, so that the establishment of mail communications with South America, South Africa, Australasia, and the Far East may be considered from the several points of view of the cost of operation of such lines and of the speeds at which it is desirable that these lines be maintained.

3. That the board so constituted shall likewise report upon the measures necessary to render investment in American shipping safe and attractive to private capital and to increase the present resources of our systems of credit, as by the establishment of mortgage banks, to supply funds to the shipping industry for financing the construction of tonnage, and to throw around shipping mortgages such protection as to remove any apprehension on the part of investors regarding the safety of shipping propositions.

4. That the President be empowered to suspend the operation of such of the provisions of the seamen's act (applicable to American vessels, Nov. 4, 1915; foreign vessels, Mar. 4, 1916) as he may consider detrimental to the interest of American shipping, until Congress, having before it the advice of the shipping board, has revised and modernized the United States navigation laws; or if this suspension be deemed not expedient by Congress, then that section 13 of the seamen's act be amended so as to eliminate the language test and the minimum perventages of able seamen among the deck crew, substituting therefor provisions equivaient to the requirements of the British merchant-shipping act. and that the requirements of section 14 and annexed regulations concerning certificated lifeboat men, etc., be modified in conformity with the 1914 amendment to the British merchant-shipping act.

In the opinion of the council a truly national shipping

commerce.

2 To mintain, under the flag, communication with distant possessions.

3. To aid the national defense and maintain commerce during war, whether the United States be beligerent or neutral.

The amount and character of additional tonnage necessary thus to serve American foreign commerce, under our own flag, can best be determined by analysis of that trade and its transportation, under normal conditions, before the European war.

TRANSPORTATION BEFORE THE WAR.

In the fiscal year ended June 30, 1914, a month before hostilities began, foreign vessels carried 80.3 per cent of the total value of our exports and imports; American vessels, 8.3 per cent; cars and other land vehicles, 11.1 per cent.

NONCOMPETITIVE AND COMPETITIVE EXPORTS.

NONCOMPETITIVE AND COMPETITIVE EXPORTS.

American exports can be divided broadly into two classes. The first consists of agricultural and forest products vitally necessary to the life and industry of other people upon the free movement of which the existence of a large part of the world's population depends. These commodities are normally sold for cash, passing to the ownership of foreign buyers, their agents, or to middlemen, before leaving our shores. The maritime nations urgently requiring them provide the transportation for these commodities, which are bulky and cheap, and constitute the greater part of the total value of the export trade.

The second and smaller class of American exports consists of partly finished and fully manufactured goods which are not vital to the buyers and which, therefore, enter into competition with similar manufactures elsewhere produced. To insure a market for this grade of exports it is necessary that transportation cost shall not exceed that of similar products reaching centers of consumption from competing seats of production. This desirable parity of rates in competition with the rest of the world did generally obtain before the war, but in many cases, exporters selling c. i. f. (i. e., including cost, insurance, and freight in the selling price) and seeking further to extend and diversity American trade, were obliged to establish warehouses throughout the world in order to obtain the advantage of more direct, frequent, and often cheaper, transportation to desirable markets. Under normal conditions superior transportation is obtainable at certain European ports because the tonnage of imports into Europe exceeds that of exports, making more cargo space available for shipments to neutral markets capable of consuming American manufactures. The more numerous and faster lines from Europe to neutral markets are due to—

(a) Greater diversification of European export trade.

(b) Larger number of traffic-producing ports at which vessels may call in early stages of outbound and last

CHARACTER OF IMPORTS.

Imports into the United States likewise fall into two classes—highly finished manufactures of small bulk but great value, and raw materials and foodstuffs of large bulk. The total tonnage of imports is about half that of exports. Competition for cargoes to the United States, therefore, is nearly always brisk and normally keeps freights on imports (which are ultimately borne by the consumer) below those on exports.

TRAMP STEAMSHIPS INDISPENSABLE.

on exports,

TRAMP STEAMSHIPS INDISPENSABLE.

The disparity between import and export tonnage vitally affects the character and cost of the transportation afforded the foreign trade of the United States, for it means that not all vessels used in export trade can obtain direct return cargoes, and many therefore must load at foreign ports for destinations other than the United States. For instance, a steamer starting from Savannah across the Atlantic with cotton for Liverpool is likely to be chartered to carry coal from. Wales to Argentina to avoid being compelled to return to the United States empty (in ballast). If no cargo offers at Argentina ports she may proceed in ballast to Chile to take nitrate for Europe and thus remain away from the United States indefinitely or until, at some port, a profitable cargo or charter to the United States is offered. To lay down Pittsburgh steel at Vancouver in competition with British steel shipped from England via Magellan, steamers from New York (owned or chartered by the exporters), in addition to taking steel from Vancouver, had to take cargo for delivery at intermediate points along the west coast of South America and Mexico. After discharging steel at Vancouver, where no cargo direct for the east coast of the United States is regularly available, these vessels ship lumber or coal for the Gulf of California. They are reloaded with copper matte for Dunkirk, France, and in France take chalk for New York, the whole trip consuming from six to eight months. It was the only process whereby the cheap water rate from Liverpool to Vancouver, made possible by the export trade of other countries was served three times, while that of the United States was served once, but it was the toli taken from the commerce of a large export traffic out of British Columbia to Europe and the Far East, could be overcome. In these voyages the export trade of other countries was served three times, while that of the United States was served once, but it was the toli taken from the commerce of the o

The liner she's a lady by the paint upon 'er face,
An' if she meets an accident they count it sore disgrace,
The man-of-war's 'er husband, and 'e's always 'andy by,
But, oh, the little cargo boats! They've got to load or die!
The liner she's a lady, and 'er route is cut and dried;
The man-of-war's 'er 'usband, and 'e always keeps beside;
But, oh, the little cargo boats that 'aven't any man,
They've got to do their business first, and make the most they can!
—Kipling.

AMERICAN SHIPPING MUST SERVE OTHER NATIONS AS WELL.

AMERICAN SHIPPING MUST SERVE OTHER NATIONS AS WELL.

An American merchant marine sufficiently large to relieve, say, 60 per cent of our bulky exports and imports from dependence on foreign shipping must obey this economic necessity as completely as the European and other shipping now carrying the greater part of this trade, for shippers customarily give freight to the lowest bidder, who is, by and large, the agent of the vessel which keeps most constantly employed.

AMERICAN MARINE DEPENDENT ON ABILITY TO COMPETE.

The traffic to and from the United States, therefore, will go to American vessels only if they are able to compete with foreign vessels on the outer legs of the circuitous voyages they will be obliged to make in serving world commerce generally.

The possession of a greater number of American-flag ships would have rendered our commerce less vulnerable to the reduction of its accustomed transport through destruction, immobilization, and impressment of foreign tonnage. The 4,000,000 tons of British shipping engaged prior to the war in commerce between ports wholly foreign to the United Kingdom shrank during the first year of the war to 2,500,000 tons, and has since further decreased. The possession of established American lines to certain markets now reached only via Europe would have facilitated a wider exportation of competitive manufactures and enabled American exporters more completely to supply markets customarily served by Europe.

The most profitable of all industries in foreign trade at the present time is shipping. A larger American merchant marine would have profited through world commerce during this war, precisely as the manufacturing industry now profits from the needs of the belligerents, and shipping earnings would be contributing to a trade balance larger than that which now stirs the American imagination to the possibilities of trade extension through juddicious foreign investment made possible by war profits. At a time when Great Britain's excess of imports over exports surpasses all records, the earnings of British shipping not only offset war indebtedness but one-half of the profits in excess of normal returns go to the State. This means that not only British importers, but all others who pay the freight on goods carried in British vessels, contribute to the war budget. British shipping, therefore, not only permits the British Empire to conduct "business as usual," but is also a source of governmental revenue.

This desirable situation arises from a shipping which by no means carries all of British commerce. Only about 55 per cent of the tonnage annually entering and clearing from ports of the United Kingdom in a normal year is British, the remainder being foreign. During the war the British percentage is somewhat increased. In ordinar

HOW LARGE SHOULD AMERICAN MERCHANT MARINE BE?

The almost universal sentiment of the people of the United States for a greater merchant marine proceeds from a somewhat intangible desire that American commerce shall be carried under our fiag. It is evident from England's experience that no nation can transport all of its commerce in its own vessels. Assuming that the carriage of 60 percent of American foreign commerce in American vessels would render this country reasonably independent of the carrying of the merchant marine of any other nation, it is important to determine how great an American tonnage would be necessary. In 1915, 1,871,543 tons of American shipping carried 14.3 per cent of the total foreign commerce. This tonnage, for the most part, was engaged in traffic with near-by markets, the West Indies and Central America, Canada, and Europe. With few exceptions, only that portion of it which was transferred from foreign flags at the outbreak of the war steamed regularly to more distant parts of the world.

SIX TO TEN MILLION TONS NEEDED TO CARRY 60 PER CENT OF UNITED STATES TRADE.

Assuming that American shipping large enough to carry 60 per cent of our own commerce would find itself drawn into general world trade (as is the British merchant marine), it is estimated that somewhere between 6,000,000 and 10,000,000 gross tons of steamers of various sizes and types would be required, to be obtained by construction and transfer from other flags, the total being reached during the next decade and consisting of passenger and cargo liners; specially constructed vessels (tankers and colliers) and tramp steamships discharging the functions enumerated at the beginning of this report. Included therein is the vital question of national defense. Observation of the present British control of the seas and the transportation of allied troops to fighting zones, both near and remote from England and France, establishes that a merchant shipping adequate to the needs of a diversified commerce automatically provides the types of vessels most needed for the transportation of military and naval supplies and troops in time of war.

commerce automatically provides the types of vessels most needed for the transportation of military and naval supplies and troops in time of war.

The value of this additional tonnage (6,000,000 to 10,000,000 tons) would range somewhere between \$50 a ton deadweight, the price prevailing before the war, and \$100 per ton, the price of construction at the present time, or a total of from \$520,000,000 to \$1,040,000,000, which, to earn the 6 per cent average dividend rate, after deprectation, characteristic of British shipping over an extended period of prosperous and depressed years, would have to return to the investors from \$31,200,000 to \$62,400,000 per annum.

The foregoing estimate of the tonnage required is liberal, but in size it would still be little more than half the total of British steam tonnage, which before the war was about 45 per cent of that of the entire world. At a time when predictions are freely made that the United States will become the world's banker and acquire the greatest share of the world's foreign trade, a shipping in the foreign trade of from \$,000,000 to 10,000,000 gross tons (it should be remembered that while the total tonnage reported by the United States Commissioner of Navigation on June 30, 1915, totaled \$,389,429 gross tons, only 1,871,543 tons was registered for foreign trade, the remainder being in the coastwise, lake, and river trade) would appear not an excessive goal to be attained 10 or 20 years hence. Unless such progress is made the United States will not become one of the foremost maritime nations.

It is obvious that the rise of the United States as a maritime nation must necessarily be accomplished by the transfer of a certain amount of tonnage from foreign to American register. Indications are that after the leading maritime nations have made up the wastage of war the world's tonnage will be adequate for world commerce. For the United States alone, by construction, to add, say, a million tons a year for eight years to the world's shipping in foreign trade would cau

WILL THE PENDING BILL ENCOURAGE THE DESIRED RESULT?

Advocates of the pending bill (H. R. 10500) claim that it is a necessary first step to encourage the full development of American shipping. It is fair, therefore, to inquire just what the proposed policy will accomplish, and whether it will lead to or permit the further steps necessary to produce a really great American merchant fleet.

PROVISIONS OF THE BULL.

(Since this report was formulated the Committee on Merchant Marine and Fisheries of the House of Representatives on May 9 reported House bill 15455 as a substitute for House bill 10500. This limits the proposed regulation of shipping in foreign trade to supervision of conferences and traffic agreements, prohibition of deferred rebates, the use of fighting ships, and discrimination between shippers and localities. The provisions of House bill 10500 for licensing all vessels clearing from United States ports, preferential railroad rates for merchandise to be exported in American vessels, and prohibiting sale of American ships to noncitizens except by authority of the shipping board do not appear in the substitute bill. The authority of the Government to operate the vessels obtained under the law is limited to five years from the close of the present war, and the character of the trade in which private enterprise may operate the Government-owned vessels is not delimited. The substitute provides for a shipping board of seven instead of five members and like House bill 10500 authorizes the issuance of \$50,000,000 of United States bonds wherewith to purchase, lease, or construct ships. Certain administrative features have been added, and the shipping board empowered to regulate interstate water rates as rail rates are now regulated by the Interstate Commerce Commission.

Briefly stated, the bill as introduced by the Hon, J. W. Alexander

as rail rates are now regulated by the Interstate Commerce Commission.

Briefly stated, the bill as introduced by the Hon. J. W. Alexander in the House of Representatives January 31, 1916, provides for the creation of a shipping board and the raising of \$50,000,000 you yissuing United States bonds, this sum to be expended in the construction, purchase, or leasing of merchant vessels, which may be sold or chartered to private companies, or operated by the Government itself, and which may be taken by the Government for the use of the Army and Navy in time of war. The shipping board is given all the powers over ocean transportation that the Interstate Commerce Commission exercises over rail transportation. No corporation, firm, or individual will be permitted to engage in either domestic or foreign shipping in American ports without a license from the shipping board. This means that the owner of every vessel, American or foreign, touching at American ports must obtain a license. No vessel will be permitted clearance unless its owners have such a license. If any vessel falis to comply with all the orders of the board regarding rates and service, rules and regulations, the board is authorized and directed to revoke the license held by the owners, and this will, presumably, prevent clearance not only of the offending vessel but of all vessels belonging to that owner. This revocable-license system is the power by which the board proposes to control all vessels, American or foreign, calling at American ports, and by which it is proposed to regulate ocean freight rates. Authority is given for preferential rail and ocean rates on merchandise to be exported in American bottoms. The bill provides that no vessel enrolled under United States laws shall be sold to any save a citizen of the United States.

BILL WOULD PROVIDE ABOUT 600,000 TONS.

With the \$50,000,000 derived from the bond issue, not more than 600,000 gross tons could be provided at existing prices, or less than one-tenth of the minimum amount necessary to establish the United States in the shipping position above described.

Nothing like 600,000 gross tons is available from the few nations, which, during the war, permit alienation of their merchant vessels. American shippards will not guarantee deliveries of new construction within two years. Rear Admiral Benson has testified that the utmost Government navy yards can guarantee, if assured prompt deliveries of material, is six 10,000-ton ships in two years. The effect of the bill upon the country's aspiration for larger shipping is, therefore, more important than its possibilities of immediate relief of the present restriction of American commerce due to scarcity of vessels and abnormal rates.

NO TRAMP STEAMSHIPS PROVIDED.

The bill appears to restrict the operation of these Government vessets (whether operated by the Government or by private corporations) to trade directly between the United States and foreign countries, i.e., in the language of the act, to "use in the transportation of the commerce of the United States with foreign countries," and between the United States and our distant possessions; in other words, to service on certain fixed lines. It falls, therefore, to touch tramp shipping, upon which the greater part of our exports and imports depend. (The limitation quoted does not appear in the substitute bill H. R. 15455.)

Either by direct operation or leases of the vessels to private corporations, the bill proposes to embark the United States in an industry normally costing more to conduct under the United States than under foreign flags, and to restrict that operation to what often proves the least remunerative branch of shipping—established lines. Under normal conditions of peace private companies can be induced to operate Government ships only if the rate of lease or charter is sufficiently lower than the market to offset higher American operating costs. Somebody must pay the difference. Under the proposed policy it will be the taxpayer, just as surely and completely as under a subsidy policy. If, then, Government ald is extended only through leasing of Government-owned vessels, the American flag in foreign trade will become a Government monopoly. Increase of American shipping, so long as operating costs exceed those under foreign flags, will depend upon the willingness of taxpayers to increase appropriations for new construction and continued deficit in the Government shipping account,

PRIVATE CAPITAL WILLING BUT DISCOURAGED.

PRIVATE CAPITAL WILLING BUT DISCOURAGED.

With the fullest conceivable accomplishment of this law supplying less than one-tenth of the tonnage necessary to make the United States a first-class maritime power, what prospect remains for the provision of a greater American general cargo-carrying tonnage of the necessary tonnage by private capital? The willingness of capital to engage in ocean shipping is indicated by upward of 250 vessels now under construction in American shipbuilding yards. Existing yards have been enlarged, abandoned plants revived, and new plants established to meet the abnormal demand for construction; but whether vessels now on the ways shall be permanently operated under the American or foreign flags will depend upon whether such operation is profitable, and that in turn depends upon Government policy.

In what situation, therefore, does capital find itself when urged to gradually finance, at a cost of between half a billion and a billion dollars, the construction of 6,000,000 to 10,000,000 tons of steamships of various sizes and types? First of all, it finds this country without a definite shipping policy. Whereas in England all policy, governmental and commercial, has long leaned toward shipping, American policy has ignored it. Until 1913 no vessel could fly the American fag unless built in the United States. The Panama Canal act, in the hope of producing an American tonnage which could avail of the waterway built by American skill and treasure, reversed this protective shipping policy and authorized the admission to American register, exclusively for the foreign trade, of foreign-built vessels not more than five years of age. But the increased cost of operating vessels under the American scompared with foreign flags was so great that not one foreign-built ship was transferred until the war created abnormal conditions, offsetting the higher cost of operation, and the President, by congressional authority, suspended the most one-ous restrictions of the navigation laws, while the chief incentive was to permit American-owned foreign-flag vessels to gain the protection of United States neutrality. This policy was also designed to enable American vessels to compete effectively with those of other nations, but was followed almost immediately by a proposal for Government ownership and operation of vessels, which discouraged private capital, for it promised to interpose governmental competition, regardless of profits, into the shipping situation.

Then came the seemen's act, designed to force the shipping of all foreign nations touching at American ports to construct the proper of t

Then came the seemen's act, designed to force the shipping of all foreign nations touching at American ports to operate on the same high cost plane as vessels under the American flag, but which, in actual operation, imposes certain restrictions on American vessels which do not apply to those of certain other nations. All of these policies were advocated "for the encouragement of the American merchant marine," but no two of them originated in the same quarter. None completely covered the needs of American shipping. Only one, the ship-register act of August 18, 1914, has been effective, and that solely by reason of abnormal war conditions. Private capital has been confronted with a succession of promises and disappointments, an incomplete and changing legislative purpose.

ing legislative purpose.

ENCOURAGEMENT OR RESTRICTION?

The efforts of Congress to deal with the subject have been sporadic and fragmentary, and it is not yet apparent whether the legislative mind desires to consider shipping as an industry which, when properly developed, will render economical service to American foreign trade or as a service which should be so regulated as barely to exist. The pending bill, barren of encouragement for privately owned shipping, appears to proceed from a desire for governmental repression of rates, on the principle that the use of American ports, improved at public expense, is a privilege equivalent to that of eminent domain enjoyed by a railroad, and therefore obligates vessels to governmental control. This seems to overlook the fact that port improvement, from the earliest times, has been designed to attract shipping. Any restriction in excess of those applying to shipping at competing ports will tend to nullify the benefits derived from enormous appropriations for deepening channels, lighting roadsteads, and improving terminals, all of which attracted such numbers of vessels as produced steady competition for export freight.

AMERICAN SHIPPING AT COMPETITIVE

export freight.

AMERICAN SHIPPING AT COMPETITIVE DISADVANTAGE.

It is urged that the application of the law alike to American and foreign vessels precludes discrimination and subjects the American ship to no disadvantage as compared with the foreign ship seeking cargoes from the same American port. American vessels, however, must also meet in their circuitous voyages the competition of foreign ships which never call at American ports, and therefore will never be subject to the seamen's act's requirements as to manning and equipment, or to the proposed rate regulation of this bill. All American vessels will be obliged to meet the maximum requirements of the American laws, but only that portion of foreign shipping which calls at American ports will be similarly burdened. The struggle for survival would naturally occur in trade wholly foreign to the United States, such as from the United Kingdom to South America, or Africa, or the Far East, between American ships complying with all our extreme navigation legislation and foreign ships permitted by their Governments to operate on a competitive level with rival maritime enterprise. To live on our own export and import trade American tramp steamships must be able to live on the odd legs of the circuitous voyages necessary to avoid return in ballast. The fact that American shipping is now highly profitable is no criterion of its ability to compete during a shipping depression such as may follow a few years after this war and such as did follow the Boer war.

EFFECT OF REGULATION OF RATES.

Ocean shipping is the most competitive of industries; a constant struggle for existence, chiefly among nations for centuries engaged in maritime carrying. It is difficult to conceive success for the American entrant if burdened by legal restrictions not borne by the older and stronger opponents. In so far as such laws apply equally to American and foreign vessels they increase our freight rates and handlcap our trade. If they do not apply to foreign vessels they drive our ships out of business. This proposed policy of regulation of ocean-freight rates, springing, apparently, from dissatisfaction with existing abnormal rates, is expected to benefit American shippers, on the ground that they are not already sufficiently protected by the normal operation of the law of supply and demand. Admittedly abnormally high rates spring from a scarcity of ships. The following Associated Press dispatch sheds light upon efforts to control shipping by regulation of rates:

"Manila, March 4, 1916. " MANILA, March 4, 1916.

"Interisland traffic is seriously affected by the withdrawal of a number of coastwise trading vessels which have accepted charters for foreign trade. Four of the ships have already left the local service and six others are preparing to leave. Foreign charter rates have been growing increasingly attractive, whereas local rates for transportation are stable, being fixed by laws."

SHIP-OWNING AND EAST-PROULTING FORES. AND COMPANION.

SHIP-OWNING AND RATE-REGULATING POWER INCONSISTENT.

The bill proposes to endow the shipping board with two inconsistent functions: That of shippwner and that of regulator of ocean-steamship rates and practices. At the same time that the board is charged with a vindication of the policy of Government ownership and a justification of the expenditure of \$50,000,000 either through operation of the ships by the Government or through leases to private companies, it will have practically unlimited power to prescribe the rates and practices of its

competitors. Such a condition is comparable only to the unthinkable possibility of a single railroad in the United States being given the power to regulate the rates and practices of all its competitors.

Since export freight rates are, as a general rule, paid by the purchaser and do not affect the seller unless they are higher than those enjoyed by an over-sea competitor, a Government rate-regulating policy would seem to thwart the advantage which the American exporter sometimes can obtain by a special rate sufficiently low to enable him to place his product in a foreign market at a lower price than his over-sea competitor.

While the bill provides that preferential rates may be ordered by the shipping board, it is doubtful if this process would be sufficiently expeditious to meet the needs of competition with the shipping of other countries whose Governments, after careful consideration, have declined to attempt the regulation of ocean-freight rates. It is respectfully submitted that the control of ocean-freight rates by exercise of power to deny clearance to foreign vessels, is a hazardous experiment, vastly different from the regulation of railroad rates in interstate commerce, where all carriers are equally subject to Federal control.

POSSIBILITY OF REPRISALS.

In the increasingly keen competition for foreign trade, American vessel owners are at liberty to offer, and shippers to seek, the lowest possible rates for the extension of American trade in neutral markets. Whether an official shipping board's regulation of rates in such manner as to stimulate American export competition in a given neutral market would be deemed, by the competing countries, to be a discriminating policy, is a consideration not to be ignored. The possibility of reprisals should not be overlooked. This bili proposes on behalf of the United States an innovation in the "free ocean" conditions under which 45,000,000 tons of steam shipping have been established by the nations of the world in foreign trade, a considerable portion of which in time of peace has always been responsive to the needs of American exports and imports. The purpose of the proposed legislation is to supplement this responsiveness to the law of supply and demand with a certain compulsion, but it is greatly to be feared that the imposition upon all vessels clearing from American ports of requirements in excess of those prevailing at the ports of competing countries will drive away the carriers whose ample numbers normally (though not during the present war) produce a competition assuring reasonable rates.

REGULATION OF CONFEZENCES.

REGULATION OF CONFERENCES.

REGULATION OF CONFETENCES.

Attention is called to the fact that after exhaustive investigation of ocean freighting conditions, rates, and practices, the Merchant Marine and Fisheries Committee of the House of Representatives deemed it wise to go no further, in regulation of water carriers in foreign commerce, than is provided in the bill H. R. 450 *, now pending, which denies clearance only to vessels operated by shipowners or charterers guilty of oppressive practices, rebating, etc., and which provides for filing of conference agreements, etc., for approval or disapproval by the Interstate Commerce Commission, and which forbids rebating, undue discrimination between persons and places, and authorizes the prescribing of maximum reasonable rates only when complaint has been made that rates in effect are unreasonably high or discriminatory. In other words, it provides a method for the elimination of abuses without attempting to cover the oceans of the world with a fabric of artificial rates, a task often considered but never attempted by nations with a far greater dependence than the United States upon marine transportation. H. R. 450 provides for no system of licenses. The fact that European maritime nations have, under war necessity, adopted a license system in order to retain the use of their national shipping in an advancing market, affords no basis of comparison for the delineation of an American policy in time of peace.

DENIAL OF RIGHT OF SALE FATAL TO INVESTMENT.

DENIAL OF RIGHT OF SALE FATAL TO INVESTMENT.

The stipulation that no vessel registered or enrolled under the laws of the United States shall be sold, save to an American citizen, is designed to prevent a principle universally characteristic of maritime development, namely, the sale of old ships to make way for new. A well-organized merchant marine should consist of a large percentage of new vessels, the superior efficiency of which is derived from lighter repair bills and lower insurance. Only the necessities of war caused the European maritime nations to forbid the allenation of their vessels, Such policy is unsuited to conditions of peace and, in the case of the United States, will seriously detract from the value of shipping investments. That nation which has the fewer ships should be the last one to close its doors against selling its ships except in war times.*

Your committee believes the present lack of clear, public comprehension of the problem involved in the upbuilding of American shipping is such as to render impossible national agreement upon any policy yet suggested.

The National Foreign Trade Council has recommended the establishment by Congress of a permanent nonpartisan shipping board, which shall advise Congress as to the policy necessary firmly to establish a prosperous American shipping in the foreign trade. The need of such recommendation will remain, whether or not the pending bill becomes law.

recommendation will remain, whether or not the pending bill becomes law.

It is true the pending bill provides that the shipping board which it creates, consisting of the Secretary of the Navy, the Secretary of Commerce, and three civilian commissioners, shall have power and authority "to gather and report to the President of the United States such information and data as will enable him to recommend to the Congress legislation for the regulation of such commerce and for the promotion and development of the American merchant marine."

This investigatory function, however, is made secondary to the duties of expending \$50,000,000 and regulating all ocean transportation from American ports.

The report on the merchant marine which the National Foreign Trade Council, on September 23, 1915, adopted, questioned the wisdom of a policy of Government ownership and operation of merchant vessels, since which time the Government proposal has been amended by a provision for private operation of Government ships, and amplified by the provision for regulation.

After due consideration of the present bill the council sees no reason to modify its previous recommendations, which are herewith repeated, as necessary to the creation of a condition under which American shipping shall be freed from existing legislative restrictions which hamper it in competition with the vessels of other nations to assure that no additional handleaps be laid upon our commerce, and to enable a shipping loand to recommend the complete policy necessary steadily to encourage its development:

1. That Congress establish a permanent shipping board composed of five members, who shall be men experienced in shipping and foreign

trade. This board shall recommend to Congress such revision and modernization of all United States laws relating to shipping as it deems necessary and shall permanently discharge all the functions of the Federal Government relating thereto. This board shall constitute a permanent advisory body empowered to recommend to Congress the measures necessary for the maintenance of United States shipping upon an equitable competitive basis with other nations, always having due regard for the nasintenance of American standards of living and compensation, and keeping in view the needs of the national defense and the necessities of the foreign trade. To this end the board should be directed to ascertain the cost of construction and operation, rates of interest on shipping mortgages, insurance rates, etc., of American shipping as compared with that of other nations, and it should be its duty to determine what line of ocean carrying trade shall be permanently developed under the American flag for the benefit of the foreign commerce of the United States, and to recommend methods whereby such lines may be rendered possible, in the event of the cost of their operation preventing effective competition with foreign services in the same zone.

tion preventing effective competition with foreign services in the same zone.

2. That the board bring to the attention of Congress the necessity for modifications of the speed requirements of the mail act of 1891 in special cases, so that the establishment of mail communications with South America, South Africa, Australasia, and the Far East may be considered from the several points of view of the cost of operation of such lines and of the speeds at which it is desirable that these lines be maintained.

3. That the board so constituted shall likewise report upon the measures necessary to render investment in American shipping safe and attractive to private capital, and to increase the present resources of our systems of credit, as by the establishment of mortgage banks, to supply funds to the shipping industry for financing the construction of tonnage, and to throw around shipping mortgages such protection as to remove any apprehension on the part of investors regarding the safety of shipping propositions.

4. That the President be empowered to suspend the operation of such of the provisions of the seamen's act (applicable to American vessels, Nov. 4. 1915; foreign vessels, Mar. 4, 1916), as he may consider detrimental to the interest of American shipping, until Congress, having before it the advice of the shipping board, has revised and modernized the United States navigation laws; or if this suspension be deemed not expedient by Congress, then that section 13 of the seamen's act be amended so as to eliminate the language test and the minimum percentages of able seamen among the deck crew, substituting therefor pravisions equivalent to the requirements of the British merchant shipping act, and that the requirements of the British merchant shipping act.

The Warehouse Bill.

SPEECH

HON. THOMAS L. RUBEY. OF MISSOURI.

IN THE HOUSE OF REPRESENTATIVES,

Saturday, April 29, 1916.

The House in Committee of the Whole House on the state of the Union had under consideration the bill (H. R. 12717) making appropriations for the Department of Agriculture for the fiscal year ending June 30, 1917, and for other purposes.

Mr. RUBEY. Mr. Chairman, it seems that there has developed in the discussion here to-day some opposition to this measure. I can not for the life of me see how any Member can be opposed to this kind of legislation. I spent many of my boyhood days upon the farm, and ever since I grew to manhood my associations, business and otherwise, have been largely with those who till the soil. The first official position I ever held was that of county school commissioner, and I spent five years in an earnest effort to build up and improve the country schools in my county. I have always held that the most important and, indeed. the fundamental basis of our entire educational system is what is known as the district or country school. As a legislator in my own State I was always found advocating those measures looking toward the improvement of the farming communities of my State, and so when I became a Member of Congress I was especially gratified to be assigned to membership on the Committee on Agriculture.

During my service here I have advocated with all the earnestness and zeal at my command every measure which has come before Congress looking to the improvement of the agricultural interests of my country. Agriculture is the very foundation of this Republic. Upon it must depend every other industry in the land, and I can not see why some Members of Congress coming from the large cities oppose legislation in the interest of the farmer. The principal opposition to this warehouse bill here to-day comes from city Members of this House. We found the same thing when we had up for consideration the bill providing for Government aid in the improvement of roads, and there is no doubt in my mind that when, within the next few days, we take up the rural-credit bill, the principal opposition to that measure will come from city Members. It has been said and truly said: "God made the country, and man made the town." If it were not for the success of the farmers of America what would become of our cities and towns. When sunshine and

rain come in due season and when, as a result of long and patient toil, success comes to the farmer and the land is filled with abundant harvests, then it is that prosperity comes to the merchant, the banker, the mechanic, to those engaged in mining, manufacturing, railroading, and, indeed, to every industry. When crops fail stagnation follows, merchants fail, banks close their doors, mechanics are without employment, mining, manufacturing, and railroad industries curtail their expenses, and thousands of honest, toiling, laboring men are thrown out of work. In view of these indisputable facts, I can not see why Members of this House from the cities are not always found enthusiastically supporting every measure for the advancement of agriculture. I rejoice in the fact, and it is but fair to say that a very large number of the representatives from the cities are always found favorable to legislation for the farmers, and I truly hope that those few who in this Congress have been found in opposition to such legislation may soon see the light and cease their efforts to defeat such bills as the one now under consideration, a bill certain to be of vast benefit to agriculture.

Mr. Chairman, I am decidedly in favor of the warehouse bill, I have heard a good deal said here this afternoon which would indicate that this bill is intended to benefit only the people who grow cotton. Missouri is a cotton State-that is, in a small way. I see my friends from the cotton States smile. We raise a comparatively small amount of cotton in Missouri, but we raise the best quality of cotton that is raised in the United States.

Mr. CRISP. We smile again. Mr. RUBEY. I represent an agricultural community that does not raise any cotton. We raise corn, wheat, oats, rye, hay, fruits of all kinds, and many other things too numerous to mention. As a national legislator, I feel that I must take a broader view than simply to support a measure because it is beneficial to my own people. I represent in part a great agricultural State, a great grain-producing State. All around me, especially to the west and to the north, are other great grainproducing States. I am in favor of this warehouse bill because it will benefit not only the cotton people of the South, but because it will benefit the grain people who live in the great grain-producing section of the country. The farmers throughout this region, many of them, are compelled to market their crops as soon as harvested. They have certain obligations which they must meet, and in order to do that they are compelled to take their products to market at a time when the market is glutted, when the supply far exceeds the demand, and when prices are lower than at any other season of the year. I believe that the passage of this warehouse bill will, taken together with the currency bill, which we passed in 1913, bring relief to the farmer and enable him to hold his grain for a more favorable market.

A little more than two years ago, when the banking and currency act was under consideration, carnest efforts were made to give relief to the farmer and to increase his opportunity to borrow money and that, too, at reasonable rates of interest. One of the provisions of that act authorized Federal reserve banks to rediscount agricultural paper having a maturity of not more than six months. Let me illustrate just what that means. It means that a Federal reserve bank is authorized to loan money to any member bank in its Federal reserve district, provided that that member bank will give as security the notes of farmers secured by agricultural products. Let us see how that provision has worked and whether or not it has been of any advantage to the farmer. The Federal Reserve Board, acting under this provision of the bill, in September, 1915, authorized the loaning of money to member banks at a low rate of interest on notes secured by nonperishable agricultural products stored in warehouses, and for which warehouse receipts had been issued, and the board specifically provided that this money should be loaned to the farmers at not to exceed 6 per cent interest. This authorization of the Federal Reserve Board was taken advantage of by Federal reserve banks throughout the South, and large sums of money were loaned to member banks, and they in turn loaned that money to farmers on cotton warehouse receipts at 6 per cent. It was the first time that the farmers of the South had ever been able to borrow money from banks at 6 per cent. Grain which has been properly inspected and graded, stored in warehouses, offers just as good security as cotion, and there is no reason why the grain farmers in the great grain-producing States should not obtain 6 per cent money on grain-warehouse receipts, just as the cotton farmers have upon cotton-warehouse receipts. The passage of this warehouse bill will result in placing the grain farmers upon an equal footing with the cotton farmers, and will give them the same advantages, no more and no less.

The best security that a farmer can offer for a loan is real

long-time loans. I am anxious to see passed through this Congress a rural-credit bill that will give our farmers an opportunity to borrow money on long time and at a low rate of interest, and I expect to have an opportunity to vote for such a bill within the next few days. Fat cattle in the feed lot, or growing cattle out upon the farm, offer another kind of security which is hard to excel, and when we add to these two kinds of security farm products stored in warehouses and for which receipts have been issued we have given to the farmer another very valuable source of credit. I want to see this warehouse bill passed. I hope the time will soon come when the farmers in my State, and in other sections of the country, especially in the great grain centers, will organize and by a system of cooperation erect warehouses of their own, in which they can store their grain, have it inspected and graded, obtain their receipts from the warehousemen, and take those receipts to any bank, and with that as security borrow money at a reasonable rate of interest. A note given by a farmer, backed up by a warehouse receipt for grain or for any other nonperishable agricultural product, offers as good security as can be found anywhere in this broad land. I believe that as a rule all the banks, both State and National, whether members of the Federal Reserve System or not, will be ready and willing to handle warehouse receipts and loan money upon them. however, a local bank does not have the money at its command to loan, or is not willing to furnish it at a reasonable rate of interest, farmers who are organized and have their own cooperative warehouses will be able to secure loans upon their receipts from some near-by bank which is a member of the Federal Reserve System.

Under present conditions a very large part of the crop, as soon as harvested, passes into the hands of the grain men and is stored in elevators or in warehouses, there to await an advance in the market price. The result is that when the rise in price comes the grain men get the benefit of it. In 1914 a large part of the grain crop was marketed soon after it was harvested. In the late summer and early fall of that year prices increased enormously, but comparatively few of the farmers of the country received the benefit of that advance. There were a few farmers here and there who were not forced to sell their grain; they stored it in their granaries and held it, and as a result they were benefited by the advance in price to the extent of thousands of dollars. If we had had a system of warehousing in 1914 such as is provided for in this bill, and the farmers had taken advantage of it, it would have been

worth to them millions of dollars.

Already the farmers in the Central States and in the Northwestern States have learned the necessity of getting together and looking after their own interests, at least so far as the handling and marketing of their grain is concerned. In this section of the country there are now established nearly 4,000 cooperative farmers' elevators. These elevators are owned and operated by the farmers themselves. It is said that nearly a half million farmers are interested in these elevators. Each and every one of these farmers' elevators will be in position to take advantage of this warehouse bill as soon as it becomes a law. They are already organized; all that it will be necessary for them to do is to erect a warehouse, which many of them have already done, and make application to the Secretary of Agriculture for a license. There is no doubt that if this bill becomes a law the farmers in this section of the country will at once establish Government warehouses in connection with their grain elevators.

Mr. Chairman, right here and in this connection I desire to call attention, with all the emphasis in my power, to the importance to the farmers of my country of thorough, systematic, and complete organization and cooperation. We now have a number of very excellent farmers' organizations. The Farmers' Educational and Cooperative Union, the National Grange, the Society of Equity, the Patrons of Husbandry, the Gleaners—these and many others in the various parts of the United States have done, are now doing, and will continue to do efficient work for the advancement of agriculture. These organizations have accomplished much in their respective fields of labor, but there is need of a great central body or head of all these societies. There should be a federation of all the farmers' organizations, so that they can act together as a unit upon all questions affecting agriculture. In this way, it seems to me, and in this way only, can there be real and true cooperation among all the farmers of America.

One of the important questions before the farmer to-day is how he may best market his crop after he has produced it. For years he has been considering how he may increase production, how by scientific methods and otherwise he may raise more estate, but as a rule real estate is offered as security only for abundant crops; to use a trite saying, one oft repeated, "How

he can make two blades of grass grow where one grew before." Now, the all-important question is, What is he going to do with his crop after he has raised and harvested it? Of what benefit is it to the farmer to grow two blades of grass where one grew before or to raise two bushels of grain where he raised one bushel before if, under the present cumbersome and haphazard system of marketing, some one else is going to get the extra blade of grass or the additional bushel of grain? A complete and workable system of warehousing under Government supervision is an absolute necessity to an efficient marketing system. passage of this warehouse bill will mark a new era in marketing, especially in the marketing of grain and all stable, nonperishable agricultural products. This House has to-day, by an almost unanimous vote, agreed to a bill which I introduced providing for the standardization of grain—the United States grain-grades act. Under the provisions of that bill the Secretary of Agriculture will establish uniform standards for grain and will supervise the grading of grain throughout the United States. This is the first great step taken by Congress looking toward the standardization of agricultural products. It will be followed by other legislation similar in character until uniform standards will be established for all the principal products of the farm, so far as it is practical to do so. These laws are absolutely necessary before we can have a thoroughly efficient system of markets. This warehouse bill seeks not only to standardize warehouses and place them under Government supervision, but it does another very important thing, it standardizes the receipts issued by warehousemen and makes them uniform in every State in the Union, so that a note backed up by a warehouse receipt given to a member bank under the Federal Reserve System can be rediscounted in any State in the Union.

Within a very few moments this House will vote on this bill. That it will pass by a large majority there is no doubt. If it receives favorable consideration in the Senate it will receive the signature of the President and become a law, and thus one more important piece of constructive legislation will be enacted by this Congress looking to the welfare and advancement of agri-

enliure.

Letter from Hon. E. A. Calvin.

EXTENSION OF REMARKS

HON, WILLIAM H. MURRAY, OF OKLAHOMA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, May 19, 1916.

Mr. MURRAY. Mr. Speaker, I take advantage of the unanimous consent given me to extend my remarks in the RECORD by printing a letter from the Hon. E. A. Calvin, of Houston, Tex., a gentleman who served four terms in the Texas Legislature from the Dallas district, a very thrifty and intelligent farmer, who is quite well known to farmers' union men throughout the United States and is now head of the farmers' cooperative shipping of cotton at Houston, Tex. I especially appreciate his opinion of my course because of his intelligence and practical sense and his ability to know the practical from the "wild and visionary." wild and visionary."

mr. Calvin's letter is as follows:

Houston, Tex., May 17, 1916. Hon. WILLIAM H. MURRAY, M. C., Washington, D. C.

Mr Dear Mr. Murray, M. C.,

Washington, D. C.

Mx Dear Mr. Murray: Perhaps you will be surprised to receive this letter, as I have not written to you nor heard from you directly since we used to meet in the national farmers' unions, but the purpose of this letter is to congratulate you over a speech you made in Congress during the consideration of the rural-credit bill. Unaware to you, I was sitting in the gallery when you offered your amendment permitting tenant larmers to come under the system and made your speech, and I noted the force with which you delivered it and the applianse with which the Members received it.

It seemed to me that your provision was the only one offered to permit the man who needs help to borrow money, and it seemed to be sound and practical from a financial standpoint and not wild and visionary as some of the plans offered in political campaigns.

During my little stay in Washington I noted a disposition on the part of most Congressmen to underestimate and ignore the conditions of the landless people throughout the United States. I could not help being impressed with the prevailing opinion that the farmers of this country do not need being and the loathness on the part of Congress to grant to the farmers the aid and assistance to which they are justly entitled.

I desire to congratulate you as an old member of the farmers' union on the effort you made to put something into the rural-credit bill that would have been of real benefit to the landless farmers, and I trust that your days in Congress: may be long that you can accomplish a good work along this line.

Yours, sincerely.

E. A. Calvin.

36 years.

Rural Credits Bill and Shipping Bill.

EXTENSION OF REMARKS

HON. JAMES B. ASWELL,

OF LOUISANA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, May 19, 1916.

Mr. ASWELL. Mr. Speaker, for a generation the farmers of the country have rightly expected Federal legislation to enable them to borrow money as cheaply as any other class of citizens. Under the long years of Republican misrule the farmers have been denied consideration. This rural-credits bill is the first constructive, beneficial legislation specifically directed to the relief of our farmers. I congratulate this House, and especially the Members of the Democratic side, because we are about to fulfill our pledges to the country and begin legislation that will ultimately result in enabling honest and energetic men every-where to own their farms. The Republican side of the House talk much and try every possible way to delay or defeat this bill, but when the roll is called you will find that most of them will not dare vote against it. I congratulate them upon their good sense and superabundance of caution in preserving themselves at home. They know what the country demands, though it pains them greatly to see the Democrats do what the Republicans repeatedly promised but failed to do. I am sorry for them, but they must stand up to the rack even when there is no "fodder" for them.

This bill is far from being perfect. It is merely a beginning. It is in many respects an experiment and will necessarily be adapted slowly to our conditions. In Europe it is old, but in America new. Our basic conditions are different. It will be in many ways a disappointment, but it is a bright day for our farmers when this legislation is written upon the statute books. It can be amended to meet the necessities as they arise, and from time to time will be so changed as to be made more practicable and workable. The important present necessity is to place it upon the statute books and put it into practice as rapidly as possible. "The clock of destiny has struck aow!"

The administrative features of the bill are complex, tedious, cumbersome, and expensive. They are new and must be tried out. The maximum rate of interest charged to farmers should be reduced from 6 per cent to 4 per cent, and the 5 per cent stock requirement should be eliminated. All these "kinks" will be straightened out through the practical workings of this bill after it has become a law, and it will be properly amended. I have great faith in what it will ultimately mean

to the country.

This bill has had the fullest study and consideration. commission, consisting of delegates from the United States appointed by President Wilson and of delegates from various individual States and from Canada, visited foreign countries and made a complete examination of the rural-credit systems of the countries visited. A subcommittee of the Banking and Currency Committees of the Senate and House of the Sixtythird Congress held exhaustive hearings and a joint committee on rural credits appointed by the Sixty-third Congress made a full and elaborate report on the general subject. From all this information the pending bill has been evolved. This bill will give vastly greater volume of land credits on more favorable terms and aid materially also in more uniform interest rates than have before been available. Government supervision and Government participation, long-time loans at a low rate of interest, on easy payments, are some of the beneficial results to Cooperation among farmers, stimulation to agricultural industry, larger and easier credits accommodation, intensive agriculture, more personal farm ownership, and the independence of the farmer will vastly increase our happiness and Under this bill, thank God, the farmer at last is to get a square deal.

The bill provides for 12 farm-loan banks with a farm-loan board of 3 members and farm-loan associations consisting of 10 or more persons desiring loans on farm lands. Every borrower takes stock in the farm-loan association to the amount of 5 per cent of his loan, which amount is returned to him with accrued dividends when the loan is paid. The farm-loan banks are authorized to sell bonds based upon the mortgages received from the farmers. These bonds are exempt from taxation in all parts of the United States and will find a ready market, which will tend to lower the rate of interest to the farmer. The bill makes provision for mortgages with maturities extending from 5 to It is estimated that the total farm-mortgage indebtedness of the country is over \$4,000,000,000. This bill when put into action will save to the farmers of the country in annual interest about \$175,000,000.

According to the United States census of 1910, which is the latest available report, there are in Louisiana 7,520 farms occupied by their owners under mortgage, whose total mortgage indebtedness is \$8,950,301, to say nothing of the indebtedness on bonds or the many farms owned by corporations and nonresidents. The records show that the average annual rate of interest on farm mortgages in Louisiana is 8.6 per cent. The present annual interest charge on \$8,950,301 is \$769,725.88.

If this indebtedness of \$8,950,301 could be refunded under the

If this indebtedness of \$8,950,301 could be refunded under the provisions of this bill at a rate of 5 per cent per annum, the estimated average rate under the bill, and these farmers would engage to pay annually \$769,725.88, which is the sum they are paying now for interest alone, the entire debt, principal and interest, would be paid in 18 years. This would mean a net saving on the above mortgage indebtedness of over \$497,000 per

It is therefore clear that the \$9,000,000 proposed to be subscribed by the Government to the farm-loan banks in order to start the system is a mere trifle in comparison with this stupendous saving.

This bill provides for loans from \$100 to \$10,000 on 60 per cent of the land values and 20 per cent of the improvements. It is clear that any farmer who can raise 40 per cent of the value of a farm can borrow 60 per cent and thus become the owner of his farm, paying for it on reasonable terms, at a low rate of interest, for any period ranging from 5 to 36 years.

I take especial pleasure in casting my vote for this bill, which, in my opinion, is one of the most beneficial and encouraging constructive measures that has been presented to Congress in a century.

NITRATE PLANT.

The provision in the Army bill for a nitrate plant, the purpose of which in times of peace being to furnish cheaper fertilizers for the farms, while an experiment and must yet be tested, gives additional encouragement and support to our great agricultural interests.

SHIPPING BILL.

The shipping bill now pending before the House is in harmony with and supplements the rural-credits bill in a very practical way. The lack of an adequate merchant marine for exporting our agricultural products has cost the South since the European war began many millions of dollars. The South The South has paid an unreasonably heavy toll to the war conditions. Our merchants have been unable to buy in the open markets of the world, and we are practically deprived of foreign markets for our cotton, lumber, and mineral products. In other sections of the country where war materials are manufactured and sold at abnormally high prices under special shipping privileges prosperity has followed, but in the South our people have suffered unfairly. The time has come to right this wrong. The Republicans of the North should no longer filibuster and oppose the shipping bill, that will speedily open the markets of the world to all sections of our great country. The South has been sufficiently taxed already in helping to pay the annual Federal pension bill to Union soldiers of \$169,000,000, while our Confederate soldiers have been neglected by the Federal Government, to cause the fair-thinking men of the North to join the South heartily in promptly passing this bill to give us the commercial mastery of

the seas which is our right and duty to enjoy.

An adequate merchant marine is a question of commercial necessity, of national honor, and of American right. I am for a merchant marine owned by Americans, built in American yards, and sailing under the American flag.

Flood Control.

EXTENSION OF REMARKS

OF

HON. S. D. FESS,

IN THE HOUSE OF REPRESENTATIVES,

Friday, May 19, 1916.

Mr. FESS. Mr. Speaker, the pleas of the unfortunate are ever appealing; and when relief is sought by the distressed and the money necessary can be forthcoming by no greater effort than a ballot in Congress, it requires some courage for a Member to

refuse to give his support to vote out of the Treasury vast amounts of money. This is especially true when the House is stampeded by a spurt of national generosity and when its membership is wrought up to a high state of benevolence led by no less a figure than the much-beloved Speaker himself, in his ennobling periods of rhetoric and his lofty appeals to a humane patriotism, literally sparkling with classical reference and greatly enriched by historical citation, in which he mildly impaled those of us who declined to follow his course, by eulogizing others who did as men who now and then displayed a degree of statesmanship too infrequently witnessed in the House, by rising above local or State interests and voting for a measure which did not affect their locality.

No one willingly welcomes the charge that his vote is cast because of local prejudice or because of the want of national dignity or his inability to rise to the stage where he can think beyond his own State or neighborhood. Neither does he wish to invite the charge that he is brutal and unmerciful and deaf to the cries of many in the presence of wide suffering due to the

uncontrolled elements of nature.

The floods upon the Mississippi are so frequent and so destructive that they have long become a national interest. But so have those upon the Ohio and other streams, in a less degree perhaps. The Mississippi River Commission has been in existence for nearly 40 years, during much of which time agitation has gone on to have the Government take up the matter. Reports tell us that for various purposes including navigation there have been spent nearly \$170,000,000 upon this stream. This has been a period of experimentation. In spite of all this vast expenditure we have as distressing floods as before, and many claim they are growing worse. It is loudly declared that the dyking of the river is destined to elevate the stream's flow and compel an overflow. Men declare that to control by dykes is an impossibility. True there are others like Townsend who assure us that the waters can be controlled in that way. It is sufficient to say that such a conviction is not universal among engineers. Many equally ingenious men say that the reservoir to impound the water is the only undisputed method of flood control. The opponents of this scheme admit the possibility of control but deny its economy and declare its cost is prohibitive. The proponents, on the other hand, declare that water thus impounded could be converted into hydroelectric power to be utilized at the figure which would more than care for all the cost both of construction and maintenance.

This state of uncertainty is not reassuring. As a Member of the House responsible for my vote I can not allow myself to be swept from my feet by these flights of oratory, to vote at one fell swoop \$45,000,000 for a project that we do not know will succeed, to add this amount of the money in the Treasury to the already mammoth sum of nearly \$170,000,000 with little

definite results to any one.

Mr. Speaker, there are features of this flood control that I do not appreciate. After years of agitation, during which annual appropriations were made, but not in the amounts to suit these Mississippians, the time came in this Congress, when a new scheme was hit upon. A new committee was created, called the Flood Control Committee. Its functions were specified. The proposal was warmly supported by the distinguished Speaker of the House. Its personnel was selective, of course, with reference to the sort of bill to be brought in. Within a few weeks the bill is forthcoming. Here it is. It was true to its creation; the Mississippi was taken under its care. In spite of the defense of its creation by the Speaker, its creator, and others that it was purposely separated from the Rivers and Harbors Committee to avoid the charge of "pork" by making each project stand on its own bottom, the very first proposal includes the Sacramento River, a stream lying wholly within one State. As the Nestor of the House, Uncle Joe Cannon laconically remarked, "This is to give us two pork-barrel committees instead of one." It is pertinent to ask why if each is to stand on its own bottom these two are combined. The same charge lodged against the legislative practice in the former committee of "You scratch my back and I will scratch yours" will be difficult of denial in this case.

Mr. Speaker, I can not vote for this measure as it stands. The Flood Control Committee has not brought in a comprehensive plan of flood control. It has brought in a piecemeal proposition with but one item suggested and that item such that no man can tell whether it will fit into a comprehensive plan or not. I can not be induced to vote for a project which proposes to pour millions of Federal money into the mouth of a river, which does not consider the control of the waters above which must flow through the very channel this project proposes to control. This comprehensive plan can not be the result of three months of investigation. I do not withhold support because of opposi-

tion to reclamation of the 16,000,000 acres of waste land now in the possession of syndicates and speculators, although that situation argues caution and at least compensatory cooperation. I do not oppose it because I am averse to the function of flood control as a Federal activity, because I am not so averse; but I am opposed to this scheme because it is not an assurance against wicked waste; it is the result of a propaganda supported by powerful local influence; it is ripened into a well-governed campaign which embodied its best expression in this committee, whose report is half-baked—cut to fit the immediate situationand here on schedule time, as per Democratic regularity, to sink an unnamed amount of public funds gathered not from the country demanding the donation but hastened through this fast-fading Democratic control acting upon the classic advice, "If it were done when 'tis done, then 'twere well it were done quickly.

This Congress should have instructed this committee to make exhaustive research for incontrovertible facts of control of the waters of the Mississippi, of course including those of the Ohio, the Missouri, the Illinois, and other channels whose waters must pass through to the Gulf. Then work on these specifications can be safely begun. The great waste of money in the rivers and harbors legislation has to a great extent been due to the lack

of a definite program.

I shall therefore be compelled to vote against this, another breaking into the National Treasury, which during the last two Congresses is but a reservoir of revenue to supply the hungry appropriation hunters, many of whom referred to the \$45,000,000 as a few millions, as if they were but so much pocket change to be drawn upon for convenience. Shades of Jefferson! Another plank in this paternalistic platform for local advantage.

A Plea for an Honest and Just Currency System for the Farmer and Home Builder.

Free the farmer from the oppression of money sharks, Shylocks, and financial buccaneers by giving him access to obtain money from the mint like other people when he puts up sound security.

EXTENSION OF REMARKS

HON. JAMES H. DAVIS, OF TEXAS.

IN THE HOUSE OF REPRESENTATIVES,

Monday, May 15, 1916.

Mr. DAVIS of Texas. Mr. Speaker, the rural-credits bill up for amendment, at the point where the bill sends the farmer out on the market to hunt his money I offer this amendment permitting him access to the mint upon equal terms and privileges now enjoyed by commercial banks of the Federal Reserve System under present asset-currency laws. At the end of section 13 add:

And whenever any Federal land bank shall deposit with the Federal Reserve Board farm-loan bonds of any amount the Federal Reserve Board shall cause to be issued and advanced thereon Federal reserve notes upon the same terms as Federal reserve notes are now issued to member banks under the provision of the Federal reserve act: Provided, That the amount so advanced shall never exceed the sum of \$200,000,000, and the reserve board shall have power to control the amount of these reserve notes outstanding by sale of said bonds and retirement of said reserve notes at its discretion.

I took the figure of \$200,000,000 on the theory that there is about \$400,000,000 floating indebtedness on the farms of this country, and I put the figure at about half that, which would stabilize the money market, give relief, whereby the outside money market would be forced to compete with that agency, and we would have an open and sure method for obtaining money on reasonable terms. I am one of those who believe you can not legislate as to the rate of interest and make it an ironclad You must control the issue and movement of proposition. money. If there is anything that yields to the law of supply and demand, it is the money market,

I have tried to be during this whole discussion very demure and decorous, and yet this is the most important question that has been before this House, so far as I am individually con-cerned. It involves, in a measure, a life's work for myself and a lot of fine men who have gone to the great beyond with whom I worked. I am not going to play politics. I want to suggest to our friends from the Republican side, who have been making fun of rural credits and wanted to romp on Woodrow Wilson and the Secretary of the Treasury, that if you want to play politics with me meet me in the next campaign, have your best

silk-hatted and kid-gloved men tease me in joint debate, and I will play politics with you to your heart's content.

I am not going to discuss the political phase of this question. I want to treat it in its economic sense. The question was raised by the Republican side of the House wanting to know why we did not just start the grinding machine and grind out a lot of money for the farmer. The answer is, The farmers have never expected that, which was a peculiar operation of the Government given by the Republicans to the Aldrich gang. They had millions and hundreds of millions ground out and handed to them under the Aldrich-Vreeland Act, and our Republican friends seemed to think that was "safe and sane" grinding.

The whole problem resolves itself into this one question; Are you willing to do for the farmer just what you have done and are by law doing for the commercial banking associations of this

country?

Some friend will ask, "Is the security good?" I can prove by every man that has made a speech in the committee that it is the best security on earth—the earth itself. So the security is The discretion is handed over to the reserve board to retire the notes, and you will have no inflated currency. The bonds are to be sold if necessary at the discretion of the reserve board to retire the currency issued to the farmer. The limit is fixed at \$200,000,000, and you need not be uneasy about "flooding the country with currency." The whole question comes now to this one point: Is this a measure to relieve the agricultural industries of this country? If it is, give them a just measure, a fair measure, one that will meet them on equal terms as it meets the commercial world.

But some man says, "It is class legislation to go to the farmer." Now, listen: I live on a farm, and it is perhaps natural, having been raised on the farm and having lived on a farm for the last 15 years, that my judgment is biased, because I am one of those who believe that class consciousness is just as natural as self-interest. But I have spent 20 years in the courthouses, and my books tell me that the prime object of all government is to restrain the strong and vicious, to assist the weak and helpless, to establish and maintain that which is right, and to condemn and prohibit that which is wrong.

So I ask you whom are you seeking to benefit? Can you establish and maintain that which is right in relation to the farmer, and have him hawked on the money market and devoured by greedy corporations, money sharks, and legalized Shylocks? Several gentlemen on the Republican side of the House talked about the farmers being so wealthy and so prosperous. The reverse is true. There are over 5,000,000 farmers in this country whose life-one-fourth of it-under the tenant laws, regulations, and customs goes to the men who own the earth.

I had the honor, Mr. Speaker, to be the national political lecturer, so designated by the Farmers' Alliance for nearly three years in its palmiest days. Their statistics developed the proposition that upon an average the tenant farmer vacated onefourth of his life to the landlords. I come to you with the statement that just about two-thirds of the wheat, two-thirds of the corn, and far more than two-thirds of the cotton in this Republic are raised by men who do not own the soil. I come to you with the statement that in the South, where we produce upon the average something like 15,000,000 bales of cotton, more than 5,000,000 are raised under chattel mortgage, and that means a distress call in which the cotton is forced to go to market to liquidate and satisfy a mortgage. You can take the trade journals and consult the organs of the cotton factors of Europe and see therein statements of the fact that when the put-in calls take place in the money market in October there must be a rush to the market to sell the cotton even at a sacrifice. Maturing mortgages, representing so many millions of dollars, compel the farmers to sell. We have seen the same situation all over the country, and yet when you come to relieve the farmer by a just rural-credit measure, a lot of good-looking fellows rise up and ridicule the proposed law and others malign and abuse it as simple sophistry and demagoguery.

Now, if this House had left the preparation of this measure to JOE EAGLE, BOB HENRY, my old friend HUGHES, OTIS WINGO, myself, and others who have been working for years, we would have fixed a better bill. But I am going to support the bill, because it stands as a framework for what can be made a great system for the farmer. I am like John Smith, who went to see his best girl and saw a fellow in the parlor sitting crosslegged, twisting his moustache at her. He thought it was no place for him, and so he went to see his second-best girl, where he found a fellow with sweet ointment on his hair rolling his eyes at her; and about that time he heard the church bell ring and went to prayer meeting, got into the church just at the moment the preacher was calling for the first prayer, who said, "Here is Brother Smith; he will lead the prayer." So Brother Smith

dropped on his knees and said, "Oh, God, we come to Thee to-night because we have nowhere else to go." [Laughter.]

I am in the same shape. I have been fighting for rural credits for 20 long years. The best measure was the bill introduced by the Farmers' Union, presented by the gentleman from Arkansas [Mr. Caraway]. I voted for that; and the next best proposition was by my friend from Kansas [Mr. Doolftel, and I voted for that. Then I voted for the tenant amendment, offered by Mr. MURRAY, of Oklahoma. I did not get either of them, and now I have nowhere else to go.

The features of this bill that make for future service are, first, that it has established the fact that the Democrats and a large element of the Republican Party are carrying out their pledges to make a rural-credit system. It will settle the constitutionality of the law. It will commit the Government to a rural-credit plan, and thereby put the Government in shape to go on with the service. I call to mind that my old friend from Georgia [Mr. Hughes] and other older men here remember, as I do, that when the Interstate Commerce Commission was first created it was after a hard-fought battle, and the commission was a very crude machine for relief, but it was perfected and is now a great power for public good. The same is true of most of our institutions. So this bill provides now for the man who can make land available. It will follow that the farmers them-selves will demand, and they will send representatives here pledged to enlarge the scope of the law and apply its benefits to the people down below the man who owns the land. When you once admit the soundness of the doctrine you have laid the foundation for future service of the country, and the city man will be made to understand that his salvation depends upon the success of the farm. Why are foodstuffs so high to-Because four-fifths of the world are not making foodstuffs, but burning up and destroying them and consuming them, and the other fifth has to supply the world. way when you enlarge the productiveness of the country and make contented the man on the farm you have laid the foundation for the best system of preparedness this Republic can ever have. [Applause.]

For, my Republican friends, James G. Blaine said that the farmer represented the bacon and greens of civilization. Jefferson said that the farmer represented the hope of humanity, and that in all ages the prosperity of the plowman and his condition gauged the world's progress. So we are making a start. I have helped in every way I could to make this bill as nearly what I wanted as possible. It is not what I want, but I am going to support it, in the hope that it will be enlarged, amplified, and made a measure of relief for the people of the

[Applause.]

Our whole Federal currency system is undergoing radical changes and vast improvement under this Democratic administration. My mission is to argue that the farmer and the wage earner ought to have a greater share of these benefits. Federal reserve act enacted by this Democratic administration is a vast improvement over the old currency system of the Republican Party. If properly administered, I think it will make our country immune against panics and money famines and make our currency system responsive to the actual needs of commerce and destroy the power of Wall Street to control the flow and movement of currency, and, so far as the general business is concerned, is a measure of great relief to the country. But it makes no provision for the farmer—our greatest wealth producer and our most patient and long-suffering citizen. farmer overcomes droughts, floods, insect pests, and all the blights that beset his crop, he should not be forced to compete with the great, greedy gang of corporation speculators when he asks for the privilege of owning a home and making a crop. should be free from the financial bushwhackers, commercial jayhawkers, and the mercenary greed that is always found in the great money markets of every country.

But, sir, it has been amusing to me to hear Republicans gibe

and jeer and snicker and sneer at the farmer for asking for an honest and just rural-credit system; and many of them with taunting arrogance ask why not start the Government grinding machines and grind out a few hundred millions for the farmers? To all of which I answer that the farmer has as much right to the Government grinding machine as any other citizen in this Republic. The Government printing presses, the Government mint, the Government grinding machine, is as much his and belongs as much to him as to Pierpont Morgan or any other citizen of this Republic. But why should the Republican's sneer at the Government grinding machine? The most infamous piece of special currency legislation that ever disgraced civiliza-tion was passed by Republicans when they passed the Aldrich-Vreeland Currency Act; and I call to mind that just a few years

ago the Government grinding machines under that act were put to work to grind out over \$600,000,000 in one turn, and handed it practically gratis to a lot of business buccaneers, financial freebooters, and commercial cannibals. This act was passed by the Republican party as an "emergency" measure to go to the relief of a lot of railroad wreckers, frenzied finan-ciers, and big business bullies, who in the last few years have made our court records a stench of scandal, revealing their unscrupulous and unsavory conduct. And now, when the millions of farmers, whose toll feeds and clothes the living and shrouds the dead, come to Congress and ask for an honest rural banking system a lot of Republicans meet him with jeers, gibes, and speers

Room on the earth and a home to inhabit and raise offspring is the great problem that has vexed all civil: ation. God gave all mankind dominion over the earth, and hence all men have an equal right to use and occupy it. The fathers who created this Republic told King George, the crowned usurper and tyrant, against whose outrages they rebelled, that the God that gave us life gave us liberty at the same time. If God Almighty gave us life and liberty conjointly, it necessarily follows that liberty includes a sacred right to some spot on the earth for a home,

Those patriotic fathers, inspired by the spirit of 1776, who breathed into life the sacred declaration of American independence, also told us that governments are instituted among men to protect men's rights, not to destroy them; hence governments transgress the laws of God and outrage the laws of justice when they concentrate the land of the country and its natural wealth into the hands of a few. Thereby they disinherit the

masses and multitudes from a God-given right.

Whether such title and dominion be vested in crowns, kings, lords, dukes, earls, corporations, or individuals, if such titles withhold the use of the earth from the many and fasten it into the hands of a few the system is rank usurpation, indefensible and unjust. As I look back over the ages of the past, I see the struggle of the great masses against the classes for bare room on earth. It would seem in this our glorious land, covering a broad and fertile continent, happily located in the Temperate Zones, reaching from the Atlantic to the Pacific, that there is room for homes for ten times our population if we had a just land system. And yet it is sad to behold homeless millions of our people. Yes, sir, not only homeless but in a large measure hopeless and helpless. A large majority of our farmers are forced to beg a landowner for the bare privilege of living on the earth and working for their daily bread.

If these farmers were a shiftless, indolent element of civilization, we might pass the matter with less consideration, but when we realize that from their toll comes two-thirds of the wheat crop, two-thirds of the corn crop, and far more than two-thirds of the cotton crop of this Republic, no sane man can charge them with being either shiftless or indolent. The boundless wealth they add each year to the common stock of our country's storehouse entitles them to the watchful care and just treatment of men who make the laws under which they must live and toil. With all the great glow and discussion of a rural farm-credit system for many years, this measure gives but little help to this great deserving part of our population.

All history teaches us that as population grows and condenses all kinds of labor grows cheaper and land values grow higher. The centers of civilization, congested and overrun by increasing millions, furnishes the most striking examples of disparity between the cost of labor and the price of land. A city where the ordinary wage earner gets \$2 a day frequently presents a common business lot worth half a million dollars, meaning that the man, to earn that much by his wage, must work without eat-

ing and wearing clothes for 8331 years.

The price of farm labor and the customary price of farm land are now so far apart in most of our country that the home-less farmer looks forward to a midnight of despair when he figures on earning a home by cultivation of the soil. Men who earn their money in the great corporations of this country, and in other enterprises than farming, are rapidly absorbing our lands, and the farm owner of the future will live in town, while the farm worker and tenant will live in the country and till the soil he does not own. In every age the absentee landlord has been one of the blights and curses of civilization.

It is not my purpose to dilate and lengthen this discussion, but I want to suggest, in all earnestness, that if this Republic expects to maintain its freedom, its democracy, our land and money systems must be radically changed. We have frequently been met in the discussion of this rural-credit measure by men, mostly on the Republican side of the House, whose callous consciences made them jeer at the suggestion of a farmers' relief measure and with vaunting insolence ask if the farmer wanted the Government to grind him out a lot of money. To these men let me answer that the Government grinding machine in the Republic belongs as much to the farmer as it does to any other person. His right to have money ground out for his use and benefit is just as sacred as any other man's right, Beginning in 1862 the United States grinding machinery—our

grinding machinery—the grinding machinery that belongs to all of the people, has been run exclusively for the creditor class. For many years a man had to be a creditor of the National Government, a Government-boud holder, before he could have the grinding machinery grind out any money for him; but under the present asset-currency system he can take the notes, bills of lading, certificates of credit, and other paper classed as com-mercial assets, hypothecate that with the keeper of our mint, and have untold millions—yea, billions—ground out for him. Since the mint began to grind, in 1862, we are told that it has ground out currency enough to go around the earth six times if it were put in \$5 bills and placed end to end. And, yet, I stand abashed as an American when I contemplate that under this unjust and outrageous system there never was one dollar of that money ground out for a farmer, a wage earner, or manual laborer, who at all times have constituted the great majority of our people, and whose labor and toil have blessed and beautified the earth and clothed and fed humanity.

Just a few years since the Government grinding machinery, out to grinding under the unscrupulous, unjust Aldrich emergency-currency measure, ground out something like \$600,000,000 This act of political perfidy and dishonor, known as the Aldrich-Vreeland Currency Act, was called an "emergency measure." What was the emergency? It was that a vast horde of business buccaneers wanted the privilege of piling down their fictitious and fraudulent issue of stocks, bonds, and certificates of the great corporations of this country and have the Government grind out currency by the million and give to them. Aldrich and a cold-blooded cabal of Republicans devised and constructed this, one of the most infernal systems of special privilege that ever disgraced law. It was designed and put into practice to accommodate commercial plrates, sordid Shylocks, high-toned swindlers, railroad wreckers, and business buccaneers, giving them a legal right to loot, pillage, and plunder honest business,

the helpless farmer, and the belabored workman. A few years ago the investigation of the Money Trust developed such an infernal system of money-mad and outrageous misconduct of the money managers of our country who control the Government grinding machinery that the magazines coined the word "money devil." And yet, when honest, upright, sober, industrious, unspeculative farmers ask that they have access to the grinding machinery, upon the same terms with this money devil, some man rises on this floor with imperious arrogance,

sneers, jibes, and jeers to object.

In this discussion for several days I have said but little. The amendment I offer was not only prepared with great care, but at a conference over which C. S. Barrett, president of the National Farmers' Union, presided, attended by the representatives of 11 States, representing the farmers' union and the grange, it was adopted as first choice of several amendments to the measure. And Bob Henry, my colleague from Texas, was designated floor manager in an effort to put these amendments into the measure. But, sir, I feel sad when I reflect that of three Members in the Congressional Register as actual farmers, living on a rural route, I am the only one that voted for such amend-

Any rural-credit system that enables people to hypothecate farm land and obtain cheap money will be followed by rapid advance in the price of farm land and inflated land values, and under our dual system of government I know of no method by which the Federal Government can cure that situation without an amendment to our National Constitution, for, after all, I am one of those who believe that the final solution of our troubles over the land question is a graduated acreage tax on land and a recouping land value tax by the States. It is not only unjust, but it is ungodly and a rebuke to civilization to lock up the earth by paper title in a safe, while millions of honest, industrious people beg for the pitiful privilege of smiting the soil with an industrious hand to earn their daily bread.

Mr. Speaker, this measure commits our Government to the fact that the great agricultural element requires for its own production and for the common good, a rural banking and currency system. Any system that leaves the farmer to fight the droughts, floods, worms, and insect pests, and then go on the market in competition with the greedy speculative corporations, and commercial class in borrowing money to produce his crops and buy and maintain a home is not only unjust but it is outrageous.

The measure falls far short but will give relief when finally completed. It will now be left to the great mass of the common

people and the farmers themselves to see that men elected to Congress in the future are pledged to cure the ills and defects, amplify and enlarge this measure until it becomes a wellrounded, well-grounded, and thoroughly workable system for the farmer, tenant, city wage earner, and urban homeless man.

A Bill to Establish a United States Shipping Board.

EXTENSION OF REMARKS

HON. CYRUS CLINE. OF INDÍANA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, May 19, 1916.

Mr. CLINE. Mr. Speaker, the time is at hand when the American people should be alive to our commercial advantages. Every indication points to the fact that when the war in Europe is over we shall have a world-wide commercial war. The very force of present conditions makes it unavoidable. That jealousies of the great powers of western Europe will lead to boycott in the principal markets of the world are not improbable. America is the richest market on the globe. Not only can we dictate upon what terms we may open these markets, but it is our duty to do so. Our commercial treaties have been violated by our two great rivals, and those treaties should be abrogated and new ones entered into, in which we should dictate the terms upon which we will open our doors. Our competitors will, when the last gun shall have been fired, begin the mightiest contest for trade the commerce of the world has ever seen. The United States should compel reciprocal trade relations not only with England and Germany but with every other nation that shall desire to participate in our commerce

At the south of us lie the 21 Republics of Latin America with 70,000,000 people, and with whom we are now on terms of most friendly relationship and who want to associate with us and be a part of us, commercially speaking. The commercial eyes of our competitors are looking to South America to recuperate the losses they have sustained in the wickedest war of all the cen-

The South American markets, with their constantly increasing population and their rapid development, constitute the great prize for the trade nations to compete for. There is no retreat for us from this contest. The bridges behind us are burned. As a Member of this body I welcome the contest for this overseas trade. Our manufacturing interests, widely diversified, and our farm products that will continue to grow greater each year must, through the legislative action of this body, find a place for exchange and sale in a world's market. The indifference that has clothed the public mind concerning our foreign trade and the methods by which that trade shall be conducted for over a half century has been awakened to our present necessities. Not locally, but everywhere, the American public is aroused to the present lamentable conditions with which we have been and with which we are now contending. Early in September, 1914, the shock of a world-wide war paralyzed the commerce of both continents. Germany and England and France withdrew a large portion of their merchantmen from the ocean trade lanes of the world. Manufacturers, farmers, and exporters faced financial ruin because their surplus goods and products were without means of export. What is the situation? The merchantmen of our competitors are elements of their respective naval powers. In the absence of war a large portion of their navy travel the seas with the cargoes of their products from the farm, factory, and mine for sale in new and growing markets. These Governments are strong and powerful growing markets. forces. British ships carry British goods in preference to the goods of any other nation. France and Germany do likewise, We are now able to do but 11 per cent of our own business against these strong competitors. We must wait for England and Germany and France and Austria to carry our products when they shall have none of their own to carry.

Just prior to the great Civil War we were carrying 92 per cent of our trade. During that struggle England bought more than 800,000 gross tons of our vessels. We took over a million tons to meet the exigencies of the war and the Confederates destroyed 100,000 tons. When we emerged from that contest with half our gross tonnage gone and the shipping that we then owned antiquated, we lost our over-seas trade and have never regained it. Undoubtedly vicious marine legislation, which continued for nearly a half century, played a large part in the destruction of our merchant marine. At the close of the war we became engaged in other new and important activities. Our attention was directed in developing the great West, and we trusted to other countries to carry our commerce. In 1915 the United States, one of the most populous nations in the world, a Nation with the greatest resources, the greatest export trade, owned only 12 per cent of the world's tonnage. Compare this with England with 19,000,000 gross tonnage, Germany with 4,000,000 gross tons, France and Japan with 2,000,000 gross tons each, and

the United States with 5,000,000 gross tons. So reduced were we at the outbreak of the European war that we had but 15 vessels of over 1,000 net tons each regularly engaged in ocean trade. All the tonnage of every description that we owned, engaged in ocean traffic, was but 2 per cent of the world's total gross tonnage. It is a sorry spectacle to know that the United States, as the greatest and most powerful of nations, has but 2 per cent of the world's tonnage in ocean traffic. It may be surprising to know that since the commencement of the European war more than 6,000,000 gross tons of the world's merchant shipping has been withdrawn. A very large part of this is used as auxiliary to the navies of the belligerents. Since September 3, 1914, more than a million tons of the world's shipping has been destroyed by mines and submarines. This pitiable condition that American shipping is in will continue to remain unless some radical steps are taken to improve it. In December, 1915, according to Secretary Redfield's report, American shipyards had under the course of construction or under contract 98 vessels of 3,000 tens and over. We now have under contract at this date 368 vessels with 1,129,014 tens. There has been admitted to American registry, under the act of August 18, 1914, 180 vessels, carrying 617,183 tons gross. During that time and up to December 31, 1915, there were transferred from American registry to other flags 65 vessels, with a gross tonnage of 40,276. Our entire merchant marine on June 30, 1915, employed in domestic, coastwise, and foreign trade 26,701 vessels, with a tonnage of 8,389,429. It may be remarked that a very large portion of this tonnage is engaged in coastwise and Interlake trade. I believe the time is here for reestablishing a merchant marine that would serve the double purpose of meeting the demands of our foreign trade and at the same time serve as a naval auxiliary that will be a great, strong reserve arm of the Navy in case the time ever comes for its use as an element of defense. The time is here to make this Republic felt not only as an economic and commercial force but to constitute our new merchant marine such a factor as a naval auxiliary with out Navy as shall compel respect for our trade and commerce wherever we of right may choose to go. What would France and England in the great war now in progress have done had not their merchantmen been easily converted into auxiliary naval craft. During the Civil War this Republic, then in the zenith of its carrying power of ocean commerce, lost its over-seas business.

The United Kingdom, quick to see the opportunity that came to her because of that war, bought more than 800,000 tons of our shipping to be engaged in the markets that we were then supplying. As I said before, since the outbreak of the European war more than 6,000,000 gross tons of ocean trade vessels have been withdrawn from commerce. Of this amount Germany and Austria have withdrawn 3,000,000, Great Britain 2,000,000, and 600,000 have been destroyed by mines and submarines. Since June 30, 1915, at least an additional million tons have been withdrawn and destroyed. What shall we do not only to relieve the shortage of merchant vessels but to take advantage of the opportunity now presented to gain a great world trade that we lost under like circumstances during the great Civil War? Shall we be as quick as the English people were to anticipate our opportunity?

Secretary Redfield reported that on December 1, 1915, we had in our own shipyards 98 vessels of 4,000 tons or over. Of those 98 vessels 11 were constructed for colliers exclusively, 47 for tankers or bulk oil, and 4 for the Norwegian Government, leaving but 38 vessels for the coastwise, the Great Lakes trade, and our ocean commerce. This construction is not spasmodic. In 1913 we built 71 vessels; in 1912, 80; in 1910, 63; in 1908, 84; in 1907, 63; and all of this without any apparent effect on our over-seas trade, for the reason that a large part of this went into domestic trade. While we were building this amount the United Kingdom in 1914 built 474 vessels, with a gross tonnage of over a million and a half. In 1915 it constructed 477 vessels, with a gross tonnage of one and three-quarter millions. In my opinion this is the psychological time to increase our foreign trade. I am firmly convinced that private capital, unaided by the Government and uncontrolled by Government agency, can neither provide the necessary shipping facilities nor compete with our rivals. Let me illustrate what I mean by Germany and

Japan. In 1885 Germany registered 520,000 gross tons under her flag. At that time her exports were \$681,000,000. Twenty-eight years afterwards, through the aid and assistance of the German Government, her tonnage had increased to 2.681,000 and her export trade to \$2,400,000,000. The gross tonnage of Japan in her foreign trade in 1885 was but 123,000 tons and her exports \$49,000,000. In 1913 her tonnage had increased to 1,507,000 tons and her exports to \$350,000,000. I am in favor of the Government becoming directly interested in the building of a merchant marine and in having control over and regulation of our commerce through a shipping board as recognized in the bill which we are now considering.

bill which we are now considering.

The Democratic Party is directly opposed to subsidies of any character to private corporations engaged in foreign commerce. Returning to the field of opportunity for South American trade, the entire European nations shipped to the Republics south of us in 1913, \$677,766,000 worth of goods. We exported to that continent in addition thereto \$166,000,000 worth of goods. In 1915 we sent to the South American Republics \$344,000,000 worth of Undoubtedly our great increase in trade was due, in part, to the European war. But the very fact that we have been able to capture this trade because of those abnormal conditions ought to be an incentive to us to keep it. With an advantage over our competitors of 3,000 miles of travel there is no reason we should not have 80 per cent of this trade instead of a small fraction of it. Director General Barrett, of the Pan American Union, says that the commerce of Latin America has increased in seven years from \$1,800,000,000 to more than three billions. At the same time the trade of the United States with these Republics has increased from \$500,000,000 to \$800,000,000. I have already referred to the fact that the shipping of the belligerent nations has been reduced during the war by more than 6,000,000 tons. If it shall continue another year, the loss to the world's shipping by submarines, mines, and natural depre-ciation, it is estimated, will be 2,000,000 more, making a total loss of 8,000,000 tons, or more than 25 per cent, of the ocean carrying trade of the world.

Mr. Speaker, I have long been wedded to the idea promulgated by the fathers of this Republic that we should always remain free from "entangling alliances" with other great nations and be permitted to work out our destiny alone. Through the evolution of our resources, however, and our increasing commercial relationships we shall not remain in that national isolation contemplated by the founders of the Government. Our interests, financial, political, and commercial, have grown to be the interests of the civilized world. Our increasing friendly relationships with the South American Republics have given us new opportunities and a new duty that ought to be grasped and performed. In the development of our foreign commerce I am not so much concerned as to whether we shall build an auxiliary to the Navy that may be incidentally a merchant marine as I am that we shall build or buy a great line of merchant vessels that shall float the world's greatest commerce and be incidentally a naval auxiliary if we shall need it. I believe we are further from a probable war with any foreign power to-day than we have been for 50 years. Our people want peace, not war. Peace is the natural condition of nations and war the abnormal condition.

The highest hope for this Republic for the future lies in the paths of continued peace, which every patriotic citizen, of whateven ancestry or birth, will strive unceasingly to maintain. The war in Europe has been the best argument for continued peace that was ever written. The human slaughter that has reddened all Europe with blood, and the magnitude of destruction wrought, that will require many years to replace, is the spectacle that this contest has produced. We ought to meet the emergencies that now exist. We ought to be independent in our commerce; so independent that we shall not have to wait upon England or Germany or France or Austria to take our goods for export from American shores to the world's markets. Very recently the vice president of the Southern Railroad said that in New York and Baltimore alone there were 100,000 carloads of products from the farm and workshops east of the Mississippi waiting for some tramp ship, for some vessel belonging to another power, to take our goods at their leisure to distant markets; that the congestion was so great that the railroads carrying these products from the interior had laid an embargo on the carriage of all heavy and bulky merchandise. That is a condition that this House should not tolerate, and can not tolerate and yet keep our foreign trade and improve it. It is urged that the increase in our local shipbuilding will supply the demand. Our experience covering the last 10 years does not verify that statement. If the war shall end in the near future there will be the wildest scramble for the world's markets ever witnessed. The depressed and exhausted condition of Germany, England, France, and Austria will compel them to unlimited efforts not only to regain their foothold on foreign trade but to capture new and increasing The two major conditions which we must provide for are these: Vessels to carry our own goods and the power to control and steady freight rates. Freight rates rose in some instances to an increase of more than 1,000 per cent, because it was within the power of the Shipping Trust to control those Such unbridled and unrestrained power will always demoralize trade. The strong arm of the Government under the limitations prescribed in this bill will eliminate extortionate rates for transportation and protect the American exporters. If a merchant marine is to carry the American flag into foreign markets sufficient in size to meet our requirements it must have that regulation and protection that can come alone from the Federal Government.

The Military Establishment.

EXTENSION OF REMARKS

HON. MURRAY HULBERT. OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES, Saturday, May 20, 1916.

Mr. HULBERT. Mr. Speaker, a fortnight ago our people were again horrified by the intelligence flashed throughout the country that another atrocious raid had been perpetrated by a band of Mexican marauders who crossed the border at Glenn Springs, Tex., and yet at the same time electrified by the heroic defense which the nine United States troopers on duty at that post made against the onslaught of more than 50 half savages in their thirst for blood and their greed for spoils,

When this bill was originally under consideration in the House, I pointed out in a speech on March 20, 1916, that we then had in the United States 34,000 men available for military duty, one-half of whom had either gone across, or were on, the Mexican border, which I emphasized was greater in length than the distance of a straight line from the city of Washington to the City of Denver, or approximately 1,700 miles. In other

words, 10 soldiers for every mile.

While we are deliberating upon the final provisions of this bill designed to meet the requirements of the future, it is fitting and proper that we should pause for a moment and pay a deserved tribute to those who have been willing to take up and discharge the duty which our military regulations has devolved upon them. The defense of those nine men will stand in American history as an act of heroism, and while these nine defenders will be recorded as heroes, the three who lost their lives on May 5, 1916, will be revered as martyrs to an inefficient mili-

My distinguished colleague from Texas [Mr. STEPHENS], in a speech delivered by him on the 25th of March, 1916, said:

I regret to state that many men who have taken the oath of allegiance to the United States, thereby renouncing their allegiance to any foreign prince, potentate, or power, have, since the beginning of the present great European war, forgotten their oaths and are now boldly taking the side of their relatives by blood and have also boldly criticized our Congress and our President, thereby rocking our ship of state, making it harder for our good and great President to steer crear of all foreign complications that might lead our country into war, which God forbid.

About that time this House authorized the President of the United States to recruit 20,000 additional soldiers in the Regular Army in an endeavor to meet the exigencies which had arisen, and while for the 65 days ending May 19, 1916, 33,546 persons applied at the various recrulting stations only 7,446 have been accepted; and yet every day we read in the public press of the daring exploits of American citizens who, when the President has called upon them to rally to the colors of Old Glory, have preferred, although not bound by ties of kinship, to enlist, and are to be found in the trenches of northern France.

Rather do I honor the American citizen who has conceived it to be his duty to enter the military service of Uncle Sam, and who has fallen in life's battle in the service of his country.

The gentleman from Texas further said:

The Bible tells us that a man can not serve two masters, and human experience abundantly sustains this doctrine; therefore there can be no English, German, Irish, or Catholic American, because a man can not serve two masters.

This unfortunate statement of my colleague, which I accredit to an error of the mind and not of the heart, does not, I am sure, represent the sentiment he intended to convey, yet it has occa-

sioned much bitterness among a people who are as loyal and devoted to the principles of true Americanism as they are in the

practice of their religion according to the tenets of their belief.

Pvt. Stephen J. Colock, Troop A, Fourteenth Cavalry, was born in New York City on July 31, 1896, was educated in the public schools, in the Mission of Immaculate Virgin, Staten Island, and St. Agnes Convent, Sparkill, N. Y. He entered upon an apprenticeship as a printing pressman, but chafed under the close confinement, and yielding to the temptation for a more varied and adventurous experience offered by enlistment in the United States Army, stimulated by the services of his paternal uncle who served in the Sixty-ninth Infantry, National Guard of New York, his maternal uncle who served in the United States Navy, and two brothers who served in the Spanish-American War, he joined the colors, and fell in life's battle defending the honor of his country. It was my proud privilege to attend the military services conducted over his remains in St. Gabriel's Roman Catholic Church, in New York City, on last Monday morning, during which the thought came to me that the people of the great Empire State of the South could not be unappreciative of the fact that an Irish Roman Catholic American soldier had sacrificed his life in their defense. His loyal service and heroic death is a refutation of any suggestion that he could not serve two masters—God and country—for he who serves one well also serves the other, and I am sure the Members of this House will join me in extending heartfelt sympathy to his parents and family.

Mississippi River Flood Control.

EXTENSION OF REMARKS

HON. HENRY T. RAINEY.

OF ILLINOIS.

IN THE HOUSE OF REPRESENTATIVES.

Wednesday, May 17, 1916.

Mr. RAINEY. Mr. Speaker, the jurisdiction of this new Committee of the House on Flood Control is already assuming large proportions. I have no sympathy with the cry of "pork-barrel legislation" which is already being raised by certain newspapers and in certain sections of the country against this bill and the work this committee proposes to undertake. The appointment of this committee has been too long delayed. are face to face in this country with food problems and with other economic questions which must be solved in the near Within the boundaries of continental United States 100,000,000 men, women, and children live. Our free lands which have any value are practically all given away. Already there has commenced a considerable movement of our populalation across our northern boundaries into the wheat lands of Canada. A few years ago emigration from the United States was absolutely unknown and the proposition appeared to be most absurd. To-day the emigration from the United States which we so recently considered impossible has become a reality. In order to discharge our full duty to this generation and the generations to come after us, it is necessary to begin now the work of fully developing our own national assets. the first important step in that direction.

It was estimated by the Inland Waterways Commission in its report of February 3, 1908, that there were at that time 77,000,000 acres of overflow land in the United States, now absolutely unproductive but which, properly drained and protected from overflow, would rapidly develop high agricultural value, and which if divided into 40-acre farms, would furnish homes for over 10,000,000 people. It is estimated that in the great flood of 1913 over \$160,000,000 worth of property was destroyed in the United States and 467 lives were lost. In Indiana alone in that year 39 lives were lost and \$25,000,000 worth of property was

destroyed.

The watershed of the Mississippi River alone comprises 40 per cent of the total area of the United States, and this river carries on to the sea the water which falls on 31 great States of this Union. The bill we are considering provides a method of protecting and securing the property along this river, subject as it is to the floods which assail it from nearly half the area of continental United States.

It is estimated that the alluvial deltas affected by this bill, which will ultimately be protected and must be protected, comprise 25,000 square miles, an area equal to the combined Kingdoms of Belgium and Denmark; an area equal to the combined area of Delaware, Maryland, Connecticut, Rhode Island, and Massachusetts. Along the Mississippi River there are 16,000,000 acres, capable of producing per acre the greatest crops of cotton and cereals that can be produced per acre on any other land in the world. Less than 4,000,000 acres of this land are now in cultivation. It is estimated that if this entire 16,000,000 acres were planted in cotton and properly and intelligently managed, though not Intensively cultivated, there would be grown on it a crop of cotton larger than the entire United States has yet produced.

THE UPPER MISSISSIPPI RIVER.

On the upper Mississippi River there are something like 50 levee districts. Twenty-six of these districts have now built levees; 8 or 10 are now building levees. On the upper river, from Cape Girardeau, Mo., to Rock Island, III., there are 782,000 acres comprised in these districts that can be reclaimed and eultivated. On these upper river lands subject to inundation and embraced in these districts could be raised every year 60,000,000 bushels of corn, worth at present prices over \$40,000,000. In Illinois alone on this section of the Mississippi River we have 216 miles of levees that we are trying to maintain. The largest of these is the Sny levee district, protected by a levee 52 miles long, extending from a little below Quincy, III., far down into Calhoun County, III., above Alton. Back of this levee there are 110,000 acres as fertile as any lands in the valley of the Nile.

NOT PORK BUT BREAD.

How any metropolitan paper, making any claims at all to fairness and deceney, can denounce the effort being made in this bill and class it as "pork-barrel legislation" is more than I can possibly imagine. The building of these levees—substituting for the present unsatisfactory method of controlling floods, a regular scientific method of doing it is something which every patriotic citizen ought to approve and commend. We need in this country more foodstuffs for our ever-increasing population. We need more clothing and cheaper clothing. The land reclamation made possible by the program upon which we are embarking means more bread and cheaper bread, more clothing and cheaper clothing. When we are confronted with the indisputable fact that one flood destroyed \$160,000,000 worth of property in the United States and 467 lives, is it not time for the Federal Government to undertake to enter intelligently upon the question of flood control?

WILL MAKE LAND MORE VALUABLE.

The objection that levee building and reclamation projects undertaken by the National Government will make the lands reclaimed more valuable, and therefore is exceedingly objectionable, is seriously urged by some great newspapers in the country whose opinions are frequently of value. The position is absolutely untenable. The building of these levees is not to be accomplished by Government funds alone, but in connection with large contributions from the landowners. The charge made in a certain great Chicago daily to the effect that this bill provides appropriations only for southern rivers shows an incredible lack of information. Appropriations have been made for a number of years to assist in levee building along the lower Mississippi River below Cape Girardeau, Mo. This bill extends the Government aid for levee-building propositions as far up the river as Rock Island, in Illinois, and under this bill, if it is enacted into law, 216 miles of levees already constructed in the State of Illinois will receive the aid from the National Treasury this stretch of levees ought to receive. The building of levees along our rivers makes the land back of them productive. It makes it possible to raise on these fertile acres cotton in the South and all the cereals in the North.

The principle of Government aid of this character for the men who produce cotton and foodstuffs for the Nation is not new. Railroads made possible by Government land rents speedily developed the great West. Every fertile farm in the public-land States was made more valuable and is more valuable to-day on account of the building of the land-grant railroads. This Government from its foundation has pursued the policy of giving away farms to settlers, and as long as the public lands last any citizen of the United States making a proper application receives from the Government a farm, and there still remains a considerable portion of our public domain not yet given away. To-day in the arid States we are proposing to give away larger farms than ever. Is there any difference in principle between giving away a farm in order to enable an industrious citizen of the United States to make a living and to do his share toward sustaining the 100,000,000 people who live here, than there is in keeping the floods and the water off his land in order to enable him to produce the things our rapidly growing population de-mands? What difference is there in principle between the What difference is there in principle between the Government-aid theories we are carrying out now with reference

to irrigating lands in our arid States on over 30 Government projects than the kind of aid contemplated in the bill we are considering?

While the provisions of this bill, if enacted into law, will start in a satisfactory way this great work, I feel confident that in a brief period of time the necessity for broadening the scope of this work and adopting other remedial measures than bank preservation and levee building will become apparent.

THE CROSSER SUBSTITUTE.

The substitute which has been presented by the gentleman from Ohio [Mr. Crosser], a distinguished member of the Committee on Flood Control, presents, in my judgment, the ultimate solution of the question, and I think this great committee of the House will in the future take upon itself the jurisdiction and adopt the remedies suggested by Mr. Crosser in his bill.

The Crosser substitute is an effort to crystallize into law the suggestions contained in the letter of Hon. Franklin K. Lane, Hon. D. F. Houston, and Hon. William C. Redfield, at the head of the Departments of the Interior, Agriculture, and Commerce of this Government, addressed to the President of the United States and bearing the date of February 26, 1916. This letter suggests with great force that Congress should commit itself to a comprehensive policy of river development, involving the expenditure of a large sum of money over a long period of time, for the purpose of developing and making the best possible use of the water assets of our country; and they recommend that Congress declare its purpose to deal with river problems, reclamation problems, irrigation problems, and power problems in a comprehensive manner, the expenditure to be met by a sale of bonds, some method to be developed which would make the lands benefited bear a proper proportion of the expense. This communication marks the beginning, in my judgment, of a correct method of considering these great questions.

We have developed in our public service in connection with river and harbor improvements a corps of trained hydraulic engineers—the best in the world. In our Weather Bureau we have developed methods which enable us to predict with accuracy two days in advance rainfalls and weather conditions. We issue flood warnings and are already able to tell almost exactly the hour of the arrival of a flood crest at any given point on our great rivers which flow down to the sea. We are splendidly equipped in these particulars, and it will soon become necessary for us to utilize in a more practical way our possibilities in these matters. So far in our plans we simply attempt to hurry our floods on to the seas. Rain falls in torrents on our arid regions, where it is so much needed, but it quickly sweeps on down to the rivers and on to the sea, and we do what we can to hurry it along in its journey. Quicker than ever before, with our methods of drainage, rainfall reaches the streams. Our great rivers—the Mississippi River, the Illinois River, and other rivers—with the process of levee building in progress, grow ever narrower, presenting always smaller outlets and greater resistance to the flow of the waters that seek to hurry on to the sea. The bill we propose to adopt to-day does not contain that element of flood control at its source which I think it ought to contain. The Crosser bill provides for this and suggests reasonable methods for impounding flood waters by building reservoirs at the sources of our rivers and on the watersheds of our rivers.

NOTHING NEW ABOUT THIS PROPOSITION.

There is nothing at all new about this proposition. Already the countries of Europe have adopted the storage-reservoir systems. At the headwaters of the Volga and at the headwaters of the great rivers of Germany this system is now in successful operation. Here in our own country the floods of the South Platte are now completely controlled by the numerous small irrigation reservoirs which have been built in Colorado on its watersheds, and it is estimated that there are probably now 1,000 of these small reservoirs in that locality catching and holding back the torrents of rain when they come and delivering the waters so impounded for irrigation purposes, quietly spreading it out over lands so badly needing it, and permitting it in this way to quietly reach its natural outlets. ing of levees alone will not secure our alluvial regions. ing of levees alone will not secure our alluvial regions. In 1860 two distinguished engineers, Capt. Humphreys and Lieut. Abbot, estimated that it would require an expenditure of \$17,000,000 to reclaim the alluvial regions along the Mississippi River. In 1912 Col. Townsend, one of our most distinguished engineers, anounced that it would require still an expenditure of \$58,000,000 to protect the necessary existing levee systems along the Mississippi River, and in addition to this amount he estimated that there would still be required an expenditure of \$00,000 000 for leaf expenditure and this river. In the same of \$90,000,000 for bank revetment along this river. year Capt. West estimated that it would require along the Mississippi River an expenditure in the future of \$228,000,000 for levees and revetment work.

It is perfectly apparent that levee building along this great river must continue. The experiences European nations are having with reservoir systems, the situation on the South Platte, now so forcibly shown to us, establish conclusively that another method, involving ultimately less expenditures for levees, must also be adopted—the flood-reservoir system. The Crosser bill involves the consideration not only of levee building, but of reservoirs, reforestation, spillways, irrigation, and a proper development of water power. In other words, it suggests a plan of completely utilizing the water assets of the country. There are two methods of controlling floods. One method is to entirely disregard the economic value of water as an asset and hurry on to the sea great floods, which carry with them the destruction of millions of dollars' worth of property and which exact an annual toll of human life. The other method is to continue our process of reasonable levee building, but to retard floods as much as we can on their journey to the sea and to distribute the waters out over arid lands, thereby rendering fertile vast stretches of desert country, preventing also in this way the inundation of rich valley lands. The Crosser plan contemplates the utilization also of water for the purpose of developing hydroelectric power, and the storage of water presents always these possibilities. The Crosser bill, which will be presented as a substitute to this bill, provides also for studies into the question of the reforestation of the watersheds of our rivers, wherever a careful study develops the necessity for reforestation, thus in this manner providing for holding back great floods. The Crosser plan provides also for reasonable spillways, through which method the rising floods may also be controlled and permitted, in specially provided channels, to return to the sea, lessening in this way the awful disasters which come from broken levees along our river systems. The Crosser substitute presents the plan which, in my judgment, will be ultimately adopted. I propose to vote for the substitute. I do not, however, expect it to be adopted at this time. I expect also, if the Crosser substitute fails, to vote for the bill.

The Shipping Bill.

EXTENSION OF REMARKS

HON. DUDLEY DOOLITTLE,

OF KANSAS,

IN THE HOUSE OF REPRESENTATIVES, Saturday, May 20, 1916.

Mr. DOOLITTLE. Mr. Speaker, I favor the administration shipping bill to provide the United States with a merchant marine. We need a merchant marine of our own under the American flag. It has ceased to be a debatable matter for years, and every political party as it came into power has promised to do something substantial to provide merchant ships to carry on our trade with foreign countries. The Republican Party has favored and continues to favor a Government subsidy to private concerns, but they have never been able to put their ideas into law or to accomplish their end. The Democrats have opposed subsidies to private concerns, and prefer the provisions of the bill now pending to establish a Government controlled institution for the construction, purchase, and operation of merchant ships.

All citizens of our country, and especially the producing population, whether they be farmers, manufacturers, miners, or of any other calling, are directly damaged by our inability to get our products to foreign markets. The falling off in exports from the United States, as evidenced during the past five weeks, is directly chargeable to lack of available ocean tonnage to transport the freights offered. The prolongation of the congestion of freights on our railways is likewise owing to the same shortage of vessels. We have not at this moment one-fourth enough American ships to carry our goods. The figures prove it.

The owner of a ship is not obliged to conform to the regulations and the laws as applied to railways; the shipowner may discriminate between shippers and may change rates, points of sailing, and time thereof almost at will. This bill establishes a board with powers similar to the Interstate Commerce Commission and corrects these evils. A huge majority of all the merchant ships of the world are owned by the countries now at war and many of them have been requisitioned for military and naval purposes. Favoritism is shown to shippers of the countries owning the ships to the serious damage of American shippers. Since August 1, 1914, when the war in Europe began, freight rates have increased enormously, in some in-

stances more than 1,000 per cent. The increase has been universal, but particularly in the necessities of life, food products principally. The ocean freight rates from the United States to European ports have become so high as to affect seriously the prices of our products, and we are the losers. On March 14, 1914, the rate on grain to some European ports was $2\frac{1}{2}$ cents per bushel, and that rate has increased every week since then until March 11, 1916, the latest available information I have, it was 50.7 cents per bushel. On March 14, 1914, the freight rate per hundred pounds on provisions was 21.7 cents, and that has steadily increased each week until it reached \$1.25 a hundred pounds on March 11, 1916, the latest available information. The rates on cotton for the same dates increased from 20 cents per hundred pounds to \$2.75 per hundred, and I might go on and enumerate every article of trade, which would show a proportionate increase.

There is but one impediment that stands in the way of our national expansion in commerce to all the world, and that is our literal inability to deliver the goods for causes heretofore stated. This bill will not give us all the ships we need at once, but it is a good start and a little competition will make much difference in freight rates.

Private capital has all these years failed to go into the establishment of an American merchant marine, and it is past time that the Government provided this very necessary element for a continued national prosperity

for a continued national prosperity.

I shall make one further observation. If sufficient American ships had been in existence during this war our country could have been spared many dangers of war that have hovered near on frequent occasions where our citizens and property have been at sea in foreign merchant vessels. Many a life might have been saved.

Let us meet this emergency, and the only way to meet it is to meet it and not quibble.

Establishment of a Merchant Marine.

EXTENSION OF REMARKS

OF

HON. JOHN H. CAPSTICK,

OF NEW JERSEY.

IN THE HOUSE OF REPRESENTATIVES,

Friday, May 19, 1916.

Mr. CAPSTICK. Mr. Speaker, as a piece of legislation intended to be beneficial the bill (H. R. 15455) providing for the establishment of a merchant marine, in my opinion is another illustration of Democratic impotency.

Illustration of Democratic impotency.

I consider the measure not only illy conceived and inopportune, but unjust to our present merchant marine and to independent concerns now having in course of construction many boats to be chartered in this service as soon as completed.

There is no need for me to dwell upon the shortage in all kinds of bottoms. It became apparent right after the European war started and has continued ever since. Neither need I mention the prices owners of seaworthy craft have been able to command for use of them. This shortage and these prices have been the subject of many newspaper and magazine articles, and are therefore common knowledge.

What is more natural then than for shipping concerns to increase their capacity to share in the harvest? What seems more unnatural than for the Government to seize the same opportunity as a governmental proposition, thereby choking off these private enterprivate enterprivate.

private enterprises?

In late years there has been but little in the way of an American merchant marine of which we could feel proud. Sixty years ago we had the largest one afloat. The boats were of wooden construction, however, having been built before the age of iron and steel craft. Other nations began building steel vessels before the United States, and that kind of carriers rapidly gained preference over the wooden boats.

Before our shippers could reconstruct their fleets the Civil War began. Then followed a series of privateering and other circumstances which practically drove our flag from the seas for a number of years. Efforts have been made to get it back, and great progress has been made. I want to see it restored there, and so do all the Members of this House, I believe, but by proper means. I do not consider this bill the proper means.

I like to think of the Stars and Stripes breaking out from the mastheads of steamers in every port on the face of the globe. It is pleasant to contemplate them taking the products of our ingenuity and industry to all foreign nations under the protection of Old Glory. This can be done if Congress, instead of

enacting a law of this kind, will pass measures of encouragement and assure reasonable protection to our enterprising citizens with brains and energy to devote in this service. These same men are patriotic enough to be relied upon to hold their ships at call of the United States in any and every emergency.

There are now under course of construction in various shipyards nearly 400 ships to be registered in the merchantmen service as soon as completed and outfitted. What is to become of them in the face of this governmental opposition? What kind of a return on the investment will they yield to their owners

We are doing a larger foreign trade to-day than ever before in our history. More of our products are being used abroad than at any other time. This is the reason for the unprece-dented demand for ships. Our business men, alive to the present opportunities, are bending every energy to establish our products and commodities in foreign markets, seldom, if ever, reached before the present conditions existed. It is a foregone conclusion that in accomplishing this that shipping will be stimulated. If the establishment is made permanent, shipping is resultantly benefited. Why, then, should the Government interfere with and discourage this movement, instead of cooperating with and protecting it?

The coastwise trade has been the backbone of our merchant It will feel the enactment of this bill quite as much as it did the repeal of the canal-tolls provision, another example

of Democratic impotency.

Furthermore, this bill will give foreigners the entering wedge into this business, long eagerly sought by them. This will be without benefit to our insular possessions, as may be seen in comparing the rates from Porto Rico, under a protected merchant marine, with the rates of other West India ports, open to foreign competition. These figures show that the rates between the United States and Porto Rico are lower than anywhere else, and indicate that the sugar crop of Porto Rico has been moved, up to last year, at about 12 cents per 100 pounds, while a freight rate from between 40 to 60 cents per 100 pounds has been the prevailing tariff on the same product from Cuba to the same ports of destination.

The advantage of low freight rates to the people of our possessions must be apparent to all, and is no more than should be accorded them. We hear a great deal about trade expansion. I heartily believe in it, but fail to see how trade is to be successfully expanded by Government competition instead

of Government protection.

Now is the time for us to engage in trade with South America and the Orient. These countries are auxious to do business with us. We have much which they could use, and they in turn have goods which could be utilized in our industries and markets. The private concerns now building ships have these facts in mind quite as much as the feature of immediate advantage in shipping lines. Is the United States to nullify these investments, discourage these enterprises, and otherwise make it impossible for them to live and still cry "trade expansion"? It would seem so.

This assertion is based on my belief that the bill in its present form, instead of affording present relief to shippers, will work immediate and lasting injury. It is experimental in nature and hedges our merchant marine with restrictions which no other nation has ever undertaken in the construction or operation of ships. Brazil some years ago began the operation of a line of steamers, and it was subsequently taken over for debt. After \$50,000,000 Government money has been appropriated and spent in establishing a merchant marine, how is it going to live in competition with our own shippers and the foreign tramp steamers which carry two-thirds of the world's commerce and will not come under the control or power of the shipping board? The undertaking to me appears highly impractical, ill advised, and woefully unbusinesslike.

Rural Credits.

EXTENSION OF REMARKS

HON. SAMUEL J. TRIBBLE. OF GEORGIA.

IN THE HOUSE OF REPRESENTATIVES,

Friday, May 12, 1916.

Mr. TRIBBLE. Mr. Speaker, this rural-credit bill appropriates the sum of \$9,000,000 for the purpose of loaning money to the farmers. This amount is intended to finance the ruralcredit banking system provided in the bill and assure the success of the institution. The many millions of dollars necessary to supply the demand for farm loans will flow into the treasury of the rural-credit banks from the sale of bonds issued on the security of the farmers who deposit their land mortgages with the rural-credit banks.

METHOD OF RURAL-CREDIT BANKS.

1. The rural-credit board located in Washington, composed of three members, has complete control and supervision of the rural-credit banks.

2. The United States is divided into 12 districts. The 12 banks, located centrally in these districts, are known as Federal land banks. The minimum capital stock of the Federal land banks is \$750,000. The stock in the Federal land bank is placed on the market for sale. If not purchased in 90 days the Government purchases the stock sufficient to finance the institution. The Government will not share in the profits. The stockholders of the Federal land banks share in the profits.

3. Local organizations are authorized and chartered. These local organizations are known as national farm-loan associations. The national farm-loan association is composed exclusively of borrowers. No person not a borrower can become a member of the farm-loan association. Ten farmers desiring to borrow can organize this association. The membership is unlimited, but must contain not less than 10. The local association shall elect five directors. The association shall also elect a president, vice president, loan committee of three, and a secretary-treasurer. No officer of the local association shall receive a salary except the secretary-treasurer.

HOW LOANS ARE SECURED.

Loans are secured by organizing a national farm-loan association composed of 10 or more farmers desiring to secure loan. The minimum loan is \$100, and the maximum is \$10,000. borrower is required to make application for loan accompanied with subscription for stock in the local association. For this stock he pays \$5 per share. One share authorizes loan of \$100. If a borrower desires a loan of \$1,000 he must purchase 10 shares, or \$50 worth of stock. This purchase of stock is not a cash transaction unless borrowers so desire, but is added to the The application, subscription of stock, and description of land is forwarded to the Federal land bank. The Federal land bank orders an examination of title and appraisement of the land. If the appraisement is satisfactory and the title good, the loan is made and the money sent to the secretary-treasurer of the local association to be paid to borrower.

AMOUNT, INTEREST RATE, AND TERMS.

The borrower may secure 60 per cent of the value of the land and 20 per cent of the value of improvement on the land. The amount of interest charged depends on the sale of the bonds. In no case can the interest exceed 6 per cent, and it is expected that the rate will be less. The deferred payments may be from 5 to 36 years, as desired by borrower.

REPAYMENT (AMORTIZATION) PLAN.

The principal and interest is paid annually. These annual payments contain both principal and interest, called amortization payments. Under the present system of loaning money the interest only is collected on deferred payments. For instance, should a loan be made for \$1,000 at 6 per cent for the term of 20 years, at the end of 20 years \$1,200 will have been paid in annual payments as interest and the \$1,000 principal remains unpaid. If the interest rate charged should be 8 per cent on \$1,000, for 20 years the annual interest payments would amount to \$1,600, and the principal of \$1,000 would still be unpaid at the end of 20 years. The amortization plan provided in the bill will be easily understood by the following table, showing loan on \$1,000 for 20 years at 6 per cent:

Total annual payment.	Interest at 6 per cent.	Paid on principal.	Amount on principal unpaid.	
\$87. 19 87. 19 87. 19	\$60,00 58,36 56,63	\$27, 19 28, 83 30, 56	\$972.81 943.98 913.42	
87. 19 87. 19	52, 86 50, 80	34. 33 36. 39	881. 03 846, 70 810, 31 771, 73	
87. 19 87. 19 87. 19	46.30 43.85 41.25	40. 89 43. 34 45. 94	730, 84 687, 50 641, 56	
87. 19 87. 19 87. 19	35, 57 32, 47 29, 19	51, 62 54, 72 58, 00	592, 86 541, 24 486, 52 428, 52	
87. 19 87. 19	22.02 18.11	61. 48 65, 17 69, 08 73, 23	367. 04 301, 87 232, 79 159, 56	
87. 19 86. 85	9, 57 4, 91	77. 62 81. 94	81.94	
	annual payment. \$87, 19 87, 19	annual payment. \$87. 19	annual payment. 6 per cent. Paid on principal. \$87. 19	

It will be seen by this calculation on the amortization plan, provided in the rural credit bill, that the amount paid annually is \$87.19, making a total of \$1,743.46. The calculation of principal and interest on \$1,000 for 20 years at 6 per cent totals \$2,200. Therefore one can save \$456.54 on a loan of \$1,000 at the same rate of interest. The rate of interest charged is generally 8 per cent on long loans. Calculation at 8 per cent for 20 years on \$1,000 shows the interest to be \$1,600; add to that \$1,000 the principal which totals \$2,600, making a difference of \$856.54. Commissions may also be added to the \$856.54. Should the borrower desire a loan for 36 years on \$1,000 at 6 per cent, his annual payments would be \$68.39, only \$8.39 more than ordinary interest rate at 6 per cent.

It is claimed for the rural credit bill that interest rate will

It is claimed for the rural credit bill that interest rate will be less than 6 per cent, therefore I have made a table at the rate of 5 per cent on \$1,000 for 20 years, which is as follows:

Annual periods.	Total annual payment.	Interest at 5 per cent.	Paid on principal.	Amount of prin- cipal still unpaid.	
1	\$80. 24 80. 24	\$50.00 48.48	\$30.24 31.75	\$969.76 938.00	
3	80, 24	46, 90	33, 34	904, 67	
4	80, 24	45, 23	35, 01	869, 66	
5	80, 24	43, 48	36, 76	832, 90	
6	80.24	41.64	38, 59	794.31	
7	80. 24	39.71	40. 52	753, 79	
8	80. 24	37.68	42.55	711.23	
0	80. 24	35. 56	44.68	666.56	
10	80. 24	33. 32	46. 91	619.64	
	80. 24	30.98	49. 26	570.39	
12	80. 24 80. 24	28. 51 25. 93	51.72 54.31	518, 67 464, 36	
13	80, 24	23, 21	57, 02	407. 34	
15	80. 24	20, 36	59, 87	347, 46	
16	80.24	17.37	62.87	284.60	
17	80, 24	14. 23	66, 01	218.59	
18	80.24	10, 93	69. 31	149, 28	
19	80, 32	7, 46	72, 78	76, 50	
20	89.24	3, 82	76. 50		
Total	1,604.80	604.80	1,000.00		

At the rate of 5 per cent both interest and principal is paid in 20 years by the payment of \$1,604.80 in annual payments of \$80.24. This shows that the entire obligation is paid and only \$4.80 more required than is necessary to pay interest at 8 per cent on \$1,000 for 20 years and still have the principal of \$1,000 unpaid.

Principal Principal	and and	interest interest	at at	8 5	per per	centcent	\$2, 1,	600. 604.	00
------------------------	------------	----------------------	----------	-----	------------	----------	------------	--------------	----

Total difference _____ 995. 20

The annual payment on \$1,000 at 5 per cent for the term of 36 years is \$60.43 including both principal and interest. The annual interest at 5 per cent alone is \$50, and the annual interest payment at 6 per cent is \$60, and at 8 per cent \$80, and none of the principal paid.

LIABILITY OF THE BORROWER.

The farmer is interested in knowing his personal responsibility before becoming a stockholder in the national farm-loan association. The borrower is liable for 10 per cent of the amount of his loan. In other words, he is liable for double the amount of his stock. If he borrows \$1,000, he owns 10 shares. The shares represent \$50. His liability can not exceed double that amount, or \$100, on \$1,000. The stock owned by the borrower is filed with the association, and when the debt is discharged the value of the stock and accumulated dividends must be paid the borrower.

HOW MONEY IS SECURED FROM BONDS.

When loans are made bonds are sold in the markets to the highest bidder. The borrower does not get the same rate for which the bonds are sold; 1 per cent is retained by the Federal land banks to be used in paying expenses first and then dividends on outstanding stock. As business increases and bond sales are very large the stock of investors in the farm-land banks are retired, and it is represented that the investors' stock will be retired in a few years. When the investors' stock is eliminated, then the borrowers' stock will draw the dividends and there will be no investors' stock participating in the dividends, and the borrowers' stock becomes valuable as an investment.

If bonds sell for 4 per cent, the borrower's loan will be for 5 per cent. If the bonds sell for 4½ per cent, the interest of loan will be 5½ per cent, and so on. No interest charged the borrower can exceed 6 per cent, and may be much less, according to the price of the bonds sold. Funds are secured by the sale of

bonds to loan the farmers. The farm mortgages of individuals desiring loans are assembled into collective security, and upon this collective security farm bonds are issued and sold. The bonds are sound and safe, and should sell as well as Government bonds.

BORROWER'S INTEREST IN STOCK SUBSCRIBED.

Instead of giving the borrower the same interest for which bonds are sold, 1 per cent more is charged the borrower. After paying the expenses this 1 per cent belongs to the borrower under the Federal land-banking system, while in the joint-stock company the 1 per cent is applied to investors' stock after paying expenses. The borrower owns the Federal land banks. He is not only interested in repaying his loan but he is interested in the proper management of the Federal land banks and his local organization because of the value of his stock. The borrower is not interested in the dividends of the joint land banks and assumes no responsibility for losses. For instance, on a loan of \$1,000 bonds are issued for \$1,000. If the bonds sell for 5 per cent the borrower pays 6 per cent. The 1 per cent retained by the Federal land bank belongs to the borrower, less his obligation for expense. When his obligation for expense is discharged the balance of the 1 per cent is placed in the treasury of the Federal land banks. The amount accumulating over and above expense is placed in the loan fund. The amount of stock subscribed is used in the same manner. When the borrower's loan matures and the obligation is discharged this accumulated fund, together with the accumulated profits, is paid the borrower as his share of the profits.

FARM BONDS.

The Federal land banks are granted the privilege of selling farm-loan bonds to the amount equal to twenty times its capital. The joint land banks are granted the same privilege to the amount equal to fifteen times its capital and surplus.

GOVERNMENT AID.

The Government appropriates \$9,000.000 to assure the organization of the rural-credit system. This may be used before funds are obtained by the sale of bonds. The board is also authorized to call on the Secretary of the Treasury for Government deposits in case the Federal land banks need assistance.

Furthermore, the Government pays the salaries of officers of the Federal land banks and the expenses of such banks, and exempts all stock and bonds of the rural-credit banks from taxation.

PURPOSES OF LOANS.

Loans may be made to purchase land, equipment, live stock, general farm improvement, and pay off indebtedness on farm. If the borrower uses the money for other purposes, a penalty is imposed and the loan becomes due. No person not engaged in farming or in good faith intending to become an actual farmer can secure a loan or become a member of the farm-loan association.

The foregoing contains a brief synopsis of the rural-credit bill, to which the Government contributes financial aid in money.

JOINT-STOCK LAND BANKS.

The bill also authorizes the organization of joint-stock companies for the purpose of making loans on farms. The Government contributes no money to the joint-stock company and purchases no stock of same. Joint-stock land banks are organized and financed by persons seeking the stock of the bank as an investment. The capital stock must be at least \$250,000 paid-in cash before a charter is granted. The joint-stock bank is authorized to issue bonds on land mortgage in the same manner as the Federal land banks. The interest rate charged by the joint-stock company shall not exceed 6 per cent. The interest charged shall not exceed 1 per cent over the amount of interest for which the bonds were sold. If the bonds sell for 4 per cent, the interest charged shall be 5 per cent, and so on.

CAPITAL STOCK IS TAXABLE.

The joint land banks are relieved of tax in the same manner the Federal land banks are relieved, except the capital stock of the joint land banks may be taxed. They operate on the same principle. The material difference consists in the fact that Federal land banks are operated by the Government, and the borrowing farmer gets the profits, while in the joint-stock company the borrower does not thare in the profits, and all dividends are paid to the shareholders who invested their money in the joint-stock company. No stock is issued to the borrower in the joint-stock company. The borrower has no liability for losses in the joint-stock company.

Trade Associations and Better Business Methods.

EXTENSION OF REMARKS

HON. JAMES A. GALLIVAN. OF MASSACHUSETTS,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, May 20, 1916.

Mr. GALLIVAN. Mr. Speaker, under the leave granted to me to extend my remarks in the Record, I include an address of Edward N. Hurley, vice chairman of the Federal Trade Commission, before the Boston Commercial Club, March 28, 1916.

The address is as follows:

TRADE ASSOCIATIONS AND BETTER BUSINESS METHODS. [Address of Edward N. Hurley, vice chairman of the Federal Trade Commission, before the Boston Commercial Club, March 28, 1916.]

It affords me great pleasure to be with you to-night and to address the Boston Commercial Club, a club which is so well and favorably known.

I am glad to meet with business men in the great city of Boston, where such marvelous strides in growth, development,

and wealth have been made during the last decade.

The Federal Trade Commission, recognizing the importance of New England in manufacturing and shipping, held its first public meeting in Boston. We have received valuable information from your business men, which has been very helpful in outlining our report on foreign trade. This report will be presented to Congress in a few days.

Most of the larger problems of business with which you are concerned have to do with the improvement of conditions in industry as a whole and to that extent the industrial welfare of

our country.

GOVERNMENT COOPERATION.

Government and business are and should be mutually helpful. Through a period of years the Government has been gradually extending its machinery of helpfulness to different groups upon whose prosperity depends in a large degree the prosperity of the country. To adjust, adjudicate, and determine the questions that arise between shippers and carriers the Interstate Commerce Commission was established. Through it the railroads and the shippers alike can secure prompt and definite rulings as to what they can and can not do. The fruit growers of the country, the farmers' cooperative elevator associations, the dairy producers' associations receive aid, advice, and rulings on important questions from the Department of Agriculture, and all are urged to cooperate to benefit their conditions. Now the bankers, through the Federal Reserve Board, can receive authoritative decisions as to their powers and duties. All of this is of general benefit to the whole country.

BUSINESS, TOO, REQUIRES ASSISTANCE.

To do for general business that which these other agencies do for the groups to which I have referred was the thought behind the creation of the trade commission. To make that thought clear I will quote from the President's statement on the

The business of the country awaits also, and has long waited and has suffered because it could not obtain further and more explicit legislative definition of the policy and meaning of the existing antitrust law. Nothing hampers like uncertainty, and the business men of the country desire something more than that the menace of legal process in these matters be made explicit and intelligible. They desire the advice, definition, guidance and information which can be supplied by an administrative body, an interstate trade commission. The opinion of the country would instantly approve of such a commission. It demands such a commission only as an indispensable instrument of information and publicity, as a clearing house for the facts by which both the public mind and the managers of great business undertakings should be guided, and as an instrumentality for doing justice to business where the processes of the courts, or the natural forces of correction outside the courts, are inadequate to adjust the remedy to the wrong in a way that will meet the equities and circumstances of the case.

Groups of business men are constantly coming before the Fed-

Groups of business men are constantly coming before the Federal Trade Commission, asking for information as to how they can improve conditions. Manufacturers come to us protesting against overproduction or complaining against their competitors, claiming unfair methods of competition, and asking us for relief. They assert their competitors are selling goods below cost and ruining the industry in which they are engaged. evils, often of many years' standing, they request relief.

The Federal Trade Commission has been in existence one year, and after surveying the field we found from a preliminary investigation that 200,000 corporations out of a total of 260,000 engaged in the manufacturing and mercantile business of the United States were eking out an existence; 100,000 of them did not earn a penny. Out of 60,000 successful corporations doing a business of \$100,000 a year, over 30,000 charged off no depreciation whatever. Only 10 per cent of our manufacturers and merchants know the actual cost to manufacture and sell their products; 40 per cent estimate what their costs are; and 50 per cent have no method, but price their goods arbitrarily. Most of the manufacturers and merchants who do not know what their goods cost are basing their selling price on what their competi-tors sell for, and with only this knowledge for a basis they are frequently cutting prices and demoralizing the industry in which they are engaged.

There were over 22,000 business failures in the United States last year; more than 20,000 of them were small concerns. We all know that a large percentage of business is run at loose ends, haphazard, and without the proprietors really knowing at any time how they stand or whether they are making a profit

or a loss.

LACK OF ADEQUATE INFORMATION.

The Federal Trade Commission, no matter how anxious it is to be helpful to those laboring under these industrial disadvantages, is confronted at the outset with a lack of adequate information regarding industry.

With all the attention that has been given to business the

past 15 years it is a remarkable fact that to-day there are no comprehensive data available, no constructive material at hand to furnish to a manufacturer, merchant, or trade association desiring to improve the unsatisfactory conditions in their in-Without such data it is impossible to make recommendations to Congress for helpful constructive legislation.

From the Government the railroads receive statistics giving them a broad view of the transportation situation of the coun-The farmer is told frequently the conditions of the crops, so that he may know how and when to dispose of his surplus products. The health of his stock is under the jurisdiction of the Government. The banker is furnished details as to the financial condition in the country by the Treasury Department. These are helpful fields of Government activity, and the people of the country are heartily in accord with this work.

Manufacturers and merchants who are merchandising the farmers' product, shipping their goods over the railroads, depositing their money in the banks, and meeting the pay roll of thousands of employees-these, too, should be furnished with data and information regarding their respective industries.

In order to cooperate intelligently with the manufacturers and merchants of the country the Federal Trade Commission must have these facts. With this thought in mind we recently. mailed to every corporation in the United States a form containing a few simple questions pertaining to their industries. This information embraces the products which they manufacture, their annual sales, the capital invested, and other principal items, such as depreciation, and so forth. These data will be compiled by industries and a summary of results sent to each company engaged in that particular line. This will give each and every man in the business an opportunity to know whether or not the industry he is engaged in is in a healthy condition. If an industry with large capital is showing no earning power, that industry either is not well managed or the production exceeds the demand. Knowledge of existing conditions will prevent others from entering the business or unprofitably investing additional capital where overproduction already exists. The industry in which conditions are unsatisfactory will receive particular attention and the real causes of the conditions will be ascertained.

These facts are not to be asked for in any inquisitorial spirit, and the hearty cooperation which the Trade Commission has so far received from the business men of the country indicates their appreciation of the need of such definite facts.

BUSINESS COOPERATING WITH COMMISSION.

During the past year business men appearing before the Federal Trade Commission have presented many of their problems, and as a business man it has been particularly gratifying to me not to have had a question presented that did not show honesty of purpose and straightforwardness in every way. From this experience I know that we will continue to receive cooperation from the business world.

In the Federal Trade Commission's investigation on foreign trade most of the information was supplied with unusual promptness from business men, who spent a great deal of time in giving us facts and figures regarding actual conditions existin foreign markets and the difficulties experienced in competing with our foreign neighbors. This report is on the press and will be published in a few days, and I hope it will be useful to the business men of the country. It could not have been published without their hearty cooperation.

Is this not evidence that Government and business have a better understanding and both recognize, in order to do big

things, they must have the same object in view and have confidence in each other? I believe these conditions exist to-day, and if it continues the problems will be easy to solve and will make the effort worth while.

The Association of Public Accountants has appointed an advisory board to confer with the Federal Trade Commission on matters pertaining to standard forms of accounting. The National Association of Credit Men has also appointed a committee

to confer with us at any time on request

The Chamber of Commerce of the United States has a Federal trade committee, of which Mr. Harry A. Wheeler, of Chicago, is chairman. Last autumn this committee sought a conference with the Department of Justice with a view to ascertaining the probable attitude of the Department of Justice with respect to future prosecutions under the antitrust laws. It was explained to the Attorney General by representatives of the committee that if he would express himself it might be regarded as reassuring to the public mind and at the same time dispel some uncertainty which heretofore has been said to exist. number of conferences were held, and the result was that the Attorney General made a statement in which, among other things, he outlined the policy of the department as regards the method of enforcing the law in those cases which are admittedly doubtful. He stated that where men have entered into a transaction believing in good faith that the transaction is a lawful one, and subsequently, upon complaint made, the department reaches the conclusion that the transaction was not in accordance with the statute, but is yet satisfied of the good faith and innocent purpose of the parties, and can see that there was ground for the view upon which they acted, it has not been and will not be the policy of the department to invoke extreme penalties against them. In such a case the department would consider that the just and appropriate and quickest way of enforcing the law would be by a civil proceeding in which the question involved could be contested or a consent decree entered, according as the defendants desired, or by a notice to the parties of the department's conclusion, with opportunity to abandon or modify the transaction. It was further stated by the Attorney General that no proceeding is ever instituted until after the most painstaking and exhaustive investigation, in the course of which the person or corporation against whom complaint is made is given full opportunity to submit its defense before any action is taken.

The Illinois Manufacturers' Association, the National Foreign Trade Council, and many similar organizations have committees of business men who stand ready and willing to cooperate

with the Federal Trade Commission.

QUESTIONS PEFORE THE AMERICAN PEOPLE.

Efficient methods of manufacturing, industrial preparedness, and foreign trade seems to be the most important questions before the American people to-day. You are vitally concerned.

Undoubtedly the business of the country requires some helpful readjustment. Many suggestions have been made by writers and lawyers of note, by captains of industry and legislators, prescribing different remedies. There is no one remedy that will give relief to all of our ills. What will help one industry may injure or kill another, but I believe there are a few fundamental principles upon which may be based the diagnosis and treatment of ailments of industry and commerce.

STANDARD ACCOUNTING METHODS.

When business was done on a large percentage of profit questions of accurate cost and of operating efficiency were not so important; but in most lines of industry to-day the large percentage of profit has passed. Manufacturers are working on smaller margins and must absolutely know what their goods cost. With margins of profit so close, any unreliable method of arriving at cost of production must be eliminated.

It is a fact well understood among business men that the general demoralization in a large number of industries has been caused by firms who cut prices, not knowing what their goods actually cost to manufacture; and the cost of selling, which is equally important, is almost wholly lost sight of. Are the officers of the companies who are cutting prices right and left, irrespective of their costs, fair to their customers, stockholders, or

A manufacturer who does not know with a close degree of accuracy what it costs him to produce the different articles he manufactures and what it costs him to sell them is not in a position to meet intelligently competition, and invites business

Many of the larger manufacturers have thorough cost accounting systems, which they recognize as necessary in order to give them the information essential to successful management. the other hand, the number of small manufacturers who have no adequate cost-accounting system and who price their goods arbitrarily is amazing.

Proper accounting for the smaller manufacturer is most essential. It is necessary for his success that he know on what particular article he is making a fair profit and on what he is making only a narrow margin of profit or losing money. If he has this information, he can concentrate on the manufacture and sale of the product on which the profits are satisfactory

Whole industries, in many instances, are suffering from a

general lack of intelligent knowledge of cost.

HOW THE COMMISSION CAN HELP.

How can the Federal Trade Commission help to improve this situation?

The commission has no intention and no desire to use compulsory methods, but it does hope to reach the desired end by encouraging improvements in accounting practice, by indorsing standard systems of bookkeeping and cost accounting, and by assisting in devising standard systems, either at the request of individual merchants and manufacturers or through the association that represents the industry

It is recognized that no one standard system of accounting is applicable to all classes of business, but that special systems are required for each group or class of commerce and industry,

The commission, however, while recognizing the commercial advantages to be derived from uniformity of systems, does not advise making a change where systems already installed give adequate information and are economically operated.

STANDARDIZING PRODUCTS AND PROCESSES.

In the field of standardizing products, processes, and raw material much has already been accomplished. Let me illus-Let me illustrate what has been done in this direction by citing a few representative industries. In the implement and vehicle field, wagon wheels have been standardized from 41 heights to 4: the width and length of tires have been made uniform. In automobiles, standards have been adopted for horsepower rating. tube sizes, spark-plug shells, ball bearings, and many other items. The association of knit-goods manufacturers adopted a scale for underwear sizes which, as you know, is at present used by practically every maker of underwear in this country, with a consequent prevention of loss formerly caused by wrong sizes. Architects and builders are urging uniform plans and specifica-The steel manufacturers issue booklets containing standard specifications for structural and boiler steel, steel rails, concrete reinforcement bars, and so forth. And so it goes. The manufacturer has fewer sizes to order and to make, the material men only a limited number to supply and keep in stock. Economy in production and continuity of operation are both served by this means and the consuming public shares the benefit by not having to pay for the wide and unnecessary variety of products and materials. Much of all this has been brought about by trade associations.

TRADE ASSOCIATIONS.

Commercial clubs, boards of trade, trade associations, manufacturing associations, and similar organizations constitute a most potent influence for accomplishing the ends for which they have been organized.

There are about 6,500 commercial, industrial, and trading organizations in this country. These include 2,500 chambers of commerce, commercial clubs, boards of trade, and similar promotive business organizations; a thousand manufacturing and mercantile associations of a general character, comprising business concerns in a number of different industries, such as State manufacturers' associations, credit associations, and so fortly, and about 3,000 trade associations—groups of business men in particular manufacturing, mining, or mercantile industries.

The commercial club, the board of trade, the chamber of commerce, attempts to bring together business men of all lines for the many kinds of cooperative endeavor so necessary for the progress of a business community. The general manufacturers' and merchants' association fills a similar need for the broad manufacturing or mercantile field, while trade associations consist of concerns in particular industries, and include manufacturing, mercantile, and producing associations, national and even international associations, and State and local associations.

THEIR FIELD OF ACTIVITY.

The activities of all of these business organizations are manifold, and the business done by their members runs into the These groups of associated business men are putting billions. forth special efforts to improve systems of cost accounting, bettering their processes of manufacture, standardizing their out-put, obtaining credit information, and endeavoring to advance the welfare of their employees, and are bound to be most important factors in our country's development in the course of

Special commendation should be given to associations that are endeavoring to build up industry in these constructive ways. production and successful merchandising require many step in the process of changing the form of the raw materials and putting the product on the market at a figure adequate to cover the cost of production and the cost of selling and net some profit to the producer, without charging the consumer an excessive price; and neither the individual manufacturer nor the Government alone can work out the many serious economic and business problems involved so successfully as can a group of associated producers, laboring together in cooperation. These associations, when conducted intelligently and rationally, with the thought of bringing about improved business conditions, will make it possible for our industries to compete in price and quality in the markets of the world.

Trade associations should not only be encouraged to increase their membership, but should be furnished by the Government with complete statistics in their particular line and should be assisted in every way to develop and stabilize the industry.

The Pederal Trade Commission's report on industries will be

most helpful to associations, since it will furnish facts and figures not now available which will enable them to perform their proper functions of stimulating cooperative effort and im-

provement.

Industrial preparedness and the mobilizing of our industries in case of war can be accomplished and developed more rapidly through trade associations than by any other method. It is recognized that the foreign trade of Germany, France, and England could not have been developed so thoroughly if it were not for the trade association. If we are to be important factors in the world's commerce, the trade association must be encouraged.

The questions of giving to our workmen continuous employ-

ment so that they may average longer periods of prosperity can be solved through the trade association. With its knowledge of labor requirements in the whole industry, it can assist its members obtaining unemployed men from other parts of the country.

There should be a greater degree of organization and of mutual helpfulness in all lines of trade and industry, so that American business may be welded into a commercial and industrial whole, the part of the Government being to cooperate with business men, on request, to bring about the results that will benefit business and hence promote our national welfare.

FOREIGN TRADE.

If our business men are to be factors in the world's markets, they must receive encouragement to do as our foreign rivals are

We have reached the point under normal conditions where we must have foreign markets for our surplus manufactured product. The American people, including every day laborer, every clerk, every mechanic, every farmer, and every business man, large and small, is heartily in favor of the Government giving immediate relief that will make it possible for us to obtain our share of foreign business, so that our factories may run continuously and keep our labor permanently employed.

With all that has been accomplished in this direction by collective effort, however, we have made only a beginning. Germany every important industry is organized into trade associations, and 85 per cent of the manufacturers engaged in those industries are represented in their respective trade associations.

Germany's success as a commercial and industrial world power is due very largely to the policy of organizing and cooperating of the working together of its captains of industry establishing communities of interest between the small and the big business men for the mutual purpose of promoting trade at home and abroad. The old adage, "In unity there is strength," is put into practice and has proved to be the backbone of Germany's industrial and commercial achievements, efficiency, and

More than 600 independent associations of manufacturers, producers, and merchants exist in Germany to-day, and, besides. the entire industrial system of that country is honeycombed

with about 5,000 subsidiary business organizations.

In foreign trade men think in terms of national competition. In China and in South America the contest is not so much between individual corporations as it is between national industries. For example, the contest in South America is not between two steel manufacturers in Germany or two steel manufacturers in England, but it is between the German steel industry, the English steel industry, and the American steel industry.

In South America we do not hear of the actual or potential competition of European individual corporations or houses. hear of German, French, American, or English competition. By means of cartels or trade associations, the leading industries

in these countries have organized, and when they move forward into foreign markets they move forward united against competitors from other nations. Countries like England and Germany have built up a permanent export market in the countries of This has come as the result of earnest cooperative efforts on the part of those interested in the particular industry

The Government can furnish information to business men as to conditions in this country as well as to conditions in foreign markets. Necessity forced England and Germany to seek foreign markets; necessity will force us to seek foreign markets. No matter what efforts the Government may put forth, upon the business men of the country rest the responsibilities for the ulti-

mate success of American foreign trade.

The Military Establishment.

EXTENSION OF REMARKS

HON. JOHN JACOB ROGERS. OF MASSACHUSETTS.

IN THE HOUSE OF REPRESENTATIVES,

Saturday, May 20, 1916.

Mr. ROGERS. Mr. Speaker, I shall vote against the conference report presented to the House by the gentleman from Virginia [Mr. Hav]. I believe that every true advocate of national defense should do the same. Why?

The parliamentary situation is this: The Senate has accepted the conference report, and if the House also accepts it the legislative journey of the measure will be complete and it forthwith mass to the President for his signature. If our the forthwith goes to the President for his signature. If, on the other hand, the House should reject the conference report, the bill would be sent back to conference and there would result, on the part of the Senate and House conferees, a complete reopening of the questions involved in the bill. Those who are perfectly satisfied with the bill as it stands will vote "yea on the conference report, and thereby record themselves in favor of having the legislation put upon the statute books exactly as it is before us to-day; those who believe that the bill is woefully and fundamentally imperfect—even though an advance over the present law—should vote "no."

I definitely and emphatically enroll myself in the latter class. As a preparedness measure the present Army bill is a puny and misbegotten orphan; it is a fraud upon the Nation. By walking abroad under the guise of preparedness and by lulling the people of the country into the belief that a real preparedness measure has been passed, it actually does more harm than good. In most ways it is a step backward rather than a step forward. Even its most ardent advocates can scarcely assert

that it is at best more than a step sidewise.

On the asset side of the bill we have, first, an increase in the Regular Army of about 50 per cent. This is desirable as far as it goes; but when we remember that our entire present Army almost to a man has for many weeks been engaged, without apparent result, in pursuing one bandt, we can scarcely regard the Army, even with a 50 per cent increase, as insuring national safety in the event of a real war with a real power. day or two we have seen that the militia of three States has been ordered to cooperate with the Regular Army in running down this clusive bandit, with the prospect that the remainder of our National Guard may ultimately be necessary for the same The second and last item on the asset side is section 54, which provides for summer training camps. This is a desirable provision but adds very little to what was already possible and was actually carried out last summer.

On the debit side are: First, the persistence in the method of legislation for the National Guard, which has been pronounced unconstitutional by the Judge Advocate General of the United States Army and by almost every other careful student of this subject; second, the elimination of the Federal volunteer provision in the Chamberlain bill, which would ultimately have given us a sound, strong, and effective force auxiliary to the Regular Army; and third, the inclusion of the \$20,000,000 Alabama nitrate "grab," every cent of which will be wasted and worse than wasted. For this section the country is "indebted" to the Senator from Alabama [Mr. Underwood], ably represented upon the conference committee by the gentleman from

Alabama [Mr. DENT]. O Preparedness! Preparedness! How many crimes are committed in thy name! Because I am a believer in true preparedness and not in fake preparedness, because I will have no part in fooling the people or lulling them into a feeling of false security, I shall vote to send the measure back to the conferees in the hope that the good things may be made better and the bad things be purged

Army Bill and the Men of Our Army.

EXTENSION OF REMARKS

HON. ISAAC SIEGEL. OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, May 20, 1916.

Mr. SIEGEL. Mr. Speaker, I shall vote for the conference report on the bill to increase the efficiency of the Military Establishment of the United States, not because I am fully satisfied with its provisions but because it appears that at the present time to be more advisable to do so than to have no legislation on the subject. The nitrate proposition involves the waste of \$20,000,000 and will bring no benefit of any kind to Our method of legislation, however, prevents us from rejecting a part of this measure and gives us no power to accept such a part of it as we think is the most desirable and beneficial for our country.

Mr. Speaker, in view of the fact that we are now discussing our Army, it is fitting and proper that I should here make reference to the bravery and gallantry shown by our boys at Glen Springs, Tex., on the night of May 5 and the early

morning of May 6.

The San Antonio Star of May 11, 1916, describes the encounter as follows:

as follows:

The story of Smyth, sergeant of Company A, Fourteenth Cavalry, is going around the countr, as an illustration of the stuff of which the American soldier is made. When, without warning, the Mexican bandits appeared at Glen Springs, Friday night, Sergeant Smyth and eight troepers ran to an adooe nut with but one window and a barred door. The sergeant gave orders to shoot carefully, "Pick out any moving figure and set go."

The mine men took turns shooting from the window. After three hours, unable to rout the Americans, the leader of the bandits gave orders to throw fire balls on the roof, which was thatched partly with tin and partly with candelills weed.

Flaming torches made of torn cloth and weeds were dropped on the roof. The heat grew intense and the faces and backs of the soldiers, still fighting sprittedly through the window, become blistered and burnt. The heat burned the tops of their heads. As the soldiers leaped out, three were immediately shot down.

Smyth seading the other cavalrymen made for the corral in a rain of bullets. They then made for the fills and when morning came crept back to the settlement and saw the main body of some 50 Mexicans leaving. Smyth terribly burned about the feet and shot in the arm, loaded the four wounded troopers into a motor truck and with the bodies of the killed went to Marathon.

The three troopers mentioned as having given up their lives in

The three troopers mentioned as having given up their lives in behalf of their country were William Cohen, Stephen Golock, and Laurence K. Rogers. The first two came from the Borough of Manhattan, New York City, and the latter from the State of Kentucky.

On Sunday last they brought William Cohen home to the three rooms where his old mother lived at No. 116 East One hundred and fifteenth Street, New York City, in the congressional district which I have the honor to represent, and we laid him to rest at Mount Zion Cemetery where a number of veterans of the Spanish-American, Philippine, Civil War, Vera Cruz, and

Haiti, lie buried.

The story of Cohen is similar to that of the numerous young men of New York City who enlist in the Army because of their love and admiration for our flag and our country. They are imbued with the spirit of true patriotism and are ever ready to sacrifice all they possess, including life itself, in behalf of our beloved land. Cohen was so desirous of enlisting in the United States Army that when he became a private, on February 20, 1909, he was under age. Assigned to the One hundred and sixtyseventh Company, Coast Artillery Corps, he became a corporal on January 20, 1911, and was honorably discharged as of that grade February 19, 1912, at Fort Totten. N. Y., by reason of expiration of term of service, with character recorded as excellent. He reenlisted February 20, 1912, at Fort Totten, N. Y., in the same company and was honorably discharged February 19, 1915, by reason of expiration of term of service with character excellent. He again enlisted June 8, 1915, at Fort Slocum; was assigned to Troop A, Fourteenth Cavalry, and was killed

in action with the Mexican bandits at Glen Springs, Tex., May 5, 1916. He was typical of the many immigrant lads that have entered the Army. He knew that his mother, Ida Cohen, needed financial help, as she was a widow, and each month he sent her at least \$10, showing the spirit of a son's love for the one that was dearest to him. It was fitting that he should be taken to his last resting place on the Sunday that was designated as Mother's Day throughout this Republic. She had no opportunity to take a last look at her boy, because he had been shot so many times and was so fearfully burned from the oil the bandits had poured in the but from the roof that orders came from Texas that the coffin was not to be opened.

Stephen Colock, another one of the troopers who met death bravely, was also of immigrant descent and displayed a courage and a fearlessness on this occasion that warrants his being placed upon the tablet of fame with the others who participated

in this terrible affray.

Laurence K. Rogers, the third trooper, showed the same kind of reckless bravery that characterized the other two. He was of the old mountain stock of Kentucky and true to its traditions.

Where in the world could you find the men of Jewish, Irish, and native descent fighting side by side and willingly making the greatest sacrifice that we can ask of any man, namely, giving up their lives in our behalf, that our flag might be upheld and the lives of our citizens in Texas properly protected.

If nothing else comes from the Glen Springs raid, it will at least awaken the hearts of all Americans from the broad Pacific to the Atlantic and from Maine to Florida, bringing its responsive echoes all the way on the east to Porto Rico and on the west to the Philippines and the Hawaiian Islands, and to the north to Alaska, that the spirit of true Americanism as exemplified by all the numerous races that help to make up our people is alive, and that when the Nation is in danger that we can rely upon all citizens to do their duty to the utmost, regardless of where they first saw the light of day or from which country they originally came to our shores.

The deaths of Cohen, Colock, and Rogers should make all men

realize that a people that forces nine men to protect 40 miles of the border of our country are unjust and unfair not only to the boys in khaki but to themselves, and that an increased Army and Navy should be obtained in order that our flag may be respected wherever it flies, whether on the top of an embassy or on board of a ship, and so that our passports when issued shall give to the holder thereof that respect and protection which a great Republic like ours has a right to and should at all times com-

mand.

Mr. Speaker, I will close what I have to say with part of a speech by the late Robert G. Ingersoll:

These heroes are dead. They died for liberty; they died for us. They are at rest. They sleep in the land they made free, under the flag they rendered stainless, under the solemn pines, the sad hemiocks, the tearful willows, and the embracing vines. They sleep neath the shadows of the cloud, careless alike of sunshine or of storm, each in the windowless palace of rest. Earth may run red with other wars; they are at peace. In the midst of battle, in the roar of conflict, they found the serenity of death. I have one sentiment for soldiers living and dead: Cheers for the living; tears for the dead.

Patriots of Preparedness.

EXTENSION OF REMARKS

HON. FRANK BUCHANAN, OF ILLINOIS,

> IN THE HOUSE OF REPRESENTATIVES, Saturday, May 20, 1916.

Mr. BUCHANAN of Illinois. Mr. Speaker, I desire to insert an article printed in the May number of the Bridgemen's Magazine, written by Mr. John J. Walt, a structural-iron worker, who is one among the great masses of American workmen patriots, and who is a student of those matters that concern the working people. In this article he expresses the judgment and sentiment of the great majority of the wageworkers of the country, and it might be well for those public officials who are afflicted with military hydrophobia to consider that they will have the wealthproducing masses to reckon with when they go before the people for reelection. While the beneficiaries of the extortionate profits in the war traffic with the belligerent nations may have made great progress through the war-trust newspaper and by other methods, corruptly spending large amounts of their bloody money, and perhaps have a great many of our patriotic citizens

deceived, yet when the facts are put before them, when the light shines through the darkness and on the so-called high places, and the financial and commercial pirates and industrial highand the financial and commercial pirates and industrial highbinders and their agents in public office are stripped of their
cloaks of deception the majority of those who are in public
office advocating this propaganda of large expenditures under
the name of preparedness, which will create militarism and
war, will be relegated to the political scrap heap.

I know the sentiment of the working people, the wealth producers of the country. I know that they are American-loving,
patriotic people and that their sympathies lie with humanity
and not with militarism, which is in conflict with humanity. I

and not with militarism, which is in conflict with humanity. I know that they are peace-loving, liberty-loving, and humanityloving people and that they are absolutely and unqualifiedly opposed to the propaganda that has been supported by the criminal war trust and others whose greed for extortionate profits controls in their efforts in regard to governmental matters.

It is seldom that we hear from the rank and file of the work-

ing people, and if they would more frequently express them-selves through their official publications, and if our public offi-cials would spend some of their time reading the official publications of the labor organizations instead of the big daily trust newspapers that are the mouthpieces of the criminal rich our public officials would have a better knowledge of the judgment and sentiment, aspirations and ambitions of the working masses of the country.

The article is as follows:

PATRIOTS OF PREPAREDNESS.

CHICAGO, ILL., April 23, 1916.

EDITOR BRIDGEMEN'S MAGAZINE:

EDITOR BRIDGEMEN'S MAGAZINE:

The ordinary ironworker who works hard every day hunting a job and, when he gets it, puling I-beams around, shinning columns, or driving rivets, who glances at the morning papers (trust press) while he is riding to work or reads it after his day's work is done—and the same applies to men in other trades—and stops a few minutes to think after he has read same can't help but notice that the ammunition makers, manufacturers of war material, manufacturers of machinery to make war material, bankers that make money by handling war bonds, and other parties that profit by war and "preparedness for war" have inaugurated a campaign of fear and alarm, to try and scare everybody, mostly our Senators and Congressmen in Washington, into voting untold millions of dollars into the pockets of these war traffickers.

Their fertile brains manage to produce one ghost story after another, all intended to gain their ends.

They style themselves "patriots" and call everybody names—traitors, undesirable citizens, etc.—who don't fall for their bull.

All these "patriots" are anxious for a big Army and big Navy, for which they are anxious to furnish the material to equip the same (for profit).

which they are anxious to furnish the material to equip the same (for profit).

But when it comes to furnish the men to do fighting and money to pay for the ammunition, etc., why, of course, the common herd of us are supposed to supply that and pay for it. They post the streets or cheap hotels where workingmen pass by or live with posters, "Men wanted for the Army. Your country needs you," and others like it. But you could not find one of these posters with a search warrant in any of the clubs or swell hotels where their sons or they themselves hang out. Besides, these pot-bellied "patriots" are in no danger of being drafted in case of need, as they are too old or too fat, or both, but they want the others to go.

these pot-bellied "patriots" are in no danger of being drafted in case of need, as they are too old or too fat, or both, but they want the others to go.

When it comes to paying the bills, do they offer to pay them out of their profits, swollen fortunes, or big incomes? Not much.

They started by having Congress vote to keep a tax of 1 cent a pound on sugar (tariff, they call it). They know that every poor man's family has to have sugar to live and can't live without it, and therefore has to pay the tax. The poorer they are the more children they have, and consequently the more tax they have to pay. Very simple.

They also know that the biggest majority of people are poor. And the "patriots" are losing sleep scheming out other ways to tax the necessities, what the poor people need to live, to pay for "preparedness."

And right here let it be said to the credit of Congressman Frank Buchanan, member of Local No. 1, representing the seventh congressional district of Illinois, a district composed of wage carners, that he was one of the faithful few, as he always is on labor questions, to vote against the tax of 1 cent a pound on sugar.

What a financial blessing it would be to the wage earners of America if they would send more men like him to Congress. It would leave money in their pockets.

This campaign of madness for "preparedness" showed signs of falling off, judging by the returns of the last elections. In the State of Michigan, which was the only State where people had a chance of volcing their sentiments, and where the candidate for "preparedness" was Senator Smith and protest was Henry Ford, the people of Michigan showed in unmistakable language what their sentiments were by giving Henry Ford a nice majority over Smith.

The same has since happened in Nebraska, and no doubt would happen in every State of the Union if people had a chance for a straight vote.

This was a hard blow for the "patriots of preparedness," and they are dying hard. So they have started a new scheme to attain their ends.

The Illinoi

ends.

The Illinois Manufacturers' Association and their scab-loving "patriot" secretary announced that they have chartered special trains which will take them to Washington, and announced that they will give a swell dinner to the Members of Congress and the Senators from Illinois (perhaps they will give them something else) and let them know what the sentiments of the "people back home" are.

No doubt this will become a popular move for these self-styled "patriots" and will be imitated by self-admitted "patriots" in other States, which will mean more special trains and more swell feeds for Congressmen and Senators.

Union men ought to be on the alert for those moves and follow the lead of the Chicago Federation of Labor, which passed the following

resolution, without a dissenting voice, more than 350 delegates being present, Sunday, April 16, 1916:
Whereas the Chicago Tribune, April 4, 1916, and other papers printed the following article:

PREPAREDNESS SPECIAL TRAINS TO VISIT CAPITAL—200 CHICAGO AND DOWN STATE LEAVE ON AFRIL 18.

The newest idea in the better-defense movement is a "prepare special." The Middle West business interests have adopted the plan of invading Washington with extra trains for personal conferences as a part of the agitation to acquaint Congressmen with "the sentiment back home."

home."

The first train will leave Chicago on April 18 over the Baltimore & Ohio with 200 Chicago and down-State patriots. They will have with them a carefully thought-out memorial containing a definite statement for a permanent defense policy, which will be presented to the 30 Illinois Representatives. A banquet will be held at the Shoreham Hotel in Washington on April 26. Senator Lewis, as the senior Illinois Senator, will preside, with Samuel M. Hastings, president of the Illinois Manufacturers' Association, representing the business men.

HERE'S THE COMMITTEE.

The committee that is now working on the plan the Illinoisans will back includes the following:
S. M. Hastings, K. K. Knapp, La Verne Noyes, M. J. Foreman, C. H. Markham, J. S. Miller, John P. Hopkins, Paul Schulze, M. S. Florsheim, A. H. Mulliken, D. E. Felt, G. R. Meyercord, John C. Spry, W. M. Lewis, J. B. Sanborn, Hale Holden, C. Poppenhusen, Colin C. Fyffe, W. N. Pelouze, F. W. Upham, and Peter Theurer.

OTHER SECTIONS REPRESENTED.

Capt. George B. Blow, of La Salle; H. G. Herget, of Pekin; George D. Tower, of Mendota; and William Butterworth will represent the other sections of the State in the committee.

In addition to originating the invasion method, the Illinois leaders are working on the organizations in other States to get up similar expeditions.

AGAINST PREPAREDNESS.

That the labor element, the small-business men element, and the farmer element in most of the cities recently visited by President Wilson in his last trip West are against preparedness was the statement of Victor S. Yarros at the City Club yesterday.

Mr. Yarros, as correspondent of the New York Evening Post, investigated the subject of preparedness sentiment in seven cities after the President's visit to them.

Also, on April 13, 1916, the following was printed by the Tribune:

"PREPARE" NOTE FOR DINNER-ILLINOIS MANUFACTURERS' ASSOCIATION WILL BE HOST OF MEMBERS OF CONGRESS ON APRIL 26.

[Special.]

WASHINGTON, D. C., April 12.

WASHINGTON, D. C., April 12.

Headed by Samuel M. Hastings, president of the Illinois Manufacturers' Association, 200 members of that body will visit Washington on April 26 to give a dinner to the Illinois delegation in Congress and present a plan for preparedness. Announcement of this impressive manner of convincing the delegation that Illinois industrial leaders are warmly in favor of effective preparation against war was made to-day by John M. Glenn, secretary, who is in Washington.

Whereas the "patriots" of the Illinois Manufacturers' Association therein mentioned are nearly all reaping great financial benefits from the present war in Europe by furnishing ammunition and other war materials, also would reap very large profits if the Senate and House of Representatives of the United States should adopt their so-called "military preparedness" plan; and
Whereas the "patriots" whose ill-gotten profits enable them to hire a special train and arrange for an elaborate dinner in Washington to the members of the Senate and House of Representatives represent numerically a very small portion of our community and do not represent the sentiment of "the people back home" in Chicago; and Whereas the dally press has not given us any record of these self-styled "patriots" of the Illinois Manufacturers' Association rushing to the recruiting station and enlisting in the Army or Navy of the United States since Mexican trouble started at Columbus, N. Mex.: Therefore be it

*Resolved** (by the delegates of the Chicago Federation of Labor, representing 200.000 organized workers of the other of Chicago rehaming the properties of the control of the

United States since Mexican trouble started at Columbus, N. Mex.: Therefore be it

Resolved (by the delegates of the Chicago Federation of Labor, representing 200,000 organized workers of the city of Chicago who are not participating in the profits of war and "military preparedness." but, on the contrary, are suffering from the continued rise in price of necessities of life and the decline of the purchasing power of their wages and salaries, and are therefore unable to hire "special preparedness trains" to proceed to Washington and arrange elaborate dinners for the Members of Congress, in regular meeting assembled). That we condemn this attempt by these self-styled "patriots" of the Illinois Manufacturers' Association to mislead Congress as to the true sentiment of "the people back home"; and be it further

Resolved. That we inform the President of the United States and the Members of Congress of the true sentiment of the "people back home" as expressed in the report of the executive board of the Chicago Federation of Labor on "preparedness," adopted unanimously February 6, 1916 (see Bridgemen's Magazine, p. 170, March number), and which can be found on page 3200 of the Congressional Record of February 18, 1916, and which we hereby reaffirm; and be it further

Resolved. That the Secretary of the Chicago Federation of Labor be instructed to send a copy of this resolution to the Hon. Frank Buchanan, requesting him to have same read into the Congressional Record, also a copy to be sent to the President of the United States, to each of the Senators and Members of the House of Representatives from Illinois and to the American Federation of Labor.

JOHN J. WALT, Iron Workers, No. 1, JOHN FLORA, Carpenters, F. G. Horr, Cigar Makers,

CHAS. DOLD, Plano Makers,

CHAS. DOLD, Plano Makers,

Similar resolutions ought to be passed by every union and central

Delegates.

Similar resolutions ought to be passed by every union and central body in the United States and forwarded to the President, Senators, and Congressmen in Washington to let them know what the sentiment of the "people back home" is.

The following article from the Chicago Day Book, April 18, 1916, commenting on the above resolution, is of interest and may help us see the motive that is behind the so-called "patriots" in giving swell dinners to Congressmen:

[Day Book, Chicago, Apr. 18, 1916.]

DANQUETING GAME OLD STUFF-CONGRESSMEN TO FEED WITH

The Illinois delegation in Congress will be guests of 200 members of the Illinois Manufacturers' Association at a banquet in Washington, April 26. The manufacturers left Chicago for the Capital Tuesday morning.

April 26. The manufacturers left Chicago for the Capital Tuesday morning.

Once when the writer of this was working on another paper he was put "hep" to the way this game of banqueting legislators is played. It happened that the big commercial and manufacturing association of the State was giving a banquet to the 200 members of the legislature. The cost was \$5 for each of the 750 plates—for the eats alone—and there was entertainment by a star of the Chicago Grand Opera Co., the most noted moving-picture comedy star of the day, and the stars from many theaters. No drinks were served, because many of the legislators were "dry," but fine booze was passed out free at a special bar in an adjoining room.

The reporter knew that the evening's entertainment was costing the commercial association a little better than \$7,000.

"Why waste so much money?" inquired the reporter of the secretary of the association. The secretary roared with laughter.

"Waste? Waste nothing!" he shouted. "We consider this the best investment of the year. Why, do you know that on either side of every lawmaker at that banquet there sat a member of our association. We have an ax to grind. We want some special legislation that will be a great boon to manufacturers; so we spent \$7,500 on a big feed and fine entertainers to get the legislators in a good humor to listen to us.

"I told you there was an association member on either side of every legislator. Each one of these members was picked for the part. Our legislative experts studied for weeks to find out just how each lawmaker stood on the issues in which we are interested. If he was not favorable to us, we put our best persuaders beside him at the table.

"Don't tell me it was wasting money. We're going to give one every year."

favorable to us, we put our best persuaders beside him at the table.

"Don't tell me it was wasting money. We're going to give one every year."

Before that legislative session was over it passed four of the six bills the association wanted, and would have passed another—a gigantic street franchise steal, but the people got wise and so mad that it dared not put the bill through.

The Illinois Manufacturers' Association is going to send trainloads of members at great cost to Washington to sit beside Illinois Congressmen at the banquet, April 26, to interest the Nation's lawmakers in military preparedness measures which big business wants passed.

The passing of preparedness bills will bring more money to the coffers of Illinois manufacturers who will share in furnishing the extra equipment and ammunition, while it will increase the amount of public guards of private property.

The manufacturers' association admitted that the purpose of the banquet is "to impress on the Congressmen the fact that the business interests of the Middle West are keenly alive to the necessity of a broad general plan of preparedness."

President Samuel M. Hastings, of the association, it is announced, will present a memorial to the members of the delegation containing a plan for preparedness which the manufacturers feel should be indorsed. After summing up the plans of the manufacturers, the Chicago Federation of Labor at their meeting Sunday passed resolutions which wound up with:

"Be it resolved (by the 250,000 organized working people of Chicago who are not profiting by the European war and who will not gain by the 'military and naval preparedness plans,' but, on the contrary, are suffering from a continual rise in prices of the necessities of life, and who are therefore unable to hire special trains and pay for dinners). That we condemn this attempt by these self-styled 'patriots' of the Illinois Manufacturers' Association to mislead Congress as to the true sentiment of the people back home."

The fact of the matter is, these "patr

"You will ask me, Why do you say the shortest possible notice? Because, gentlemen, you can not afford to postpone this thing. I do not know what a single day may bring forth."

And all the "patriots" said, "Amen. Well done, thou faithful servant."

Against the statement of the President let me cite these facts from the Congressional Record, February 7, 1916:

"March 3, 1915, a little more than a year ago, the Congress authorized the construction of two dreadnaughts larger than any nation now owns. Not even one splinter has been laid upon another to begin the construction of these ships, and will not be started until about 1917."

Also the Congressional Record of February 7, 1916, contains the information that 68 warships, which when completed will cost \$185,-000,000, are in process of construction; that the administration—and the "patriots of preparedness"—has never even intimated that it would be pleased it construction were accelerated; and that the men employed on these ships are working only eight hours a day, in face of the fact that it would be perfectly feasible to employ three crews working 24 hours a day. (See Pearson's Magazine, May number, p. 460.)

And so far it is not known that the President has ordered them to hurry up, which he ought to do, if what he said in his speech at Cleveland is true.

Also the "patriots of preparedness" have never hollered for more speed in finishing these warships that have been already authorized and money appropriated for. This proves they are not sincere.

The compaign of these "patriots of preparedness and fear," have other objects in view. These objects are, first, to get the citizens of this country alarmed, and their hearts full of fear, and their brains confused, so they will approve the tactics of these so-called "patriots" in brow-beating Congress to appropriate untold millions for tools of war, while the excitement is on; and that means lots of fat, juley contracts and profits. That is the real reason of "preparedness" of these self-styled "patriots."

Another very important reason is that they hope the workers of this country in all this excitement will forget Ludlow, Colo.; Calumet, Mich.; coal miners' strike in West Virginia; the textile strike in Massachusetts; strike in Paterson, N. J.; and the hundreds of other outrages committed against the workers throughout the United States by these so-called "patriots" of the Manufacturers' Association and Steel Trust, as shown by undisputable testimony of the report of the Industrial Relations Commission, F. P. Walsh, chairman.

The printing of this report, so as to make it available for every citizen, is being held up in the United States Senate by the tools of big business and these "patriots of preparedness."

Another object of these "patriots of preparedness." is to prevent Congress from doing anything that might carry into effect the recommendations of the Industrial Commission, and thereby relieve the intolerable conditions and sufferings of the toilers of America, in the different industries, managed and controlled by these self-admitted "patriots of preparedness," they hope to choke the report to death. Congress will adjourn and nothing will be done, and, if successful, these "patriots" will be satisfied, even if they don't get all they ask for in the "preparedness" program.

By the way, has anybody anywhere seen these "patriots" ask that this material for "preparedness" be produced and manufactured under union conditions, which means under sanitary conditions, an eighthour day, and a living wage, by American citizens? Not so anybody could hear it—not much.

These "patriots" of the Manufacturers' Association and the Steel Trust will insist on their right to work the cheapest scab labor they can get, and, if necessary, import it and work them 12 hours per day, seven days a week, for Chinese wages. A

Therefore the duty of every union man and true American is clear; it is to oppose the efforts of these "patriots of preparedness," and in the coming elections vote against any candidate for office or candidates of any political party that pledge themselves to the program of these "patriots" of the Manufacturers' Association and Steel Trust. Every union in the different States and central bodies ought to prepare resolutions and send them to the Senators and Congressmen from their State, demanding the printing of sufficient copies of the report of the Industrial Relations Commission, and that some immediate action be taken to carry out the recommendations contained therein.

Don't delay. Congress will adjourn before very long. At the next meeting of your union instruct your secretary to write a communication, as suggested above, to your Congressmen and Senators.

J. J. Walt.

J. J. WALT.

Rural Credits.

EXTENSION OF REMARKS

HON. SAMUEL M. TAYLOR. OF ARKANSAS,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, May 17, 1916.

Mr. TAYLOR of Arkansas. Mr. Speaker, on the 23d of February last there appears in the Congressional Record a speech I made on rural credits. This speech I circulated among the people of my district, and in response I was astounded to know the interest our farmers felt touching rural-credit legislation. I did not know then just exactly what the features of legislation on this subject would be, but I indicated in that speech what legislation I thought would meet with the approval of the farmer. The pending bill is not just what I would like to see passed, but every great measure must have a beginning, and this bill is a step toward granting Federal aid to assist the great farming classes of this Nation. It has been discussed for months before the great Banking and Currency Committee of the House, and among its membership are found farmers. This bill, when it passes, will be the result of a compromise. It is new legislation in this Government, and the fact that it is a compromise should not discredit the measure, because even the Constitution of our great Government was the result of a compromise among men.

Aid to enable farmers to procure money to purchase homes and to carry on agricultural pursuits has been extended by every enlightened Government save our own. We have extended Government aid in one form or another to every line of business except agriculture. Millions of acres of public lands were given away to corporations to induce them to build railroads, and it is high time that the farmers and agriculturists of this country should be aided in their efforts to feed their families and the people of this Nation by our great Government. The matter of farm loans has been one that has engaged the attention of Members of Congress for some time and it is of vital importance to all sections of the country. I have listened to many arguments in regard to the best plan for help. I was born and reared on a farm. Farming was the principal industry of my native State. The farmer does not care so much whether we have 1 farm-loan bank or 12. Many of the features of this bill may not appeal to him, and especially those features which are administrative, but he will want to know whether the bill will permit him to borrow money on his land at a low rate of interest, and that, too, for a long time, with option to pay the debt any time within a reasonable period. This bill provides rightly along that line. What the farmer wants is results, and he cares little about theories. He is willing to pay his debts and pay interest thereon, and he feels, when he borrows money to help in conducting his business—and the farmer is a business man—and he pays a rate of interest when he needs to borrow money too high for money hired than he should have to pay, considering the fact that he offers the finest character of security and the further fact that he needs to borrow for a term of years rather than for a few months. The product of his labor usually comes to him in the fall or at the end of the year, and his opportunity for canceling his indebtedness as the result of his labor does not come to him as often as it does to other business men.

I am going to vote for this bill because it is the first step taken by the Government looking to long-time loans. Of course, the system proposed will have to become familiar to the farmers and the system understood, and as time passes needed features will be amended by Congress that may now be probably overlooked. Every new problem necessarily has to have a beginning, and as the years roll by the system now entered upon will be satisfactorily worked out. There will be no turning backward, because the borrowing and farming classes of the American people will never be satisfied until rural credits is firmly established in the laws of the land.

Agriculture is not a State institution but is a national affair. This great Government must help to aid the building of farms and homes and add to the joy, contentment, and happiness of this great class of our grand people who have embraced agriculture as an occupation. Young men must be encouraged in their desire to enter the occupation of agriculture. They would like to follow in the footsteps of their fathers and gain a home whereby he may depend only upon the blessings of God upon his honest industry. Farming is of great importance, as it controls the prosperity, the character, and independence of our country. It is indeed the most certain source of strength, wealth, and independence. This bill offers a meeting place for the person with money to loan and the person who desires to borrow that money. It appears to help both of these people and the class to which each belongs. It will not harm or hurt those of other classes because the success and prosperity of the whole Nation with its interests hinges largely upon the success and properity of those who till the soil. Make him prosperous and he will carry prosperity as a blessing to the fireside of every citizen—rich and poor, high and low.

Mr. Speaker, the one hope of the American people to-day is rural credits—the brand of rural credits that will really lower interest rates to American borrowers. None other will satisfy them; none other with approval will they accept. There have been presented to Congress many bills dealing with this subject. Some of them are weird, fantastical, and could never come true. Some of them advocate that the Federal Government shall furnish money to the American farmers without adequate security, and some of them with practically no security at all. On the other hand, bills are pending and have been introduced by men who do not in truth and in fact believe in a rural-credits system at all. These bills are usually found to be mere makeshifs, that look good upon their faces, but which in truth and in reality would render no positive relief to the farmer whatever.

The President of the United States during the consideration

The President of the United States during the consideration of the Owen-Glass currency bill promised in words loud, clear, distinct, and emphatic that he would stand for and aid in the passage of a rural-credits bill.

Mr. Speaker, under the provisions of the pending bill an appropriation of \$9,000,000 is made, which will finance the rural-credit banking system. It is believed millions of dollars necessary to supply the demand for farm loans will come into the treasury of the rural-credit banks by the sale of bonds which will be issued on the lands of the farmers who may deposit their land mortgages with these banks. This \$9,000,000 furnished by the Government may be increased to \$180,000,000, because the Federal land banks are granted the privilege of selling farm-loan bonds equal to the amount of twenty times its capital. The joint-land banks mentioned are granted the same privilege and the amount equal to fifteen times its capital and surplus.

METHOD OF RURAL-CREDITS BANKS.

 The rural-credits board located in Washington, composed of three members, has complete control and supervision of the rural-credits banks.

2. The United States is divided into 12 districts. The 12 banks, located centrally in these districts, are known as Federal land banks. The minimum capital stock of the Federal land banks is \$750,000. The stock in the Federal land bank is placed on the market for sale. If not purchased in 90 days, the Government purchases the stock sufficient to finance the institution. The Government will not share in the profits. The stockholders of the Federal land banks share in the profits.

3. Local organizations are authorized and chartered. These local organizations are known as national farm-loan associations. The national farm-loan association is composed exclusively of borrowers. No person not a borrower can become a member of the farm-loan association. Ten farmers desiring to borrow can organize this association. The membership is unlimited, but must contain not less than 10. The local association shall elect five directors. The association shall also elect a president, vice president, loan committee of three, and a secretary-treasurer. No officer of the local association shall receive a salary except the secretary-treasurer.

HOW LOANS ARE SECURED.

Loans are secured by organizing a national farm-loan association composed of 10 or more farmers desiring to secure loans. The minimum loan is \$100, and the maximum is \$10,000. The borrower is required to make application for a loan accompanied with subscription for stock in the local association. For this stock he pays \$5 per share. One share authorizes a loan of \$100. If a borrower desires a loan of \$1,000, he must purchase 10 shares, or \$50 worth of stock. This purchase of stock is not a cash transaction unless borrowers so desire, but is added to the loan and paid with other deferred payments. The application, subscription of stock, and description of land is forwarded to the Federal land bank. The Federal land bank orders an examination of title and appraisement of the land. If the appraisement is satisfactory and the title good, the loan is made and the money sent to the secretary-treasurer of the local association to be paid to borrower.

AMOUNT, INTEREST RATE, AND TERMS.

The borrower may secure 60 per cent of the value of the land and 20 per cent of the value of improvement on the land, making a total of 80 per cent. The amount of interest charged depends on the sale of the bonds. In no case can the interest exceed 6 per cent, and it is expected that the rate will be less. The deferred payments may be from 5 to 36 years, as desired by borrower.

REPAYMENT (AMORTIZATION) PLAN.

The principal and interest is paid annually. These annual payments contain both principal and interest, called amortization payments. Under the present system of loaning money the interest only is collected on deferred payments. For instance, should a loan be made for \$1,000 at 6 per cent for the term of 20 years, at the end of 20 years \$1,200 will have been paid in annual payments as interest and the \$1,000 principal remains unpaid. If the interest rate charged should be 8 per cent on \$1,000, for 20 years the annual interest payments would amount to \$1,600, and the principal of \$1,000 would still be unpaid at the end of 20 years. The amortization plan provided in the bill will be easily understood by the following table, showing loan on \$1,000 for 20 years at 5 per cent:

Annual periods.	Total annual payment.	Interest at 5 per cent.	Paid on principal.	Amount of prin- cipal still unpaid.
1	\$80, 24	\$50,00	\$30, 24	\$969,76
2		48, 48	31.75	938, 00

19	80.24	7.46	72.78	76.50
20	80. 24	3, 82	76.50	
Total	1,604.80	604.80	1,000.00	

It will be seen by this calculation on the amortization plan that \$1,604.80 will pay both principal and interest.

LIABILITY OF THE BORROWER.

The farmer is interested in knowing his personal responsibility before becoming a stockholder in the national farm-loan association. The borrower is liable for 10 per cent of the amount of his loan. In other words, he is liable for double the amount of his stock. If he borrows \$1,000, he owns 5 shares. The shares represent \$50. His liability can not exceed double that amount, or \$100, on \$1,000. The stock owned by the borrower is filed with the association, and when the debt is discharged the value of the stock and accumulated dividends must be paid the borrower.

HOW MONEY IS SECURED FROM BONDS.

When loans are made bonds are sold in the markets to the highest bidder. The borrower does not get the same rate for which the bonds are sold; 1 per cent is retained by the Federal land banks to be used in paying expenses first and then dividends on outstanding stock. As business increases and bond sales are very large the stock of investors in the farm-land banks are retired, and it is represented that the investors' stock will be retired in a few years. When the investors' stock is eliminated, then the borrowers' stock will draw the dividends and there will be no investors' stock participating in the dividends, and the borrowers' stock becomes valuable as an invest-

If bonds sell for 4 per cent, the borrower's loan will be for 5 per cent. If the bonds sell for 4½ per cent, the interest of loan will be 5½ per cent, and so on. No interest charged the borto the price of the bonds sold. Funds are secured by the sale of bonds to loan the farmers. The farm mortgages of individuals desiring loans are assembled into collective security, and upon this collective security farm bonds are issued and sold. bonds are sound and safe, and should sell as well as Government bonds.

GOVERNMENT AID.

The Government appropriates \$9,000,000 to assure the organization of the rural-credit system. This may be used before funds are obtained by the sale of bonds. The board is also authorized to call on the Secretary of the Treasury for Government deposits in case the Federal land banks need assistance.

Furthermore, the Government pays the salaries of officers of the Federal land banks and the expenses of such banks, and exempts all stock and bonds of the rural-credit banks from tax-

PURPOSES OF LOANS.

Loans may be made to purchase land, equipment, live stock, general farm improvement, and pay off indebtedness on farm. If the borrower uses the money for other purposes, a penalty is imposed and the loan becomes due. No person not engaged in farming or in good faith intending to become an actual farmer can secure a loan or become a member of the farm-loans associa-

The foregoing contains a brief synopsis of the rural-credit bill, to which the Government contributes financial aid in money.

JOINT-STOCK LAND BANKS.

The bill also authorizes the organization of joint-stock companies for the purpose of making loans on farms. The Government contributes no money to the joint-stock company and purchases no stock of same. Joint-stock land banks are organized and financed by persons seeking the stock of the bank as an investment. The capital stock must be at least \$250,000 paid-in cash before a charter is granted. The joint-stock bank is authorized to issue bonds on land mortgage in the same manner as the Federal land banks. The interest rate charged by the jointstock company shall not exceed 6 per cent. The interest charged shall not exceed 1 per cent over the amount of interest for which the bonds were sold. If the bonds sell for 4 per cent the interest charged shall be 5 per cent, and so on.

CAPITAL STOCK IS TAXABLE.

The joint-land banks are relieved of tax in the same manner the Federal land banks are relieved, except the capital stock of the joint-land banks may be taxed. They operate on the same principle. The material difference consists in the fact that Federal land banks are operated by the Government, and the borrowing farmer gets the profits, while in the joint-stock company the borrower does not share in the profits, and all dividends are paid to the shareholders who invested their money in the joint-stock company. No stock is issued to the borrower in the joint-stock company. The borrower has no liability for losses in the joint-stock company. Instead of giving the borrower the same interest for which bonds are sold, 1 per cent more is

charged the borrower. After paying the expenses this 1 per cent belongs to the borrower under the Federal land banking system, while in the joint-stock company the 1 per cent is applied to investors' stock after paying expenses. The borrower owns the Federal land banks. He is not only interested in repaying his loan, but he is interested in the proper management of the Federal land banks and his local organization because of the value of his stock. The borrower is not interested in the dividends of the joint-land banks and assumes no responsibility for losses.

This bill, I sincerely trust, when enacted into law, will be attractive to the farmers and will help to lift the burdens from the backs of those who go forth at early dawn to labor for their loved ones and become prosperous and will help to bring forth products that feed and clothe the family of man. If this legis-lation proves successful, this Congress will have made for itself

an enduring fame.

In Support of H. J. Res. 199, Opposing the Withdrawal of the United States Troops from Mexico and Authorizing and Directing the President to Send Such Reenforcement as May be Necessary to Accomplish the Purposes of the Expedition.

EXTENSION OF REMARKS

HON. JEFF: McLEMORE.

OF TEXAS.

IN THE HOUSE OF REPRESENTATIVES,

Friday, May 19, 1916.

Mr. McLEMORE. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD, I include the following, which I find in a newspaper published in New York and called "Issues and Events":

> AN OPEN LETTER TO PRESIDENT WILSON. (By William Kennedy.)

> > WASHINGTON, D. C., May 4, 1916.

Mr. President, the path to power leads through Parral. To you, guided by that political idealism which has made American diplomacy throughout your administration such a shining exception to the diplomatic standards of the Old World, this would have no appeal if the path to power did not coincide with the road of righteousness. But they do coincide, and both

lead past Parral.

Your Mexican policy, first and last, has been subjected to such criticism as seldom assails any measures undertaken by the responsible heads of government. Innumerable selfish influences have united to make your path hard. That you have made mis-takes you, of course, would be the first to admit, but the great masses of the simple, straight-thinking people of the country have credited you with full justice. I, for instance, a plain citizen, disagree with your course in many matters, yet feel that you were right in refusing to recognize the assassin Huerta. You may have been hasty in sending the fleet to Vera Cruz, and you may have sacrificed something of national pride when you withdrew our forces from that city, and yet history will acknowledge that you served humanity and advanced political standards by bringing Huerta to an end by patient insistence, with a minimum of bloodshed. Many of us felt uncomfortable as you negotiated with the arrogant and stubborn Carranza on the one hand and the bloodstained Villa on the other; but future generations of Americans will acknowledge that you did what you did in the spirit of a sincere friend to a stricken sister Republic. History, too, will sustain your recognition of Carranza. Every calculable circumstance indicated that he had got a firm grip of power, was actuated by high ideals and supported by able men, commanded the greatest support among his people, and was most likely to advance that people in prosperity and peace. Your decision on that point was unassailable; the question is, has not Carranza failed—failed miserably and culpably? And if so, is not a sharp turn in our national policy necessary?

No one can doubt that you have the courage to acknowledge a mistake. The Nation looks to you now, its patience with Mexican conditions exhausted, to acknowledge and to rectify it. The path of just and legitimate national prestige leads through

Carranza has not mastered Mexico and never can. Many States of his country do not know his power at all, or yield it

merely a mock homage. The humane causes which he was expected to advance to the good of the long-suffering peon have not been advanced, but a rulnous and unjust confiscation of property and of industrial plants necessary to the development of Mexico seems to be on the program. Liberty has not been reestablished; no elections have tested the opinions of the people; and a bitter assault has been made not merely on one church but on all religion. Banditry has not been ended; and as a result of the weakness and indifference of the Carranza government the outlaw Francisco Villa found the opportunity to actually raid American territory, killing American soldiers, murdering and wounding American men and women, and burning an American town. Your instant action to punish the perpetrators of that deed was worthy of a vigorous Chief Executive and guardian of the Nation. Without a dissenting voice the people approved of it. They approved, too, your determination not to infringe the sovereignty of Mexico. But since then events have moved swiftly and tragically. The world and the American people have learned much. They have learned that Mexico is indeed distracted and disrupted, a widespread anarchy with no sovereignty to respect, with so much gone irretrievably wrong that only action by you on an even higher plane of courage and idealism can restore that sovereignty, and recreate, by American labor, even by American blood, a something which we can call Mexico and acknowledge anew as a sister Republic. The proof was given at Parral.

If the attack upon our troops at Parral had been merely a tragic outbreak of irresponsible people we could have overlooked it. But it was an attack made by the military forces of the government of Gen. Venustiano Carranza. high in authority ordered it; but the people of this country are only too painfully impressed with the obvious fact that after the act it had and has the full approval of Gen. Carranza and They have vouchsafed no word of sorrow; his lieutenants. they have made no apology. The blood of our brave soldiers does not haunt their minds. The only comment they have made on the occurrence is an impudent demand that we recognize in it a compelling reason to suspend the national purpose, to give up the chase of the invader of our borders and the murderer of our people; and to that argument they add the sinister threat of an all too obvious mobilization of their barbarous armies before and behind our punitive expedition. They little understand Americans, Mr. President, or Americanism as embodied in you. The path for America lies through Parral.

The exact measure of Gen. Carranza and his "government" has been given. No matter who refuses at this time to recognize it, the treacherous shots which greeted our unarmed and trusting troops at Parral have sounded the death knell of that "government." The American people infinitely prefer that you should recognize that fact; they prefer your conduct of the necessary business, which opens in prospect before us, to the conduct of some other aspiring citizens. They rejoice at the decision you have already taken not to order our brave soldiers, in whose splendid conduct they take a legitimate pride, to turn tail and slink home under the orders of Gen. Carranza. But the American people demand yet more. They demand that the word shall be "Forward—forward through Parral!"

Beyond Parral is Pancho Villa. Far from being in any danger of capture or death at the hands of the Carranza "government," he is deliberately sheltered and aided by the military forces and the officials of that "government"; and so he will be sheltered and aided until the mad hatred borne by that people toward Americans is ended by whatever means may be necessary. We are in no danger, at least under your guidance, of turning our operations into the conquest of tyranny and greed. One thing we may have to do; hold northern Mexico for awhile and reestablish civilization there. But one thing we MUST do; go onward through Parral to kill or capture Villa.

Whatever that may involve we must accept. Murder, arson, and military attacks within our own borders we can not, with the sublimest magnanimity, permit. The perpetrators of those crimes we should and we must punish, if it takes us not merely past Parral but to Tehuantepec. Any other course would make us traitors to that cause of human rights which you have given a new meaning and a new dignity and power in international affairs. You need not fear that the American people will read in such a determination anything of that selfishness which you have repudiated as a guiding motive in the conduct of nations. The American people will be with you if you go on through Parral—with you as never before.

To-day the people are uneasy in their minds; only their confidence in you keeps uneasiness from being a great fear. The whole people approve of your services to humanity in curbing war-inflamed nations across and on the ocean, recalling them to a sense of the rights and immunities of nonbelligerents. But

millions of the American people feel that you have done all in that way that is humanly possible. A further step which, as that way that is humanly possible. A further step which, as you admit, might lead us to the verge, nay, over the verge, of war, is sincerely dreaded and abhorred by millions. The American people will credit you with the great and inestimable results you have accomplished; but the shadow of a tragic error will cloud your fame if now, by insisting on more than nations battling for their lives can grant, you permit us to be drawn into that very war which your attitude has done most to rebuke. The American people would prefer that individuals forego some modicum of unessential privilege rather than that the whole Nation should sever an historic friendship and enter the ghastly arena of the great war against a people who have injured us only inadvertently; in which case, too, we would in-evitably become the allies of other nations whose equal wrongs against us you and your Secretary of State have so thoroughly exposed. But in Mexico we have a real cause, a national cause, a cause about which there is no difference of opinion from one corner of the country to another. Pursue that labor unflinchingly and every able man will be at your service, every State will gladly call on its militia to assist you, every mother will gladly send her son.

Beyond Parral is Pancho Villa. After him our troops must go. Whoever blocks our way must be treated as a national enemy according to the rules of war. The blood be upon them if they force the shedding of blood.

And if the dictates of duty, nay, of idealism itself, point past Parral, may one not point out to you how other reasons support that plan? Past Parral lies the end of the criticism which has assailed your Mexican policy. Past Parral the clamor of the selfish interests which have tried in vain to swerve you from your course can not sound. Past Parral lies the end of all doubt and all division.

The path to the Presidency leads through Parral.

The Agricultural Department and the Farmers.

EXTENSION OF REMARKS

OF

HON. FINLY H. GRAY.

OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, June 2, 1916.

Mr. GRAY of Indiana. Mr. Speaker, the problem of practical agriculture will never be solved by the education of a few boys in the agricultural schools of the States, nor by the occasional visit of an agricultural expert or special agent, nor by the annual tour of an agricultural car through a farming community making short stops for brief instructions to the farmers. The great body of the farmers of the country must be reached for instruction and cooperation in their everyday farming operations.

The necessity of bringing the Agricultural Department and the State institutions in closer relationship with the farmers and actual farm operations is at once realized from an examination of many department publications, reporting experiments and demonstrations conducted for the information and instruction of the farmers of the country.

Farmers, being without opportunity otherwise to avail themselves of the information and benefits of the Agricultural Department and schools, subscribe for these publications, only to find that many of the experiments and demonstrations reported had been conducted at specially and elaborately equipped agricultural stations, and while interesting and of general scientific value, much of the information and instruction could not be followed or carried into practical use with the common and ordinary facilities with which farms are provided and the prevailing conditions under which farm operations are generally conducted.

The activities of the Agricultural Department must be brought into closer touch with the actual farm operations, and experiments and demonstrations, to be of practical use and value to the farmers, must be conducted with facilities and under conditions prevailing generally upon the farms of the country.

tions prevailing generally upon the farms of the country.

While it is not possible for a department of the Government to establish and maintain relationship with the great number of farmers of the community as individuals, it is practical to reach and cooperate with them through farm organizations in bodies.

The Agricultural Department must be extended to include a system of local farm organizations, under which every farmer

in his own community will be afforded an opportunity to attach himself to and become a part of the Agricultural Department, and thereby avail himself of the benefits of the information and instruction afforded and the advantages of all the new and im-

proved methods of agriculture.

To establish this closer relationship of the Agricultural Department with the farmers of the country it is not necessary that the farmers should go to Washington, nor is it necessary to reorganize the whole Agricultural Department, the growth and development of years, to reach and carry on its operations

with the farmers.

Taking the Agricultural Department, as now organized and constituted, and the farmers of the country, with their practical experience in conducting their own neighborhood and community affairs and providing for a system of local organizations through which the farmers can act in bodies and adding a bureau in the Agricultural Department to coordinate with such organizations, and a system of scientific agriculture and practical farming is established.

Flood-Control Bill.

EXTENSION OF REMARKS

HON. ISAAC SIEGEL, OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, May 17, 1916.

Mr. SIEGEL. Mr. Speaker, this House is voting to-day for the flood-control bill, because it realizes that the time has come to take definite steps to relieve conditions along the Mississippi and Sacramento Rivers. The damage caused by flood in one part of the country has its reaction and consequent results in all other parts of our land. The day of sectionalism as an argument is slowly but surely passing away, never to return. We are daily seeing evidence that such arguments are not only valueless for advancing the cause of the one who raises it but meets at all times the emphatic disapproval of all reasonable and intelligent men. Those who have the best interests of the Nation at heart do not make inquiry as to which particular city or State is to be benefited by the legislation, but is it a measure that deserves the support of Congress?

Closely allied with this kind of legislation should be the improvement of New York Harbor and the deepening of the Hudson River, because the benefits to be derived therefrom are

national and not local.

New York State has to-day one-tenth of the Nation's population. Every broad-minded citizen who does his own thinking and studies what is best for the United States knows that the prosperity of New York State is reflected in every other part of the Union, and that when citizens of the State of New York, regardless of party, plead for these improvements they are asking for what is bound to help the whole country.

The history of the improvement of the Hudson River has been fully described by Mr. Wilfred H. Schoff, and I quote therefrom

at length:

IMPROVEMENT OF THE HUDSON.

IMPROVEMENT OF THE HUDSON.

If the statistics of commerce on American lakes, rivers, and harbors were more strictly classified, one might more surely determine the relative commercial importance of our many navigable waterways. Some of our river improvements are in reality harbor improvements, and the tonnage reported can not under present legislation, distinguish between river and harbor traffic; but a separate calculation of the commerce of New York Bay and the Hudson River apparently indicates that the Hudson carries the largest volume of river traffic, as distinguished from ocean-going traffic, on any American stream.

The nature of the river makes its improvement for modern commercial requirements a comparatively easy matter, and the existence along its banks of the world's busiest seaport, the terminals of the reconstructed Eric Canal, and of most of the transcontinental railroad lines gives any project for its improvement almost a national significance. The navigable section of the river extends from the Battery at New York City to Waterford, the terminus of the Barge Canal, a distance of about 155 miles. Of this section the greater part is natural deep water, the river flowing through a longitudinal crack, or fault, in the earth's surface and being a flord rather than a river. At only two places between New York and Hudson, 117 miles, are there any obstructions of the navigable channel, and these consist of sand bars easily and cheaply dredged through.

The principal sources of the Hudson River lie in the wildest portion of the Adirondack Mountains, in Essex County, northeastern New York. A number of branches, any one of which might possibly be considered the main stream, form its upper waters; but if the highest collected and permanent body of water be assumed as the true head, then the source of the Hudson becomes Lake Tear-of-the-Clouds, which lies at an elevation of 4,822 feet above tide, in the center of the

The river flows rather irregularly southward until it reaches the northern boundary of Saratoga County, where it makes a sharp turn and flows eastward for about 12 miles, passing through the mountains and forming, as it cuts across the rocky strata, several falls of great height and beauty. At Sandy Hill, just below Glens Falls, it makes another abrupt turn and flows southward, continuing in this direction until it empties into New York Bay.

From Lake Tear-of-the-Clouds to the mouth of the river the distance by water is probably about 300 miles. The total area drained is 13,366 square miles. The river is tidal to Troy, the head of navigation.

The headwater region is mountainous in character, is in general heavily wooded, and is dotted with numerous lakes and ponds. The rocks, belonging to the oldest formation, and mainly granitic, are either bare or covered only with a layer of spruce duff, humus, and forest litter. The river emerges from the mountain region a few miles west of Glens Falls, and thence to Troy the topography is moderately rolling and the surface soil is chiefly almost sand. Below Troy the river follows the great depression which extends almost due north and south between New York Bay and the St. Lawrence, flowing in an open valley bordered by well-cultivated lands, which rise with moderate slope from the stream. The Catskill Mountain region is reached 20 to 30 miles below Albany, and thence to the mouth of the river the immediate valley is flanked by high hills, the highlands of Orange County, and the precipitous Palisades being especially noticeable.

The commercial value of the Hudson River is clearly based on its history in past ages, and it is readily understood from a study of its geological structure how the river came to be the only practicable water route between the Atlantic seaboard and the great interior. At no other point in the Appalachian chain is there any such depression through the mountains themselves or any such submergence of a tidal stream.

HARBOR IMPROVEMENTS.

through the mountains themselves or any such submergence of a tidal stream.

HARBOR IMPROVEMENTS.

The first appropriation made for the improvement of New York Harbor was in 1884, and amounted to \$200,000. It was for deepening Gedney Channel through Sandy Hook Bar. There was no survey or estimate, and the work was experimental. In 1886 Congress appropriated \$750,000 for a 30-foot channel, 1,000 feet wide at mean low water at the Sandy Hook entrance, and in the same year a plan was approved for a permanent 30-foot channel to cost \$1,490,000. This project was completed in 1891. The total length of the improvement is about 10½ miles.

In 1899 Congress appropriated \$1,000,000 and authorized continuing contracts up to \$3,000,000 additional for a 40-foot channel 2,000 feet wide. This cost limit was increased in 1907 to \$5,148,510. This new project, which is known as the Ambrose Channel, is now the principal entrance to the harbor of New York, the earlier Sandy Hook Channel being maintained to its full depth but not necessarily to its full project width. The total length of the improvement is about 73 miles. Other entrances are the Coney Island and the Bay Ridge and Red Hook Channelse on the eastern side of the harbor. The Coney Island Channel, being mainly for local traffic, is of smaller dimensions, the depth being 14 feet and the width 400 feet. Work was completed in 1905 at a total expenditure of about \$17,500.

The Bay Ridge and Red Hook improvement was first adopted in 1881, the project providing for a depth of 18 feet and a width of 200 feet, providing an entrance to the Eric Basin and the south Brooklyn docks. In 1887 this channel, then only half finished, was found to be insufficient and Congress in 1888 suthorized the enlargement of the project to a depth of 21 feet and 400 feet wide. This project was completed in 1895 at a cost of \$410,000. By act of 1894 the improvement was further enlarged to a depth of 26 feet and a width of 800 feet in the triangular area at the channel bend was also included. This prov

IMPROVEMENT OF THE RIVER.

Improvement of the river for harbor purposes began in 1875 and consisted mainly in the removal of obstructions to attain a depth of 40 feet. The present project, which was adopted in 1913, contemplates a 30-foot channel, 800 feet wide, from Ellis Island to Hoboken; the removal of a shoal off Hoboken to a depth of 40 feet; a 26-foot channel, 550 feet wide, along Weehawken; the removal of ledge rock off the Battery to a depth of 40 feet; the removal of a shoal on the east side between Nineteenth and Thirty-second Streets to a 40-foot depth, and of an obstruction north of Spuyten Duyvil Creek to retain uniform depth. The estimated cost of this improvement was \$1.570,000. The Jersey City-Hoboken Channel is about 3 miles long and the Weehawken about 5 miles.

Between New York City and Hudson, about 117 miles north of the Battery, the river is a submerged stream, having natural depth sufficient for ordinary purposes of navigation, except at a few points, as at Haverstraw Bay, where there are shoals requiring some dredging. Between Hudson and the northern limit of improvement at Waterford, where connection is made with the barge canal, the river, although far from the ocean, is really at its delta stage, being much obstructed by gravel and silt brought down from the mountains and occasionally by rock. It is this section of about 38 miles which is comprised within the present project of improvement to barge canal depth of 12 feet, and for which the cities of Albany and Troy are agitating for further improvement, such as to enable freight transfers at the head of the river as well as at the mouth.

From 1797 until 1834 the State of New York undertook such improvement of the river as was thought necessary, and from 1834 until

1892 the State and Federal Governments worked on the project jointly, both in dredging and the construction of jetties. Originally, there was a depth as far north as Hudson of about 25 feet, between Hudson and Coxsackie about 12 feet, falling off to about 7½ feet at Albany and 3½ to 4 feet above Albany. At Troy the State of New York in 1823 built a dam in the pool, above which connection was made with the Eric Canal. There was a tidal range at Troy of about 1 foot, Albany 2 feet, and Hudson 3 feet.

The first project of improvement was adopted in 1834, and on this as modified in 1852 and 1866 the Government spent \$1.667.938 to secure a depth of 9 feet between Troy and Albany and 11 feet between Albany and New Baltimore. This included both dredging longitudinal dikes and intersecting cross dams. The second project, adopted in 1892 and modified in 1899, provided for additional dikes and dredging to secure a depth of 12 feet from Coxsackie to the Troy Dam. Upon completion of this work in 1910 a total of \$5.466,752 had been expended by the United States.

PRESENT PROJECT OF IMPROVEMENT.

completion of this work in 1910 a total of \$5,460,732 had been expended by the United States.

PRESENT PROJECT OF IMPROVEMENT.

The present project was adopted in 1910 and will provide a channel 12 feet deep from Hudson to Waterford, including the temoval of the old State dams and construction of a new lock and dam at Troy. This work was first planned to be done by the State of New York in its Barge Canal project, but the Federal Government after some discussion with the State authorities finally decided to exercise its exclusive jurisdiction over the river and to meintain control as far as the Barge Canal locks at Waterford. The 12-foot channel is to be 200 feet wide from Waterford to the Troy Dam and 400 feet below the dam, being wider at all bends. It is also to be widened to form harbors in front of the cities of Athany and Troy.

The original estimate of cost was about \$5,200,000. There was some delay pending adjustment of jurisdiction with the State authorities, and this, with some enlargement of the dra and additional rock excavation, brought the estimate to \$7,530,000. By this work the tidal range at Troy and Albamy becomes about 3 feet and at Hudson about 4 feet.

The most impressive part of the upper Hudson improvement is the great concrete dam and lock at Troy. Although structural work on the data of the second of

That all citizens, regardless of party affiliations, are in favor of the improvements that I have referred to are shown by the statements made by ex-Gov. Martin H. Glynn and by the present governor, Charles S. Whitman.

Mr. Glynn says:

Mr. Glynn says:

The cost of improving the tidal Hudson to accommodate sea-going vessels is a nominal one compared with the enormous resulting advantages to the country at large. If the improvement is to be made to accommodate sea-going vessels, the saving in freight rates on local and inland commerce on freight handled and regulated as a result of the improvement will, in one year, pay for the entire cost of the project.

The "trongest reasons for deepening the Hudson are national and not local. A deeper fludson would attract to the United States a goodly part of the grain movement from the West and Northwest, which is now so profitable to Canadian harbors. The present rate structure for large tonnage to the West from Albany is only 80 per cent of what it is from New York City or Boston. On sixth-class business this means a difference of \$1.05 a ton, which would amply pay for a boat for the trip from New York City to Albany. Terminal and dock charges would be much less in Albany than in New York, and this difference would increase the saving \$1.05 a ton by a considerable margin. But this \$1.05 is the smallest saving. This 80 per cent charge from Albany of what it is from Boston or New York would save millions and millions every year to the shippers and consumers of the whole country.

If this freight could be brought to Albany by water \$3.15 would be saved on the present charges on every ton of first-class freight; \$2.74 on every ton of second-class freight; \$2.11 on every ton of third-class freight; \$1.48 on every ton of fourth-class freight; \$1.26 on every ton of fifth-class freight, and \$1.05 on every ton of sixth-class freight. It

does not require much imagination to see what an immense sum these savings would mean to the people of the country at large.

As New York spent \$200,000,000 on its canals for the benefit of the Nation, so New York asks Uncle Sam to expend a few millions—and just a few—not for the benefit of this valley or this State, but for the benefit of the commercial welfare of this country and the individual prosperity of its citizenry. When God gave this Nation the Hudson River lie gave it a priceless gift. For any Government to allow parsimony or faise economy to stand in the way of the use of this priceless gift, to its fullest extent, is bad business and worse statesmanship. If red tape stands in the way, strangle red tape. If moss-covered precedent stands in the way, brush off the moss. If hypercritical technicalities stand in the way, banish them and substitute common sense.

critical technicalities stand in the way, banish them and substitute common sense.

The water is here, the business is here. New York has brought its great canal here—now let Uncle Sam bring the ocean to the end of the canal. The Panama Canal has rung the death knell of small water craft. New York gave more to build the Panama Canal than any other dozen States. To wed the Panama Canal to the barge canal of New York we need a 27-foot channel in the Hudson from Troy to Hudson, and no niggardly policy, no denial of a proper dowry, no refusal of consent on the part of Uncle Sam should prevent this wedding. Again, I submit the strong reasons for a 27-foot channel in the Hudson River are not municipal, sectional, or State—they are National.

Gov. Charles S. Whitman says:

The State of New York has spent nearly \$200,000,000 upon canal construction. This is not alone for the benefit of New York, but is of direct benefit to all the States bordering on the Great Lakes.

From New York City to the city of Hudson the Hudson River is deep enough to accommodate the vessels of our constwise trade. It is but a matter of 30 miles of insufficient channel depth that separates the terminus of our great canal system from these seagoing vessels. With our enlarged canal it is expected that the commerce reaching the Hudson will amount to \$15,000,000 a year, and the proposed increase in depth for a bare 30 miles will place these cargoes directly upon our ocean-going ships for distribution throughout the world.

world.

It is expected that the new barge canal will accommodate vessels adapted as well to novigate the Lakes so that a large part of the freight originating at and adjacent to points along the Great Lakes can be brought to the Hudson River by water without breaking bulk. It has been estimated that freight thus handled can be brought to Albany for about one-tenth the present rate of rail transportation.

To enable seagoing vessels to tap direct the arreries of commerce is an advantage that requires no demonstration. To make the eastern terminus of our canal system available to seagoing vessels would benefit not only the section directly served but the entire country.

It is a matter of common complaint that the port facilities at New York City are inadequate for present commerce and the cost of providing suitable facilities is so high as to make it almost prohibitive.

Mr. Speaker, this House has done its duty to-day to those

Mr. Speaker, this House has done its duty to-day to those who are directly interested with the improvements of the Mississippi and Sacramento Rivers and I hope that this House will now give its attention to the urgent necessity of deepening the Hudson River and providing for the necessary deepening of the East River, as well as for the proper dredging of the channel near Hell Gate. It is only by widening and deepening the channels already mentioned by me that transportation between the whole Gulf and southern seaboard and New England can be made cheaper.

The Monroe Dectrine as a Factor in International Peace.

EXTENSION OF REMARKS

HON. WILLIAM P. BORLAND, OF MISSOURI.

IN THE HOUSE OF REPRESENTATIVES, Monday, May 22, 1916.

Mr. BORLAND. Mr. Speaker, by unanimous consent of the House of Representatives I herewith insert an address which I delivered at the conference on international arbitration, at Mohonk Lake, N. Y., Friday, May 19, 1916.

The address is as follows: THE MONROE DOCTRINE AS A FACTOR IN INTERNATIONAL PEACE. (By WILLIAM P. BORLAND, M. C.)

It is now nearly a century since the Monroe doctrine, so called, was announced by an American President in a purely domestic State document, an annual message to Congress

In the century of its life our conception of this great pronouncement has grown. By "our" I mean to include not only the citizens of this Republic, but of both Americas and of Europe as well. From an announcement of a policy of our own Government it has gradually and inevitably become, if not actually a part of international law, yet a principle to be reckoned with in all of the international politics of the Western Hemisphere. The original meaning of the doctrine, read in the light of the age which gave it birth, is clear and comparatively narrow in its scope. At the time it was announced Europe had passed through two generations of revolutions, the birth pangs of modern liberal thought and popular government. A con-certed effort was made by the reactionaries, who represented

political privilege and the divine right of kings, to reestablish their power by taking advantage of the somewhat unsatisfactory working of popular government in the countries in which it was being tried. One of the purposes in view was to help Spain recover control of her revolting American colonies and reestablish over them a monarchical system. Our interest in the matter arose chiefly from our strong sympathy with representative institutions. Hence, President Monroe, or John Quincy Adams, his Secretary of State, who is credited with being the real author of the doctrine, announced that, having recognized the independence of the American Republics, we could not view with indifference an attempt to reestablish over them the political systems of Europe. The pregnant words of the message were:

We owe it therefore to candor and to the amicable relations existing between the United States and those powers to declare that we should consider any attempt on their part to extend their system to any portion of this bemisphere as dangerous to our peace and safety. With the existing colonies or dependencies of any European power we have not interfered and shall not interfere. But with the Governments who have declared their independence and maintained it, and whose independence we have, on great consideration and on just principles acknowledged, we could not view any interposition for the purpose of oppressing them or controlling in any other manner their destiny by any European power, in any other light than as the manifestation of an unfriendly disposition toward the United States.

Occasionally we hear that the Monroe doctrine has been outgrown. On the contrary, the trend of historic events has given it a deeper significance and a greater importance. Occasionally we are treated to academic discourses on the desirability of abandoning it. Let no theorist put this proposition to the practical test of popular opinion. The query, "Shall the political systems of Europe be extended to any portion of this hemisphere?" would receive an overwhelming negative in every country in both Americas. Never was the doctrine more deeply rooted in the affections of the people and never would it be

more unwise to challenge it than to-day.

But it is said that some of the South American countries which, under the fostering care of that doctrine, have grown to real national greatness are able now to maintain their own national integrity. Conceding with pleasure that this is true, it is far from showing that the Monroe doctrine is obsolete. It shows, rather, that there are additional shoulders to be placed under the burden of responsibility in maintaining the right of the countries of the Western Hemisphere to pursue their national destinies. There is nothing to prevent any nation from making the spirit of the doctrine a part of its own domestic policy and maintaining it singly or by convention. The only right which is affected is the right of European countries to acquire, either by consent or convention, territorial sovereignty here, and such right, if it existed, could scarcely add to the strength security, or dignity of any American pation.

to the strength, security, or dignity of any American nation.

The initial purpose of the Monroe dectrine was to secure to the American nations a fair opportunity to work out their national destinies free from the fetters of European feuds and factions. A fresh start was to be made in national life in the New World. Not only was the political creed of Europe to be rejected, but its historic antipathies, its traditional feuds, its tangled skein of alliances and intrigues, the beginning of which is lost in the maze of history. The new countries were to furnish the theater for a newer and better political drama. This initial purpose has been accomplished. Every American nation has had a fair chance to develop its own political ideals. The result has been in its own hands. It has been "the master of its fate, the captain of its soul."

While in form the Monroe doctrine was a challenge and a defiance addressed to Spain in her attempt to regain her lost colonies and to all powerful nations of Europe in their efforts toward colonial expansion in the Western Hemisphere and thus might have been easily represented as a standing invitation to war, it has been proved by the unanswerable logic of events the most potent factor in international peace. In the first place, it has removed the temptation to, if not the cause for, war between the smaller American States and the nations of Europe. If territorial aggrandizement can not follow military success nations show a surprising willingness to settle their disputes by other means than an appeal to arms. While there is nothing in the Monroe doctrine which prevents an European nation from beginning or maintaining a war against an American nation, yet the fact that any attempt at annexation or territorial indemnity as the result of such war will bring another powerful country into the conflict, seems to have had a decidedly deterrent effect upon such hostilities.

In the second place, while wars have taken place between the American nations themselves growing out of a clash of interests, which can not in all cases be avoided, these conflicts have been fought to a conclusion without involving the countries of the Old World. It is but natural that the weaker party to a struggle should seek, if it can, an alliance with some powerful champion, such an alliance dictated by the passion or interest of the moment usually involves a permanent loss of political independence. But for the Monroe doctrine it is probable that the aid of European countries would have been called into American disputes, complicating the situation and adding to the difficulties of making or maintaining a satisfactory peace. The usual results in such cases are represented by the old couplet about the profits of litigation:

A shell for thee, and a shell for thee; But the oyster, that's the lawyer's fee.

Then, again, there are domestic disturbances. Every nation has had its civil war, and usually such clashes of domestic interests, if fought out fairly and with no outside interference, have resulted in a stronger bond of unity and national feeling. But let a foreign power be invited or insinuate itself into the struggle and all hope of a return of peace and mutual confidence is at an end. From the days when Demosthenes thundered against Philip of Macedon for interfering in the local politics of Greece, true patriots have recognized the dangers of such interested friendship. And here again we may note how reluctant the European powers have been to proffer their aid and encouragement in the civil wars of the American countries when they could not be rewarded for such friendship by either a concession of territory or a sphere of influence.

If the Monroe doctrine has kept the nations of Europe from being embroiled in American politics, it has also kept the American nations from being embroiled in the politics of Europe. During the nineteenth century the continent of Africa and the continent of Asia were largely divided into colonies or spheres of influence by the European States. The fact that one nation had secured such a colony or sphere of influence seemed to require that to maintain the delicate adjustment of the balance of power other nations be granted concessions of equal importance and strategic value. It can not be doubted that a like fate would have overtaken the continent of South America and probably also portions of North America if there had been no restraining influence. While the exploitation of other continents by European powers has gone on rapidly during the past century. the territorial sovereignty and influence of such countries in the Americas has decreased. It was much less at the close of the century than at the beginning. England is now the only great nation of Europe holding important territory in the Western World. This territory is not threatened by her enemies, and hence is removed from the zone of hostile influence.

The Monroe doctrine has fully justified its existence in keeping the Americas out of the present conflict that has engulfed nearly the whole of the civilized world. Without it we would certainly have been involved if the opposing parties each held important territories on this side of the water. It may be judged, therefore, not only by the success which has attended it in keeping European politics from American shores but by projecting our fancy into what might and could have happened without it. The eighteenth century saw North America divided into the colonial empires of three great powers—England, France, and Spain. War and the entanglement of international politics was the only profit from these colonies to any of these powers, until happily the successful revolt of the British-American colonies enabled one local self-governing nation to dominate the strategic posi-tion on the continent and make the fragments not worth fighting for. A North America divided into the colonial empires of European States would have been a backward, stagnant, and undeveloped continent. A North America dominated by liberal politi-cal views and filled with the aspirations of national life _as been a factor in the progress of civilization.

Strange to say instead of the Monroe doctrine proving a source of irritation to the European powers, it has been welcomed by them and tacitly acknowledged and encouraged. England, France, and Germany have each had an opportunity in the recent past to test it if they saw fit, but chose rather to avoid the issue. To be sure the balance of power, so long preserved in Europe, has had much to do with the reluctance of those nations to test the American principle. No European nation would now look with indifference upon a violation of that doctrine by another power.

The good will of America, the reservoir of raw material for Europe, has been an important factor also in commanding respect. But the positive element, after all, has been that America had no interest in the quarrels of Europe. Our complete removal from contact with, or influence upon, European politics has been a source of security and satisfaction to all parties. We hold no territory in Europe. We have no ambitions there which may cause alarm. Its nations have nothing to fear from an American country unless the former are the aggressors.

But for the frenzy of political excitement in which we committed ourselves to the Philippine folly, we would have no territorial interests in Asia. The politics of the Orient represent the politics of Europe, with added complications, and it would be unfortunate indeed if we should become involved in that direction. Whether we can ever honorably withdraw from the Philippines or not, our experience in that direction has not been sufficiently encouraging to warrant the belief in our own minds or the fear in the minds of others, that we will ever willingly repeat our experiment. The blindest partisan has ceased now to talk of making the Philippines a base for the extension of American influence in Asia, and the public man who would to-day urge the acquisition of another foot of Asiatic territory would be politically as "dead as the bullrushes round little Moses on the old banks of the Nile."

While the Monroe doctrine can not preserve equality among American nations any more than the constitution of a republic can preserve physical or intellectual equality among men, yet it can and does preserve equality of opportunity. It does moreit provides the broad base of common ideals and common interests which can not but be wholesome in its tendencies. It is the interest of every American country that every other country of the western world should develop its people and its powers to the highest plane socially, industrially, and politically. While the doctrine itself is not a guaranty against territorial While the doctrine itself is not a guaranty against territorial aggrandizement within our own hemisphere, it contains an automatic check against unwieldy power or any extension of authority over an unwilling people. All of the nations invoived are Republics and a republic can grow only by incorporating territory upon the basis of equality of right with the original population. To a republic incorporated territory is a source of strength and prosperity, while dependencies, which are held upon a plane of lower political rights than the dominant nation and which can not look forward to an equality of rights, are a source of military weakness political danger and financial loss.

our of the common bond of interest in the Monroe doctrine as it now appeals to all of the Americas, there has grown by action of the present administration a principle of Pan Americanism which will draw the western nations closer together, inspire them with mutual confidence and respect, and unify their political ideals. The first fruits of this new policy are now seen. Mutual distrust and jealousy born of ignorance of each other's aims and purposes is disappearing. American nations can now sit in council upon the general peace of America. They can offer, without misunderstanding, their good offices in cases of friction which may lead to hostilities. They can also assist in a sympathetic and disinterested way in the restoration of stable government in any of the countries. They can observe a true respect for the dignity and integrity of other nations by refusing to permit their soil to be used for hatching plots against the peace and public order of their neighbors. Nations so united and so animated by ideals of peace and progress can in the present unfortunate situation in the world use the independence which they have happily preserved in commanding respect for the rights of neutrals and noncombatants, for the principles of international law, for the security of commerce, for the humane activities of the Red Cross, and perhaps even for the very existence of civilization itself.

The Rural-Credits Bill.

EXTENSION OF REMARKS

HON. JAMES H. MAYS. OF UTAH.

IN THE HOUSE OF REPRESENTATIVES.

Monday, May 15, 1916.

Mr. MAYS. Mr. Speaker, the Congress may have had more important measures before it during the past decade, but just mow I can not think what they were. By some the Federal reserve act, passed by the Sixty-third Congress, is regarded as the most far-reaching in its salutary influences of any measure considered by Congress in 50 years' time. Many point to the income-tax law, enacted by the same Congress, as being the most important of all in that it was the first step toward the only just and countries. and equitable system of taxation.

A number of the old guard on the other side of the House believe that no questions or acts are worthy of consideration except those relating to the tariff question, and accordingly dream and talk of nothing else. Others believe that measures

leading to the increase of our military and naval establishments are in comparative importance paramount to all others; and some patriotic gentlemen would appropriate money for nothing else.

These and many other acts, passed and pending, are destined to exercise much influence in the affairs of our people; but no act or measure before us or behind us will so directly benefit so large a proportion of the whole people whom we are representing as the rural-credits bill now under consideration,

The legislation here proposed is so essential that the wonder grows upon us that by preceding Congresses and parties in power it has been so long deferred. Solemn promises in this regard have been forgotten, or if not forgotten have been remembered only to be repudiated.

Infant industries have been nurtured and sustained and proresulted a most inequitable distribution of wealth. These fostered interests have flourished beyond the dreams of those who founded them. Through it all the laborers and the farmers, the creators of our boasted prosperity, have enjoyed a very meager share, even of life's necessities. Such legislation as this bill proposes has been promised in the platforms of

many political parties.

In 1912 the Democratic platform made the following state-

Of equal importance with questions of currency reform is the question of rural credits or agricultural finance. Therefore we recommend that an investigation of agricultural systems in foreign countries be made so that it may be ascertained whether a system of rural credits may be devised suitable to the conditions in the United States. And we also favor legislation permitting national banks to loan a reasonable proportion of their funds upon real estate security.

The Progressive Party offered a covenant which-

Pledged the party to the fostering and development of agricultural credit and emphasized the necessity of bringing the benefits of better farming, better business, and better living within the reach of the dwellers in the country.

The Republican Party platform pointed with pride and promised to continue to investigate and to urge and recommend relief to the farmers' financial needs.

The Democratic Party were charged with the responsibility of legislation by the votes of the people. In response to the platform promises the currency system was reformed by the enactment of the most beneficent piece of legislation put upon our statute books in half a century. National banks were authorized by law to loan a reasonable proportion of their funds upon real estate security. An investigating committee was appointed and sent abroad by the President to examine and study agricultural credit societies and rural credit systems. This commission made exhaustive investigation and rendered most instructive reports.

In brief, they found that every European nation of any importance had seen the necessity of adjusting their financial systems to the peculiar requirements of the farmers.

In Germany the "Landschaften" system, organized and controlled by the General Government, was providing long-time loans to the farmer at 3½ per cent interest, and by applying an additional 1½ to 2½ per cent the principal was gradually and finally discharged.

In France they found the Credit Foncier, a Government bank, subsidized and controlled, loaning money on farms at 4 per cent interest. Other agricultural financial institutions had been supplied with funds of the great Bank of France, to be loaned to local farmers' associations at low rates of interest.

In Russia the Peasant Land Bank had been doing business for 32 years lending money to farmers at 4 per cent interest.

In Switzerland various land-credit institutions, operated by

the State, were taking care of the needs of the farmers at low rates of interest.

Austria-Hungary had assisted in the inauguration of rural-

credit systems now in successful operation,

Denmark, a country smaller than the first congressional district of Utah, had advanced between five and six millions of dollars, without interest, to establish mortgage banks of the Kingdom of Denmark. The committee reports that this bank is of the same general character as the land bank established by the bill under consideration. Besides the financial advance of over \$5,000,000, and in addition to the purchase of debentures of the land institutions, that Government makes annual appropriations from the national treasury of funds to be loaned to the landholders.

In Sweden an initial payment of over \$2,000,000 had been provided, and a later subsidy of \$8.000,000 to the general mortgage bank and central institution designed to aid local mortgage associations in the sale of their debentures

In Egypt the State controls an agricultural bank operating for the benefit of the farmers.

Even in Japan a subsidy of nearly \$5,000,000 has been granted to 46 district banks and guaranty made of 5 per cent upon the stock of the central agricultural bank.

Out of the English treasury in 35 years there has been appropriated over \$2,000,000,000 in order that land might be sold to farmers and capital furnished at low rates of interest in the development and operation of same.

In the Dominion of Canada an equitable system of rural

credits has been established.

While in all these countries the wise foresight of the governments has developed systems suitable to their agricultural classes and the required capital to purchase and operate farms has been made available at fair rates of interest, it is passing strange that the subject has been so long neglected in the United

One is constrained to inquire why it is that the European farmer may secure 80 per cent of the value of his farm at 3½ or 4 per cent interest on long-time payments, with an amortization feature which gradually and finally cancels the whole indebtedness, while an American farmer, with better security, is able to obtain 30 per cent of the value of his farm for a short term of years at from 8 to 10 per cent interest, with no provision for liquidation of the loan. There is something radically wrong, and the wrong has been of too long standing.

Mr. Speaker, I know from personal experience that in the farming regions of the intermountain States a farmer owning as productive a farm as can be found in any country, and desiring to secure capital to purchase live stock in order that some profit from his investment and labor may be expected, would be required to pay a commission of 2 per cent, besides various and sundry other fees, in order to secure a three-year

loan at 9 per cent interest.

The commission men have grown rich and arrogant. Can the banks at which the farmer deposits his funds, if he should ever have any, remedy the situation? They can not. The farmer is at the mercy of these selfish aristocrats who loan

the money of the eastern insurance companies.

Can the farmer pay 9 per cent and make a profit? not. The statistics show that he makes less than day laborers' wages and works longer hours. The average farmer's family receives for the labor of the husband, wife, and children the sum of \$402 a year for all their labor beyond the interest on his investment.

The bill under consideration may not be perfect, but it will save the farmer in interest on \$10,000 of capital which he may require to place his farm upon a productive basis more than the total present average net cash income of the American farmer. That may spell the difference between failure and success. may stop the exodus from the farm to the cities. It may so encourage and stimulate the agricultural pursuits that the distressingly high cost of living may, in part, be relieved.

Mr. Speaker, the Committee on Banking and Currency, after examining the system of the old countries, after carefully studying the reports of commissions, experts, etc., have submitted a bill distinctly American and designed to meet the peculiar conditions prevailing in our country. The bill they submit to us consists of 31 sections covering 59 pages.

It provides for the creation of-

A Federal farm-loan board of three members with a salary of \$10,000 each and necessary traveling expenses

 A farm-loan registrar for each land-bank district.
 The necessary appraisers, examiners, attorneys, experts, assistants, clerks, laborers, and other employees,

4. Twelve district land banks with an initial capital of \$750,000 each with the necessary officers, directors, and em-

Each bank is to have a board of nine directors, six to be elected by the national farm-loan association and three appointed by the Federal farm-loan board.

The capital stock of each of the 12 Federal banks is divided into shares of \$5 each and may be held by any individual, firm, or corporation, by any State, or by the United States. The bill provides, however, that the stock held by the United States shall draw no dividends.

The farm-loan board is, as soon after the passage of this act as practicable, to open books for subscription to the capital stock of the Federal land bank in each district. After 90 days the Secretary of the Treasury will subscribe for all the stock

Both Federal land banks and joint-stock banks are to be financial agents of the United States Government.

The bill provides for the organization of national farm-loan associations by 10 or more persons desiring to borrow money on farm-mortgage security.

Each association shall elect a board of five directors, who in turn shall elect a president, vice president, and secretary-treasurer, and a loan committee composed of three members, all officers and directors except the secretary-treasurer to serve without compensation unless the Federal farm-loan board should provide for same.

Membership in the farm-loan associations is restricted to borrowers. Members may borrow not less than \$100 nor more than \$10,000. A member shall own stock in the association to the extent of 5 per cent of his loan, and his stock is held as additional security. Dividends on the stock, however, are paid to the owner. The stock is accepted as cash in final payment of the loan. A member may include the price of his stock in the face of his loan.

Shareholders are liable only for their own loans, except to the extent of double the value of their stock. To illustrate, a farmer desires to borrow \$10,000 for the purpose of refunding a loan carried at a higher rate of interest, for stocking up his farm, for buying more land, or making improvements. He will first join a local farm-loan association and make application upon form furnished. If his application is accepted he will purchase \$500 worth of stock and deposit same with the bank as additional security. He is liable for only \$1,000 in excess of his individual loan. When he makes application the land offered as security is examined by the loan committee and appraised by them. The report is filed with the directors of the association. The Federal land bank also appraises the land, and will make no loan unless the report of its appraisers is favorable.

Only first mortgages will be acceptable for loans, and will be made with a provision for repayment upon amortization plan by means of annual or semiannual installments sufficient in amount to cover the interest and the charge for administration expenses, which shall not exceed 1 per cent, and such further amount as will extinguish the whole debt at the maturity of not less than 5 years nor more than 36 years. The borrower, however, may make additional payments in multiples of \$25 toward the reduction of the principal.

Loans will draw interest at a rate dependent upon the price at which the farm-loan bonds may be sold, not to exceed 6 per cent, however, and may be made for the following purposes:

1. To purchase land for agricultural purposes. To purchase live stock and equipment.

3. For the erection of buildings.

To refund existing mortgages.

5. To liquidate indebtedness incurred for any of the foregoing

Loans will not be made for over 60 per cent of the value of the land, plus 20 per cent on the insurable improvements. Loans will be made only to actual farmers or persons desiring to become such.

In the event the land is sold the purchaser may elect, within 60 days, to assume the mortgage and the stock. If the member dies, his heirs have the same option. The usual course is followed as to the payment of insurance premiums, taxes, and local assessments against lands.

In case no association is formed in a locality agents approved by the board may be employed by the Federal land bank to make

The bill provides for the organization of joint-stock banks for carrying on the business of loaning on the security of farm mort-

gages and issuing farm-loan bonds.

Such bonds are to be offered to the investing public at a conservative rate of interest. The bonds are to be exempt from taxation, and by the Lever amendment, adopted by the committee, the United States will guarantee the interest on the The bonds will be secured by first mortgages, the guarantee of the associated banks, and the double liability of the stockholders, and ought to sell at a rate which would provide ample funds at low interest rates.

The funds available will be, first, the initial capital of \$750,000 for each of the 12 district banks; second, the proceeds of the

sale of the bonds.

The farmer is to get the money at a rate to be determined by the rate at which the bonds sell, plus the cost of administration, not to exceed 1 per cent.

The gentleman from Oregon [Mr. HAWLEY], who has had 15 years' experience as a bond buyer in the interest of fiduciary and trust funds, has stated that these bonds are most excellent; that he would not hesitate to invest trust funds of the most sacred character in them.

They ought to sell at a rate, after the system is established, that would provide funds required by the farmers at a rate of 4½ per cent interest.

It will readily appear that this measure will be of great benefit to all classes of the country. The cities of the East will receive a more ample supply of food at a reasonable cost. The extortionate interest rates paid in the South and West will be reduced. The investing public will be able to secure a most reliable bond, exempt from taxation, as safe as the promise of a government, and drawing a fair and equitable rate of interest. All classes and conditions of every section, therefore, will be benefited by the operation of the bill.

The wonder is, Mr. Speaker, that its enactment has been so long deferred. One is inclined to inquire: What powerful influences have opposed it? How did it happen that other nations whom we would not consider our equal have advanced so far beyond us? Have those who have profited by the excessive rates of interest charged farmers exerted any influence?

In this connection it may be interesting to know that the Chamber of Commerce of New York passed on the 4th of this

month the following resolution:

Resolved, That the Chamber of Commerce of the State of New York opposes any method of agricultural banking in the United States that requires the use of Government funds or the use of any postal savings deposits in any rural banking projects, or any legislation exempting from taxation any particular class of obligations.

This same chamber of commerce, together with the bankers' associations generally of the great cities, strenuously opposed the Federal reserve act, whose far-reaching benefits have extended throughout our country and have prevented during the present crisis in affairs of the world the panic which even the same interests predicted as inevitable.

They evidently want all those funds for their own use

This bill provides no special favors nor privileges; but even if it did it would do no more than tend to even the score because these same interests have long flourished through special privileges and the fostering care extended by the Government at the expense of the rest of the country.

They opposed the great Federal reserve act because it sought to divert a portion of the country's funds away from their banks in New York and thereby discourage their speculative opera-tions. They may oppose this bill for similar reasons because it

also would tend to equalize the rates of interest.

The manager of the Utah-Idaho Sugar Co. stated in my presence that his company could secure more capital than it needed for building factories and buying sugar beets in Utah and Idaho at 4 to 4½ per cent interest. The money was literally urged upon them. At the same time the farmers who produced those beets were obliged to pay some broker a commission of 2 per cent to secure him a loan on better security at from 8 to 10 per cent

We are told that interest rates to the farmers are so much higher in this country because opportunities for investing capital at such rates are so much greater and more numerous. This bill is designed to destroy some of the opportunities for the exaction of extortionate rates of interest and bring the price of capital down to such terms as will enable honest, industrious men to use it and survive. We can surely do what other less-favored nations have done to the end that a wrong, gray with age, already too long endured, may be righted and simple justice may at last be accorded to the patient tiller of the soil.

Rural Credits.

EXTENSION OF REMARKS

HON. CHARLES B. TIMBERLAKE,

OF COLORADO.

IN THE HOUSE OF REPRESENTATIVES,

Monday, May 15, 1916.

Mr. TIMBERLAKE. Mr. Speaker, it is a statement well within the limits of the exact truth to say that the legislation proposed in the bill under discussion, known commonly as the rural-credits bill, deals with a question of greater importance to the welfare of the general public than any other which has called for action by Congress for a considerable period. It is but natural that I personally should be keenly interested in this measure for a double reason: First, because I represent a district largely agricultural in its population, to whom this measure is of first importance; and, secondly, because I realize that any legislation vitally affecting the best interests of the farmer

and of the rural population, generally, affects the interests of the whole country in the highest degree.

This Congress could render no greater service to the country than by facilitating in every proper way the growth of agri-culture for the reason that it forms the basis of all wealth and prosperity. That the country has not given it the help and support it deserves is evident from the fact that in the 10-year period, from 1899 to 1909, while our urban population increased 44 per cent our rural population increased only 11 per cent. With wise legislation the wide disparity of these figures should gradually disappear.

what has been the experience of other countries in this matter of rural credits? It has certainly been the subject of earnest consideration by other people. The Rural Credits Commission appointed by Congress, after studying this whole question, emphasized in its report the great benefit that European countries are deriving from their mortgage-credit societies. The commission of the countries are derived that the condit bonds issued that the condition of the countries are derived to the countrie sion also lays stress upon the fact that rural-credit bonds issued by the various nations of Europe rank well with Government bonds in stability and in the rate of interest secured. The commission says:

mission says:

In 1906 there were 25 farm-loan banks in Germany advancing to the farmers more than \$755,000,000 upon real estate mortgages. The cost to the farmer marged from 3½ to 4 per cent per annum. In recent years the amount loaned has greatly increased. This cooperative movement has now secured a foothold in almost every civilized country in the world. It is doing splendid service in India and in Japan. In Canada there are now over 150 cooperative land banks. In Denmark, also, many facilities of mortgage-loan banks are offered the farmer. Four-teen banks, dealing only in first mortgages, had a total of nearly \$424,000,000 outstanding in mortgages in 1910, in addition to about eight other associationss which granted further credit upon second mortgages. The total credit received by farmers in Denmark from these sources in one year is estimated by the institute of agriculture at \$220,000,000.

The commission infers that a proper system installed by the Government of the United States could be made a great national

benefit to both investors and borrowers.

The International Institute of Agriculture makes the statement that in the various countries of Europe the farmer is able to obtain loans for long periods at low rates of interest and that the systems there in vogue seem to have been uniformly successful, both from a borrower's and lender's standpoint.

As has already been stated by several authorities on this sub-

ject, and particularly by the gentleman from Oklahoma [Mr. Morgan] in his valuable book on land credits, in this proposed legislation great interests are involved. The passage of this bill will affect the prosperity and well-being of more than six and a half millions of farmers and of more than 45,000,000 men, women, and children now on our farms, who are directly and vitally interested in all matters pertaining to the extension of rural credits. Everyone naturally wants the farming communities of our country to keep pace with our cities, and the lack of proper credit facilities for the farmer has been the one thing that has held back the development of the farm.

The full significance of the fact that the value of agricultural

Interests and the value of farm products is greater in the United States than in any other country is seldom properly appreciated. Statistics show that the value of farm property in 1910 was approximately \$41,000,000,000, of which some twenty-eight and a half billions was in land. The annual returns were about

eight and a half billions.

From figures given by the Secretary of Agriculture in one of his reports it appears that our banks have extended to the non-farming population over \$18,000,000,000 in credit and to the farmer only about two billions. When one appreciates the fact that our farmers and their families constitute more than one-third of our population, the inadequacy of their facilities can be realized, from the statement that our hards have can be them but one-ninth of the country's credit. The total bank loans and investments in securities of various kinds amount to nearly \$21,000,000,000; but on farm lands they do not equal \$550,000.000. Only 2½ per cent are on farm-mortgage securities, the remaining 97½ per cent being upon securities other than farm lands. It is said that the farm lands in this country constitute one-fourth of the wealth of the Nation, and yet the banks extend them but one-fortieth of the credit at their disposal.

These figures clearly indicate that the same consideration

has not hitherto been given by the Government to credits of the farmer as is given commercial credits. If the bill before the House does this, it will afford an adequate measure of relief; if it does not, it will fall below the expectation of the country.

The statement is therefore reiterated, Mr. Speaker, that it is the manifest duty of this House to pass such a bill as shall effectually and speedily remedy the very limited credit facilities at present available to the farmer, thus enabling him to obtain without difficulty, on the security of his farm property, such loans as are consistent, for such periods and at such low rates as shall be just and proper. This, more than any other one thing will aid agricultural development; it will tend to make farm life more desirable and more enjoyable; it will add materially to the wealth and resources of the country; and, at the same time, it will attract others to farm life and tend to minimize the evils of overcrowding the cities. For these reasons I am in favor of the bill.

This bill to be effective, to furnish in adequate measure the relief so urgently desired, and to satisfy the requirements of modern agricultural operations, should make full provision for the prompt and easy extension of long-time loans, at low rates of interest, and it should also include a provision that the bonds authorized under the bill shall be free from all taxation. This last condition will in itself tend to lower the interest rate of such loans as are made under farm mortgages. To tax bonds which are issued for the purpose of raising the necessary funds to improve the land would be most unjust in that it would impose upon the farmer a double burden. He already pays taxes on the land which he owns and which would be mortgaged to furnish the necessary security. That these mortgages should be exempt from taxation is evident, for it naturally follows that to tax the same would be double taxation, and in the end paid by the farmer in the additional rate of interest it would be inevitable he would have to pay.

It is essential that longer credits be extended the farming communities than it is either desirable or necessary to extend to the commercial circles. The farmer secures, as a general rule, but one crop a year, and his period of revenue recurs but once every 12 months. Thus between one revenue period and another nearly a year elapses. Many are the needs of the farmer, and money is oftentimes urgently necessary to carry into effect improvement of farm property which increases the yield of the soil, makes farming more profitable, and tends to make country life more attractive and prevent that exodus to cities which is so detrimental to the best interests of the Nation.

Farm-loan bonds, the issuance of which by competent authority is authorized in the bill, should, in the very nature of things, be the best security obtainable and consequently they should find a ready market at rates of interest low enough to meet the views of the farmer borrower, and yet yield satisfactory returns to the conservative investor who would desire to purchase them on account of the stable character of the security behind them. There would seem to be no good reason why the bonds proposed should not be designated as "United States agricultural bonds," thereby giving them a certain dignity and stability which would be helpful and which would justify them in drawing the same low rate of interest as is earned by other Government bonds. Such a name would also tend to facilitate their ready sale both in the United States and in such European countries as invest largely in the approved securities offered in this country.

Many of the provisions of this bill were sought to be changed in the committee, and there several had my support, believing that by the incorporation of these amendments the bill would be more workable and produce better results. The provisions of the amendment of the gentleman from Oklahoma [Mr. Morgan] in doing away with the joint-stock banks to my mind would have had the tendency to reduce the machinery, hence reduce the expense, which in the end must be borne by the borrower in a higher rate of interest on his loan. In my judgment also the amendment offered by the gentleman from Pennsylvania [Mr. McFadden] to reduce the 12 Federal loan banks to one central Federal loan bank, which also contemplated that the farm-loan association banks should be eliminated, would have had the tendency to further reduce the machinery, which is expensive, a consequence of which would have been to make still further reduction of interest rate to farmers possible, would have materially benefited the bill. It would have had the tendency to make uniform the rate of interest borne by the bonds of the whole country, issuing as they would from the one source.

It is apparent, however, that it is the judgment of the House that the bill should pass in its present form, and, accordingly, I shall gladly give it my support and vote for it. I think it a wise beginning. Its defects will be discovered when put to actual test, and if they are found to exist further legislation will correct them. At least a start is made in the right direction and the fundamental principles are correct, namely, a long-time loan at what I hope will develop a reasonable rate of interest, with interest and principal paid upon the amortization plan, to a class of our citizenship heretofore, in my judgment, discriminated against, who were always able to furnish the best security that the country affords.

Rural-Credits Bill.

EXTENSION OF REMARKS

OF

HON, WALTER L. HENSLEY,

IN THE HOUSE OF REPRESENTATIVES,

Monday, May 15, 1916.

Mr. HENSLEY. Mr. Speaker, I desire to congratulate the Committee on Banking and Currency on presenting to the House the rural-credits bill, which is now under consideration. This is the second great piece of constructive legislation which has come from this committee during the present Democratic administration. The banking and currency act was the first one. It has been upon the statute books for nearly two years, and, according to the very best authority on the subject, it is a positive guarantee against panics, which were under the old law at will visited upon the country by the large banks and financial interests of the great cities.

The blighting influences resulting from these money panics in each instance have cursed the entire country for long periods of time. In many instances these panics were brought upon us in spite of every evidence of material prosperity. This administration very promptly corrected that evil. No former administration has ever given the country legislation on the subject of rural credits, notwithstanding the insistence of the people in their demands for it. And there is no real or satisfactory explanation that you on the other side of this aisle can make as to why you did not respond. Again it remained for this administration to remedy the situation, thereby substantially aiding the farmers of the country. Therefore this administration has presented this comprehensive rural-credits bill, in response to the crying need for money at a lower rate of interest in the country districts everywhere. When this bill is passed and is in operation it will enable the farmers to borrow money on real estate at a much lower rate of interest than they are now required to pay.

required to pay.

The total indebtedness of the whole country, as we are advised, is \$6,000,000,000. The 12,000,000 farmers of the United States have their farms mortgaged for something around \$3,000,000,000, and they are paying at present the average rate of \$½ per cent interest on this tremendous sum. This represents \$255,000,000 annually which the farmers pay in interest. If the farmers could borrow this money for 6 per cent interest, the highest rate that will be permitted under this bill, it would effect a saving to them of \$75,000,000 annually.

Industrial bonds usually sell at par when bearing only 5 per cent interest. So, Mr. Speaker, I say there is under the present system wrongfully collected from the farmers of the country on excessive interest charges from \$75,000,000 to \$100,000,000 annually which this legislation will save to them. Each farmer who has a mortgage on his farm can easily estimate the saving which this Democratic measure will mean to him annually.

Mr. Speaker, is this not good legislation? Is it not desirable

to save the farmers this tremendous amount of money annually? Although this administration has placed upon the statute books many laws beneficial generally to all our people, the farmers are confidently expecting this additional legislation. And with the best security in the world, such as farm lands constitute, there is no reason why they should not obtain money at as low a rate of interest as it can be obtained upon any other securities. Is there any reason why the farmers should pay a higher rate of interest on the money they borrow than the merchants and other business men pay on the money they borrow? It is not fair that they should be charged more. This bill will remedy that situation. It should have been done long ago; and, to my mind, there is no reasonable excuse that you on the other side of this House can assign why you did not enact a law of this character when you were in power. I rarely ever say anything political upon the floor of the House, but I can not refrain now from saying that although you may criticize this piece of legislation-apparently because you are afraid that it will reflect too much credit upon this administration-I predict that you will confine yourselves to criticizing the bill, and that when we reach a vote on it you will vote for it by the scores, as you have done frequently concerning other wholesome legislation which you had denied the people and which was given them

by this administration.

The query arises in my mind, Why did you not put legislation of this character upon the statute books when you were in

power? It was needed then as badly as it is needed now, but you refused to respond to the people's demand. You were either not concerned about the needs of this great body of people-the farmers of America-whom this legislation is intended to aid or you were willing to see the money changers gouge them to the extent of these millions annually. It may be necessary in the future to make changes in this law in order to perfect it, but it is a start in the right direction at least, and, if found necessary, it can be amended from time to time, Mr. Speaker, I very gladly give this measure my support.

Rural Credits-If the Farmer Has Money, We All Have Money.

EXTENSION OF REMARKS

HON. WILLIAM J. CARY. OF WISCONSIN,

IN THE HOUSE OF REPRESENTATIVES,

Monday, May 15, 1916.

Mr. CARY. Mr. Speaker, the great question of rural credits has been a subject of deep and vital interest in this country for many years. It affects directly the welfare of some 40,000,000 people engaged in agriculture, and it affects, indirectly, the entire country.

I have been consistently in favor of legislation on this ques tion ever since I have been in Congress, and although this bill is not, perhaps, entirely perfect, it is a step in the right direction and will be the foundation of as valuable financial and economic progress as the Postal Savings System has been.

It is somewhat amusing to note that big capital, as usual, is more or less hysterical over the question, just as it was when the Postal Savings System was proposed and just as it always will be when any remedial legislation will be proposed in the

City Members have protested and used that old, timeworn argument that the city would receive no benefit from legislation

affecting rural communities only.

It seems strange that people will not understand the obvious truth that city and country are never independent of each other. The farmer can not dispose of his product without a market, and the market just as certainly can not do business without a product to buy and sell.

As a matter of fact, agriculture is the cornerstone, the very foundation, of solid national prosperity, and no nation can long endure without a nucleus of prosperous and successful farmers.

The Germans have an old saying, "Hat der Bauer Gelt, hat's die ganze Welt "-if the farmer has money, the whole world has

Realizing that agriculture was the backbone of a country's prosperity, Germany, over a century ago, established a rural-credit system, and although her "landschaft" debentures have long since been independent of financial aid from the Government, the system was financed by the Government at its inception and is to-day under governmental supervision. The result has been a most wonderful agricultural development. Nearly 70,000,000 people exist in comfort on an area much smaller than the State of Texas. Eighty-six per cent of the farms are tilled by their owners, as against 64 per cent in this country and about 50 per cent in England. At no time has this fostering care of agriculture shown such marvelous results as to-day. Surrounded as Germany is by an iron ring of foes, her ports and frontiers practically closed to foreign trade, she is able to bid defiance to her foes and produce enough to feed her people within her own territory.

Little Denmark, a country smaller than some congressional districts, advanced \$5,360,000 without interest to finance the Mortgage Bank of Denmark and still lends governmental financial aid to small holders. Here, again, the evils of tenant farming have been practically eliminated and a host of land-owning small farmers are able to produce from comparatively unfertile soil a wealth of product that makes the Danish farmer one of the richest in proportion to his holdings in the world.

Sweden is another country in which a Government-endowed mortgage bank has proven of incalculable benefit, and wherever in Europe a rural-credit system has been in existence for any time we find the same beneficent result, the elimination of tenant farming and the protection of the small farmer from the rapacity of the loan shark and the usurer.

The amount of money we will appropriate is small compared with other appropriations, and I venture to predict that the benefits that will accrue will exceed even the most optimistic advocates of rural credit.

Mr. Speaker, so much has been said of the farmer and his value to the country that I will not go into elaborate details, but this much is self-evident, our country was started on its

glorious way by farmers.

From Washington to Lincoln and throughout our history the majority of our greatest soldiers and statesmen have come from

rural communities.

In times of peace the rugged and virile sons of farmers have brought their country-nourished vitality to our toil-worn cities. In times of war the boys from the farm have ever been in the forefront of the battle line.

Let us then by this and other legislation inspire the farmer with confidence in his country and its future. Let city and country work out together the glorious destiny of a land that knows neither class nor caste, where prejudice and oppression can not exist, but where a race of men and women shall live for all time to come in peace and plenty, harmony and fraternity,

equality and liberty.

Military Establishment.

EXTENSION OF REMARKS

HON. CHARLES BENNETT SMITH.

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Monday, May 22, 1916.

Mr. SMITH of New York. Mr. Speaker, in taking up the subject of national defense the present Congress was confronted by a new and extraordinary situation. In former years little public interest was manifested in the size or composition of the Regular Army and the major part of the home influence ex-erted on the House and Senate was in favor of small appropria-The conceded helplessness of the United States in a military way was made evident by the lessons of the European war and was emphasized by the spectacle presented on the Mexican border when the President was obliged to appeal to Congress for an emergency increase of 20,000 Regulars to repel an invasion of Mexican bandits.

A propaganda, part of which, unquestionably, was instituted by patriotic and sincere men and part of which was brought about by not altogether disinterested or unselfish individuals, flooded Congress with letters, telegrams, petitions, and resolutions demanding a larger Regular Army and a reserve force capable of meeting every demand for national defense. The Committee on Military Affairs of the House held hearings for several weeks—listening patiently and intently to members of the General Staff, officers from the War College, representatives of the National Guard, and citizen experts who volunteered information as to the composition of an American Army adequate

to our present needs.

HOUSE PROVIDES FOR 140,600 MEN.

In reporting a bill the committee recommended a standing army of 140,000 men, with a plan for federalizing the State militia so that the State troops would automatically join the United States forces on the call of the President. It may be explained that the Army at the time the expeditionary force went to Mexico was distributed as follows: Panama Canal Zone, 7.300 men; Philippine Islands, 13.000; Hawaii, 9.000; Porto Rico, 800; China and Alaska, about 800 men, which, deducted from the total force of 86,500 troops, left in all in the United States approximately 55,000 men. Among the reasons given by the committee for refusing to favor a larger Army were these:

Gen. Scott, Chief of Staff, gave testimony to the committee that in time of peace a regular force of 135,000 men would be adequate to our requirements. That does not mean Gen. Scott

favored a maximum of 135.000 men. His statement, however, was used as an argument for a small Army.

The contention was further made that a Regular Army must of necessity be a mere nucleus to a war footing and that the important feature of our national defense must be in our reserve

CONTINENTAL ARMY REJECTED.

The committee rejected the recommendation of Secretary Garrison for a volunteer or continental army, which would be re-cruited under the direction of the War Department and would be trained in summer camps by officers of the Regular Army. Those who favored the continental plan were of the opinion that a competent reserve force of 400,000 to 500,000 men could be trained in a brief period and at a comparatively small expense and that the men so recruited as reserves would belong to the best class of our American citizens. They would come from industrial and commercial life and from the professions, and the enlistments would be solely for the highest and best patriotic reasons,

The committee, however, took the position that the number of volunteers would be numerous and the plan undoubtedly successful in times of national excitement like that now prevailing as an effect of the European war or because of our present or prospective differences with Mexico. It was the belief, however, that in ordinary times and in the absence of this unusual state of mind interest in military activities would pall and the continental force would dwindle to nothingness.

AMERICAN TRADITIONS.

Further objection was made to an Army of more than 140,000 men by citing the attitude of former Presidents of the United States. James Madison, for example, speaking on the Constitution, said:

As the greatest danger is that of disunion of the States, it is necessary to guard against it by sufficient powers to the common Government; and, as the greatest danger to liberty is from large standing armies, it is best to prevent them by an effectual provision for a good militia.

President Washington spoke as follows in his farewell address:

We will avoid the necessity of those overgrown military establishments which under any form of government are inauspicious to liberty and which are to be regarded as particularly hostile to republican liberty.

In 1812 John Adams expressed himself as to United States policies as follows:

The danger of our Government is that the general will be a man of more popularity than the President and the Army possess more powers than Congress. The people should be apprised of this and guard themselves against it. Nothing is more essential than to hold the civil authority decidedly superior to the military power.

In 1835 Andrew Jackson referred to the subject in this language:

A large standing military force is not consonant to the spirit of our institutions nor to the feelings of our countrymen, and the lessons of former days and those also of our own times show the danger as well as the enormous expense of these permanent and extensive military organizations,

Other Executives referred to the subject, but most of them in recent years dwelt on the importance of strengthening the militia rather than on the desirability of increasing or diminishing the Regular Army.

The argument was reiterated that the policy of the country had been consistently against a great Military Establishment and that grave danger would arise from any change in this traditional national principle.

When the bill came before the House, the ranking Republican member of the Military Committee, Mr. Kahn, of California, offered an amendment to increase the size of the standing army from 140,000 to 220,000 men. This amendment was defeated by a meager majority, and the bill itself was adopted with the provision for 140,000 men as the peace basis of the Regular Army.

It is interesting to analyze the vote on the Kahn amend-

It is interesting to analyze the vote on the Kahn amendment, because it illustrated the difference in sentiment in various sections of the country and explains a phase of the preparedness fight in Congress which can not be understood fully by those unfamiliar with the sectional viewpoint. The delegations from Connecticut, Delaware, Massachusetts, New Hampshire, New Jersey, and Vermont voted solidly in favor of the Kahn amendment providing for an Army of 220,000 men. Only two Members from New York State voted against the amendment, those being the Socialist, Mr. London, of New York City, and Mr. Fitzgerald, of Brooklyn. Five Members from Pennsylvania voted against the Kahn amendment.

FOR A SMALL ARMY.

Among the States whose delegations voted against the Kahn amendment were these: Arkansas, Florida, Georgia, 9 out of 13 in Indiana, Kansas, Louisiana, Mississippi, Montana, North Carolina, North Dakota, Oklahoma, South Carolina, South Dakota, Tennessee, Texas, and Virginia.

The vote was not divided on party lines, but the tendency was evident on the Democratic side to support the committee and a smaller Army.

Democrats from the New England States, however, voted solidly against the committee and for a larger Army while the sentiment of Members in the South and the Central Western States was, generally speaking, against any large preparedness program. It is probably true that Members from these sections actually represented the sentiment of their districts in voting

against the Kahn proposition. To use their own expressions they refused to be stampeded into revolutionizing an American policy because a few persons on the Atlantic coast were afraid that a hostile fleet would arrive some morning and destroy property and lives along the eastern border. They pretended to believe that the demand for preparedness was promoted and accelerated by the munitions manufacturers.

In the Senate the Chamberlain bill was under consideration after the Hay bill had been disposed of in the House. The demand for a larger Army and for a more definite plan for a reserve force had reached the interior, and this influence was felt in the final vote on the Senate bill. The House had voted down a provision for 220,000 men, yet the Senate inserted by a substantial majority a provision for 250,000. The Senate also included a provision known as section 56 providing for a Volunteer Army on a plan somewhat similar to that which was recommended by Secretary Garrison, and which was responsible for the separation of Mr. Garrison from the present administration.

DIFFERENCE BETWEEN THE BILLS.

The most radical difference between the Senate and the House bills was in the number of Regular troops and in the plan for a Volunteer Army instead of the federalization of the State militia. The Senate also included an appropriation for a nitrate plant on the theory that we would be helpless for ammunition in the event of war if our Navy were destroyed and we were unable to import nitrate for munition purposes.

A provision, which was almost identical in the Senate and House bills and which did not attract the attention it deserved, was one which Mr. Gard of Ohio presented. It provides an extensive and comprehensive plan for the training of college students to become Army officers. The provision was adopted by the Senate and House conferees. The Gard provision was prepared after much intelligent and arduous labor. The plan involves the assignment of Army instructors to colleges where at least 100 students will agree to train, with a view to becoming reserve officers. The War Department will provide a sufficient quota of instructors to meet every demand, and it is estimated, on the assurance of college and Army authorities, that at the end of 10 years not less than 50,000 well-trained men, capable of acting as officers of the Army, will be turned out by these colleges. An allowance will be made to the students themselves for cer-

An allowance will be made to the students themselves for certain work they perform, and while the allowance is not large it will be an additional inducement to students to place themselves under the direction of Army instructors. As the training continues the number of students will increase, and while the plan may not meet fully the expectations of those who projected it, and may fall short of meeting the country's requirements for officers in the event of war, it can not fail to be of the greatest importance as a plan for reserve officers, an arm of the service which is now greatly lacking in actual and reserve efficiency.

which is now greatly lacking in actual and reserve efficiency.

When the Senate and the House bills were passed the conferees of the two Houses could not agree and returned to their respective bodies.

The conferees had difficulty in agreeing on a bill but finally adopted a compromise plan, providing for an Army of a strength outlined in this language:

THE STANDING ARMY.

The total enlisted force of the line of the Regular Army, excluding the Philippine Scouts and the enlisted men of the Quartermaster Corps, of the Medical Corps, and of the Signal Corps, and the unassigned recruits, shall not at any one time, except in the event of actual or threatened war or similar emergency in which the public safety demands it, exceed 175,000 men.

The proposed army is to be raised in five annual increments, and will not reach a maximum strength until the end of five years. It is estimated that about 12,000 men will be added annually to the Regular Establishment, so that this country will have at the end of one year approximately 120,000 men. The increase does not involve a change in the traditional policy for a small standing army, and, considering the enormous increase in population, the demand for the assignment of soldiers to Panama, the Philippines, and elsewhere, it may be truthfully said that the provision for the standing Army is as conservative as any ever enacted into law since the Union of States organized a Central Government.

It may be argued that when the five years have elapsed and the Army is up to its full strength we will have a force of acknowledged and, for the United States, of unprecedented numbers. Permit me, while we are considering the figures in the Hay-Chamberlain bill, to draw the attention of the House to the recommendation of the War College as to the men actually and urgently needed to safeguard the country against attack. The War College recommendation is incidental to an investigation conducted at the request of the Secretary of War and Chief of Staff and was submitted in September, 1915. I quote from the

official report of the War College Division as to the country's requirements:

WAR COLLEGE ESTIMATE.

Combining all previous estimates of Coast Artillery and mobile troops required for service an over-sea garrisons and at home, the following tabular statement of the required strength of the Regular Army in units appropriate to each arm, results, viz:

Localities.	Infan- try regi- ments.	Cav- alry regi- ments.	Field Artil- lery regi- ments.	Coast Artil- lery com- panies.	Engi- peer bat- tal- ions.	Signal Corps bat- tal- ions,1
Philippines*	9 9 9	3 1 1	3 2 1	26 14 21	1½ 2 2 2	1 1 1
Porto Rico Praga Sound area California North Atlantic States Middle West Mexican border United States	9 9	3 4 4 3 6	3½ 3½ 3½ 3½ 1	228	24 24 24 24 24 24	1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1
Total required	65	25	21	289	153	110

³ Includes aero squadrons.
² Nine regiments Infantry, 2 regiments Field Artillery, 2 battalions Engineers.
Filipinos to be added, 21,000 officers and men.
³ This estimate can only be verified by an inspection of all the harbors in question, for which inspection there has not been sufficient time since this estimate was received.

These figures may be summarized as follows:

Oversea : Mobile (combatant) Coast Artiflery Corps	74, 500 7, 500	82, 000
In United States: Mobile (combatant) Coast Artillery Corps	121, 000 27, 000	148, 000
Total: Mobile (combatant) Coast Artillery Corps	195, 500 34, 500	280, 000

To this total should be added officers and men for the Sanitary, Quartermaster, Ordnance Department, etc., appropriate to a force of this strength, amounting approximately to 30,000 officers and men. Including Philippine Scouts 21,000, the grand total becomes 281,000.

The wide discrepancy between the Regular Army as provided for in the bill and the recommendation of the War College furnishes its own comment as to whether the needs of national defense are met in the military program as adopted by Con-

The contention is made that wars are not fought by the Regular Army, but by the reserve forces. The provisions of the compromise bill in this direction are, therefore, of vital importance. The volunteer or continental army plan was reimportance. The volunteer or continental army plan was rejected by the House after it had been adopted by the Senate. The main reliance, in the final draft, is placed on the National Guard. The guard is federalized, and compensation for officers and men is provided, so that encouragement to enlistment and for energetic effort on the part of the officers is not lacking. It is estimated that the membership of the guard is now about 150,000 men.

STATE MILITIA ESTIMATE.

The advocates of the plan to use the State militia as the auxiliary or emergency army expect an increase in membership until 400,000 to 500,000 men will be enlisted and trained, ready to join in the patriotic duty of protecting the country in time of stress. I have no means of knowing whether the expectations of these optimists will be realized, or whether the federalization of the State militia will work a magic influence in inducing young men to join the guard. That is a situation which must wait upon the experiment.

In the meantime, however, it will have to be acknowledged that the reserve of the Nation will be virtually nil, and that our chief dependence in any present controversy must be on moral sussion, unless the offending or contending power shall have the courtesy to consent to await our convenience in train-

ing an adequate Army.

The National Guard has been assigned a great honor and a tremendous responsibility. Constant and rigid training will be required to reach the standard of the new reserve regulations. Time alone will decide the wisdom of treating the State militia as an arm of the Federal force instead of a State organization with State duties and obligations.

The statement is frequently heard that the country will develop a large reserve force under the plan of enlistment provided in the Army bill. The enlistment contemplates a service of three years with the colors and four years in the reserve. fact can not be overlooked in this connection that with the

meager standing Army maintained by the United States and the recurring expiration of reserve enlistments, the reserve will never reach a size or importance worthy of great national dependence in case of war.

THE COUNTRY'S DANGER.

In conclusion I desire to express myself emphatically against any plan or principle which would develop a military atmosphere in the United States. More dangerous, however, than this phere in the United States. More dangerous, however, than this undoubted evil is the policy of a truly great nation trying to retain governmental standards for 100,000,000 persons solely because these standards and policies, through a kind Providence, met the demands of a group of States with 3,000,000 souls.

This country is not yet aroused to its urgent requirements. Congress is awaiting the word from "back home" as to how much preparedness is actually desired. We have a form of government necessarily unwieldy, where one section can not dominate the sentiment of another. To my mind we are inviting calamity by delaying the plan of genuine preparedness. And yet, according to the viewpoint of many intelligent and patriotic Members of Congress I am influenced in my judgment by the "hysteria" which has visited a part of the country, but which

has left a large part distractingly calm and unmoved.

The work of education must go forward until the whole Nation shall realize that our security should not be left to uncertainty or chance. Our liberty must be safeguarded beyond a question of doubt in the minds of our own people and with the control of the province of the provinc convincing definiteness among those nations who may be envious

of our freedom or covetous of our possessions.

"Thou Shalt Not Bear False Witness Against Thy Neighbor."

EXTENSION OF REMARKS

HON. MARTIN DIES. OF TEXAS.

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, May 23, 1916.

Mr. DIES. Mr. Speaker, I have heard a great deal of criticism of Members of Congress for mailing out parts of the Con-GRESSIONAL RECORD, free of postage, under the franking privilege. There are probably some abuses of the law, but there are cases where sending out parts of the Record is not only justifiable but of the highest importance to the public interest and the integrity of the public records. A man by the name of Howth is a candidate for Congress against me, and he is using large sums of money in an effort to mislead the people as to the records of Congress. If I could be present in the district I could and would denounce these misrepresentations of the public records. But Congress is in session at Washington, which is more than a thousand miles from Texas. Congress is considering and deciding the most important questions of the age. We have passed again at this session the good-roads bill. We have just passed the farm land and loan bill, or ruralcredits bill. We have just passed the compromise Army bill, and the naval bill will be before us soon. Many matters of great importance are yet pending in the Congress, and white they are up for settlement I do not feel that as a representative of the people I ought to leave my post of duty at Washington and go down to Texas to defend the integrity of the public records and my own record as a public servant. Therefore, I shall "stay on the job" while important matters are pending, and correct the misrepresentation of the Congressional Recomb and of my own record by printing the truth in the Congres-SIONAL RECORD and mailing each poll-tax payer a copy of the truth under my frank as a Congressman. I have served the people faithfully. No dirty dollar has ever crossed my palm. I have never permitted any person, natural or artificial, directly or indirectly, to contribute a dollar to my campaign expenses. I have always paid for my own campaigns. I shall do so in this campaign. Under these circumstances it is an outrage for any man or set of men to flood the district with printed statements misstating the records of Congress. If it is spiritual death for a man to "bear false witness against his neighbor," who is present and can defend himself, it ought to be both spiritual and political death for a candidate to "bear false witness" against his Congressman, who is absent in the line of

Following is one of these false circulars. I print it in the Congressional Record just as it is being handed out. A gentleman wrote me from Port Arthur, Tex., that a man was

employed to stand at the gates of the great refineries where thousands of working men are employed and hand each man one of these circulars. The circular is untruthful. It is a perversion of the solemn records of the Government, It is an outrage against a faithful public servant. The perpetrators ought to be ashamed of themselves.

Here is the circular word for word, and letter for letter, as it is being circulated:

LAWS TO PROTECT THE RIGHTS OF LABOR, AND TO PROTECT CHILDREN FROM OVERWORK NOT FAVORED BY MR. DIES.

LAWS TO PROTECT THE RIGHTS OF LABOR, AND TO PROTECT CHILDREN FROM OVERWORK NOT FAVORED BY MR. DIES.

Mr. DIES was present and did not vote on a bill providing that injunctions shall not be issued without giving the parties to be encioned notice and an opportunity to be heard, unless immediate and irreparable injury is likely to ensee to complainant and delay would probably permit the doing of the act sought to be restrained, in which event a temporary restricting order can be issued at the discretion of the judge; that security shall be given by the parties seeking the issuing of restraining orders for the payment of damages to parties who may be injured oy being wrongfully enjoined; that every injunction shall give the reason for its issuance in specific terms; that no injunction shall be issued for any cause arising out of the labor dispute, except to prevent irreparable injury to property or property rights of complainants, for which injury there is no adequate remedy at isw: that injunctions shall not be issued to prevent strikes and the peaceable activities necessary to their conduct or from doing anything which might lawfully be done in the absence of such dispute by any party thereto.

He was also present and did not vote on a bill relative to trials of contempt of court, by providing for a jury trial, if demanded by accused in case of indirect contempt committed outside the presence of the court.

These bills were advocated by the American Federation of Labor.

In 1913 the House had up the matter of passing over the President's vot on a mendment to an appropriation for \$300,000 for enforcing the antitrust law, which amendment provided that no part of the money should be spent to prosecute any party to an agreement to increase wages, shortening hours, or bettering labor conditions, or organizations of farmers to maintain fair and reasonable prices for their products. Dies was present and did not vote on a bill to establish in the Department of Commerce and Labor a bureau to investigate and report upon al

Trust.

He voted against the bill creating postal-savings depositories

The first statement in this false circular is that I was "present and did not vote" on the anti-injunction bill, and the bill to provide trial by jury for persons charged with contempt, where the alleged offense was not charged to have been committed in the presence of the court. The false circular truly says that "these bills were advocated by the American Federation of Labor." But it speaks an untruth when it says I was "present I was not only present but I was voting, and and not voting." I voted to pass the bill which is now the law, and which has proven satisfactory to organized labor all over the country. See official Record of the Sixty-third Congress, second session, page 9911. Later I was present and voted to adopt the conference report on this bill. See Congressional Record of Sixty-third Congress, second session, page 16344. I never voted against such a measure in my life. I was never "present and not voting" when such a measure was voted upon. I was never absent when such a measure was voted upon without being duly paired for the bill with a Republican who was against the bill.

The next charge in this false circular is that I was "present and did not vote" upon a proposition to pass an appropriation bill over the President's veto. The Record does not show that I was "present and not voting." The vote on this matter, which was of minor importance, occurred just as Congress was about to adjourn for the session. The Record shows that I did not vote. I have no independent recollection of the matter.

The next charge in this false circular is that I was "present and did not vote" to establish a certain bureau in the Department of Labor, known as the Children's Bureau. I was for the bill, as the CONGRESSIONAL RECORD shows, and was paired for the bill with Mr. Copley, a Republican, who was against the This bill passed the House April 2, 1912.

The next charge in this false circular is that I voted against appropriating \$165,000 for the purpose of investigating infant

mortality, dangerous occupations, and so forth, but that Congress voted \$600,000 to stamp out hog cholera. The fact is that I voted against the appropriation to investigate the infant mortality for the reason that we had already appropriated a sufficient sum for that purpose. In voting against that amendment I stood with the Democratic committee and voted with a majority of the Texas delegation in Congress. In the case of the hog cholera, I stood with the Democratic committee and voted with a majority of the Texas delegation in Congress.

The next charge in this false circular is that I was "present and did not vote" for what is known as the Federal child-labor law. The fact is that I was present and voted against that measure. My reasons for voting against the bill were, in the first place, that Texas already has on the statute books a better child-labor law than the one proposed; and, in the next place, the question of child labor is not a Federal question, but a State question, and I believe the people of Texas are competent to regulate the matter in their own legislature without having Congress interfere. The age limit in the proposed Federal statute was 14 and 16 years, while the Texas law provides for 15 and 17 years. I have heard no complaint against the Texas statute, and I voted against having Congress assume jurisdiction where, in my opinion, it has none.

The next charge in this false circular is that I was "present and did not vote" for a bill to investigate the Money Trust. I was paired for it with a Republican, Mr. Harris, who was against it.

The next charge in this false circular is that I voted against a bill creating postal savings depositories. The truth is that I voted for the Democratic bill, which would have helped the people, and against the Republican bill, which became the law and has never amounted to a row of pins. At the time the bill passed the House the Senate and the Presidency were Republican. The Democrats in Congress, under the leadership of CHAMP CLARK, proposed a substitute Democratic bill, for which

I voted, and with me voted nearly every Democrat in Congress. So much for the "false circular." I am denouncing it now through the Congressional Record, and when I get the people's important business attended to at Washington I shall go to the

district and denounce it in person before the people.

In the seven years that I have faithfully served the people of east Texas I have cast thousands of important votes. I doubt if any man from Texas ever served in Congress and stuck closer to the job than I have done. In the thousands of votes which have been taken since the people elected me I have been present and have cast my vote in nearly all of them; and I have always had the courage to vote one way or the other, as the Record shows. I do not recall now a single instance where I was "present and not voting," as stated in this false circular. In the few instances where I have been absent on roll call I

have either been sick or at an important committee meeting or otherwise engaged upon important public business. And even then I usually made a pair agreement with a Republican whereby neither of us cast a vote, which amounts to the same thing as if we had both voted.

Congress has been in session almost continuously since I have been a Member, and I have given faithful and constant attention to the public business.

The false circular above referred to is but a sample of the great mass of misrepresentation being poured into the public ear against me while I am absent from the district at my post of duty. Another charge made against me is that I have made no effort to reduce the pension graft, as I promised to do in my campaign for election. This charge against me is utterly false in word and in spirit. I have labored dilligently to stop the pension graft, and the press throughout the country have praised my work. From a long list I select the following newspapers that have commended my work against the pension graft:

The Baltimore Sun, the Indianapolis News, the Houston Post, Charlotte Observer, Mobile Register, New York World, Abliene Reporter, Beaumont Enterprise, Louisville Courier-Journal, Nashville Banner, Washington Pathfinder, State Topics, Tyler Courier-Times, the Chicago Post, New York Times, Fort Worth Record, Oklahoma News, Leslie's Weekly, Nashville Tennessean, the Houston Chronicle, the New York Sun, and many others.

One of these newspapers was edited at the time by Henry Watterson, the great Democratic leader; another was edited by Josephus Daniels, the present Secretary of the Navy. They were simply giving praise to a faithful public man for duty well performed. My opponent is simply trying to pick flaws in order to get an office,

PUBLIC BUILDINGS.

This opponent says in this false and unfair literature that in 1913 Congress wasted money on needless public buildings. Senator Morris Sheppard, who was formerly a Member of the

House, was chairman of the Committee on Public Buildings, and this public-building bill was prepared under Morris Shep-PARD's direction. The bill passed the Democratic House of Representatives, the Senate, was signed by the President, and became the law

In the second Texas district, which I have the honor to represent, there have been constructed the following public buildings: The Federal building at Beaumont, secured by Hon. S. B. Beaumont is a city of over 30,000 population, has a Federal court, and Mr. Cooper did a great service in securing the appropriation. The public building at Port Arthur was also secured by Mr. Cooper and does him credit. Port Arthur is one of the largest ports in the United States, is a port of entry, and a city of nearly 20,000 people. I secured the public building at Marshall, a city of more than 15,000 people, where postal facilities were sadly needed by the Government and the people. I secured an appropriation for a building at Nacogdoches, where a public building is soon to be erected. The site at Orange was secured by me, and Senator Sheppard secured the appropriation for the building. Nacogdoches is a large and important city, and Orange is coming forward as an important deep-water port This politician who is running against me will not say that these improvements should not be made, but he shrewdly points to the building at Anderson, S. C., Chickasha, Ala., Kalispell, Mont., and says they should not have been constructed. He does not state the facts as to these buildings. He merely read the Republican criticism of a Democratic measure and repeats it without investigation. If what he says had been true Morris SHEPPARD would not have sanctioned this bill, as chairman of the committee, and a Democratic House of Representatives would not have passed it. I am endeavoring to secure an appropriation to erect a public building at Lufkin and at Jacksonville, and the attack of this politician shall not prevent me from carrying on the work.

THE NAVAL BILL OF 1914.

In the effort of this candidate to pick flaws in my record, he criticizes me for voting against two battleships and in favor of one, in 1914. He conceals the fact that President Wilson and practically the entire Democratic Party were against the two-battleship proposition. Oscar Underwood was the Democratic leader in the House, and spokesman for the administration. Underwood led the fight against two battleships and in favor of one. I am proud of the vote I cast then, and when the European war is over and sanity comes again to our country, we will quit building these \$20,000,000 battleships, which hide from \$300,000 submarines and lie rotting behind the guns of harbors, impotent monuments of colossal waste and taxation.

THE SHIP-PURCHASE BILL.

He says I voted against the ship-purchase bill last year. Yes; I voted against the bill last year, because it carried a provision for permanent Government operation. The proponents of the bill cut that objectionable feature out of the bill this year, and I voted for it.

THE WAR-RISK BILL.

He says I was recorded as "not voting" on the war-risk bill. I was not present when the vote was taken. I was absent on account of sickness. There was practically no opposition to the bill, and the Democratic leader assured me that my vote was not needed to pass the bill. If I had been present, I would have voted for the bill.

After having circularized the district with the false statement that I was "present and not voting," this candidate made a speech, in which he said, "It is Dies's habit to sit mute and not vote on these big questions." No greater injustice was ever done a public man than that. I do not recall having ever declined to vote upon any question in Congress. I have always voted my convictions and spoken them.

PARCEL POST.

This candidate tries to leave the impression, although he does not say so directly, that I have opposed the parcel-post system. Why, I have advocated parcel post ever since I was a boy, and always voted for it and never against it. There are thousands of men in east Texas who heard me preaching the parcel-post system more than 25 years ago. There was never such a law in the United States until I came to Congress, and I did my full share to make the system what it is.

In every instance where this man says I was "present and did not vote" he speaks an untruth, and the records of Congress show it. I have endured this wholesale misrepresentation silently, in the hope that a sense of decency and fairness would return to those who thus falsely and unfairly assail me. despairing of fair treatment at the hands of these assailants, I shall henceforward bludgeon them with the truth when they assault me with misrepresentation.

POSTMASTER APPOINTMENTS.

This candidate says I appointed my cousin postmaster at Port Arthur, Tex. That is absolutely untrue. I recommended J. H. Washburne for postmaster at Port Arthur and the President appointed him. He is not related to me in any way, directly or indirectly. There are several hundred postmasters in the second district, and none of them are related to me except Jack Dies, postmaster at Beaumont, who is my brother. He is a good postmaster, and a good brother, too, and I am glad he has the job.

SAYS I HAVE DONE NOTHING.

This candidate says that I have done nothing as a Congressman. I suppose he means that I have not gone out singlehanded and passed any laws. He seems to overlook the fact that there are 430 other Congressmen and that they have to be consulted about lawmaking. And then there is the Senate of the United States, which must pass on every bill before it becomes a law. And, finally, the President must sign it. I have helped to pass a good many laws. Here are some good laws that I have voted for and that are now the law:

The graduated income-tax law, which is a tax upon wealth, and not consumption.

The tariff bill, which reduced the tax upon consumption. The election of United States Senators by a direct vote of the

The anti-injunction bill, which regulates the granting of injunctions in labor disputes.

The bill to grant jury trials in indirect-contempt proceedings

growing out of labor disputes. The present banking and currency system, which makes panics impossible.

The Parcel Post System, which makes express company robbery no longer possible and gives the farmer a better chance.

The antitrust laws, that regulate big business, and make it no longer safe for any man to laugh the law in the face, no matter how rich and powerful he is.

The eight-hour day for workingmen in Government works. The law prohibiting certain gambling contracts in cotton fu-

The above is a partial list of laws I have helped to pass,

given from memory.

The following are some of the good laws which I have helped to pass, but which await the sanction of the Senate and the President before becoming law:

The good-roads bill. The rural-credits bill. The immigration bill.

This last bill passed the House at the present session by a larger vote than ever before, and I feel hopeful that it will soon become the law.

The candidate against me has sought to arouse prejudice in his favor by saying that I spoke disrespectfully of President Wilson. There is not one word of truth in it. This candidate for office may justify his conscience in the unkind, untrue, and disrespectful statements he is making about his Congressman, but I am too good an American ever to speak disrespectfully, much less falsely, about my President. The statement that I referred to the President's speech as idiotic is untrue.

My constituents know that I do not agree with the President on the nonpartisan question of preparedness. I have dealt fairly with those I represent by telling them candidly of this difference. I now state candidly that the Army bill which has just passed the House and Senate is larger than I wanted it to I voted for the Army bill because I was unwilling to vote against any legislation at all upon the subject, and the Hay bill was the best compromise we could get. We succeeded in eliminating the continental army plan for 500,000 men, and instead gave additional encouragement to the State Militia. The estimates for the standing army for next year are for 105,000 men, which is but little more than the present size of the Army. The increases under the new bill are to be raised, if ever, in five annual installments, and as there are now practically 20,000 vacancies in the Army the probability is that no part of the authorized increases can ever be raised in time of peace. The appropriation for the Army will be much larger than before, but that will be for reserve material to be kept on hand against an emergency

As to the Navy bill, which has not yet passed, I feel hopeful that we can cut out the five-year feature of the program, so that when the war in Europe is over and peace once again blesses the earth the taxpayers will not have enormous five-year contracts hanging around their necks for needless armaments. Both the Army and the Navy bills will be larger than are necessary, in my judgment, but all legislation is and must be the result of compromise. The President, the Senate, and the House of Representatives embrace 524 men, each with a sworn duty to perform, and it is inevitable that no one man of that number can have laws made to suit his own individual ideas.

I do not want any man to be deceived as to how I stand on this great question. I am opposed to a large standing army in time of peace. I am opposed to a colossal Navy. I am in favor of adequate national defense. My speech delivered in Congress January 28, 1916, and the speeches since made by me in the district express my views upon this question. I have had no occasion to change my mind since then and have not done so. The European war will in all human probability be over before frost of this year. It will leave the peoples of Europe in poverty and woe, a veritable charnel house and shambles. It will then be apparent to every intelligent man who has no ax to grind that our fears were unfounded. In the meantime I shall exert my utmost power to prevent this Republic from becoming committed to the principle of militarism, that body of death, in the embrace of which liberty, fraternity, and equality have ever perished, and will unto the end of time.

Administration Shipping Bill.

EXTENSION OF REMARKS

HON. WILLIAM L. LA FOLLETTE.

OF WASHINGTON.

IN THE HOUSE OF REPRESENTATIVES,

Saturday, May 20, 1916.

Mr. LA FOLLETTE. Mr. Speaker, the failure of the majority party to keep a quorum in attendance during the discussion of the administration shipping bill by the Committee of the Whole House on the state of the Union enabled the minority party, by a decisive majority, to vote out section 5 of the bill.

The majority, by calling for a separate vote on this amendment when the bill came up for final passage in the House, succeeded in reinstating section 5, which I consider was a very unfortunate thing for the country. I think it was also unfortunate that the voting of the section out of the bill in the committee prevented my offering the following amendment to the bill, and it is likewise to be commiserated that under our rules there was no opportunity to offer the amendment to the section after it was reinstated by the House:

Amendment offered by Mr. La Follette: Page 6, line 3, at the end of section 5, after the word "purposes," insert "Provided, That nothing in this section shall be construed as conferring on the shipping board any power or authority to lease or purchase any of the interned ships of any belligerent nation interned in this country or elsewhere. The exercise of such authority is hereby expressly prohibited."

Mr. Speaker, the gentleman from Missouri, the chairman of the committee having this bill in charge [Mr. ALEXANDER], in response to a question propounded by the gentleman from Ohio [Mr. Fess], "Do you intend to buy the interned ships?" answered "No." The gentleman from Ohio very particular swered "No." The gentleman from Ohio very pertinently re-torted in part, "Many of the advocates of this bill are expecting

Mr. Speaker, when the Government shipping bill was under consideration by the Sixty-third Congress the question of where the United States Government was going to buy ships was discussed pro and con. It was pointed out that all of the tonnage of the world was fully engaged with the exception of the tonnage belonging to citizens of belligerent nations interned in the ports of neutral countries, and it was claimed that the purchasing of interned vessels would doubtless lead to complications involving our good faith and neutrality.

If the Government purchased vessels other than these interned

vessels, it added nothing to the freighting tonnage of the world and could not hope to relieve the freight congestion; furthermore, the Government could only buy tonnage at enormously inflated prices.

It was openly charged that the shipping bill of the last Congress was not born of patriotism, but, on the contrary, was of entirely different parentage. It was claimed that under the guise of public expediency and need an attempt was being made to pay for past favors and to further the interests of certain citizens and others by the purchase of a lot of interned ships in which they were financially interested.

These charges and claims were not complimentary at all to the chief sponsor for the legislation, the Secretary of the Treasury, Mr. McAdoo, and the good faith of this administration was seriously impugned.

ping board, it leaves this bill subject to the same imputations that were made against the bill introduced in the last Congress, and leaves an element of danger, and gives cause for apprehension throughout the country that, in my judgment, should be

The committee should have made the leasing or purchasing of interned vessels prohibitive, and I trust that a provision of that kind will be inserted at the other end of the Capitol.

Mr. Speaker, without going into the question of the wisdom of Government ownership, I desire to say that as a straight business proposition, and, the application of the greatest element in the success and control of the world, common sense, I am opposed to the Government going into this venture at this If the Government could have obtained control of a large volume of tonnage at the outbreak of the European war and let contracts for the building of additional tonnage at that time, it would have, no doubt, been a paying investment for the country; but to go into it at this time is, in my judgment, the height of folly. Vessels can neither be built nor bought within the bounds of reason. It would cost probably 500 per cent more at this time than at the outbreak of the war. Then there were but 68 vessels building in the shipyards of the United States; now there are some 386, and the Government could not procure a contract to have any vessels built and delivered short of two years, and in all probability by that time the European war will be over. Immediately the immense tonnage engaged in the transport of troops and war supplies will be available for commercial carrying; the European countries engaged in war, with the possible exception of England, will have but little to ship abroad for some time after the close of the war, and the neutral countries of Europe contiguous to the now belligerent countries will be called upon to supply much of their manufactures and production for use in the rehabilitation of the devastated and depleted territory. Naturally, they will not have as great need for ocean tonnage as before the war. In my judgment, when the thousands of vessels now in course of construction and under contract for future construction in the shippards of the world are placed in commission, and those engaged in the service of the belligerent nations are released, there will be the cheapest tonnage and the greatest supply of shipping for carrying our products that this country has had in all of its existence. I am constrained to believe that by the time this administration shipping bill can get into full operation there will be no earthly need for it, and the Government had much better save the fifty to one hundred millions of dollars that will be frittered away. For the reasons stated, I can not support this measure,

The Shipping Bill.

EXTENSION OF REMARKS

HON. GUY T. HELVERING,

OF KANSAS,

IN THE HOUSE OF REPRESENTATIVES,

Friday, May 19, 1916.

Mr. HELVERING. Mr. Speaker, the long-drawn-out struggle a little over a year ago in the United States Senate over a similar shipping bill attracted the general attention of the However, as on all similar occasions when partisanship is brought into play in the discussion of economic questions. the issues involved have been rendered obscure and men have taken sides, for or against the shipping bill, largely because of the fact that they are either for or against the present adminis-

With the desire to clear away some of the misunderstanding existing and with no intent to inject any element of partisanship into what, in my opinion, is a purely economic question, I propose to briefly set forth the arguments that were put forward in the United States Senate by those who favored or opposed the measure.

The first objection made was that there was no necessity for such legislation, and that ocean-going vessels in plenty can be found to care for all of our foreign trade.

This was answered by Secretary of the Treasury McAdoo when he showed just exactly the congestion existing at the various scaports. The increase in ocean freight rates for December, as compared with July, 1914, was 141 per cent, and this proportionate rate increased for some time during 1915, and at Mr. Speaker, unless it is made impossible under this bill for this rate the total increase in a 12-month period would amount the negotiating for any of the interned freighters by the ship-

HON.

In many instances the rates are now absolutely prohibitive, and in the case of our South American trade—a field which offers to us the most wonderful opportunities at the present time when the Panama Canal affords easy access and when the nations which formerly largely supplied these markets are now entirely out of the field—we are absolutely helpless. Shipping lines have been discontinued and contracts have been broken in order that the vessels may be used in the more profitable business of transporting goods to the nations now at war.

It is now said that private enterprise can be depended upon to meet our needs and that it is unnecessary for the Government

to enter the field.

To this objection the history of the past 50 years furnishes an ample answer. The need for the transportation of our goods has existed, but despite all that our American shipping has almost become extinct, as far as foreign business is concerned. I have not the time to go into the cause for this, which many of you fully understand, but we all realize the condition existing and know that we have nothing to hope for from private investment.

Now come the opponents of the shipping bill and say that the only remedy lies in the subsidizing of shipping owned by Amer-

ican citizens.

The American people have shown repeatedly that they are utterly opposed to subsidies. They will not tolerate being taxed in order to insure profits to any favored class. They realize that it is an economic fallacy to claim that they can get relief through taxation which would inure to the benefit of the few and at the cost of the many. Relief through subsidies is not to be expected, and the proposition would meet with condemnation. And the opposition in this House knows full well that a measure providing a subsidy could not be passed.

Another objection urged is that it is socialistic for the Government to enter upon an experiment of Government ownership.

Granting this, and yet it is not an objection. Government is created and maintained for the well-being of all of the people of a country, and its functions can not be so circumscribed that it can not undertake and carry out any plan needed for the protection of its citizenship. The functions of the Post Office Department are socialistic, for it is a Government-owned and managed monopoly, and yet no one to whom the word "socialism" is obnoxious would ask us to go out of the business.

It is further urged that for the Government to buy foreign ships or to engage in the carrying trade would endanger the

peace of this Nation.

And to this answer is made that it would have absolutely the contrary effect. The Government is naturally so scrupulous in maintaining neutrality and in living strictly within the letter and spirit of international law that the right to purchase any vessel would be accurately determined before the act was accomplished.

Furthermore, a Government-owned vessel would not under any circumstances carry contraband of war, and the shippers of legitimate commerce would have the assurance that their goods would be carried in Government ships without delay and without interference.

Getting to the basis of the objections, we find two powerful factors united for a common purpose—defeat of the attempt to enlarge our facilities for foreign commerce by governmental activity. One of these factors is the combine of shipping interests, which will be satisfied with nothing less than the payment to them of subsidies. The other factor is the shipbuilders of America, who to a man are opposed to the purchase of any vessel which they do not build. These men are interested more in personal profit than they are in the building up of an American merchant marine; and if I had the time I could demonstrate to you from the record how they have before this permitted greed to control them in dealing with really national questions.

This combination of interests controls great commercial bodies in this country. It is dominated by exactly the same small group of men who compose the Money Trust, and it controls a large section of the press of this country. By means of its subsidized press and its controlled commercial bodies it is trying to manufacture sentiment against the legislation proposed, but to remedy existing evils the only remedy it offers is a direct subsidy.

The world asks for our goods, and it is willing to pay for them.

We have no merchant marine to carry our American products of farm and factory.

We have the opportunity now to build up a magnificent foreign trade, and thus insure for the future steady employment to all American workingmen.

The shipping bill would put the Government into the field to do for the people that which they can not do for themselves.

Between insuring profits to magnates by direct subsidies and permitting them to make rates deterrent to commerce or injurious to the producer and consumer, or to let the Government do the work needed, and thus insure fair charges and equality of service, which plan do you favor?

The time to act is now, when the opportunity presents itself. The Government would give assurance to the American industrial world that they would have relief, and that ships would be run as needed and not be taken from a useful and important field

to earn temporary additional profits.

Monument at Gainesville, Tex.

EXTENSION OF REMARKS

JOHN H. STEPHENS,

OF TEXAS.

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, May 23, 1916.

Mr. STEPHENS of Texas. Mr. Speaker, the gentleman from Massachusetts [Mr. Gallivan] on March 31, 1916, introduced in this House a bill (No. 14030), which reads as follows:

A bill (H. R. 14030) to erect a monument at Gainesville, Tex.

Be it enacted, etc., That the sum of \$100,000 is hereby appropriated for the purpose of acquiring a site and erecting a monument at Gainesville, Tex., to the memory of the 42 loyal citizens of the United States who, without trial or process of law, and without having been convicted of any crime, were barbarously put to death by mobs and pretended military authorities at Gainesville, Tex., in the month of October, 1862.

Mr. Speaker, this bill alleges, first, that the men hanged were convicted without trial or process of law. The facts are (as I will show in this speech) that these men were tried and convicted by a jury under military law for treason and murder. Many witnesses were called and testified before the jury that found them guilty.

Second. The bill alleges that they were not convicted of any crime. In reply to that, I will show that the facts are that they not only were convicted of the crime of murdering Col. Young and a Mr. Dixon, but also of treason to their country, and that many of them admitted their guilt before the jury trying them.

Mr. Speaker, the gentleman from Massachusetts [Mr. G; LLI-VAN] by introducing the above bill to erect a monument to the men hanged at Gainesville has offered a gratuitous insult to the citizens of Cooke County. There is possibly not one man in a thousand now living in that county that had anything whatever to do with the hanging of these men. Why all these persons should now be insulted for what a few persons may have done in Gainesville 54 years ago is wholly beyond my comprehension. It is clearly shown by the evidence I shall quote in these remarks that these men acted only in their own necessary selfdefense and in defense of their country against the threatened invasion from Kansas. Many of the men hanged admitted their guilt, and one of them, a Mr. Field, according to the sworn statement of Mr. Parr, hereafter quoted, when about to be hanged, said "that the citizens of Cooke County would not be doing their duty if they did not hang every man that belonged to that so-He further said that "we all took an oath to kill every man, woman, and child when the society was sufficiently strong, take their property and cross Red River and there be met by a regiment of northern soldiers."

Mr. Speaker, the gentleman from Massachusetts [Mr. Gallivan] in his speech says, "Some of them banded themselves together to prevent their being drafted into the Confederate Army." There is not one scintilla of proof to sustain this statement either in Dr. Barrett's book or Mr. Cates's history or in any of the letters I have received.

Mr. Gallivan again says that they—the men hanged—did not kill anyone. Dr. Barrett says in the very book that Mr. Gallivan quotes from:

Col. William Young (whom some of the clan killed about 10 days afterwards, which will come up in its proper place) said to the man making the confession, "Since you and some others who are members of this clan have lived near me I have been very kind to you all. What was to become of me and my property, for I did not have your sign, password, and grip?" The man looked at Col. Young for a few seconds and then said. "I often thought of you and intended to give you the sign, password, and grip before the uprising, that you might save your person and property."

Mr. Speaker, Dr. Barrett, further on in his book, says that "Col. Young and Dixon were killed by this band"; and in this connection he says, "If Col. Young had not been killed this hanging might have stopped."

Mr. Speaker, I will say that it must be presumed that Mr. GALLIVAN read all of Dr. Barrett's statements and that he knew that Col. Young and Mr. Dixon were killed by this clan. Why does he state that this clan killed no one? The only answer is that he had deliberately made up his mind to injure and slander the good people of Cooke County, the State of Texas, and the South for his own political advancement.

Mr. Speaker, the gentleman from Massachusetts [Mr. Galli-VAN] only quoted such parts of Dr. Barrett's book as suited his malicious purposes, as I will now show by quoting from Dr. Barrett's book. The last part of the first chapter, pages 1 and 2, sets forth clearly why these men were hanged. The paragraph is

headed in large type:

HOW THE ORGANIZATION WAS FOUND OUT.

How the organization was found out.

The mail carrier who carried the mail from Gainesville south was staying all night at a hotel in Gainesville, and a man who was a member of the organization was there also. This man was considerably under the influence of liquor. This man told the mail carrier enough about this organization to attract his curiosity and his suspicion, so he asked a number of questions about it; the intoxicated man told him to go to a certain man and that man would initiate him and tell him all about it. The mail carrier said nothing about what he had heard, but started south with the mail next morning. By the time he had got into Denton County he had thought so much of the strange, mysterious affair that he came to the settled conclusion that there was something very dangerous to the community on hand and the people unapprised and unprepared for it; that it might come upon them at the midnight hour, with all the horrors of a savage massacre; and he was not far wrong, as the sequel will prove, by the confession of the members of the organization, which I am approaching in my history.

This mail carrier came to the conclusion that he would inform the military authority of what he had heard at Gainesville, and did so through a military officer, who gave information to the military.

When this mail carrier came back to Gainesville the military, questioned him, and after learning all they could from him he was sent to be initiated. He went and took the oath of secrecy, and took what will be known in this history as the first degree, though members of this organization did not so call it. After taking this first degree he was told if he would take another oath he would be informed of the whole thing. But he refused to go any further, and when he reported to the military, there being nothing in this first degree to make a fluss about, the anxiety was great to know what was in what I shall call the second degree.

The military selected a man who had been connected with the Confederate Army to go and

This man went to the initiator and wormed himself into his favor about in this way—I heard him tell it more than once: He spoke of having been connected with the Confederate Army in a manner which was well calculated to convey the idea that he was not sound in the

having been connected with the Confederate Army in a manner which was well calculated to convey the idea that he was not sound in the faith.

This caused the initiator to ask him how he was pleased with the condition of things. The man seeking to be initiated answered, "Not very well," and remarked, "If you had been where I have been and seen and heard what I have, you would not be pleased yourself." This was a precious morsel for the initiator; he bent forward with a smile, and was in this way thrown completely off of his guard. And the organization about which I am writing was named, and the man wishing to be initiated not only nibbled at it but he bit heavy, swallowing the hook, bait, and all. So he took both degrees, saying it was the very best thing for the time.

The man that was initiated asked the initiator to give him the names of some of the members that he might know who to approach, and he got quite a number of names. This man then asked the initiator to initiate another man, but he objected, saying that the man was a strong southern man. "He was," said the other, "but I have worked on him, and he is all right now." So the agreement was that the other man was to be initiated next day. They met next day, and the man was put through. The two men questioned the initiator till they found out much of the intentions of the members of the organization, but not all, for those leaders generally kept some of the most objectionable things back till they proved a man. But these men found out enough to know that if this thing was carried out it would devastate the country.

Don't be surprised of the strength of the language at the conclusion of the above sentence, for the truth must come, and when you hear you will say the language was not stronger than the case demands.

The next thing to be done was for these men to report to the millitary at Gainesville. The men lived near each other, but in going to report at Gainesville. The men lived near each other, but in going to report at Gainesville. The men lived nea

Mr. Speaker, I have quoted all of the language used by the doctor on that subject. I next quote from the paragraph headed "How they were sworn to secrecy" by the organization of the treasonable conspiracy which is told, beginning on page 6 and ending on page 7 of Dr. Barrett's book, and is as follows:

G and ending on page 7 of Dr. Barrett's book, and is as follows:

They told them that if they would take the oath of secrecy they would give the sign, password, and grip.

If the individuals agreed to take the oath, after taking it they were told when they met up with a man, the situation admitted, to pass the fingers of the right hand slowly over the right ear. The answer for this was for the man to pass the finger of the left hand slowly over the left ear; but fo guard against all mistakes, when they approached a man and gave him the sign, he was to be asked where he got his horse or any article about him. If he said in Arizona, he was all right and could be approached.

The grip to distinguish in a crowd or in the dark consisted in the common shake of the hand, with the end of the forefinger pressing tolerably hard on the side of the wrist.

They sometimes gave this sign, password, and grip to their friends, telling them that if there was any uprising to give them and they would save themselves and property, telling nothing more.

They also stated that this organization existed in both northern and southern armies, and it they became sufficiently numerous they would stop the fighting and restore the Constitution and Union.

Here it is proper to state all of this was not told to all of the men, but all of this came up in the various confessions.

This constituted what I shall call the first degree, though they did not so call it. When they got through with this first degree they would tell the man that if he would take another oath they would tell him all they intended to do if he consented. They swore him to secrecy and to do all he could for the North, and to do all he could against the South, to relustate the Constitution, and go to the relief of any member who should be arrested, and if a member betrayed them and their secrets they were to kill him if they had to follow him to the end of the earth, and no death was too bad for him to die. If he did not flinch, they then told the plan. They told the favored few all their plans, but to the great mass they only told part of their plans, all being sworn to obey their leaders.

The Confederate Government had a large amount of ammunition at Sherman, which was guarded day and night. Cooke County had about 400 pounds of powder and other ammunition to suit it.

Their plans were to rise in the night, take all the ammunition at Sherman and Gainesville, and throw the country without ammunition and take the country and hold its property and all, and no man's person or property was to be respected unless he had their sign, password, and grip. This and other things will appear when I come to speak particularly of the confessions.

Immediately following the language last above quoted, Dr. Barrett prints in large type "Their confessions." It is as fol-

THEIR CONFESSIONS.

Barrett prints in large type "Their confessions." It is as follows:

THEIR CONFESSIONS.
